NEW YORK, THURSDAY, JULY 5, 1883.

The Week.

As the season progresses without further serious damage to the small-grain crop than was reported in the early spring, the prices of all breadstuffs and provisions continue to decline. The winter wheat is already being harvested, and a week more will put the spring wheat out of danger. The corn crop will still be subject to various contingencies, and will not be secure before the latter part of August, but its present prospects are good. Those of the cotton crop throughout the entire cotton region are more favorable than usual, and, in view of the nearly absolute certainty of a large crop, prices have been declining. Commercial and financial prosperity is so entirely dependent upon these crops that trade and speculation have waited for results until the usual hot-weather stagnation has come over the speculative markets. But it is now accepted as a foregone conclusion that minimum prices must rule, at least for the present, for all these important commodities as well as for iron, leather, coal, etc., etc. The basis is therefore established for a favorable condition of our foreign trade, which will justify an increase of its volume both of exports and imports. In financial affairs the current week is one of the usual landmarks in the year's progress, because the first week of July brings out from $60,000,000 to $70,000,000 of interest and dividend disbursements, and in the present instance is making an excessive supply of floating capital that must find investment in securities or loans or in speculative purchases of commodities; and while the past week has presented nothing but declining prices for commodities, securities, and joint-stock shares, it is generally acknowledged that this tendency is likely to be checked if not reversed by the necessity of finding employment for capital. The stock market, however, which would seem likely to draw a large share of this capital, continues extremely languid, and prices are as a rule very much below the average of the past two years, owing largely to a general distrust of the management of a majority of the American railroads.

Messrs. Beirne and Elam, the Richmond duellists, met on Saturday, near New Hope, in Augusta County, Virginia, having succeeded in eluding the police, and did their best to kill each other. The range was made only eight paces, and at the second shot Mr. Elam was struck in the thigh. Mr. Beirne then expressed himself as "satisfied," and Mr. Elam had to be, as he could not fight any longer. It is not clear, however, that Mr. Elam will die, and therefore Mr. Beirne's satisfaction must arise from the fact that he hit Mr. Elam and was not hit himself—a feeling which any man will at once understand. Both combatants have been interviewed with regard to the fight, which seems to have been conducted according to the local rules governing the subject; but neither of them has thrown the least light on the bearing of the result on the issue over which the battle was fought. We are sorry to have to go back to this matter, but Mr. Beirne, our readers will recollect, is editor of the *State*, Mr. Elam of the *Whig*, and the battle was fought about a description which Mr. Elam gave in his paper of Mr. Beirne, and a description which Mr. Beirne gave in his of the followers of Mahone. Were these descriptions, or either of them, correct? If Mr. Beirne hit Mr. Elam, the followers of Mahone would be proved to be a "vicious, corrupt, and degraded gang," in favor of miscegenation and mixed schools. If, on the other hand, Mr. Elam hit Mr. Beirne, it would be proved that "lofty pretensions of superiority in manners, morals, and letters are laughably ridiculous coming from a source so pitiable in all moral and intellectual resources" as Mr. Beirne.

Some of the Southern comments on the affair are excessively funny, or would be, if such events were not a serious blot upon Southern civilization. The *Landmark*, for instance, of which we observe that Mr. James Barron Hope announces that he is editor, solemnly warned us before the battle began not to indulge in "brutal levity," on the ground that we were inflaming the passions of Messrs. Beirne and Elam to such a degree that they would be forced, in order to escape ridicule, to "come back from the field with somebody on a stretcher." It calls upon us to "look into our conscience" and "ask of that monitor if it can hold itself guiltless of having uttered words which must inflame the parties to this deadly controversy and stimulate others, perhaps, to escape its [our] pungent irony by bloodshed under similar circumstances." It can, esteemed *Landmark*, it can; for the reason that civilized men do not regard it as wrong to ridicule a barbarous and criminal practice merely because of the effect ridicule may have upon the minds of the barbarians who keep it up. The practice of duelling will probably not survive many Beirne-Elam affairs even in Virginia. If the Virginians will now go to work and punish somebody for the violation of the law, or, at any rate, try to, they may, to a certain extent, relieve the State from the stigma of this disgusting fight; but the *Landmark* and all like it may be assured that to encourage other Elams and Beirnes there is no better way than to thank God that the "trouble is over," and to speak with bated breath of the heroism of the two ruffians who have caused it. The discovery of the *Landmark* that the Northern press is responsible for duels because it ridicules duelling, throws a valuable side-light upon the imbecility of mind which the custom seems to produce.

The Butler trouble at Harvard blew over on Commencement day so completely that many people are no doubt asking themselves why so much fuss was made about the grim old warrior and his degree. He came to the alumni dinner at the invitation, we believe, of the President of the College, was called upon for a speech, and made one in which he spoke in a very complimentary strain of the College, and breathed forth no threats of any kind. In fact, Butler now appears to be a warm friend of Harvard and the higher education and all good things. Refusing him the degree, instead of "riling" the old man, has probably led him to think all the better of the College. It is the people who truckle to him, and pretend to think that he is a great and good statesman, for whom he probably has the most profound contempt.

The result of the Harvard-Yale boat race seems to have convinced all observers that Yale will have to abandon its present stroke. It will also probably have to abandon its present curious system of "bunching" the seats of its boat in twos. In other words, unless all impartial observers are wrong—and among them we include even Harvard rowing men, for there is really no interest to either college in such a race as that of last Thursday—Yale will have to abandon the idea with which it still deludes itself, that it can find out, if it only devotes time and ingenuity enough to it, some brand-new device or trick that will enable it to win races without adopting the system which time and experience have taught all the leading rowing colleges of the world. The lesson that it does not pay as well to be "smart" and ingenious, and continually introducing novelties, as to abide by what the world has actually learned, was taught Harvard by bitter defeats, and is now apparently being taught Yale in the same way. By all accounts, the finest crew that Yale ever turned out was easily beaten on Thursday because they were possessed with the idea that they knew something about rowing which nobody could teach them.

The Iowa Republicans had "a large and harmonious" convention, with no struggle about the candidates, and seemingly none about the platform. Among the former there are no men of national reputation, but as they are the old incumbents now renominated, with the exception of Judge Reed, the candidate for Judge of the Supreme Court, it must be assumed that they are generally acceptable to the party which once elected them and now wants to elect them again. As to the platform there seems to have been a minority of dissenters, but scarcely strong enough to make an impression upon the majority and hopeless of accomplishing anything. The first resolution "points with pride" to what the Republican party has accomplished in the past. The second puts the people of Iowa in the same category with "the people of all countries who are struggling for their rights in opposition to oppressive laws and systems." To these struggling peoples earnest sympathy is offered, and then the same sympathy is, by implication, asked for the people of Iowa, for the Convention goes on to say that "we also plant ourselves on the side of the homes of our own people in their contest against the saloons." This is not as clear as it should be. The fact is that the Iowa

Legislature passed, for submission to the people, an amendment to the Constitution prohibiting the manufacture and sale of intoxicating liquor; that it was approved by a majority of nearly 30,000, but that it was then declared void and of no effect by the Supreme Court on account of some irregularity in the passage of it. It would seem, therefore, that the people of Iowa, in what the Convention calls their "struggle for their rights," have been baffled, not by "oppressive laws and systems," or any other form of despotism, like other peoples struggling for their rights, but by their Supreme Court, or rather by their bungling legislators, whose work was condemned by the Supreme Court. However, the Convention resolved that it is the duty of the Legislature to make the prohibitory amendment over again, this time, we suppose, in a more workmanlike way, so that the Supreme Court may not have another chance to undo it. To be sure, the wording of the amendment will have to be clearer than the wording of the resolution which recommends its reënactment.

We do not think we risk anything in saying that many of those who voted for this resolution, especially the more prominent and experienced politicians, are seriously apprehensive that this liquor question, as it has already once reduced the formerly enormous Republican majority in Iowa to small proportions, may do so again. Still, they voted for it, as they did for another resolution, insisting strongly upon the maintenance of a high protective tariff, and vigorously denouncing the efforts of the Democrats in Iowa for a change of the customs laws in the direction of free trade. We venture to say that in this instance, too, some of those who supported this resolution without believing in it, know very well that the movement for a reform of the tariff by a reduction of duties has made nowhere in the West a larger number of converts than in Iowa; that among these converts there are many Republicans, and that a not inconsiderable number of them may refuse to vote as they have done before, if this issue is clearly and strictly made. It is very much to be regretted that the Iowa Republicans followed the example of those of Ohio in recommending the repeal of the time clause in the law concerning the application of soldiers for pensions, or, in other words, the extension and perpetuation of the pension-arrears scandal. This is a kind of demagogy which should not, and in the long run will not, pay.

The Republican State Convention of Minnesota has incorporated in its platform a resolution on the tariff which would be open to great objection if coming from a gathering of pretended free-traders, but which appears more acceptable coming from a party in which the protection sentiment is predominant. It insists upon maintaining the taxes upon whiskey and tobacco, and, in addition to them, "a system of duties upon imports, so applied as to provide revenue for the necessary expenses of the Government, and so adjusted as to encourage the development of the manufacturing and labor interests of the country." Theoretically it countenances the principle of protection, but as it wants revenue raised only to defray the necessary expenses of the Government, and insists upon keeping the large revenue derived from the whiskey and tobacco taxes, the additional amount to be raised through duties on imports will be small. Consequently the Minnesota Republicans must favor a very thorough revision of the tariff in that sense. For a convention of protectionists this is doing very well. If the whole Republican party would adopt this platform and act upon it in good faith and with consistency, it would gradually solve the tariff problem in a satisfactory way, and deserve in that respect more confidence than the Democrats. A party moving from protection premises in the direction of a liberal revenue reform would be more trustworthy than a party starting from a free-trade standpoint and moving in the direction of protection.

It seems that General Crook's reasons for the policy he advocates with regard to the Apaches whom he has brought in from their stronghold in the Sierra Madre, were at first not quite clearly understood and appreciated at Washington. Perhaps the War and Interior Departments did not like to assume the responsibility of ordering or authorizing things which were so little in accord with their first impressions, and so repugnant to the critical mind of the country. At any rate, there seems to have been some hesitation about the admission of General Crook's captives to the reservation, and the General himself was summoned to Washington for consultation. He will be there in a day or two. His management of Indian matters in war and peace has been throughout so vigorous, at the same time so humane, and, on the whole, so successful, that neither the War nor the Interior Department will compromise its dignity in following his advice. It is true that on former occasions these restless Apache vagabonds did break out again after having been located and decently treated on reservations; but it is apparently General Crook's opinion that they are now too thoroughly convinced of the hopelessness of further attempts in that line to indulge again in such eccentricities. If this is General Crook's opinion, the Government will do well to accept it; public opinion will not charge it with any responsibility if General Crook should prove mistaken.

The foreign missions of the Mormons are so successful that twenty-two missionaries, who returned on the *Nevada* on Sunday, were able to bring with them 674 accessions to the Church of the Latter-Day Saints. They cannot be sent back because they are not paupers. The adults are well dressed and have considerable baggage, and the children are healthy. The few of the company who are infirm are well cared for by relatives. Some of the immigrants have been assisted, but only in the way citizens of foreign birth for many years have helped their friends to join them in this country. The Mormon leaders not only aim to secure converts, but they shrewdly give them money for the journey to Utah. It is said that $35,000 has been expended in this way during the last year. Since these Mormon immigrants cannot be prevented from landing, it is encouraging to know that the sexes are about equally divided, that the men are farm laborers and mechanics, and that therefore they are probably going to Utah not to practise polygamy, but to work for a living. The multiplication of Mormons in this way by no means implies the multiplication of polygamists. While plurality of wives is adopted as an article of faith, as a domestic custom it is losing rather than gaining strength.

Stalwart sensitiveness in regard to the reputation of men who are not of that faction is illustrated in the case of Postmaster Pearson. When it was discovered that Mr. Pearson's name was associated with a district messenger and telegraph company, the Stalwarts at Washington, instigated thereto by the Stalwarts of New York, insisted that the Postmaster ought to be removed for engaging in a business which infringed upon the postal monopoly of the United States. It made no difference that it was at once explained that the messenger business did not come within the statutory prohibition; that Mr. Pearson had no connection whatever with the company, and that he never had authorized the use of his name in association with it, further than consenting as a friendly favor to sign the petition for its incorporation. This did not prevent the delicate and susceptible Stalwarts from insisting that even the appearance of evil must be avoided—by everybody but Stalwarts—and that the New York Postmaster must go. It did not prevent the Stalwart organ at Washington from sneering at "the truly good reform Postmaster" and the "dearly beloved Postmaster." But the sincerity of Stalwart sensitiveness is exposed to the gravest suspicion when the appointment by Commissioner Evans of the man Horton, who was once dismissed from the Revenue Department for cause, and against whom charges of gross corruption have been made, escapes all criticism whatever from the organ which impudently professes to speak for the Administration as well as the Star-route defendants. Certainly there could not be better ground for sensitiveness than the editorial relation of the Assistant Postmaster-General to such a newspaper.

Puck had a picture the other day showing Dorsey and Brady coming gayly out of one door of the court-house, free, and "counsel" coming out of another, very wealthy. This it called "Results of the Star-route Trial." For these results the Trial will probably always be regarded as one of the most remarkable in the history of jurisprudence. It has had a new result now, and a very singular one, in a threat of a libel suit against the Attorney-General by Mr. Cook, the "ex-counsel" for the Government, founded on an interview in which the Attorney-General stated that the ex-counsel had been discharged by the Government, and strongly hinted that after he had been discharged he "sold out" to the Star-routers. The ex-counsel says he never was discharged, but went out of the cases voluntarily; and also that he never sold out, though he seems to admit having a wicked partner who had a pecuniary transaction of some sort with the Star-routers which lent color to the accusation.

We are surprised that Mr. Cook is willing to confine himself to a libel suit. He ought to begin criminal proceedings. If the ex-counsel would have Mr. Brewster arrested and locked up in one of his own jails, it would teach the old slanderer a lesson which he would never forget, and greatly embolden timid counsel and ex-counsel who have wicked partners all over the world.

The visit of the plumbers to this city is an event of some interest, as it has enabled them to give—what is always so valuable in the case of any oppressed class—their view of their position. It appears from their proceedings that they attribute the feeling against them partly to the licentious attacks of the press, and partly to the rise of the sanitary engineer, who, they say, knows nothing about plumbing, and is an impostor. This seems to call for some reply from the sanitary engineers, many of whom, it is believed, privately hold and express the same opinion of plumbers that the plumbers do of them. Let them come out like men and tell us not only what they think are the facts with regard to plumbers, but what they have to say for themselves. There is of course no use in asking the press to withdraw its charges against plumbers; the press in this, as in so many other cases, is "down" on plumbers, because many editors think they are an unpopular class and try to curry favor with their readers by abusing them. But it is hopeless for the plumbers to attempt by argument to affect the minds of a class so depraved.

A good deal of excitement was occasioned in Chicago a little while ago by a decision of one of the courts there as to what are known as "superstitious uses." We have not the text of the decision before us, but the principle involved was that trusts made for "superstitious" purposes—for such purposes as saying masses for the repose of the souls of the dead—were not in this country void. The same question has now arisen in this city, and resulted in a decision that such trusts are void. Margaret Gilman, a pious old Catholic lady, in August last put the sum of $2,300 in the hands of a friend named McArdle, directing that the money should be used after the death of herself and her husband to pay for funeral expenses, the erection of a monument, and to have masses said for the repose of the souls of both. The old lady was then eighty-five years old, and she made the trust while alive, no doubt because she feared that a will might be disputed. She also very ingeniously united with the masses two other objects—a funeral and a monument—universally regarded as legal throughout the Christian world. Mrs. Gilman and her husband shortly afterwards died, and she has now, in the curious vernacular of New York jurisprudence, been badly "beaten" by Judge Freedman, of the Superior Court.

His decision is in substance that there is no objection to the trust on the ground of its being "superstitious"; that the old English doctrine with regard to the matter cannot be applied in this country, where the law recognizes complete equality among beliefs and creeds; but that in this case there is no beneficiary, no person in existence for whose benefit the trust is held. Mr. and Mrs. Gilman are both dead; the money is intended to benefit their souls. But, says Judge Freedman, the soul of a dead person "is incapable of taking an interest in property left behind." But how does Judge Freedman know this? In just the same way that Mrs. Gilman knew just the opposite. Mrs. Gilman and pious Catholics generally think that the soul will be benefited by masses, but living Catholics have never seen one so benefited, and living Protestants have never seen the contrary. Protestants say that there is no purgatory; Catholics say that there is. If the Catholics are right, it is obvious that the souls of Mr. and Mrs. Gilman are now deprived of a substantial property right, and the decision can only be supported on the theory that the Catholic religion is a superstition and the Protestant religion true. This is exactly what the courts in this country have always refused to decide, on the ground that one religious belief (in the eye of the law) is no more irrational than another; that the law has no machinery for deciding between them, and that it cannot undertake such a task without establishing, as far as it goes, a state creed. The Gilman funeral expenses were, in Protestant eyes, just as ill calculated to benefit the Gilman souls as the masses. A judge who has made up his mind that it is part of the common law that a soul cannot be benefited in any way by the expenditure of money in religious rites, is entering, we believe, on a new and, we may add, a not very safe field.

The Deceased Wife's Sister Bill was lost in the House of Lords last week by a vote of 145 to 140. This probably shows that in a year or two it will pass, as the vote against it has been steadily decreasing for a long period. The bold rally of the Conservatives against the bill is of course all the grander the more hopeless the cause becomes. It is sad to think, however, that the time when the English sister-in-law or aunt can lead a blameless and unsuspected life in the family of her brother-in-law is drawing so rapidly to a close. The good old times are fast passing away.

The vote on the second reading, which is usually decisive in the Lords, set English Conservatives to reflecting about the probable consequences of the passage of the bill. The principle which, according to them, underlies the prohibition of these marriages was very neatly stated by the Archbishop of Canterbury in the course of the debate. As the restriction is religious in origin, and he is the head of the Church, he must know; and he says, and says it boldly, that marriages of affinity are all right if in describing them you "count four"—*e. g.*, the man, his deceased wife, the deceased wife's relative, and another relative of the man himself; for example, a man's wife's sister may be married by his son; but it is a sinful and illicit connection if you "count three"—*e. g.*, the man, his deceased wife, and his deceased wife's sister. This, however, is only a test. The reason of the rule may be found, not, as we should naturally suppose, in the Bible—for the Bible is singularly silent on the subject—but in the last number of the *Saturday Review*. This well-known Conservative organ has thought the matter out carefully, and points out that if the barriers are once thrown down, the next step will be to demand the legalization of marriages with a man's own sister. All the arguments in favor of one, it says, can be used in favor of the other.

> "She is presumably as well suited to him in age as his wife's sister, certainly suited to him in station, probably more suited in disposition than any stranger in blood. They have to each other, by hypothesis, that reasonable affection without which marriage should not be contracted. The woman loves her nephews and nieces already (at least in most cases), for their own sakes and for the sake of her brother. The acutest judge on the bench may be very respectfully asked to point out a single flaw in the analogy."

The analogy seems to be perfect, and the inference drawn that the bill is "but an instalment" shows at once why the Conservatives have so stoutly resisted its passage, and why they dread the future should it become law.

Very cordial expressions of friendship and mutual good-will were exchanged between the Emperor of Germany and the Czar of Russia at the time of the latter's coronation; but in the meantime the German Government does not forget to provide for possible contingencies in the future. The cable informs us that the small fortress of Küstrin is to be transformed into a fortified place of the first class. Küstrin is situated between Berlin and the Russian frontier, on the river Oder and at the crossing of the railway from Berlin to Warsaw with several other roads of importance. The place is evidently intended to serve for the protection of the German capital in case of a war with Russia. The latter Power will scarcely have any reason for complaining of this apparent mark of distrust, for Russia began first to fortify her German frontier. The action of Germany can, indeed, not be taken as a hostile demonstration having an immediate meaning. It is merely an act of that timely caution for which the general staff of the German army is so well known.

The Count de Chambord seems to be really and seriously ill this time. The Royalists at Paris are naturally in a state of great excitement, for the death of the Count de Chambord means to them not only the demise of one king and the advent of another, but in this case the passing of the crown, or rather the right to the crown, from one house to another, from the Bourbon to the Orleans. And even more than that. It means the passing of the leadership of the Royalist cause in France from the hands of a pretender who represented the old régime overthrown by two revolutions, and who was so firmly wedded to its traditions that he threw away a chance to be King because he would not accept the tricolored flag, to the representative of a family identified with the leading principles of those revolutions, a man of modern ideas and of more than ordinary ability.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 27, to MONDAY, July 2, 1883, inclusive.]

DOMESTIC.

PRESIDENT ARTHUR'S scheme for consolidating the revenue districts has been subjected to much criticism because in many cases where collectors were retained the preference was given to Stalwarts, the Independents being dropped. His friends urge in his defence that a careful analysis of the internal-revenue consolidation, in connection with the rule which the President adopted as to retaining or dismissing the collectors, will disarm some of the criticism. The rule is said to have been that where two or more districts were united, the collectors longest in the service should be dropped and the one of most recent appointment should be retained, provided the new man had a good record for efficiency. In a reduction of forty-six districts the oldest collectors were dropped in thirty-eight cases, leaving only eight instances in which this rule was departed from. These exceptions have excited the most criticism.

Mr. Frank D. Conger, son of the Michigan Senator, has been appointed by the President to be Postmaster at Washington, the previous nominee having declined.

Postmaster-General Gresham has decided to consider the relation of the lotteries to the mails, in view of the many complaints which have been made by some of the lottery companies of discrimination against them in favor of one company.

Mr. W. A. Cook, of the original Government counsel in the Star-route cases, has made a statement in regard to his connection with them, in which he says that he became connected with the Star-route cases in the spring of 1881, at the solicitation of Attorney-General MacVeagh; that soon afterward he had a private interview with President Garfield about the cases, in which the latter plainly set forth his views touching them, as follows: "That it was to be regretted that there was any apparent occasion for the investigation of the official and personal conduct of individuals who had occupied a high position in public life or of any contractors with the Government; that every one, according to the established rule of the law, was to be presumed innocent until fully proven guilty, and that in his opinion no criminal case could be properly conducted from any other standpoint against any citizen; that while this was true he desired and expected a full, fair, and impartial investigation of all the facts involved in each case, without regard to the persons who might be accused; but that in making such investigation he wished me to avoid what was at times too common among attorneys, the evil of 'making a case for the sake of having a case,' and that he did not regard it as proper to obtain an indictment against any one unless the facts made out a strong probable case and appeared to be such as would fully justify a trial before a petty jury." Mr. Cook has threatened to sue Attorney-General Brewster for slander, because he asserted in a recent interview that the Star-route thieves had used their plunder to buy up ex-counsel for the Government.

Representative Blackburn, of Kentucky, it is ascertained, expects to devote himself in the next Congress to an investigation of Star-route matters, and will very probably introduce a resolution creating a committee to examine the subject.

Secretary Folger has instructed the Emigration Commissioners in this city to prevent the landing of all immigrants found to be paupers within the meaning of the law, and in cases where such pauper immigrants have already landed, to take all practicable measures to have them reshipped to the port whence they came. The Commissioners have adopted resolutions instructing inspectors that all the immigrants must be examined on board the vessels bringing them.

Gen. Rufus Ingalls, Quartermaster-General of the Army, was retired at his own request on Monday, and Col. Samuel B. Holabird was recommended by Secretary Lincoln to the President to succeed him, and on Monday was appointed.

Information received at El Paso, Texas, from a Mexican citizen, says that Apache raiders on Wednesday last appeared in the neighborhood of Janos, and captured three herders and a quantity of cattle. General Crook discredits the report, and asserts that Indian troubles in that region are at an end for the present.

David L. Payne has applied to the United States Circuit Court at Topeka, Kan., for an injunction against Secretary Lincoln and General Pope, restraining them from interfering with his entrance into and occupation of the Oklahoma District of the Indian Territory. This application brings up for decision the whole question of the status of the Oklahoma District.

The new tariff laws and the laws as to money orders went into effect on July 1.

The public-debt statement, issued in Washington on Monday, shows a reduction during June of $18,098,201 43.

A war on trade silver dollars has begun in this city, and the movement has rapidly spread among the merchants and tradesmen of other cities not to receive them at their face value after July 1.

At St. Louis the flood has subsided and business has been resumed.

There were great rain-storms in Pennsylvania on Wednesday. Valuable mines about Wilkesbarre were flooded. There was great destruction of crops. Twenty-three collieries near Ashland, Pa., were flooded on Wednesday.

In the balloting of the New Hampshire Legislature for Senator on Wednesday Mr. Rollins received 105 out of 322 votes. There was no radical change in the situation up to Monday evening, as a quorum did not vote on three days.

The Iowa Republican Convention on Wednesday renominated the old ticket, headed by B. R. Sherman for Governor, and adopted a platform favoring prohibition and protection, and commending the Administration of President Arthur. It refused a renomination to Judge Day, one of the majority members of the Supreme Court who overthrew the prohibition amendment.

In the Minnesota Republican State Convention on Wednesday the organization was perfected by the friends of the Hubbard administration, thus defeating the Windom faction. Governor Hubbard was renominated by acclamation. A resolution condemning the action of those Republican legislators who refused to vote for Windom as Senator after he had received the caucus nomination last winter, was laid on the table by a vote of 148 to 92. The platform approves the River and Harbor Bill, urges the repeal by Congress of the time clause in the law relating to the application for soldiers' pensions, and advocates a revenue tariff so adjusted as to encourage home industries. A full ticket was nominated.

Considerable opposition has developed in Ohio to Judge Hoadly, the Democratic candidate for Governor, within the ranks of his own party. A son of ex-Senator Thurman has announced his intention of supporting the Republican nominee, because of Judge Hoadly's record as a Republican and a Liberal. His connection with the Archbishop Purcell troubles, as counsel for the assignee, in which capacity he contended for the sale of church property in the Cincinnati diocese, will also, it is asserted, injure his prospects. A decision in this case has not yet been rendered, and it is alleged that Judge Hoadly is trying to have it kept back until after the October election.

In a speech at a dinner in Springfield, Mass., on Thursday night, Mr. John Kelly sharply criticised Mr. Tilden for not courageously calling on the people to sustain him in assuming the Presidency of the United States in 1876. He also said Mr. Tilden tried to get the nomination in 1880, and, failing in this, used his influence in New York to defeat General Hancock.

After much negotiation and great efforts to escape the police and evade the law, Messrs. Beirne and Elam, the Richmond editors and duellists, met on Saturday morning near New Hope, Virginia. At the first exchange of shots neither was touched. At the second shot Elam was struck in the upper part of the right thigh, and Beirne escaped unhurt. Beirne then expressed himself as satisfied, and the parties left the field, going in opposite directions. Mr. Elam is editor of the Richmond *Whig* (Readjuster), and his opponent of the *State* (Bourbon). The wound of the former is severe, and may become dangerous. Under the laws of Virginia duelling is a felony; but no one has ever been convicted under the statute.

Valentine's recumbent figure of Gen. Robert E. Lee was unveiled at Lexington, Va., on Thursday, in the presence of 6,000 persons. Gen. Wade Hampton acted as Chief Marshal. Maj. John W. Daniel delivered the address.

Commencement exercises were held at Harvard, Yale, and Union on Wednesday, and at Trinity, Wesleyan, Dartmouth, Hamilton, and the College of the City of New York on Thursday. Governor Butler attended the Harvard Commencement, accompanied by his staff and escorted by the Lancers. At the alumni dinner, in responding to the toast for the Commonwealth, he made a speech very complimentary to Harvard, referring especially to her record in the war. He was received with great applause and cheers.

More ill-feeling has been caused at Union College by President Potter's course in not giving out the diplomas to the seniors on Commencement Day, but telling them to call at his house. As each student asked for the diploma he was cross-questioned by Dr. Potter regarding his opposition to the President.

Stephen Alexander, LL.D., Professor Emeritus of Astronomy at Princeton College, died on June 26, at the age of seventy-seven.

The Harvard College Freshman eight defeated the Columbia College Freshmen in a boat-race at New London, Conn., on Wednesday, by six lengths; time, 11:03. Harvard led from the start.

The Harvard College eight-oared university boat crew defeated the crew of Yale College on Thursday, at New London, Conn., by about fifteen lengths; time, 25 minutes, 46¼ seconds; distance four miles straightaway. The defeat is attributed by many oarsmen to the new stroke which Yale has been rowing for two years.

A great railroad scheme was reported from Indianapolis on Saturday. The design is as follows: Two double-track narrow-gauge roads are to be built, traversing the country in opposite directions from New York to San Francisco and from Chicago to New Orleans. There are to be 11,000 miles of track, with a capital stock of $300,000,000. It is to be called the People's Railroad Company, and is something in the nature of a benefit association. The whole scheme is said to be visionary, and of a kin with the Greenback movement.

The State Camp at Peekskill, N. Y., is now being occupied by the militia regiments in turn for their annual drill and outing. The Thirteenth, of Brooklyn, took possession on Saturday. Chaplain Beecher preached to them on Sunday.

"Dr." Hathaway, the Philadelphia malpractitioner, was on Wednesday sentenced to pay a fine of $500 and the costs of prosecution, and undergo an imprisonment in solitary confinement at labor in the Eastern Penitentiary for a period of seven years.

Major Ellis P. Phipps, the Philadelphia Almshouse ex-Superintendent, was sentenced on Saturday to five years' imprisonment at hard labor, for forgery.

Archbishop Purcell was very ill at the Convent of St. Martin's, O., on Friday, but on Monday he was reported much better, though not out of danger.

Rear-Admiral Benjamin F. Sands, of the Retired Navy List, died at his residence in Washington on Saturday evening, at the age of seventy-two years.

FOREIGN.

There has been a great panic in Egypt during the week on account of the cholera at Damietta, Port Saïd, and other places. The flight of Europeans has been great. A commission has been formed to devise means to protect Alexandria. A strict quarantine has been ordered at all Turkish ports against vessels arriving from Egypt. There were 113 deaths from cholera at Damietta on Wednesday and part of Thursday. The deaths averaged more than one hundred in twenty-four hours throughout the week. There have also been a number of fatal cases at Mansurah and Port Saïd. The Egyptian ministers have voted $25,000 for the use of the Sanitary Commission. Two thousand persons have already fled from Alexandria. The alarm has spread to Spain, and even in England there is much apprehension. The usual pilgrimage to Mecca has been prohibited in Algeria. On Sunday the number of deaths at Damietta reached 141.

The serious illness of the Comte de Chambord, the head of the Bourbon house of France, was reported on Sunday from his home at Frohsdorf, Austria. On Monday his condition was very critical, and his death was hourly expected.

Mr. Trevelyan, Chief Secretary for Ireland, replying in the House of Commons on Thursday afternoon to a question as to whether it was true that pauper emigrants had been sent to America with the knowledge and consent of the Government, said the reports about the landing of paupers in America were greatly exaggerated. He said that all emigrants sent by the Commissioners had been supplied with funds. No paupers had been sent out by the Boards of Guardians. He said that the *Furnessia* took out 421 emigrants, of whom only five families had been in the workhouse, and in each of these cases friends in America had offered them homes. He had himself seen all the tickets of the emigrants, including railway tickets from the other side. They had also checks for the full amount of the landing allowance, which for adults is £1 and for children 10s. The Secretary of the Tuke (Ireland) Fund declares that all emigrants who have been assisted to go to America by the fund have been sent direct to relatives or friends in that country, and have been provided with money on landing. It was announced in the House of Commons on Friday that the British Government had received no remonstrance from the American in regard to pauper emigrants.

A Parliamentary election in County Monaghan, Ireland, on Saturday, resulted as follows: Mr. Healy, Home-Ruler, 2,376; Mr. Monroe, Conservative, 2,011; Mr. Pringle, Liberal, 270. At Monaghan on Monday evening Mr. Healy addressed a large crowd of people, by whom he was received with great enthusiasm. He said that landlordism had been trampled under foot, and that the election represented the demand of Ulster for speedy reform in the land laws. He had little doubt that before many years every farmer in Ireland would be the owner of his holding. Mr. Healy said that the victory of the Parnell party would lead to a reopening of the land question and other great reforms.

The Court of Appeals has rendered a decision at Dublin in the important test case of Chaine against Nelson, on which 40,000 other cases depended. The Court held that the new rents became payable from the first gale day after the act was passed, and not from the day when they were fixed by the Commissioners.

Peter Carey, the Irish informer, is on his way to America.

The Rev. Thomas N. Burke, the well-known Irish priest and lecturer, died on Monday, at the Tallaght Convent, Ireland. He was a Dominican, and visited this country in 1872, as an inspector of the houses of that order. His sermons and lectures gained him much reputation as an orator. Among them was a series of discourses in reply to Mr. Froude, on his views of the relations of England and Ireland. Father Burke was fifty-three years of age.

The British House of Lords on Thursday rejected the bill permitting marriage with a deceased wife's sister on its third reading by a vote of 145 nays to 140 yeas.

It is reported in London that there is reason to believe that the Marquis of Lansdowne, Chairman of the joint committee of the House of Lords and House of Commons on the Channel Tunnel project, will report favorably upon that scheme, and that there will also be a minority report adverse to the project.

Alderman Hadley, of London, it is asserted in this city, has completed arrangements for the laying and operation of a new cable line between England and America. The name of the new company is the American, British and Continental Cable Company. Its capital stock is £1,500,000, divided into 150,000 shares at £10 each. This has all been subscribed by English capitalists. The objects of the association are to establish communication between Sable Island and Belle Isle and other points on the shores of the Dominion of Canada, and of Great Britain and the European Continent, or elsewhere, and also between any points on the Pacific coast of the Dominion of Canada and Japan, China, Australia, and India. In London the scheme is discredited.

In the House of Lords on Monday afternoon Lord Derby, Colonial Secretary, said that the Government was not prepared to annex New Guinea, owing to the enormous extent of the territory, the unknown character of the interior of that country, and the certainty that the natives would object to annexation. Mr. Gladstone made a similar statement in the House of Commons.

At a dinner of the Cobden Club in Greenwich, England, on Saturday night, Mr. Horace White, of New York city, responding for "Foreign Visitors," said that abstract free-trade principles had made little progress in America, but that free trade itself had made much progress. The Democrats would not do anything heroic. A little more bankruptcy would do more for knocking off the tariff here than free-trade doctrines. When free trade should be adopted in America that country would become England's greatest competitor in the world's commerce. Mr. Thomas G. Shearman recounted the history of free trade and protection in America, explaining that protection was due to the civil war.

The American Rifle Team reached England safely on the *Alaska* on Wednesday. Owing to the late hour at which they reached Liverpool, no reception was given them. The team went to Birmingham on Thursday, where they practised until Monday evening.

The Committee of the upper house of the Prussian Landtag approved the Church Bill, and its passage was secured, on Monday, by a vote of 64 to 16. The session of the Diet was then closed.

The chief proposal contained in the last note of Cardinal Jacobini, the Papal Secretary of State, to Prussia, is that the Vatican will recognize the duty of notifying the Prussian Government of clerical appointments on condition that Prussia declares the exercise of all priestly functions exempt from prosecution, and the training of priests free from all restrictions. The note emphasizes the desire of the Vatican to continue the negotiations notwithstanding Prussia's violation of diplomatic usage by passing the Church Bill while negotiations were pending.

Prince Bismarck's health continues to improve.

It was reported on Friday that Germany had suggested the mediation of Russia in the difficulty between France and China. On Monday it was asserted that Russia was not disposed to undertake the task. At the British Foreign Office it is asserted that China is resolved to prepare for the eventuality of war while carrying on negotiations with France to gain time.

The town of Küstrin, situated at the confluence of the River Wartha with the Oder, and the main point of cover for Berlin against an invasion from Russia, is being converted into a first-class fortress, capable of sheltering 50,000 men, by the German Government.

The arrest of M. Krazewski, the Polish author, and others in Germany, has led to the belief that a conspiracy exists for betraying secrets relative to the German military organization. Twenty arrests were made at Berlin and Dresden on Wednesday of persons supposed to be connected with the conspiracy, and other arrests have been made at Halle, Hanover, and Cologne.

The Russian Government announces that the negotiations between Russia and the Vatican have been concluded. The hierarchy will be allowed freedom in matters of faith, but interference in questions regarding the temporal power is forbidden.

Placards have been posted in Warsaw inciting the people to a general revolt and to an alliance with the Nihilists.

The Pope is indisposed. He is reported to be much disturbed by the state of affairs in Ireland and France.

It is reported in Paris that President Grévy has refused to grant a request made by the Radical members of the Chamber of Deputies to commute the sentence of Louise Michel to exile.

A desperate attempt was made on Thursday in a carriage of a railway train running from Calais to Paris, France, to murder and rob the Rev. Mr. Witchborne, an English clergyman. The murderer attacked Mr. Witchborne with a chisel, stabbing him five times. The assassin tried to make his escape when the train arrived at Amiens, but was captured after a terrific struggle. The assailant is an Englishman. He attempted to commit suicide, and, as well as his victim, is in a precarious condition.

General Wallace, the United States Minister to Turkey, still persists in his refusal to recognize the validity of the new Turkish tariff which took effect on March 13.

The Committee of the Belgian Chamber of Representatives has rejected the import duties on tobacco proposed by the Government.

The Fine Art Exhibition was opened at Munich on Sunday. The American exhibit is reported to be good.

Sir Alexander Galt, in a recent conversation at Montreal, said that the right of Canada to make her own commercial treaties had been practically conceded by England. The *modus operandi* was that representatives of Canada should be associated with the British Minister, and that the proposed terms be submitted for approval to the British Government. To these conclusions England reserved the right of judgment, especially in cases where treaties, in its opinion, were objectionable or would lead to national complications.

William Spottiswoode, LL.D., F.R.S., died in England on Wednesday at the age of fifty-eight. He was graduated at Oxford in 1845. In 1878 he was elected President of the British Association at the Dublin meeting. He will be buried in Westminster Abbey.

HONORARY DEGREES.

THE question of Governor Butler's title to a degree from Harvard College can hardly be considered settled as yet. There can be no greater mistake than to suppose that the respectful and friendly reception given him at the Commencement dinner indicated any change in the feeling toward him of the graduates of the University, which remains precisely what it has been for the last seven years. Those who thought it was well to refuse him the degree think so still. Those who thought it was a mistake not to give it think so still also. All that the cordial greeting given him at Commencement meant was that good manners had triumphed over prejudice or resentment, and that no departure was to be permitted from the usage which from the earliest times has made the Governor of the Commonwealth welcome at all ceremonies and fêtes of Harvard College.

The question whether he shall have the degree will come up again, should he be reelected—as many think likely—next fall. The Corporation of the College were all in favor of giving him the degree, and we believe are still sorry it was not given him; and the majority against giving it to him in the Overseers was a very small one, and only decided that this year he should not have it, so that the College has still to say whether the practice of making every Governor a LL.D. shall be abandoned or resumed. Some formal decision of the matter is absolutely necessary. If it be left as it is now, there will probably be a controversy over it whenever any one elected Governor is for any reason obnoxious to any considerable body of the graduates. As long as the LL.D. remains a college honor, to be bestowed or withheld as the college authorities may please, there will be protests from time to time against giving it to this or that man who may reach the Governor's chair. It is not likely that there will, under such conditions, ever again be complete acquiescence in the doctrine that a majority vote makes a man fit for any honor whatever, even for a distinction which the College, in theory at least, reserves for acknowledged and conspicuous merit in literature, science, art, or law. So that in the interest of peace and quiet, if of nothing else, it seems as if the College would have to say, formally and openly, either that it would give the degree to no more Governors, or that it was not in the Governor's case to be considered a college honor at all, but something to be bestowed on him, as a matter of course, like the title of "Excellency," and neither expressing, nor intended to express, any feeling about him whatever, either in the way of praise or blame. But it is obvious that a public announcement of this sort would deprive it of much, if not all, of its value in Gubernatorial eyes. Nothing to the unmeaningness of which the popular attention has been formally called, was ever long coveted by anybody.

The question can hardly be decided either way without a thorough overhauling of the expediency of all honorary degrees. As at present bestowed, their effect is to lower the value of all college honors in the popular eye. Originally they meant something positive and well defined. A Master of Arts was once a man who had pursued a certain course of study and passed certain examinations successfully. So was a Doctor of Divinity or a Doctor of Laws. At present these three degrees have no definite meaning at all. They are bestowed lavishly by all the colleges for all sorts of reasons, some of them not altogether creditable—because a college benefactor has asked for it, because the grantee is himself a college benefactor, because a man has written a book, because he has reached the age of sixty, because somebody else has to have it, and his feelings would be hurt if he did not get it too, because he has himself teased the Trustees for it, because he has a large congregation, because "charges" have been made against him unsuccessfully, but have left him in low spirits. The result is that the country is swarming with Masters of Arts who have never mastered any arts, and Doctors of Law who do not know any law, and Doctors of Divinity with whom divinity has very little indeed to do. Making every Governor of Massachusetts a Doctor of Laws simply for the purpose of testifying the respect of Harvard College for the Commonwealth is, of course, a piece of the same great unreality. It is right that the College should respect the State, and uphold in all proper ways its connection with it, but to express its respect by calling the very ignorant, and it may be obscure or vicious, person whom the chances of politics may any day put in the Governor's chair, a Doctor of Laws, is a custom worthy rather of an heraldic office than of a great institution of learning, in the country which, more than any other, has driven fiction and pretence out of politics and society and law.

There is just now a good deal of talk about university reform and changes in the curriculum and in the status of both students and professors. It would seem, therefore, an eminently fit time to discuss the propriety of giving reality and definiteness to college degrees, and stripping them of their mediæval drapery, or rather of the drapery which modern custom has hung round the mediæval idea. Would it not be well, for instance, for Harvard to take the lead in making its M. A. or LL.D. a bona-fide certificate that the wearer has knowledge of a certain definite kind, in a certain definite quantity; its D.D. a certificate that he really possesses theological learning, and that his life is pure and above reproach? This would be a step in the direction in which all modern institutions are now being compelled to move—the direction, we mean, of truthfulness and simplicity—as the prime condition of their retaining their hold on popular affection or respect. To those who are prejudiced against such a change on grounds of sentiment, we would say that there is nothing less sentimental in our time than all forms of sham, and one of the greatest shams of our time is a LL.D. who knows nothing, or a D.D. who has no divinity. There is nothing about him or his degree to excite the reverence of any human being, but much to bring college learning, in our country, into popular disrepute.

THE PAUPERS AND THE IMMIGRATION LAW.

MUCH as has been said as to the defects of the law passed by Congress to regulate immigration, we have not seen in the discussion to which the subject has given rise any definite suggestion as to how the act of 1882 ought to be amended. The States, until within a few years, undertook to protect themselves against immigrants likely to become a public charge by a head-money tax, or by requiring a bond from the steamship company conditioned against the immigrant becoming a public charge within a certain term of years. The head-money system has been declared unconstitutional by the Supreme Court, and the United States law of 1882 is designed to supersede all State legislation on the subject. In the first place, the head-money and bonds are replaced by a duty of fifty cents for every alien landed here, the money to be paid into the Treasury, and to constitute an "immigrant fund," and to be used, among other things, "for the care of immigrants arriving in the United States" and "for the relief of such as are in distress." This clause, it will be seen, is of considerable importance, for it contains a recognition of a fact which always has influenced and always must influence the immigration policy of this country—that temporary distress is not a test of pauperism, but may be, and often is, due to accident or misfortune.

The next clause of the act undertakes to dispose of the pauper question, and declares that it shall be the duty of the State Commission, Board, or officers "to examine into the condition of passengers arriving at the ports within such State in any ship or vessel, and for that purpose all or any of such Commissioners or officers, or such other person or persons as they shall appoint, shall be authorized to go on board of and through any such ship or vessel; and if on such examination there shall be found among such passengers any convict, lunatic, idiot, or any person unable to take care of himself or herself without becoming a public charge, they shall report the same in writing to the Collector of such port, and such persons shall not be permitted to land."

The execution of this law in this port requires action on the part of the Emigration Commission; but although the law was passed in August of last year, they did not until Thursday of last week take any steps to enforce it. They then adopted the following resolution:

> "Resolved, That inspectors employed by this Board are hereby instructed to conduct their examination of immigrants on board the vessels bringing them, and that the Collector of the Port be asked to detain the said vessels in stream for sufficient length of time to permit said examination."

Of course any pauper whom they refuse to allow to land will have to be taken back by the steamship company at its own expense; and it was, we presume, with a view to inducing the steamship companies to keep a strict watch in their own interest on the class of immigrants they bring over, that this clause was inserted in the bill. The companies do not wish to be carrying back rejected pau-

pers as dead-heads. They will, we may suppose the framers of the bill to have argued, be very careful whom they bring over. And this is exactly the way in which the law seems to have worked. From Mr. Trevelyan's statement in the House of Commons, on Thursday, it appears that even the five families of workhouse emigrants who came by the *Furnessia* have friends here who have offered them homes.

That the law is likely, when enforced, to prove a more efficient protection against this class of emigrants than is generally supposed, is strongly suggested by the circular letter of the Commissioners to the English companies announced as having been drawn up within a day or two. This circular informs the companies that if they will consent to take back any passenger landed at Castle Garden whom the Commissioners may find likely to become a public charge, the Commissioners will not insist on a rigid inspection of all passengers before landing. As a thorough inspection and examination on board the vessels would be likely to cause a great deal of delay and inconvenience to the companies, there seems little doubt that they will agree to this. The circular shows how much power the law enabling the Commissioners to prevent the "landing" of suspected emigrants really gives them, and how much it makes it for the interest of the companies to avoid causing trouble by "flooding the country" with paupers. The Revised Statutes (U. S. R. S., Sec. 2162) contain a provision with regard to the importation of coolies, requiring the certificate of the consul at the port of embarkation of the fact that the emigrant comes "voluntarily"—*i. e.*, is not brought over in a kind of slavery. A similar provision might, of course, be adopted with regard to paupers. The consul might be required to give a certificate that the emigrant was not likely to become a public charge. For this purpose, however, he would have to make an examination into the case of every emigrant on the other side, before his embarkation, and the inquiry would be no less difficult than an inquiry into the voluntary or involuntary character of the trip. But everything would depend on the energy and vigilance of the consul, just as it does, under the present law, upon the energy and vigilance of the Commissioners. Had the Commissioners originally taken steps to inform themselves what the law was, and sent their circular to the steamship companies before the assisted emigrants began to come over, and made preparations for a vigilant system of inspection, there would probably never have been any trouble. It must be said, however, also, that we should have lost a very remarkable and instructive "scare."

The fact remains, of course, that there is no absolute test of pauperism in these cases, and that an inquiry into the likelihood of immigrants becoming charges upon the State must be rough and summary, and generally decided by an inspection of the immigrant and his purse. But we would respectfully ask our contemporaries who have been discussing the subject, What else, in view of the uncertain condition in which all State regulations have been left by the head-money decision, they have to suggest? Why is not the idea which seems to underlie the law a very good one?

STANDARDS OF MANNERS.

A CORRESPONDENT asks us to publish, as a complete reply to the question, What is a gentleman? the following definition, which, he says, was first published some years ago in a New York newspaper:

"The gentleman is distinguished from him who is not a gentleman by moral qualities which have justly won the highest place in the respect and admiration of the world. The gentleman restrains his passions and subdues his selfishness; he considers the comfort of others before his own; he respects the personality of those with whom he is brought in contact; he never takes an unfair advantage; he is scrupulously regardful of his own honor, doubly scrupulous if the honor of others be committed to his keeping; he may lack mental culture, but he is never without moral refinement; he may have an unpolished exterior, but never a base nature; courage he has, but shows it less in facing danger than in meeting responsibility; if not always sincere, he is always reliable; and to him may be safely committed all that others hold most dear, in simple reliance upon his honor; he is a man whose manly traits are penetrated and modified by the gentleness of woman's nature, and who still preserves and endeavors to constantly act upon the manliest of instincts—magnanimity."

The view of the subject on which this definition is founded is a very old one. Thackeray and Dickens were both very fond of it, and both made use of it in their different ways—Thackeray chiefly by drawing a gentleman, setting him on his legs, and making him so real that we feel as if we had known Colonel Newcome in the flesh; Dickens by exposing the odious selfishness and want of magnanimity and consideration for others which he thought the distinguishing marks of the people of the so-called polite world. According to their theory, a true gentleman is a synonym for a polite Christian, but neither of them ever pointed out, as the author of the foregoing extract does, that, in the type, sincerity must be sacrificed to "reliability." What this means, we presume, is that complete consideration for others requires us often to dissemble our actual feelings, as in the *mot* attributed to the Duc de Morny, himself a polite and at the same time bad man—that the most perfect illustration of good breeding is furnished by a man who listens with interest to things he knows all about, when they are told by a person who knows nothing about them.

The difficulty with this theory is, that when those who uphold it are called upon to give an illustration of the type, they always refer us to some character in fiction, or to some person long since dead, of the details of whose life little has been preserved except some signal act of generosity like that of Sidney's cup of water, which has evidently been handed down to us because it struck Sidney's contemporaries just as it does us, as a wonderful piece of unselfishness, not to be expected from any one. A lady dying on the field of battle might do such a thing as a matter of course—provided that the soldier was not of her own sex; but beautiful as the story is, as a test of good breeding it is plainly ridiculous. Thackeray delivered a lecture to show that George IV. was no gentleman, because he was a cruel, selfish debauchee; yet his contemporaries never seem to have thought that this affected the question at all.

There is no doubt, however, that the modern notion of a gentleman has been considerably affected by the hold this view of the subject has secured in literature, and this is one of the reasons why it is becoming increasingly difficult to make out what people mean when they speak of a gentleman, or indeed, for that matter, of a lady. It is certainly dreadful to think what the consequences would be if we actually should attempt to apply the standard of refinement of feeling and consideration for others to society, which in theory ought to consist only of ladies and gentlemen. It would exclude from society some of its best, most energetic, and progressive members. No one, for instance, would be in society who made himself agreeable to Mrs. Jones by declaring to her, as we so often hear people do, that Mrs. Brown is the handsomest (or the cleverest, or the best-dressed) woman he ever saw. Consideration for the feelings of others clearly requires us to say "one of the handsomest," as this is the only way to leave a loophole for Mrs. Brown's vanity. So we should bid a long farewell to those of our companions who address people by the wrong name—often by the wife's name, or a married woman by her maiden name; who habitually mispronounce and misspell names, who tell a friend that they have mistaken him or her for another person—for in nine cases out of ten to say "You resemble so and so" hurts the feelings of the person to whom the remark is addressed. We should no longer be entertained with critical remarks upon our clothes, looks, or ways. We should no longer hear that we "have no appetite" or "eat nothing." On the other hand, we should be deprived of the satisfaction of making ourselves the great topic of conversation, especially our personal habits, our daily bath, shirts, boots, hats, and, worse than all, our ailments. We should have to avoid the fascinating occupation of digging up the past and talking about "old times"—a kind of excavation that disagrees terribly with some people.

We should not be able to ask people how much wages they pay their servants, or to laud to the skies absent friends of whom those present know nothing, or to describe with entirely incommunicable rapture places they have never seen. The old rule that politics and religion are not good subjects for general conversation because they lead to quarrelling, would have to be revived. We should not even be able to turn up our friend's dinner-plates to find out the value of his china, nor ask him where he got his chairs. Questions of this kind, which were formerly considered in very bad taste, furnish one of the great staples of modern conversation, and the friendly curiosity which has broken down the barriers that formerly surrounded furniture, pictures, and plate, is rapidly becoming regarded as legitimate in matters of dress, many women liking apparently to be asked where they got and what they pay for their clothes. General conversation as to underclothing is not yet recognized as permissible; but the deep and permanent interest which attaches to the subject makes it difficult to believe that it will be permanently tabooed. Systematic questioning of any kind was once universally considered bad manners—a fact recognized in

the old story of the London alderman's remonstrance: "Sir, with your damned interesting questions you've made me swallow a piece of green fat without tasting it"; for it is not only our finer feelings that an ideal code requires others to respect.

What do we think of a dinner party where the men are all in full dress, but the women "go-as-you-please"? What is to be said about the almost universal practice of indiscriminate introductions of people to one another without any inquiry as to whether they wish to know each other or not? Dropping the title "Mr." altogether on short acquaintance, and calling people by their last names, was formerly considered as insulting. But this sort of familiarity has now become complimentary, and the almost universal use of nicknames by men and women makes it look as if the change were founded upon some deep-rooted modern tendency. Brummel is said to have once rebuked a lady severely for using the expression "take tea," saying, "Madam, a vulgar man can take liberties, but one drinks tea"—an anecdote which not only shows how completely useless the learning of Brummel's day actually is, but also that Brummel, were he alive now, would not be likely to succeed as a man of fashion, for there is one kind of consideration for the feelings of others that may nowadays be regarded as a *sine qua non*—that which always teaches us to refrain from rebuking the vulgar for their vulgarity. Their numbers are so great as to make it very unsafe.

THE UNIVERSITY BOAT RACE.

NEW LONDON, Conn., June 28, 1883.

IT has seldom happened in the history of American college rowing that the crew which up to the very last days of training was looked upon as a sure winner has been so easily and thoroughly outrowed as were the Yale men in to-day's race. When the correspondent of the *Evening Post* wrote from Cambridge five weeks ago that the Harvard boating men were in despair over the apparent impossibility of securing a good stroke to take the seat left vacant by Mr. Curtis's untimely withdrawal, it was generally conceded that the young "giants" from New Haven had an easy task before them, and few of those interested in the annual race between the two universities ventured to hope for a close contest, resigning themselves to the prospect of witnessing another of those mournful "processions" which every now and then mar the enjoyment of all the spectators, except perhaps a few of the youngest and most enthusiastic supporters of the winning crew. Soon after the University eight took to the water of the Charles at the opening of the spring the most ominous rumors began to spread of the poor form and general weakness shown at their practice. It was whispered that in a trial spin with a "scratch" eight from the Union Club of Boston the University had been easily beaten, and it subsequently turned out that the report was true. With three new men in the boat, necessitating frequent changes; with stroke's thwart not permanently filled, Harvard's chances, even as late as during the last weeks of May, were with good reason considered worse than ever before at a time so near the race. Moreover, the Columbia crew, when they appeared at New London to take part in what some people are ill-natured enough to call their "side-show" with Harvard, were ranked above the latter, and on the morning of the race were backed at odds to beat the Cambridge men.

Whatever objections may be urged to the occasional Harvard-Columbia race, it certainly cannot be said that it detracted from the interest of the Harvard-Yale race of to-day. So far from this being the case, there can be little doubt that but for Harvard's easy defeat of Columbia the attendance to-day would have been a mere handful compared with the throng which filled the grand stand, the observation train, and the pleasure-boats along the course. The result of last week's race was a genuine surprise, and opened people's eyes to the fact that the Harvard men had been greatly underrated, and consequently public interest in the race with Yale, which had decidedly flagged, began to revive at the bare prospect of a close struggle. And yet the original predictions of the wise were at least half true. To-day's affair was, as they prophesied, an old-fashioned "procession" of the most pronounced sort, with only this difference—that the favorites were beaten out of sight.

With New London's usual good fortune, the fresh southerly wind with which the morning opened fell just short of causing a postponement. There was no call for any delay, although the rough and choppy water meant poor time. But good time is no longer a criterion of excellence, or a necessary element for a successful boat race, since the universities have taken to pulling on the New London course. In this respect, as in almost every other, the university race has come to resemble its English model, and the crew which to-day wins by "the fastest time on record," may be beaten over the same four miles to-morrow in worse time than it has ever made in practice, so varying are the conditions of the course in point of wind, tide, and water. Nevertheless, it is a capital course, equally fair to the crews, and possessing every advantage for spectators. The management this year was better than ever, leaving nothing to be suggested, and reflecting the greatest credit upon the skill and energy of the gentlemen of New London who had the matter in charge. The race came off with admirable promptness. Both crews came out as the press boat steamed up the river, and dropped their shells into the water before the observation train had reached the starting point. When the train came in sight the eights, in obedience to the referee's signal, pushed from their floats and immediately drew into position. Yale showed as fine and strong a crew as ever sat in an eight-oared boat. Their peculiarly short and jerky stroke calls for so much strain upon the arms that their breasts and biceps seemed, for rowing men, abnormally developed. Their long, odd-looking craft, with its curious pair-oared rigging, bore a huge windsail at its nose, in the middle of which was fastened the little blue flag at a distance from the centre of the shell equal to half the length of the Harvard boat, an arrangement agreed upon to equalize the advantage to Yale of eight or ten extra feet of length. A few minutes' unavoidable delay arose from the fact that Harvard's starting skiff had dragged her anchor down stream, and the Yale captain very naturally demanded a proper alignment, which consumed some time, during which the "press" and "university" boats drifted down stream half a mile from the start. At last we caught the flash of the oars, and the crews were off.

It seems almost incredible, but no less than four reporters on the press-boat, who made most careful preparations for accurate counting, "caught" Yale's rate, during the first minute after the first ten strokes, at fifty-three. Harvard went away briskly at thirty-seven, splashing very little, considering the state of the water, while Yale for half-a-dozen strokes dashed up the foam in clouds of spray. It was impossible to see from the press-boat which crew got off first, but Yale's rapid dash gave her a commanding lead at once, and rowing at least a dozen more strokes to the minute than her rival, she began to draw away from her before a hundred yards had been pulled. It must have required a good deal of nerve for Mr. Perkins, Harvard's new stroke, to feel the Yale boat slipping by him without getting flurried or losing his head. But he kept his men to their easy, swinging pace, and Yale, a little more than a quarter of a mile from the start, led Harvard by almost one of her own long boat's lengths, so that the little blue-capped coxswain could glance over his shoulder at the bow oar of the Harvard boat. But just before the half-mile flag was reached the Harvard stroke spoke to Mr. Sanger, the coxswain, and the latter, as it subsequently appeared, called to his men to "take her up for twenty strokes." For just twenty strokes and no more the spurt lasted, the pace jumping to thirty-seven or thirty-eight from thirty-four to the minute, but the effect was marvellous. The Harvard boat drew up to the leaders hand over hand, for an instant the two eights were even, and then Harvard, pulling easily at thirty-seven, drew rapidly ahead, with Yale tugging desperately at forty-four. So quickly was the lead reversed that the men in the two boats seemed to change places like the spokes of two wheels turning in opposite directions.

In less than a minute the race was lost and won. At the half-mile flag Yale's nose was ahead. In another hundred yards Harvard had taken the lead, and before three-quarters of a mile had been rowed her coxswain was ahead of the Yale bow, and slipping away at every stroke. Before the mile flag was passed the first open water between the two boats began to show, and at the mile Harvard led by from three-quarters to a full length clear. In the next half mile the lead was doubled, and at the two-mile stake Harvard's advantage, so far as could be reckoned from the press-boat, was between three and five lengths of clear water. It was at this point that Yale did her poorest rowing. Mr. Folsom ran up his stroke to forty-four, and hardly a man in the boat was able to keep his form at that rate and row the stroke out. The swing was out of time, and the "catch," although fairly even, was weak and ineffective. To add to their discomfiture, the wind, which had shifted slightly to the westward, caught their huge windsail on the starboard side and sent them heeling over to port. This forced Mr. Tucker, their coxswain, who throughout the race handled his boat admirably, to jam his rudder hard down so as to keep the shell close to her course, with the inevitable result of a loss of headway. The Yale boat, it should be said, was visibly better adapted to smooth water. The body lines were carried well out each way and she rode too high for the stiff wind and choppy sea which the Harvard men, with their free, rhythmic stroke and neat recovery, found so comparatively easy to cope with. Harvard passed the three-mile flag eight or ten lengths ahead, still rowing at thirty-four, Yale at forty-two, which she increased to forty-five half a mile from home. Mr. Perkins made no change in his stroke until just before the finish, when he spurted to thirty-seven, and his men sent their boat flying over the line the easiest of winners by a score of lengths. They had been beautifully steered from start to finish. Over a minute later, as the Harvard men lay resting on their oars across the finish, Yale came pounding down the course. Mr. Folsom rallied bravely and forced his stroke up to forty-five; his men responded with vigor and drove their boat over the last hundred yards, coming in in

26 minutes 59 seconds, to Harvard's 25 minutes 46½ seconds.

It was a very bad defeat, and must have been a mortification to the men who have obstinately stuck to a style of rowing which the best New Haven oarsman and coach had warned them was absolutely false. It was a pity for Yale, as Captain Cook said a year ago, that Harvard's sweeping victory did not come then, and that the "eel grass" furnished an excuse for Yale's defeat in 1882, which was in reality due to the same causes that put her so far behind to-day. With practically the same veteran crew of a year ago, they were disastrously beaten by an eight which had but a few weeks' pulling together in their present places, and was composed of men most of whom were schoolboys when half of the Yale crew rowed their first and a winning 'Varsity race. In point of size, weight, and seasoned strength the Yale men were immeasurably superior to their rivals. But all these advantages were rendered absolutely nugatory by the deliberate adoption of a style of rowing in which they were of no avail.

THE BRIGHT FESTIVAL AT BIRMINGHAM.

LONDON, June 16, 1883.

THE celebration at Birmingham of Mr. Bright's silver wedding to that constituency, the twenty-fifth anniversary of his first election there, is an event without parallel in our political history for the largeness of the scale on which it has been carried out and the enthusiastic recognition of the services of its central figure. There is no other place in England which could have organized such a gathering. Birmingham is the most political of all our seats of political life. In our other great English towns, in Manchester, Liverpool, Newcastle, Leeds, Sheffield, London itself, both parties are strong, and though the Liberals command a majority in all of these except Liverpool, still the Tories are also so powerful that neither has been able to gain a complete command of the place, and the upper classes in particular are so largely Conservative as to give that party a social prestige which compensates its numerical inferiority. But in Birmingham the Liberals dominate and pervade the whole place. They have so overwhelming a majority in the Parliamentary constituency that they return three Liberal members in spite of a voter's being allowed, under the minority-vote device, to give only two votes instead of three. They have the municipal government entirely in their hands, and every department of local administration. They have invented a system of representative councils of the party which has served as a model for the rest of the country. Nowhere is there so keen an interest in political affairs among the mass of the voters. Nowhere are the relations of the working people with the classes next above them more intimate, and their coöperation in political action more cordial. In Birmingham both that party discipline which often checks enthusiasm, and that enthusiasm which is apt to break down discipline, are at their highest point. The importance, as a centre of political thinking as well as action, which was attributed to Manchester forty years ago, has now passed from Lancashire to the capital of the West Midlands, and its name excites the same hostility from the land-owning interests as that of Lancashire did in the days of the Anti-Corn-Law League.

It is not altogether easy to account for this newly-won ascendancy. Something is probably due to mere chance, to the accident which has raised up in Birmingham a group of able and energetic men with a passion for political life, and who have known how to rouse and guide the working classes. But the character of Birmingham trade has no doubt also its influence. There exists here much more largely than in the Lancashire towns a class of small employers of labor, men who form a link between capitalists and workingmen, men who have often sprung from and retain the political feelings of the workingmen, but have not grown rich enough to acquire the plutocratic sympathies of the great northern mill-owners or coal-owners. The manufactures of the place are also very largely those which require highly-skilled labor, which attract the most intelligent artisans, and develop their aptitudes to a high point. There is a good deal of intellectual life about Birmingham, an unusually large number of societies for study and discussion, a great use of public libraries.

So soon as the town perceived that its influence was recognized and had begun to alarm the conservative classes, it was naturally roused to greater exertions. The possession of Mr. Bright, so long the leader of English radicalism, the close political friend and only oratorical rival of Mr. Gladstone, has been a great feather in Birmingham's cap, and the opportunity for at once honoring Mr. Bright, making a democratic demonstration, and showing what Birmingham can do, stimulated the people to the utmost. You have already read accounts of the proceedings, and probably also reports of the speeches delivered by Mr. Bright, Lord Granville, and Mr. Chamberlain. I need neither abstract these, nor repeat the observations made in a recent letter to you on the position which Mr. Bright now holds in England, and the reasons why the abuse wherewith he used to be assailed twenty years ago has been replaced by a sentiment of respect even from his opponents, and of pride in the mind of the public at large. But the speeches he has made, containing so much historical or retrospective matter, suggest some further reflections on his career and on the sources of his influence.

His political action, now covering a period of more than forty years, has been devoted to three causes—those of free trade, Parliamentary reform, and of peace. The first of these questions has been practically at an end among us since 1852, when the Tory Government of Lord Derby abjured protection, which Peel had already overthrown; for, although the work of striking the fetters off trade was not quite completed then, and although attempts have been since made to get up a sort of disguised protectionism under the name of reciprocity, there has never been, and is not now, any serious falling away from faith in the theory of free trade, or from the practical applications which our legislation has given to that theory. Mr. Bright's work in this direction may therefore be said to have been complete more than thirty years ago, and he has enjoyed ever since the distinction of being one of those to whom the world has come round.

The Parliamentary-reform agitation which, beginning about 1859, produced the abortive bill of Lord Russell and Mr. Gladstone in 1866, and the Parliamentary Franchise Act of 1867, carried by Mr. Disraeli—to the astonishment of all England, and, above all, of the country squires who voted for it—was largely the work of Mr. Bright. His aim was to extend the suffrage to the upper part of the working classes, the skilled artisans and persons generally from whom a fair measure of intelligence and interest in politics might be expected. He was quite satisfied with the act of 1867, so far as the boroughs were concerned—indeed, it was conjectured that he would have been just as well pleased if the qualification had not been so far reduced, for it included a great many people belonging to the lower and less educated section of the working class. The county franchise still remained, and remains to this day, much more restricted; but Mr. Bright's interest was mainly for the borough people, and he knows, like everybody else, that the change in the counties cannot be long delayed. Thus this second great object of his exertions having been attained, he has found it the easier to rest from his labors, and look back with satisfaction on the past. In the third aim he has been less successful. The Crimean war was waged in spite of all the opposition he and Mr. Cobden could offer. His resistance to Lord Palmerston's Chinese war in 1857 cost him his seat at Manchester. He has seen Britain engaged in a good many colonial wars since then, and retired from the Ministry last July because it had entered on military operations in Egypt. The principles of non-intervention are still far from dominant in this country, and seem unlikely to become so in this generation. Yet they have made considerable progress since he first appeared as their advocate, as the fall of Lord Beaconsfield's Government and the amount of resistance evoked by the recent Egyptian expedition have amply proved; so that in this respect, also, Mr. Bright has good reason to be proud of the influence he has exerted, and to look hopefully toward the future.

He now rarely speaks either in the House of Commons or on a public platform. Though his health is fairly good, and his oratorical powers undiminished, he has all the air of a man who has done his life's work, and does not seek to embark in any new struggles. Upon the topics which form the programme of the present Radical party he seldom expresses himself. He is indeed a foe to established churches, and presided the other day, for the first time in his life, at the meeting of the great nonconformist society which seeks to disestablish the state churches of England and Scotland. But he takes no part in the skirmishing which goes on upon ecclesiastical questions in Parliament. He rarely touches on Irish affairs, and though every one knows that he sympathizes with the sufferings of the Irish people, and would advocate afresh his old plan of aiding them to buy out the landlords, he is a stout upholder of the Union, and denounced with severity the "rebel party," as he called it, which has sought to paralyze the House of Commons. He shows, by his dislike to such proposals as those which Mr. Chamberlain commended (in a remarkable speech delivered in his honor at this Birmingham celebration) for the establishment of equal electoral districts and the payment of members of the House of Commons, that he is far from being an ultra democrat.

The great position he holds, the confidence which he inspires, are not due mainly to his eloquence, remarkable as that is. Nor are they to be wholly ascribed to the fact that he has proved to be right in so many hotly disputed questions—right about free trade, about Parliamentary reform, about the disestablishment of the Anglican church in Ireland, about compulsory church rates, about the civil war in the United States—a contest in which the clearness and boldness of his attitude have been the better remembered because he stood opposed to most of the upper and so-called respectable classes in England. What has specially impressed the people of Great Britain is the singular consistency of his career, as the index and consequence of a singularly simple and straightforward character, and of a political faith which is, so to speak, all of a piece. No one has ever had the least doubt what he thought, or in which camp at any moment to look for him. He has often been accused of bit-

terness and violence, sometimes of narrowness; but no enemy has suggested that he had any personal ends to gain, or that there was in him any trace of weakness or hesitation. This sort of character is what most commends itself to Englishmen and to democracies, and the best wish that can be formed for English democracy is that it should continue to trust and value its leaders mainly for their honesty and single-mindedness. Such qualities are by no means the only ones needed in a popular leader; yet the want of them is even more fatal than the want of that tact in party management and skill in moving masses of men by speech which democracies tend to develop. With such a character and influence, it is a pity that Mr. Bright cannot remain in public life for another twenty years to help us to steer through the storms which seem to be awaiting us in the near future. But this, as Mr. Ruskin has said, is the most vexing thing in human affairs, that when one is most fitted by knowledge and experience to serve the world, one's time to leave it approaches. Y.

PROGRESS OF FEMALE EDUCATION IN ENGLAND.

LONDON, June 21.

A FEW days ago there took place at Cambridge a ceremony which, though it attracted no great notice here, and has perhaps not been telegraphed to America, deserves notice as illustrating the progress of one of the most beneficial movements of our time. This was a festival, if a quiet and unpretending afternoon gathering can be called by that ambitious name, held at Newnham Hall, in the outskirts of the university town—a college founded some twelve or fifteen years ago for the higher education of women. The occasion was the presentation to Miss Anne Jane Clough, sister of the poet, Arthur Clough, and principal of Newnham since its foundation, of her portrait, executed by one of our best artists (W. B. Richmond), and subscribed for by former students of the College. The day was fine, a piece of good fortune which seldom attends open-air ceremonies in England, and a good many sympathizers in the cause of female education had gathered from London and other places, not only to show their regard for Miss Clough, but to celebrate the growth of the institution and rejoice over the triumph of the cause which it represents. About one hundred of the past students and nearly as many present ones covered the lawn with their pretty summer dresses. The speeches, most of them made by ladies, were short and genial, and the only adverse criticism passed on the proceedings came from some of the male sympathizers, who observed that the girls needed to be trained in the art of cheering, their high-pitched voices giving rather a dropping fire than a solid volley of sound.

The whole question of university education for women seems to have excited so much attention in America lately that your readers may be interested in hearing what has been done in England during the last eighteen years. It is from the year 1865 that the movement dates. In that year a Royal Commission was appointed to inquire into and report on the endowed grammar schools of England and Wales, and on what is called "secondary" education generally. Several ladies who were already alive to the deficiencies in the education of their own sex, memorialized this Commission to extend the scope of its inquiry to girls' schools, and the Commission, taking what was then thought quite a bold step, consented to do so. A considerable number of girls' schools were accordingly visited, and some evidence taken regarding the state of girls' education generally, the result of these inquiries being, as was expected, to show that it was scanty and superficial, inferior even to the education received by boys, poor as that generally appeared to be. One of the points brought out was the absence of any institutions doing for women what the universities did for men, and the consequent difficulty in which women stood of obtaining the highest kind of education—a difficulty which told on girls' schools by making it hard for them to procure thoroughly competent mistresses. This led in the course of the next year or two—the report of the Commission having been published in 1868—to the establishment of a college for women, which was first placed at Hitchin, a town on the Great Northern Railway, between London and Cambridge, and in a little while, when money had been collected sufficient for the erection of buildings, this college was finally settled at Girton, a spot about two miles from Cambridge, whence it takes the name of Girton College. Its purpose was to provide for women the same teaching in the same subjects as men receive in Cambridge University, and the teachers were nearly all of them professors or tutors there, men in some cases of high eminence.

Meanwhile, in Cambridge itself, a system of day classes for women, taught by University teachers, had been created, at first as an experiment for one year only. When several years had passed, when the number attending increased, and it was found that women came to lodge in Cambridge in order to profit by these lectures, a house was hired in which to receive them, and ultimately a company was formed and a building erected a little way out of Cambridge, under the name of Newnham Hall, to which the lectures, now mainly designed for these students coming from a distance, were attached. Thus, at about the same time, though from somewhat different origins, Girton and Newnham came into being and began their course of friendly rivalry. Both have greatly developed since then. Their buildings have been repeatedly enlarged. Their numbers have risen steadily, and now average in each institution from seventy to eighty. In Girton the charge for lodging, board and instruction is £100 per annum, in Newnham a little less. The life in both is very similar, a lady being placed at the head as resident principal, while the affairs are managed by a committee including both men and women. The lectures are delivered partly by Cambridge men, professors in the University, or tutors or lecturers in some of the colleges, partly by ladies, who, having once been students themselves, have come back as teachers. These lectures cover all the subjects required in the degree examinations of the University; and although students are not obliged to enter themselves for those examinations, they are encouraged to do so, and do mostly set the examinations before them as their goal.

Originally the University took no official notice of the women students, and their being examined by the regular degree examiners of the University was a matter of pure favor on the part of those gentlemen, who consented, year after year, to add this additional labor to the duties which the University imposed on them. At last, however, some examiners came into office (for the examiners are changed every two years) who disapproved of this informal examination of the women candidates, and accordingly a proposal was made to the University that it should formally authorize and impose on the examiners the function heretofore discharged by them in their individual capacity. This proposal, after some discussion and opposition, was carried, so that now women may enter both for the honor examinations and the pass examinations for the University degree as a matter of right. Their names do not appear in the official lists among those of the men, but separately; they are, however, tested by the same question papers and judged by the same standard, so that whatever honors they obtain have at least as much value as those obtained by a young man.

Some Oxford graduates and their friends, stimulated by the success of Girton and Newnham, have founded two similar institutions in Oxford, one of which, Episcopalian and indeed High Church in its proclivities, is called Lady Margaret Hall, while the other, in compliment to the late Mrs. Somerville, has been given the title of Somerville Hall. These establishments are conducted on much the same lines as the two Cambridge colleges, but they are still much smaller, and the University of Oxford has not yet directed the admission of women to its degree examinations. In the large towns where new colleges have been lately founded or courses of lectures established, such as Manchester, Liverpool, and Leeds, steps are usually taken to provide lectures for women, but, so far as I know, no regular places of residence and teaching have yet been opened. It has, however, been proposed that the University of St. Andrew's, the oldest but also the smallest and most disadvantageously placed of the Scottish universities, should be turned into a university for women, the number of its students being now very small, while the seclusion of the location may be thought favorable to its prospects as a place of studious quiet for young women.

What is called among you the question of co-education has come up very little in England. All the lectures given inside the walls of the four English colleges I have mentioned are, of course, given to women only, the colleges being just as exclusively places for women as Trinity and St. John's are places for men. No one has proposed that women should be admitted to Trinity or St. John's, for the conditions and usages of our undergraduate life would be unsuitable for women. On the other hand, there are many University lectures to which the students of Girton and Newnham resort, sometimes with, sometimes, I believe, without, the escort of an elder lady. No difficulty seems to have ever arisen from this practice. The women take their seat by themselves in one part of the lecture room, listen and take notes, rise and walk or drive back to their college, when the lecture is over, without exciting any remark. It would, of course, be possible to go further—to matriculate them as full members of the University, subject them to the ordinary University discipline and regulations, and give them the ordinary University privileges which undergraduates possess. But this has not been asked for. Things have gone on quietly and profitably so far, and no trouble has arisen from the fact that these women's colleges stand in or near towns filled with young men, many of whom are pretty idle and allowed to do what they please.

More significant even than the progress which I have endeavored to trace in the number of female students, and in the legal recognition they have won, is the change in English public opinion on the subject. Thirty years ago the idea of giving women a university education would have been scouted as absurd. Twenty years ago, when a few enthusiasts began to talk of it, it was met with ridicule, or with arguments that education was not needed for women, or would injure them and destroy all the feminine graces. Now this hostility has so completely vanished that its existence is scarcely remembered. People take the colleges for wo-

men, the admission of women to examinations as a matter of course; even the comic papers have ceased to make jokes on the subject. A little of that sentimental interest which induced the Cambridge undergraduates, who walked out to see Girton College being built, to ask the bricklayers to let them place a brick in the rising wall, still lingers, and makes people more earnest in working and subscribing for women's colleges than they would be for men's; but otherwise the sexes stand pretty much on a level in this matter. People of all ranks, all political or religious opinions, send their daughters. At this moment the principal of one of the two halls of which Newnham consists is a daughter of the Prime Minister, while her predecessor was a niece of the Marquis of Salisbury. The principal of Girton is a niece of the late Lord Lawrence, the famous Governor-General of India. Of the students a fair proportion belong to the wealthy classes, while a somewhat larger proportion mean to take teaching as their profession, and do, in fact (until they marry), obtain places as teachers in those high schools for girls which have sprung up in our large towns of late years, and which in turn help to feed the women's colleges by raising the level of and the taste for education. Though there is no reason to think that the number of university students will ever become nearly so large among women as it is among men, we expect it to go on steadily increasing, and regard Girton and Newnham as only the earliest among the many seats of female learning that are likely to arise in England.

Y.

Correspondence.

McMASTER AND MACAULAY.

To the Editor of The Nation:

Sir: There are some things which critics scarcely need point out to persons of ordinary reading, and which are so obvious as to pass without saying. Macaulay's style is easily recognized, and the more successful the attempt to imitate it, the more certainly the model is recalled. In your Notes in No. 938, you say "that the new 'History of the United States' was immediately noticed by all the papers and all the weekly and monthly magazines; it was received with a unanimous chorus of praise. The style, in particular, received especial attention; *but no one thought of the forgotten writer of forty years ago:* all looked at once to an English historian of our own day. Every one said that Mr. McMaster had imitated Mr. Green (though the English history did not appear until the American was half written), *and no one perceived that he resembled Macaulay.*" Mr. McMaster tells us that education was almost wholly neglected in the South prior to the Revolution, and nowhere to such an extent as in South Carolina; and that the same is true of to-day (p. 27). Curiously enough, in view of this historical fact, if the *Nation* is right in the quotation we have made, a Charleston paper was the only one to recall the forgotten writer of forty years ago. The *News and Courier* of March 20, noticing the first appearance of this book, says that it cannot give a better idea of its scope than by quoting the opening paragraphs, which it does in full, and thus comments: "No reader of this passage will doubt where Mr. McMaster has 'picked up his style.' The influence of Macaulay is manifest enough, and it is only fair to say that the echo is not unsuccessful."

We agree with the *Nation* that, whether Mr. McMaster's style be pure imitation or the similarity that comes from the effort to attain the same end, the result is undeniable. "The likeness is at times painful; one feels uncomfortable in listening to the familiar rhythm, and meeting one after another the well-known mannerisms." But, whether consciously or unconsciously, Mr. McMaster has imitated Macaulay in other respects besides his style, and repeats the faults which have reduced the most exquisite picture of England ever drawn from the level of authoritative history to that of romance. We turn to Macaulay for enjoyment, not for historical study. It has been said of Macaulay that when he is describing the merits of his friends and the faults of his enemies his pen knows no moderation. He has a constant tendency to glaring colors, to strong effects, and will always be striking violent blows. He is not merely exuberant, but excessive. There is an overweening confidence about his tone; he expresses himself in trenchant phrases, which are alike challenges to an opponent to stand up and deny them. His propositions have no qualifications. Uninstructed readers like this assurance, as they like a physician who has no doubt about their case. But a sense of distrust grows upon the more circumspect reader as he follows page after page of Macaulay's categorical affirmation about matters which his own experience of life teaches him to be of a contingent nature. We inevitably think of a saying attributed to Lord Melbourne: "I wish I were as cock-sure of any one thing as Macaulay is of everything."

Mr. McMaster is just as cock-sure, and sometimes falls into very serious mistakes in consequence. As an instance, he says (at p. 27): "In the Southern States education was almost wholly neglected, but nowhere to such an extent as in South Carolina. In that colony, prior to 1730, no such thing as a grammar school existed. Between 1731 and 1776 there were five. During the Revolution there were none." For this statement he refers to Ramsay's 'History of South Carolina.' In this paragraph Mr. McMaster misquotes Doctor Ramsay, to whom he refers, and makes statements which are untrue, and the untruth of which is capable of demonstration by reference to book, page, and line of works which were open to him. We must take some other occasion to refute his assertions more fully than we can do in the limits of such a communication as this. Suffice it for the present to say that Doctor Ramsay, so far from authorizing the statement that there was no grammar school in South Carolina before 1730, tells of the establishment of a free grammar school in Charleston in 1710–12, gives the history of other public and private schools, and makes this distinct statement: "The knowledge of grammar and of the Latin and Greek languages could be obtained in Carolina at any time after 1712, or the forty-second year subsequent to the settlement of the province." As matter of history, not only were the schools in South Carolina already in existence kept open during the Revolution until closed by the bayonets of the British soldiers, but while the city of Charleston was invested by the enemy the General Assembly were establishing more schools throughout the State.

Macaulay proposed, in writing his history, to turn over hundreds and thousands of pamphlets; and his critics claimed that in doing so he was led to rely for some of his assertions upon papers of very questionable authority. Mr. McMaster says our ancestors were dependent upon their private correspondence for information as to public affairs; and he observes of these letters, that it is from this source that a just and accurate knowledge is to be obtained of many great events and stormy times. We have no doubt that such contemporaneous criticisms upon the actions and actors of any given period of history throw great light upon transactions which one desires fully to understand. But such light is always a side-light. The impatient and fretful outpourings of an active politician to his friends at home, written in the moment of defeat or excitement of contest, are not the sources from which historical facts can be established. They are, as to facts, the most unreliable of historical data. Yet it is upon such that Mr. McMaster relies to prove, as matter of history, a most corrupt bargain for the establishment of the seat of government at Philadelphia (see p. 581).

If Mr. McMaster followed Macaulay's example of turning over hundreds and thousands of pamphlets and papers, the work must have confused him; for we find him (p. 287) referring to the New York *Gazetteer and Country Journal* of July 21, 1786, for an account of a mysterious secret organization in Charleston called the Hint Club, the precise purpose of which, he says it must be owned, is obscure, but which he assumes was an original Ku-Klux, formed for the purpose of maintaining the credit of the State currency. No such paper is mentioned in Hudson's 'History of Journalism.' There was a New York *Gazette*, but that was started in 1759, and is not among those mentioned as having passed through the fire of the Revolution (pp. 111 and 144). There was a South Carolina *Gazette and Country Journal*, but the reference cannot have been intended for that paper, for that, too, was published only from 1765 to 1775 (see Hudson's 'History of Journalism,' p. 119, and King's 'Newspaper Press of South Carolina'). We must be sceptical, then, of this original Ku-Klux until a reference is given us by which its existence may be verified.

There is an occasional characteristic of Mr. McMaster's style which he certainly did not copy from Macaulay, and that is *flippancy*. In describing the debate on the revenue system and on tonnage, and giving very fairly the reasons which were presented by the representatives from South Carolina and Georgia against these measures—the same arguments against protection which are agitating the whole country to-day, and which the *Nation* is pressing so ably — Mr. McMaster adds contemptuously: "The complaints were not heeded, and the duty was laid. Indeed, the House, it should seem, had reached the wise conclusion that the members from South Carolina and Georgia could be pleased with nothing" (p. 552). This is smart, but scarcely in accord with the dignity of history or the elegance of Macaulay.

Mr. McMaster's dislike to South Carolina is as great as Macaulay's to the Stuarts. It is doubtful, however, whether Macaulay, much as he is read, has influenced to any great extent the opinion of the world as to that unfortunate family; and we do not much fear that Mr. McMaster will in the end do South Carolina much harm, unless hereafter he is more careful in his flings and accurate in his quotations.

Edward McCready, Jr.

Charleston, S. C., June 26, 1883.

[Since the publication of our Note on the above subject, we have received proof of a much more extensive and much earlier detection of Macaulayism in Mr. McMaster's work than had come under our observation up to that time.—Ed. Nation.]

Notes.

The second volume of Bancroft's 'History of the United States' (Appletons) extends from 1688 to 1763, the date which is usually taken as that which separates the Colonial from the Re-

volutionary era of our history. Mr. Bancroft, however, follows a different division of periods, and makes the last half of this volume (vol. iv. of the original edition) commence the period of the Revolution. The present instalment falls, therefore, into two nearly equal parts: Part 3 of the History of Colonization—"Colonization of the West and of Georgia"; and Epoch 1 of The American Revolution—"Britain Overthrows the European Colonial System." The treaty of Aix-la-Chapelle (1748), instead of the treaty of Paris (1763), is taken as the commencement of the Revolutionary epoch. It is worth while to note this arrangement with some particularity, because the division into periods is the most essential foundation of any historical treatment, and the conclusions of an historian of Mr. Bancroft's eminence, held to for half a century, are entitled to high respect. We ourselves, however, prefer the other division. It seems to us that the conquest of Canada is the great crowning event of the Colonial period, closing that period, and that the Revolutionary period begins with the financial legislation which grew out of this conquest, and which may be dated from the change of Ministry in 1763; so that this year, in which the English empire in America was consummated and the first step taken toward alienating the colonies from Great Britain, may properly be regarded as the close of one period and the beginning of another.

Mr. Henry J. Wisner has recently published, through G. P. Putnam's Sons, a guide-book, 'The Yellowstone National Park: A Manual for Tourists, being a Description of the Mammoth Hot Springs, the Geyser Basins, and other Features of the Land of Wonders.' The author has availed himself of all the official material at his command, and has presented in a well-arranged form concise and graphic descriptions of the principal objects of interest, together with the necessary information as to the best methods of reaching them. Not only to tourists contemplating a trip to the Park, but to all admirers of the wonders of nature, the little work will prove far more attractive than the average of its class. It is accompanied by a map of the region, which, although very imperfect, is as good as any that has been published. Now that the Government has leased grounds for the erection of hotels to accommodate pleasure-seekers, and has undertaken to build roads and bridges, it is to be hoped that we may soon have a map of the very best kind, and on a scale sufficiently large to represent the necessary details of topographical structure.

Roberts Bros. have published a new edition of the Rev. Edward Everett Hale's 'Ten Times One is Ten: the Possible Reformation.' A few pages at the end enumerate a certain number of charitable organizations which owe their origin to this work: the Ten Times One Club, the Harry Wadsworth Helpers, the Look-up Legion, etc. These imperfect and at best not very striking statistics seem to us rather prejudicial to the mathematical illusion on which Mr. Hale's story is constructed. As a matter of fact the ten club members do not produce one hundred philanthropists like themselves, any more than each subscriber to a struggling paper procures one other, and so doubles its circulation at once.

The influence of the New Shakspere Society has been felt in this country, its prizes for school work on Shakspere being open to our students as well as those of England. Hence a demand for information how to proceed in order to compete, and the little hand-book, based on experience, by William Taylor Thom, Professor of English Literature in Hollins Institute, Virginia, entitled, 'Two Shakspere Examinations: with some Remarks on the Class-room Study of Shakspere' (Boston: Ginn & Heath). The papers and answers are reproduced, the latter without correction except for clerical errors. Professor Thom's remarks will generally commend themselves. The untimely death of one of the prize-winners has made this in some sort a memorial volume.

In the Rolfe edition of Shakspere the series is continued (perhaps concluded?) with his Sonnets in one volume, and his remaining Poems in another. Here, from the nature of the case, the editor's expurgation ceases, as the need of it ceases, for, as Mr. Rolfe remarks, neither schools nor Shakspere clubs will meddle with these poems. His annotations and comparison of diverse readings have been as painstaking as in the case of the plays.

On the 29th of May the Huguenot Society of America was organized in this city with Mr. John Jay for President. Its objects are commemorative, historical, and literary. It contemplates collections pertaining to the genealogy and history of Huguenots in America, the ultimate formation of a special library, the periodic reading and discussion of papers, the preparation of a memorial history, and the establishment of branch societies. Membership is by male or female lines of Huguenot descent from families which emigrated to America prior to the Edict of Toleration, November 28, 1787; but is also open to descendants of French Protestants antedating the same edict, and to students of Huguenot history. The Secretary is the Rev. A. V. Wittmeyer, 222 West Twenty first Street.

The thirty-first volume of *Lippincott's Magazine* calls for no special remark except as to the table of contents, which is a mere alphabetized transcript of titles, with the prefixed article *a* or *the* retained. This is not convenient even for one who turns to the volume with a reference ready made; and it greatly impairs the attractiveness of the collection for the chance reader. An analytic table, resolving such enigmatic titles as "Among Citrus-Blooms," "A Work of Imagination," "The Queer Service," etc., would be well worth the slight expense attending the making of it. This is what Poole's Index does for titles that do not explain themselves.

Four cook-books fall together on our list, and illustrate in a very interesting way the different aspects of the subject of cookery. 'Domestic Economy,' by Mrs. R. C. Hollyday (Baltimore: John Murphy & Co.) is the old-fashioned book compiled from the recipes of good housekeepers in Maryland and Virginia. If they betray hands unused to the pen, this deficiency is more than made up by the fine flavor of the old Southern cookery. A new edition of Miss Parloa's 'Appledore Cook-Book' (Boston: Andrew F. Graves) comes none too soon for its many friends. It gives New England dishes with both plain and rich cooking, systematized under the cooking-school influence. The 'Nonpareil Cook-Book' by Mrs. E. A. M. (Chicago: Jansen, McClurg & Co.) adds a well-chosen and well-tried list of French and German dishes. 'Ice Cream and Cakes' (Scribners), by "An American," provides all necessary directions for "household and commercial use," though upon a scale which will evidently better serve the confectioner and caterer than the housekeeper. It is arranged with much care and skill.

Mr. Thorvald Solberg's admirable catalogue of books and articles relating to literary property has now overtaken and embraced the *Publishers' Weekly*, which has naturally given more attention to the subject than any periodical (on this side of the water) that could be named. Its articles are now indexed, volume by volume, as well as alphabetically, and this instalment of Mr. Solberg's work, like those that have preceded, is printed in the *Weekly* itself (June 16).

Science proposes that the American Association for the Advancement of Science appoint a committee, at its next meeting, to draw up a definite list of such foreign technical journals of mathematics, physics, and the like as do not compete with any enterprise of any publishing firm in the United States, and then urge upon Congress the passage of a special act putting these journals on the free list.

A list of the issues of the press in Pennsylvania from 1760 to 1769 inclusive, by Mr. Charles R. Hildeburn, is printed with the latest Bulletin of the Library Company of Philadelphia.

In their sixty-second annual report the Directors of the New York Mercantile Library complain bitterly of the vandalism of readers admitted to the free use of the reference department. Some valuable and scarce books have been stolen and many mutilated, one "to such an extent as to render it useless." So great is the appreciation of the article "Political Economy" in Appleton's Cyclopædia that it has twice been cut out of its place in the volume containing it. A reward of $50 has been posted for the detection of any engaged in this "satanic mischief," and we join in the prayer of the Directors: "Would that the sight of it would paralyze the hand of the evil-doer."

Students of history will be interested to learn, from the sixteenth annual report of the Provost of the Peabody Institute, Baltimore, that the library department has acquired complete sets of the *Moniteur Universel* from 1789 to 1833, the *Journal des Jacobins*, the *Journal de la Montagne*, the *Bulletin du Tribunal Révolutionnaire*, *L'Ami du Peuple*, besides many memoirs and other works relating to the Revolutionary period of French history.

The Trustees of the Boston Museum of Fine Arts will open an exhibition of the works of living American artists on October 16, and close it on November 27. The number of contributions is limited, but the kind may be black-and-white and water-color drawings, oils, or sculpture. They must not have been exhibited publicly in Boston before. The expense of transportation of works from a distance which are *accepted* will be borne by the Trustees. Mr. Charles G. Loring is Secretary of the Committee of Arrangements.

The fifteenth annual session of the American Philological Association will be held at Wesleyan University, Middletown, Conn., commencing Tuesday, July 10, 1883, at 3 o'clock P. M. The address by the President of the Association, Professor Milton W. Humphreys, of Vanderbilt University, Nashville, Tenn., will be delivered on Tuesday evening. A number of interesting papers have been promised. Further information may be had by addressing the Secretary of the Philological Association, Cambridge, Mass.

The Concord Summer School of Philosophy will open for a fifth term on Wednesday, July 18, and will continue four weeks. Students must be registered before July 10, at the office of the Secretary, Mr. F. B. Sanborn. Among the lecturers will be Mr. Sanborn, Prof. W. T. Harris, Prof. William James, Mr. Denton J. Snider, Mr. John Albee, Mr. D. A. Wasson, Rev. Dr. Bartol, President Noah Porter, Miss E. P. Peabody, Miss E. D. Cheney, Mrs. Julia Ward Howe, Mr. Julian Hawthorne (a lecture on Novels). Readings from the Thoreau MSS. will occupy one evening as usual.

Under the mocking title of 'The Protectors of Letters in the 19th Century,' Champfleury discourses in *Le Livre* for June on an absurd Napoleonic bookseller, Pick, or Pick de l'Isère, as he magnificently styled himself—the very name provokes a smile. Pick's occupation was ruined by the siege of Paris. Portraits of him with and

without his furs (for he was given to posing at the photographer's) accompany Champfleury's badinage. The only other noticeable paper is a translation, by M. Victor Develay, of an interesting passage on the abundance of books, from Petrarch's 'De remediis utriusque fortunæ,' or 'Remèdes de la bonne et de la mauvaise fortune,' as it is here rendered—'Remedes de lune & lautre fortune: prospere & aduerse,' according to the Paris version (1534) of Bishop Oresme; and 'Phisicke against fortune, as well prosperous, as aduerse . . . Expedient for all men, but most necessary for such as be subiect to any notable insult of eyther extremitie . . . First Englished by Thomas Twyne' (London, 1579). We should mention also engravings after the statue of Alexandre Dumas to be erected by the city of Paris in the Place Malesherbes, and its bas-relief, both the design of the late Gustave Doré, and his very latest work. The bas-relief represents a group consisting of a reader and two attentive listeners. The novelist sits above, tablet in hand and pen in hand, in an interval of composition.

We showed lately how the Roman *consilium principis* grew into an important body. Herr O. A. Ellissen has shown, in suite of himself, how the Senate in the Eastern Empire did not become important. He undertook to prove that this body had been unduly neglected by historians; but M. Charles Diehl, in the *Revue Critique*, sums up his result as follows: The Byzantine Senate was originally merely a municipal council; after the separation of the East and West it became an Imperial senate, to be sure, but was as often as not neglected by the Emperors, and had very little real power. Finally, in the ninth century, the title of Senator became entirely honorary; the Senate as a body ceased to exist, and all its functions were transferred to a new *consilium principis*.

Parts 66–71 of the new 'Brockhaus's Conversations-Lexikon' (Westermann) complete the comparatively uninteresting letter D and begin on E. The plates are all mechanical. The folded maps still relate to Germany—railroad and steamship connections; and historical phases. Those in the text show Dieppe, Dover, Dresden, Dublin, Düppel. Dresden furnishes one of the longest articles; the Thirty Years' War another; the Danube a third, being brought down as late as the Danube Commission of February 28, 1883, at London. The biographical articles on the two Döllingers, father and son; the three Dohrns, a very remarkable family of naturalists, voyagers, littérateurs, and politicians—though the last distinction has not yet been won by the younger son, Anton, head of the famous Zoölogical Station at Naples; and the two American Drapers, pleasantly illustrate hereditary genius. We might add Stephen Douglas and Frederick Douglass as twins, for they stand side by side, without regard to color prejudice. Douglass's marshalship in the District of Columbia has been overlooked. The article Dollar is naturally mainly concerned with our absurd varieties.

—In *Lippincott's* for July, C. B. Todd has an article on New York clubs, mainly descriptive of a few of the best known. The statistics of club life bring out in a striking way the steady growth of clubs in New York, which is now, after London, the principal headquarters of clubs in the English-speaking world. The old clubs go on increasing in number, and new ones are constantly added. Into the rationale of the American club the writer does not attempt to go, and consequently does not discuss the more interesting aspects of the club problem. The old rural hostility to clubs, as places where men go to escape the restraints of female society and indulge their worst passions, has pretty much died out; chiefly, no doubt, because women have found out that this is not the use for which men form clubs. In New York, of all places, a club is a necessity for numbers of married men during one-third of the year, when their families are at a "resort," which they can only visit at intervals of a week or two. The growth of clubs in this city would be very healthy and natural were the great question of club government and club privacy settled. The town-meeting form of government, which is still the type of club management with us, involves sooner or later great laxity in the admissions and in discipline generally; and an elected board of governors which undertakes to be very strict, will "get itself disliked" and finally remodelled in the interest of liberality. The standard, as the members increase, must be gradually lowered, just as happens in politics, and the sense of its being a private association soon disappears, and members feel about it and talk about its affairs as if it were really a public body, or political corporation. Then it gets into the newspapers, the members "talk freely" to reporters about the club gossip, and the club elections, and club rows, and thus privacy disappears. For those who dislike publicity in private life, and consider it a blot on club life, some other form of government is necessary, and this fact will, no doubt, in time produce a number of "proprietary" clubs, or clubs governed by close corporations, the character of which will be a guarantee against the evils produced by the town-meeting system.

— We are informed by a correspondent of the sudden death, presumably from heart-disease, of Mr. Edward FitzGerald, during a visit to his lifelong friend, the Rev. George Crabbe, at Merton, Norfolk. On the night of the 13th of June Mr. FitzGerald retired in his usual health, to all appearance. As he did not come down to breakfast on the following morning, his host went to his room, and there found him lying dead in his bed. His age was about seventy-five, as he was born some time in 1809. It was his spirited, however free, version of the 'Rubáiyát' of Omar Khayyám that first attracted any considerable degree of attention to Mr. FitzGerald's literary merit. A list of nearly all that he wrote is given in *Lippincott's Magazine* for February, 1875. Since that date, however, there has been issued, for private circulation, his 'Readings in Crabbe's "Tales of the Hall,"' a small volume of 242 pages. Mr. FitzGerald married the daughter of Bernard Barton, the Quaker poet; but their union was followed, almost immediately, by an amicable separation. To but very few of his neighbors was he known except by sight; and his singularly recluse habits gained for him, though quite groundlessly, the repute of being a misanthrope. A large circle of acquaintances was not to his taste: it sufficed him fully to enjoy the occasional companionship of a half-score or so of friends like Mr. Tennyson, Professor Cowell, and the late Mr. Spedding. The inheritor of a handsome patrimony, he was enabled to give himself entirely to literature. His favorite diversion for many years was yachting; and his tasteful schooner, the *Scandal*, was a thing of which he was, perhaps, as proud as of any production of his fastidious pen. It was his long familiarity with the waters of the German Ocean, which adjoined his home, that qualified him to compile his 'Sea Words and Phrases along the Suffolk Coast,' a curious pamphlet, which was succeeded by a supplement. Mr. FitzGerald was buried at Woodbridge, the scene of the greater part of his hermit-like career.

—M. Narducci has long urged the expediency and practicability of a general catalogue for all Italian libraries. Acting on the principle that he who wishes a thing done should do it himself, he sent a circular to the 408 public libraries of the kingdom asking for a copy of their author-catalogue for the syllable AB. Half of them paid no attention to his request, but what the other half sent was enough to make a very interesting catalogue, and to prove his point. The contributing libraries are numbered, and at the end of each article of the catalogue one finds the numbers of all possessing that particular work. Moreover, each title has a serial number by which references are made from four indexes, (1) an index of personal names (collaborators, annotators, translators, publishers, persons to whom the books are dedicated), (2) an index of subjects, (3) a typographical index of cities, with an alphabetical arrangement of printers under each city, (4) a chronological index. This is substantially the plan proposed twenty-two years ago by Mr. Jewett in his "Plan for Stereotyping Catalogues"; but apparently it was reserved for an Italian to carry out the American's idea. Possibly the Italians have more need of such a catalogue than we, because their libraries are proportionately more consulted for purposes of research than ours, and because ours contain more that is not worth such careful cataloguing, and, again, because our rapid growth would leave any such catalogue much sooner behind. Yet it cannot be necessary to insist on the convenience to scholars, and we have often enough advocated printing a title once for all in place of our present practice of printing it separately for each library. But there is one great difference between the two countries that we have not alluded to. The Italian libraries, if they are not all Government institutions, are all, we suppose, under the power of one central government, which can prescribe uniform objects and uniform methods. Any American coöperation must be on the voluntary system. The Government is powerless in the matter; it cannot compel others to work, and it is not likely to be induced to furnish the necessary funds. Nothing but an enthusiastic millionaire—enthusiastic about a matter which is not likely to touch the heart or suit the tastes of those who get millions in this country—would be able to forward this public work.

—It was only in 1867 that the Parisian became acquainted with Ice-cold Soda-water, and the spectacle of whole American families swallowing large glasses of foaming froth was to the Parisian one of the most astounding sights of the Exposition. That was sixteen years ago, and already is the Parisian prophet getting ready to put on sackcloth and to heap ashes on his head, because Paris is rapidly becoming too American. "Les dieux s'en vont," wrote the late Paul de St. Victor; "nous devenons décidément des Américains." One of the most lively chapters of the new annual volume of M. Claretie's always lively 'La Vie à Paris' (Paris: Havard; New York: F. W. Christern), is a discussion of the Americanization of the French capital by means of giant stores, huge office-buildings, crossing telegraph wires, and Mr. Slosson's billiard-playing. M. Claretie, however, is honest enough to quote, a few pages further on, the remark made by Longfellow to M. Louis Dépret, his French translator. The American poet, recalling the circumstances of his first visit to Paris, thirty-five years before, said that what struck him most was the radical change in the language. "I thought I knew French thoroughly; well, I no longer understand it. There is not the same accent and not the same tone; . . . even the manner of pronouncing words has changed. Even at the Comédie-Française, that conservatory of the spoken tongue, they do not express themselves as they used. I heard Talma, Mlle. Mars, Firmin, Monrose, Ligier, Beauvallet, and

they pronounced differently from the current custom." He ended by confessing that he was afflicted that the real "French accent was disappearing even in France." Surely this is not the fault of Miss Daisy Miller and the other ladies who rush boldly into grammatical quagmires where scholars fear to tread. If Paris is getting itself Americanized, it is the fault of the Parisians themselves. M. Claretie's book, as usual, has many amusing pages. Especially noteworthy are the chapters on the distinguished sitters of M. Bonnat, and on a recent French exhibition of the wall-papers of the last century. Highly comic are the two studio jokes of M. Arago, one an imitation of a guide showing a "personally conducted party" through the Louvre, and the other putting a burlesque speech in the mouth of Marshal Soult. Altogether, there is much in M. Claretie's pages to gratify the antiquaries of 1982 when they seek to reconstruct the Paris of the present.

—We have received the fourth annual supplement to 'Meyer's Konversations-Lexikon'—"Jahres-Supplement, 1882-1883"—forming the twentieth volume of the work. It is as bulky and as densely crammed with valuable matter as its predecessors, but its contents are, perhaps, less attractive to the general reader. It is apparently becoming more and more the object of the editors to furnish the latest data concerning every branch of knowledge, and to satisfy equally all special demands rather than to present popular information, the bulk of which, at least, would be interesting to every educated purchaser of the Cyclopædia. The number and extent of articles on scientific, technological, industrial, and commercial topics are constantly increasing, while the historical, biographical, and literary notices are becoming less ample and enjoyable. Electricity, for instance, is represented in this volume by "Accumulators," "Dynamo-electric Machines," "Electricians' Conference," "Electric Expansion," "Electric Railways," "Electric Units," "Electric Light," "Electric Exhibition," "Electrodynamometer," "Electromagnetic Engines," "Telephones" ("Fernsprecher"), "Galvanic Battery," "Galvanometer," "Galvanic Plating," and "Telegraphy"; and there are more than two score technological articles. Of national literatures only the German, English, French, Italian, Dutch, American, Polish, and Portuguese are reported about, while the Danish, Greek, Norwegian, Russian, Swedish, Bohemian, and Hungarian—all of which had their notices in the first two supplements—are omitted. The extent of these special literary reviews seems to depend upon the greater or less fondness of the contributors for their subjects, rather than upon an editorial plan. The United States is specially favored in this respect. The space allotted to our latest literature is comparatively very ample, and the praise bestowed by Herr R. Lutz, the reviewer, on most of its products is all that could be desired by the authors or their admiring countrymen. A little less enthusiasm with a little more carefulness in statement and proof-reading would, perhaps, be preferable in the interest of literary history; but then, while T. Tilton would be the gainer by appearing, instead of "J. Tilden," as the justly-praised author of 'Swabian Ballads,' and Holland would not be classed as an imitator of the writers for the British "*Tadler*," H. Bancrof, on the other hand, would not be exalted from the position of a well-assisted compiler to the high dignity of "ausgezeichneter Ethnolog" and "Geschichtschreiber grossen Stils." The article is, however, as readable as it is appreciative, and evinces a laudable, though not profound, familiarity with the subject. That the writer, being a foreigner, is not well posted as to the semi-identity of *Scribner's Monthly* and the *Century* is surely pardonable; and that he discriminatingly applies the definite article *das* to the *Atlantic Monthly* and *der* to the *Eclectic* can only cause us to admire the depths of German grammatical wisdom, though it may not always guess rightly. Less admirably wise appears to us the editorial decision which, instead of making the article "Juden" tell what happened to the Jews in various parts of the world during the year just elapsed, devoted it exclusively to the anthropology of a race as old as history. Could the desire to offer something piquant to both Semites and anti-Semites have prompted the choice? A little more information on the Malagasy race would have been much better in its place just now under the head of "Madagascar." The latter is one of the most inadequate historical notices. Of new biographies that of Kuenen is one of the poorest. The additions to former biographical sketches are very numerous, and, as additions, very valuable. The latest obituary date in the volume is that of the death of Diefenbach, March 28, 1883.

—"Fears of the brave and follies of the wise"—and blunders of the learned. If we withdraw our confidence and admiration from all who make even the most patent mistakes, we shall dangerously narrow our sympathies. Here are three flagrant specimens that crossed the track of one of our friends the other day—three in as many hours of desultory reading. An editor of Pindar, a clever man and a scholar undoubtedly, speaks of the "Wratislaw" life of the poet. For "Wratislaw" read "Breslau," for the supposition that the writer meant to give the Polish name of the town would postulate affectation worse than any ignorance. An historian of Greek literature tells of "Cypselus' [Cleisthenes'] feast for the suitors of Agariste," the famous feast in which Hippocleides "handled his legs" so nimbly. The third mistake, and not the least, is that of the learned German author of a great Greek grammar, who quotes Aristophanes, 'Clouds,' 870, in which Socrates is represented as ridiculing the pronunciation of "old Pheidippides." The brilliant Irishman who was guilty of the second slip has been severely rapped by classical scholars for similar mistakes, and, truth to tell, he often gets his proper names mixed up, but he would not have been guilty of saying, "beim *alten* Pheidippides," even in his sleep. The moral is obvious. The true scholar should forgive everybody his mistakes except himself.

JOHN A. DIX.

Memoirs of John Adams Dix. Compiled by his Son, Morgan Dix. Harper & Bros. 1883. 8vo.

ALTHOUGH tracing his blood back through an unmixed Puritan strain to the settlers of Plymouth, and himself an immigrant from New Hampshire, General Dix bore none of the outward and visible signs of a New-Englander. To his townsmen the familiar figure met in their daily walks and haunts, associated with public service, kindly acts, and courteous ways, suggested rather the type of a citizen of the world. He had taken his part of education in Canada, war on the frontier, and official work at Washington, before fixing himself in early manhood at Albany, where his public career began. The short time spent in law practice at Cooperstown makes no mark in his life. Thereafter, for twenty-three years, until he reached the age of fifty-five, the prime of his manhood was devoted to political affairs in the highest spheres. As Secretary of State, member of Assembly, United States Senator, and, not the least, as one of that powerful knot of sagacious men known as the Albany Regency, he found employment for natural ability trained to the utmost, and experience of which he shrewdly made the most. There followed a brief space of retirement, not inaction, for during it he applied his talents to the affairs of great corporations, and proved himself versatile and practical in protecting the rights of Trinity Church and developing the westward growth of an expanding railroad system.

When he reappeared in public life, the storm of civil war was lowering. In New York, the Administration, compromised in the scandal of frauds in the Post-office, demanded the character and services of some man of unsullied honor to protect and rescue it. At Washington, the half-paralysis, anticipating change, that always rules between November elections and March inaugurations, broke down into helplessness under Cabinet defection and secession menace. Here, too, the high name and tried ability of Dix came in aid. When he took the place of Secretary of the Treasury in a Cabinet of resolute and able Union men, public confidence revived and private capital flowed freely out to meet public needs.

When the suspense following the retirement of Buchanan with his Cabinet, while the nation held its breath, was broken at last, the clearing smoke from Ruffin's first gun at Sumter showed political lines sharply drawn in New York, and at the head of the hosts of the War Democracy, pledged to Union, stood John A. Dix. The War Democrats saved this city to the nation. Here the ruling party was neither liked nor trusted, nor could it at first make itself feared. Commanding by no means all the wealth, nor all the ability, nor all the military knowledge, it had few votes and an untried organization. Stanton's letter to Dix, quoted at page 18 of the second volume of this work, shows plainly the doubt prevailing in stronger minds and the alarm shaking weaker ones until the political army led by Dix struck hands with the Republicans on the higher plane of patriotism. Theirs was the harder political task: they had to break with old associates, enduring attack from both sides, instead of sweeping on with the torrent of new enthusiasms.

With the development of the personal ambitions and interests well described by Stanton, General Dix felt the full effect of intrigue and insincerity. Though neither by age nor by health unfitted for the active command deserved by his experience, he was placed at Baltimore in a post which, seeming secondary, became one of great importance, demanding skill and firmness. The only movement in the field which he directed was made in the spring of 1863 by an effective advance, in considerable force, upon Lee's communications, during the invasion by the latter of Maryland and Pennsylvania, leading to the battle of Gettysburg. General Dix, transferred to the Department of the East, with headquarters in this city, just after the draft riots of July, 1863, retained that command till the close of the war. New York, an unquiet city in profound peace, had just shown into what terror of turbulence it might flame up under the stress of war. Whatever disaffection there was against the Government festered here, with its plots, agents, and money. The control of these, the management of affairs on the Canada border, the execution of summary orders called out by the famous forged proclamation, and the oversight of the November elections of 1863, gave occasion for the firm and prudent exercise of authority which could not have been so safely trusted to any other hands than his. But for the great respect which upheld General Dix, it is not easy to

say what confusion might not have followed the astonishing experiment on the patience of all that was decent in the city made by the War Department in sending a notorious Bobadil to head the force ordered here during the election, when for a while, in the biographer's words, "it seemed difficult to tell who was in command in the city of New York."

Upon the restoration of the Union, there arose many subjects demanding explanation with foreign Powers, some of which required forgiveness of offence, and others atonement. One of these, the invasion of Mexico by France, expiated itself, and our delicate relations with that Power, which it had disturbed, were managed with skill by General Dix, sent as a messenger of conciliation. Among the great variety of ministers who, from the days of Versailles to those of the Élysée, have faithfully represented our country in France, both as to its good and its bad characteristics, no one more accomplished or more acceptable than General Dix has ever been sent thither. A singular episode in his life followed his return to this city, illustrating as clearly as any of his public employments the influence of his high repute and trusted honor. It became necessary to wrest the control of the Erie Railway from the organized bandits who had seized and rifled that great corporation. Other craft than his planned its redemption—the material execution of the plan was naturally assigned to a far more coarse and desperate agent—while his name, giving confidence abroad and commanding respect at home, lent the moral force which assured the success of the enterprise.

While the name of War Democrat was still a spell to conjure with, General Dix, pressed to accept the Governorship of the State, had steadily refused to quit his military post. Twice afterward, his nomination, judged timely and conciliatory by all parties, failed of acceptance through obscure political intrigues. At length, in 1872, in a sort of campaign of bewildered enthusiasm, Dix came, by an enormous majority of votes, to the Executive chair at Albany. His chief acts while in office were in the field of finance, in restoring the State Sinking Fund, and opposing the increased issue of national-bank paper. Two years later, when party lines were again clearly drawn, the utter distrust of the Washington administration involved and overwhelmed all its supporters, and General Dix, defeated on a renomination by a vote almost as large as that he had before received, retired from the Governorship, and ended his political career.

This is the story of a very useful and a very successful public life. Why was it less than a great one? John A. Dix saw and was a great part of the public civil and military life of his country during most of the century. As a soldier, he was too young for action in the war of 1812, and, when action was past, his experience followed only routine. In the civil war he naturally gave place to younger generals with modern ideas and larger political influence. As an orator and statesman, he was surrounded by Webster, Calhoun, Benton, and their peers. As a political manager, Van Buren, Wright, and the elders of the Regency overshadowed him. Only one other man of his day watched the rise, growth, and overthrow of as many great political parties. He saw the end of Federalism; he was at the birth of the Democratic, the Anti-Masonic, the Whig, the Secession, the Free-Soil, the Republican parties, and watched the downfall or transformation of all of them. For more than forty years he was a Democrat through evil and good repute, yet the highest office he gained was that of Senator for Wright's unexpired term of five years. When he ran for Governor in 1848, the Free-Soil party supporting him was a minority party; when he led the War Democracy in 1860, he headed the minority of a minority party; and though he profited by the fusion of 1872, his supporters fell back again two years later into a minority. Here, then, appear in ample variety the changes and combinations out of which the trimmer or the turncoat snatches his prizes; and Dix was content to forego them because he scorned to be either. His New England blood and training told. Pliancy might have helped him to greater success, but character lifted him to repute among his countrymen, and again and again challenged their appeal to him on occasions when worth and honor were indispensable to the public welfare.

Nor can it be said that Dix's accomplishments as a scholar really stood in his way to preferment. Scholarship, while no help, is in itself no hindrance in any field above ward politics. Here, as in England, though elegant cultivation carries no recommendation to public success, yet if a candidate shows the qualities for leadership, he may be as cultivated as he chooses without losing public regard. It is only the scholarship of the recluse, unfitting men for contest, that impedes their rise. Derby could lead a party though he translated Homer, and many a Southron in our old Congress had the classics at his fingers' ends. Yet in times of public violence rough boldness elbows to the front. General Dix's scholarship was as much above the dilettante's range as below the professor's nicety. If he could not have edited a Greek play, he loved, and constantly read, the Latin classics, and has left some strong and finished translations. His 'Dies Iræ' is closely moulded to the original, burns with a glow and poetry of its own, and may well bear comparison with the best renderings of that famous test of ability in translation.

To complete the measure of information as to those passages in General Dix's life which the public is entitled to understand, selections from his speeches and literary productions, judiciously chosen, are given at length in these pages, in illustration of the occasions that called them out. An appendix contains the more important of those documents and letters contributing to solve the many grave questions encountered in his political course. The relations of his domestic life and personal characteristics are drawn with a loving and reverent hand. On one subject the biographer's filial admiration is noteworthy in a professional teacher of morality. General Dix was a prominent supporter of the scheme to send the free-negro population out of the country. He opposed the agitation which defeated that scheme and eventually brought about emancipation. He assented to the extension of slave territory. He approved the Fugitive Slave Law. In short, he took sides throughout against a movement which, judged by its results, was as clearly providential as any recorded in history. We need not censure the father for being no wiser than the majority of his countrymen; but we cannot praise the perspicacity of the son in finding his parent's attitude, at every stage of his resistance to the greatest reform of the age, correct, just, and highly commendable.

ENGLISH ART AND ART CRITICISM.

Cecil Lawson. A Memoir. By Edmund W. Gosse. With Illustrations by Hubert Herkomer, J. G. Mc. N. Whistler, and Cecil Lawson. London: The Fine Art Society.

THERE is no more contested question in art criticism than the determination of the position of English art. One critic denies it the name of a school, another stamps it the most original of modern schools, and another subdivides it into more schools than we know in Italy. Talent it has, nor are there wanting instances of the highest artistic type, as Turner and Rossetti, and, among the elder men, Gainsborough; but when we come to seek some common artistic quality, which shall characterize a school, we find none. The individuality is strong, but so entirely dispersive that the dominant trait is found to be diversity. If the ruling naturalism be claimed as its bond, it need only be replied that naturalism and art are so entirely diverse that it may almost be said that they coexist in inverse proportions—the closer to nature the further from art; and in individuals this is, as a rule, true. Weak men cling to nature as a child to a chair, afraid to cut loose; and isolated men or men of isolated natures find no guide but nature, for a school supposes masters and canons and traditions—community of thought and method—conventionalisms and sympathy in, though not necessarily uniformity of, style. What makes a school is what distinguishes Perugino and Raphael, taken together, from Titian and Veronese taken together—it is the art and not the naturalism of one or the other of those great painters which stamps them as consummate, and would so mark them were they much further from nature than they are.

If it be true that the only tie of English painting, the only collective tendency, is its naturalism, as we are inclined to believe, then is it equally true that if there be an English school, it is one of pictorial naturalism, not of art, and those consummate artists, Turner and Rossetti, are the furthest removed from this common ground by being both defiantly non-naturalistic. Watts and Burne-Jones, who were next in the order of artistic organization, Holman Hunt and Millais (in spite of the fine brush power of the latter) come still lower, and, already naturalistic and therefore non-artistic, all differ one from the other in aims and method as much as though they were educated in different countries. To include all these in one school of art is simply to misuse terms.

The generous spirit of fellowship and love of art which made the Italian schools, the willingness to impart what they knew or thought, characteristic of the greatest of their painters (and to a certain extent surviving in France and Germany), is never seen in England. There are no masters and necessarily no schools, good or bad. You may, it is true, see the Royal Academy School, where bad draughtsmen pretend to make good ones; you may from certain inferior painters get lessons at a guinea an hour by which you may pick up little tricks and facilities; you have South Kensington, giving a stone to the children who ask for bread; but in general the condition of English art so called is that a number of individuals, with more or less marked artistic tendencies, are trying, more or less unaided, to acquire an artistic education—amateurs more or less all, and destined all, more or less, to become, so far as the technique of art is concerned, bad painters, now and then redeemed by curious facilities, singular gifts of individuality, and by self-taught, and therefore ill-taught, expression of the most rare artistic gifts. Turner and Rossetti, the two most purely artistic minds of this century, probably, neither had learned to draw properly nor paint, except in water color, in all their lives of study and struggle. And in the lower ranks, what grappling with mediums and methods, experiments and failures—those who develop partial successes guarding their secrets with the jealousy of a trade advantage; a mixture of the amateur and the tradesman.

In this state of art the greatest of all successes is to develop a certain originality—if eccentricity, so much the better: every man is his own master and student. The most casual look at an English exhibition is convincing enough that (with the exception of some of the water-color

painters) solid technical education in painting is no part of the qualification of the exhibitor. Clever he must be in a small way—with the brush mainly, however; he will sometimes be imaginative, sometimes vivid in his conceptions, and possibly dramatic; but of the learning of art, that which corresponds to classical education in literature—knowledge of the means, resources, traditions, and accomplishments of what has been done—there is nothing. The distinction between the classical and academical even is not felt, the very word "academical," the form and mould of education, being taken as a reproach. Individuality carried to eccentricity; originality even developed to the grotesque; extravagances of motive, of color, and even of action, catch the eye and secure the suffrages of a public blunted to the finer charms of art and ignorant of its principles. Add to this a generally received notion with the English public that art is the easiest thing in the world to write about. It is not necessary to study it, nor to have any very definite ideas about it; the public has no criterion, and at the worst the critic who knows nothing can entrench himself behind the *de gustibus* maxim, so that journals which in their appointment of a musical critic would demand a certain standard of musical education, open their columns to the first-come clever young writer who has the ability to dash off fine ringing sentences about æsthetics. A puzzled friend one day asked one of the most widely known of English critics what he meant in a certain magniloquent sentence. The critic replied, "I don't know that it means much, but doesn't it *sound* well?" And the incident, which is authentic, characterizes the larger part of the criticisms of the London press.

Some of these critics are literati capable of good work in other branches of literature, but possessed by the unfortunate delusion that art has nothing positive. They play the frog to Mr. Ruskin's bull, but unfortunately without the catastrophe. Not only the daily press breeds them, but the reviews, even the most serious, keep them alive. If they write long enough, the public finally accepts them as authority; perhaps they graduate, like Mr. Comyns Carr, as editor of an art journal. The crowning achievement of one of these amateur critics is to exalt his pet genius, or that of his set, into Olympian proportions; but it must be rare that the liberality of publishers or the recklessness of book-buyers gives one of them such an opportunity as Mr. Gosse has found in his life of Cecil Lawson, a sumptuous book, an in memoriam worthy of Rossetti or Regnault. Cecil Lawson was one of those painters, so much more common in England than in countries where art education is solid and easily attainable, who build large, if ephemeral, reputations on small capital, mainly through possession of an intense individuality acting through a very limited range, and whose achievements, precisely because untaught in method and therefore apparently spontaneous, seem to the ill-educated critic and less educated public to contain great promise of originality and individual insight, while in reality nothing is original but the manner of expression, and the real inspiration of the art is borrowed from other artists. He possessed not one of the great talents of a painter in a high degree. He never had learned to draw, as even his biographer admits; his color was a continual struggle with mechanical difficulties which he never mastered, and only evaded far enough to show that his organization was highly sensitive to color; his conceptions were of those scrappy, fragmentary kind which English art delights in—"bits" rather than pictures—compositions which had no recognition of grace of line, and were more like fragments of a large picture or of the backgrounds of figure-pictures; his execution, while bold, was also slovenly—a sort of slap-dash which had the virtue of freedom, but not that of accuracy or refinement; the boldness of an indifference to the refinements of form, not of command over them. Finally, in his very love of Nature and pursuit of her, one could see that some other painter's spectacles were always on his nose: now of Wilson, now (and oftener) of Constable, and again of Gainsborough. In the picture which created his reputation, "The Minister's Garden," could be seen by the experienced eye the assurance of a brief success, a precocious and limited talent, stimulated and fostered rather than educated by the influence of other art, but inevitably of the kind which, germinating in shallow soil, springs up quickly and perishes in the heat of the first success. Lawson was a man whom art had mastered, not one constituted to master art.

Mr. Gosse, however, with a personal partiality pardonable to the man but not to the critic, has written a eulogy which his subject must have been a Keats in color to merit. He has unbent license in encomium and made criticism bankrupt in words for great achievement. If Lawson had lived to ninety, his art would have had no greater horizon than "The Minister's Garden" and "The Hop-Fields of Kent." The roots of his failure were those also of his success—the narrowness of his mental and artistic nature. "The Minister's Garden" was too complete a success in its intense but narrow and morbid way to leave any hope for great work to come. "The Hop-Fields," if somewhat more vigorous, was less sincere, and its painting showed a false method carried to a degree of facility and success which negatived progress as definitely and certainly as blindness, and which already showed decadence. When, therefore, Mr. Gosse treats his subject to rhapsodies like the following, we clearly see that he is at sea without a compass:

"Contemporary criticism, which is very ready to see merit in a hundred living painters, is a democratic influence, and hates to acknowledge superlative merit in any one of them [a dictum which is the exact reverse of the truth, and simply a bit of rhetoric misplaced, as contemporary criticism is always creating Titians and Raphaels]. Yet it is already beginning to be perceived that there were some aspects of Nature, some combinations of her forms, some spiritual intuitions of her finer elements which Cecil Lawson grasped in the grip of genius ["It don't mean much, but doesn't it sound well?"], seizing what had escaped all previous observers, rendering with precision what had been too fleeting and volatile for others, and in short forcing from the visible earth and sky a message which had been given to none but him. And this is the very essence of originality in a landscape painter, that he should see the world as it has never been seen before, and reproduce his impressions in such a way that they shall never be unfamiliar to mankind again."

It is impossible in the same number of words to compress greater and more mistakes or ignorance as to the particular subject of consideration, or as to the relations of art and nature. The virtues attributed to Mr. Lawson are those of which he was the most nearly destitute. He owed his artistic existence purely to his artistic predecessors, and every illustration of the many in this book recalls something by some other painter. He has not recorded a single new phase of nature, and the very power of his impression on the public was the way in which he reminded us of great painters. Mr. Gosse repeats, for the hundredth or thousandth time, but in other words, the absurd notion of Ruskin's, that "this is the very essence of originality in a landscape painter, that he should see the world as it has never been seen before, and reproduce his impressions in such a way," etc., which is arrant nonsense. Men's eyes, and the faculties of seeing in general, differ only in more or less. The eye is a mechanical organ, and, except for color-blindness, sees what comes on its retina in the same manner in one man as in another. The notion that men see color differently is (if they see it at all) a mere superstition. But the imitation of nature and art are entirely different matters, and the most exalted and purest art may be as absolutely separated from the representation of natural objects in painting as it is in music; and no man is qualified to criticise art who does not recognize this law and is not competent to follow out the one or the other element in plastic art. The man who adheres most closely to nature in her larger or smaller facts is the most removed from artistic creation. The poet, the creator, the artist is shown in the revival, the combination, the exaltation, and the giving of spiritual (or emotional, if that word is objected to) meaning to the combination or adaptation. The originality is not in the least in seeing, but in choosing from what has been seen what will convey an impression which has nothing in common with external nature and cannot be borrowed from it. When, a little further on, Mr. Gosse says, "We go further, and say that our common transcripts from nature contain facts unrecognized by the founders of modern landscape, and that an academy student, if he sketches carefully, might teach Van Goyen something about clouds and show De Vlieger new truths in wave form," he shows that he knows nothing about the artist's way of seeing nature, any more than he did about the true nature of art.

BACH AS A MODERN COMPOSER.

Sebastian Bach. By Reginald Lane Poole, Ph.D. [Hueffer's "Great Musicians" Series.] Chas. Scribner's Sons.

BIOGRAPHERS of Bach and writers on hereditary genius usually begin their task with a detailed account of the great Bach family, which presents one of the most remarkable fields of observation ever opened to a psychologist. "Throughout six generations," says Forkel, "there were hardly two or three members of this family who did not inherit a natural talent for music, and make the cultivation of this art the principal occupation of their life." In one place—Erfurt—the town-musicians were during a whole century so completely identified with "the Bachs" that this generic title remained to them even after the house had disappeared. The Bachs were a very prolific family—Sebastian had no less than twenty children, by two wives—and intermarriage was of frequent occurrence. The marriage of several sisters of one family by several brothers of another also appears to have been common in this family, and another odd phenomenon was the birth, in 1645, of twin brothers who were so much alike in appearance that their own wives could not distinguish them. Both adopted the same profession, played the same instruments, were subjected to the same illnesses, and the dates of their death were little more than a year apart. One of them, Johann Ambrosius, was the father of Johann Sebastian, the greatest of all the Bachs, and the profoundest musical thinker the world has ever seen. The similarity of Sebastian's father and uncle in appearance, tastes, and character was not the only abnormal mental trait of the family. Sebastian had a weak-minded aunt, and one of his own children was an idiot. This near alliance of great wits to madness is observable in the case of other remarkable men, but here too close intermarriage may have been a cause as effective as an unusual delicacy of cerebral and nervous organization, resulting in either genius or insanity, according as the conditions of physical development were favorable or otherwise.

In Sebastian Bach's case these conditions were

so extremely favorable that they enabled him to become not only the greatest composer and organist of his own time, but in many respects of all time. Bach is preëminently the musicians' composer—a place that has been frequently, but erroneously, claimed for this or that other master. His own generation evidently had not the remotest conception of his gigantic genius, although he was recognized as the first of organists and a great writer of fugues. The number of his works was almost incredibly large (the Peters edition includes more than fifty volumes), but of these only a few were printed during his lifetime—partly in his own house—and the majority seem to have been produced only under his own supervision. Soon after his death they were almost entirely forgotten, until—more than half a century later—some of his great successors discovered these treasures and brought them again before the public. One of the first impulses was given by Mozart, who, in 1788, accidentally heard one of his vocal compositions at Leipzig in the St. Thomas Church, in which Bach had been cantor. He at once exclaimed: "Thank heaven, here is something new, from which I can learn something!" To Mendelssohn, however, belongs the credit of having restored Bach to full and immortal life. His enthusiasm was extraordinary, and as a mere youth of nineteen he arranged at Berlin, in 1829, the first performances of the great "St. Matthew's Passion," the epoch-making significance of which has only once since been equalled: by the Nibelung Festival at Bayreuth in 1876. Schumann was a warm coadjutor of Mendelssohn in his efforts in behalf of Bach, and was one of the founders of the Leipzig Bach Society, which began to issue in 1851 the valuable complete edition of Bach's works. Chopin, according to his own testimony, locked himself up for fourteen days before he gave a concert, and played Bach; and for those who can read between the lines, it is easy to see that on these occasions his exquisite harmonic sense must have found as rich nourishment in the inexhaustible stores of Bach's works as his digital dexterity improved under the severe discipline afforded by their complicated polyphonic structure. There are probably few pianists, violinists, or 'cellists at the present day who do not derive more benefit, in a mechanical as well as intellectual way, from the practice of Bach's sonatas and other compositions than from the works of any other master; for in Bach, as Mendelssohn claimed, are comprised "the fountain-head and the most important things in music." Richard Wagner, whose tastes and tendencies were so different from those of Mendelssohn, says that Bach's motets "constitute undoubtedly the most perfect unaccompanied vocal music in existence." And of his Passion Music and oratorios, he says: "What opulence, what fulness of art, what power, clearness, and withal simple purity, speak to us from these unrivalled master works! In them is embodied the essence, the whole substance, of the German nation." The opinions of other masters might be added to these, but enough has been quoted to prove that Bach is the musicians' composer, and the greatest source of inspiration to his successors.

Music is acknowledged to be an experimental and progressive art. The works of minor composers seldom survive their own generation, and even in the case of great writers like Haydn, Mozart, and Beethoven, it cannot be denied that fully one-half of their works already possess merely an historic value. Why, then, is it that Bach seems to form an exception to this rule—that it took a century for the world to begin to appreciate him, and that there is every reason to believe that his popularity among the masses will grow in a steady crescendo? It is because Bach was a kind of musical Kant. His intellect was so profound and acute that he penetrated into the mysterious subtleties of harmonic combinations in a manner which his contemporaries could not appreciate, and which occasionally carries him clear across the so-called classical period (Haydn-Mozart-Beethoven), and brings him abreast with the latest German school of harmony and modulation. Doctor Riemann, in his admirable 'Musik-Lexicon,' has given such a clear, condensed, incisive characterization of Bach that we cannot refrain from translating a portion of his article:

"Bach is one of the greatest masters of all times—one of those who cannot be surpassed—because in them is embodied, as it were, the sentiment and knowledge of an epoch, as in the case of Palestrina, Händel, Gluck, Haydn, Mozart, Beethoven, Wagner. But Bach gains a special significance, an unexampled greatness, from the fact that the specific styles of two different periods simultaneously reached in him a high development, so that he stands between both as a mighty boundary-stone, commanding a vast territory in each. Bach belongs with equal right to the period of polyphonic music, of counterpoint, canon, and fugue, and to the period of harmonic music and established tonality. He lived in a period of transition, when the imitative style had not yet lost its vitality, while the new style was still immature and in its first stages of development. Bach's genius united the peculiarities of both styles in a manner which must be regarded as worthy of imitation in a period which still lies before us. It would be absurd, therefore, to speak of Bach's music as antiquated, except in so far as this term applies to certain cadences, embellishments, and other superficialities in the use of which Bach was a child of his time and reminds us of it. His melodies are so healthy and absolutely original, his rhythms so varied and full of vitality, his harmonies so select, bold, and yet clear and transparent, that his works are not only the object of admiration, but of the most zealous study and imitation by the musicians of the present day, and will probably remain so for a long time to come."

The "cadences, embellishments, and other superficialities" of which Doctor Riemann speaks as the only antiquated elements in Bach's music, are by no means so conspicuous and tiresome as they are in the works of his contemporary Handel. Handel was one of the fashionable composers of his day. He wrote Italian operas for the fashionable world and oratorios for the people. He lived in the world, and was obliged to adapt himself to his environment. "The vocal runs and passages of Handel and Mozart," says Professor Ehrlich, "having been composed for certain great vocalists of their time, are to-day mostly antiquated. The vocal passages of Bach and Beethoven, on the other hand—characteristic, descriptive, occasionally tasteless and overladen, like the symbolic ornaments of Old-Gothic churches—are never devoid of style, and almost always quite distinctive." In so far, then, Bach may be regarded as a modern composer, while in the easy flow of his rhythms and in the naturalness of his cadences or endings he is more modern, as a rule, than Haydn, Mozart, and the early Beethoven. His recitatives are often marked by an emotional force and definiteness which foreshadow the modern music-drama. That Bach is not a dramatic genius is a notion that has been advanced by several historians and critics, Doctor Poole included. It is effectively refuted by many numbers of his Passion Music, and by the testimony of Wagner, who speaks of the "simple, vigorous, often highly poetic, interpretation of the text" in his vocal compositions. Occasionally he showed that indifference to the text which was shared by most of the ancient composers; but it is significant that when he did write a secular cantata for some ephemeral purpose, he habitually utilized the same materials in a subsequent sacred work for which they were better suited on account of the essentially ecclesiastic bent of his mind. Bach was familiar with the operatic music of the Italian composers and their German imitators, but he thought little of it, and always referred to it as *Liederchen* ("little songs"). Doctor Poole cites this to prove that Bach's "genius is essentially undramatic." Unoperatic would be the proper word. It was one of his peculiarities that the different positions as organist, chorus director, and capellmeister which he successively held, determined the form and character of his works. Had he been appointed operatic conductor, and left free to write according to his dramatic impulses, as revealed in the Passion Music and his cantatas, he would undoubtedly have produced operas as immeasurably superior in true dramatic import to the fashionable lyric operas of Handel as his fugues and orchestral works are superior to those of his worldly contemporary. Doctor Poole virtually admits this when he states that "the arias, duets, etc., which occur in his cantatas are the worthiest representatives of the opera that Germany produced before Gluck, whom, indeed, he anticipated in his treatment of the recitative." This dramatic instinct in Bach is therefore one of his principal claims to the name of a modern composer, for it is evident that the dramatic tendency in the music of the present is what principally distinguishes it from the lyric, indefinite, and absolute music of previous epochs, as typified by Handel, who, it is well known, had no sympathy with Bach. The chorals which Bach has scattered through his works, it may be added, are eminently dramatic, in the highest sense of the word, as they closely interpret the general character of the text, and by their majestic rhythms and harmonies arouse the spirit of religious devotion to the highest pitch of excitement. Wagner has shown, in the opening scene of "Die Meistersinger," what excellent theatric use can be made of a choral.

Of course we do not mean to assert that all of Bach's music is dramatic. It is so only when occasion requires, for no one would expect a fugue, for instance, to be dramatic except in the manner in which it may lead up to a grand climax. It must be observed, finally, that the style of Bach, in which the mediæval polyphonic and the modern harmonic styles are so admirably blended, and of which the fugue is the highest development in a formal sense only, has exercised an ever-increasing influence on modern composers, from Schumann to Wagner, and is destined to attain still greater significance in the future as a reaction against the mono-melodic or operatic style, in which the solo melody has undue prominence over the accompanying parts. Helmholtz has very appropriately divided the history of musical development into three periods. The first represents the homophonic music of antiquity, and the Asiatic (and savage) nations of the present day, who, like their remote ancestors, have only simple melodies without harmonic accompaniment. In the second, or polyphonic period, which extends from the tenth to the seventeenth century, attempts are made to unite several parts, each voice taking up the melody in succession (canon), while the others continue in such a way as to avoid discord without aiming at harmony for its own sake. The third is the harmonic period, in which harmony and discord are directly aimed at for the sake of expression and emotional shading. This classification is good so far as it goes, but it seems necessary either to subdivide the third period or to add a fourth. Since the beginning of the harmonic period there has been a tendency, as just intimated, to give excessive prominence to the leading melody at the expense of the other harmonic parts. This tendency culminated in Italian opera, in which the orchestra is simply used as a hazy background to the prima donna's

voice. It was resisted by the greatest of the German composers, whose scores are usually more or less polyphonic—*i. e.*, give the harmonic parts a melodic significance. But with the appearance of Wagner's music-dramas a new style came into existence, which might be called the neopolyphonic. It is based on the system of leading motives. These typical melodic, harmonic, and rhythmic phrases, representing the ideas and characters of the drama, are continually combined, contrasted, and interwoven with a contrapuntal skill which has not been equalled since the days of Bach, and which makes it possible to say in regard to Wagner's harmony what Forkel said in regard to Bach's—that it is "a manifold melody." The difference between the old and the new polyphonic style is that in the old but one subject or leading idea was used and treated in the different parts, whereas in the new the numerous motives of a whole music-drama are in turn united and contrasted with one another. Wagner's music, therefore, far from being formless, as his ignorant critics have so often asserted, is the very perfection of form, since it unites all the parts of a long drama as organically as the short compositions of the old polyphonic writers. The way in which Wagner has changed the taste of operatic audiences, so that the same people who twenty years ago would only listen to the warblings of a prima donna, now attentively follow the complicated web of his melodic harmonies, argues well for the future appreciation of Bach, whose works must be listened to in the same manner, although, of course, they lack the brilliant instrumental colors and scenic accessories of Wagner's, and can, therefore, never become equally popular.

Poole's little biography of Bach, which we have chosen as the text for our article, is one of the best works of the series to which it belongs, and cannot be sufficiently recommended to all musical persons. Nothing could be better for the cause of musical culture in this country than an effort to give greater vogue to Bach's compositions. Hitherto they have been unduly neglected, although some of our musical societies have repeatedly endeavored to dispel the popular illusion that Bach is only an erudite, pedantic scribe, without any warm red blood in his veins. So far is this from being the case that repeated hearing and careful study of his works always end in making enthusiasts of the performers as well as of the audience. As in the case of Wagner, this enthusiasm has led to the formation of special clubs. There are Bach societies in Berlin, Hamburg, Leipzig, Königsberg, London, and other cities, the object of which is to give annual performances of some of Bach's greatest compositions in a worthy manner. When shall we have the privilege of adding New York to this list?

CHERBULIEZ'S MEN AND THINGS.

Hommes et choses du temps présent. Par G. Valbert. Paris. 1883.

If any contributions to periodical literature on current events and characters of the time are worth collecting and republishing, the essays and articles, mostly political, contributed by M. Cherbuliez to the *Revue des Deux Mondes* under the *nom de plume* of "G. Valbert" are surely of the number. He is a studious and sagacious observer, a subtle analyzer of complex characters, and an undogmatic judge of situations. He is too reserved in politics to plunge into hasty estimates of probabilities; too sceptical to be dazzled by the brilliancy of momentary success; too genial a critic to distort what he opposes. He is too mindful of his standing in literature to sacrifice sense to piquancy, truth to style, or moderation to *verve*. Without ever displaying an imposing familiarity with his subjects, or a profound knowledge of history and literature in general, he has so much that is characteristic to say on every topic he selects, and says it with so much vivacity and such a profuse admixture of spirited generalizations—new or old—that even his more fugitive pieces have a value and a charm which do not pass away with the interest of the moment. His selection of topics, too, is felicitous, and pleasing by its variety.

There is, however, a little too much Bismarck in the pages before us—though probably not too much for the French taste, which is somewhat morbid on this point. The book opens, under date of December, 1878, with the great Chancellor, apropos of Dr. Moritz Busch's famous collection of "diary leaves" on 'Graf Bismarck und seine Leute, während des Krieges mit Frankreich.' The subject is very cleverly treated by M. Cherbuliez, and treated with conscious literary dignity. Nothing could be more shocking to French vanity, patriotism, or taste than the convivially confidential anti-French and similar ejaculations of the iron Chancellor, as recorded by his literary camp-follower in the great war. And Cherbuliez is a thorough Frenchman in his sentiments, though not by birth. He has here an excellent opportunity of showing up the great enemy of France, not only as a heartless foe, but in all the deformity of vulgar brutality, by merely copying, with a little comment, the revelations of the mercenary German diarist. He abstains from doing it—refrains from retort and invective. He copies enough to satisfy any Frenchman, but with the air of a man who sincerely doubts. Can that refrain of "burning and hanging," so frequently breaking through table-talk and culinary dissertations, be true? Can Bismarck really have said that his wife longed to see all Frenchmen, including their infants, shot and pierced? Are all those outbursts of more refined malice against friends and helpers true? Do Bismarck's irreverence, his deadly sarcasm, his ire or indiscretion know no bounds whatever? Is not his "Büschlein" responsible for a part of all that crudity? This garrulous historian, he thinks, is altogether a poor imitator of Plutarch. Plutarch was likewise fond of petty details, but he knew how to choose them in order to put in relief what is great. Plutarch, too, would have related of a hero that he had the superstition of deeming Friday a fatal day and thirteen a fatal number: but he would never have told of his great man, what Busch tells of Bismarck, that in his youth he could swallow eleven hard eggs one after another. Plutarch has been accused of occasionally lying; Busch never lies, but he has been often deceived by his recollections. "The only credence which M. Busch can obtain from us at certain points of his narrative is what Voltaire calls a subdued incredulity, an annihilation of reason, an adoring silence in the face of mysteries which surpass our comprehension." And M. Cherbuliez does the two revilers of France the justice of adding that "there is in the book many a page which shows the hero in his true stature, with a halo about his brow, and which forces us to admire, after wondering."

Bismarck, though unnamed, is in the background of the essay on "Realistic Politics," in which the unscrupulously grasping, Machiavellian policy of his partial prototype, Frederic the Great, is sketched after the first volume of that King's 'Politische Correspondenz.' The conclusion quotes Voltaire: "No man, perhaps, has ever understood reason better, and obeyed passion more." This is true, Cherbuliez thinks, of Frederic's doings in war, but "his high and luminous reason" guided his actions in peace. Other realistic politicians have been "as able as he in duping the Frenchman, amusing the Briton, cajoling the Russian, and ensnaring the Austrian"; but are they equally able, rational, and grandly successful in peace? That the Chancellor of the German Empire is not, is the thesis of one of the last essays, "The Deceptions of M. de Bismarck in his Internal Policy," based mainly on Karl Braun's 'Von Friedrich dem Grossen bis zum Fürsten Bismarck' (1882). In this late production not only the legislative shortcomings and parliamentary defeats of Bismarck are expatiated upon with little reserve, and perhaps with too little allowance for the difficulties in governing arising from the unnatural composition of the Empire, the absence both of absolute control and of parties able to form a parliamentary majority, and the crushing burden of unavoidable armaments; but even his mastery in international diplomacy is no longer looked upon with unbounded admiration. He has been baffled by the Liberal as well as the Ultramontane opposition, and also by Beaconsfield and Gortchakoff in an attempt contemplated in 1875—which may be doubted—and by Gladstone, in Egyptian affairs, in 1882. The French writer is here both bolder and bitterer than in his preceding pages; his gall would have risen higher still had he known, when writing, that Bismarck was just then weaving the threads of the now accomplished "pacific" triple alliance against France. We find the Chancellor also in the piquant sketch, "The Loves of Ferdinand Lassalle," in which we more than elsewhere recognize the pen of an eminent novel-writer; in "The Strength and Weakness of Democratic Governments," in which the novelist descends, in very bad humor, from the heights of fancy into the dreary arena of French republican politics and demagogy; in "King George V. of Hanover," a pleasing but incomplete historical sketch; in "The Jewish Question in Germany" and "The Roman Question," and in "The Last of the Condottieri," a powerful analysis of the political character of Garibaldi, in which, however, the "buffalo's head" is, we believe, made to weigh too heavily against the "heart of gold." The majority of the essays are fortunately unobscured by the shadow of the colossal figure the thought of which so often disturbs the serenity of French statesmen and writers. Among the topics which we can only allude to are Carlyle, Rohlfs's Tripolitan journey, the Channel tunnel, and Amalie von Lasaulx, the excommunicated nun, whose angelic character is depicted in an almost idyllic sketch.

Shaftesbury and Hutcheson. By Thos. Fowler. G. P. Putnam's Sons. 8vo, pp. 240.

In the valuable series of "English Philosophers" (which has already contained Farrer's 'Adam Smith,' Monck's 'Hamilton,' Bower's 'Hartley and James Mill,' and Fowler's 'Bacon') we have now two companion essays by Professor Fowler on the moralists, Shaftesbury and Hutcheson. They are well done. First comes a brief sketch of the author's life, followed by an account of his works, full enough to give their general tone and purport, and the special points for which he was, or deserved to be, noted, with sufficient discussion of them to bring out their relations to contemporary and modern thought, and without much attempt to establish Professor Fowler's own views. Shaftesbury's style is not altogether prepossessing to a modern reader, who is apt to be impatient of the prolixity and involution that were agreeable to the leisurely audience of his day; but the Earl always wrote like a polished gentleman. His favorite mode of argument was courteous sarcasm; his sceptical tone did not disturb his belief in God and immortality. His philosophical optimism was expressed with the *blasé* air of a man who knows by experience the

insufficiency of the best the world has to give. He was a nobleman, and his system was characterized by its benevolence and honor. He was a man of the world, and as such he was a utilitarian. He was a man of culture, and he thought that conscience and good taste were only different names for the same thing. He did not teach people to do right from any sordid motive or hope of future reward; nor did he base right and wrong upon the glory of God or divine law. He relied upon the innate sensibility of a gentleman, the feeling of *noblesse oblige*, to enforce the harmony he aimed at. Accordingly, when the selfish paradoxes of Hobbes required an answer, he explained that virtue lay in the doing for others, and that this harmony with universal humanity was perceived directly by the moral taste of a cultivated gentleman, just as he recognized musical harmony; and it was not worth while to puzzle over abstruser metaphysics.

If we compare his position with that of a modern utilitarian, who thinks that it requires difficult scientific investigation to determine what is for the common good, he seems like an amateur. But thanks to his suitability to his age and to the finished form which Pope has given to his cheerful philosophy, it has been an important feature in English thought. Pope expressed its optimism well:

> "All nature is but art unknown to thee,
> All chance, direction which thou canst not see,
> All discord, harmony not understood,
> All partial evil, universal good."

Hutcheson, whose name is coupled with Shaftesbury's in a union closer than that between any other two names in English philosophy, was a less notable man, for the reason that he sprang from the middle class, and did not represent so well the opinions of well-bred men. He was a follower and defender of Shaftesbury, but his standpoint, as the son of a Presbyterian minister and college professor, inclined him to view as a special moral sense, that discrimination of right and wrong which seemed to the Earl of Shaftesbury merely the good taste of a man of culture. Professor Fowler has done well to treat them together, and his book is a useful one.

Classic Mythology. A Translation (with the author's sanction) of Prof. C. Witt's 'Griechische Götter- und Heldengeschichten.' By Frances Younghusband. With a Preface by Arthur Sidgwick, M.A. Supplemented with a Glossary of Etymologies and Related Myths. Henry Holt & Co. 1883. 8vo, pp. 267.

Professor Witt's 'Classic Mythology' is not a systematic treatise upon mythology, but a systematically arranged collection of myths. It begins with the Cosmogony—"The Beginning of All Things," followed by "The Golden Age"—and then goes on with the principal myths and heroic legends, without any separate chapters upon the several gods and groups of gods. The only ones of the greater deities that form the subjects of chapters are Artemis and Dionysus, and that not as greater deities, but as connected with interesting legends. The thirty-two chapters contain nearly all the best stories of this class, and we do not know any book which contains just this material so complete and so well told, and so tastefully printed. Of course Kingsley's and Hawthorne's collections do not come in competition with this; they present the stories dressed up in such a way as to be as fascinating as possible to the child—the book before us simply tells the story as it has come down to us, with no additions or adornments. It is, therefore, specially adapted for purposes of instruction, containing just the material that the teacher and the student want. The American editor has adapted it more particularly for class use by adding a "Glossary" (pp. xiii. to xxvii.) giving brief explanations of the names and the myths. Of this part of the work it need only be said that it represents in its extreme form the theories especially associated with Max Müller and Sir George Cox. No possible explanation is suggested except that of the most common operations of nature. We have, for instance, eighteen dawn-myths, including Æthra, Alcmene, Andromeda, Antigone, Aphrodite, Ariadne, Atalanta, Athene; sixteen myths of the sun, etc. This work of identification is done carefully and ingeniously, and it is hard to take exception to it in detail; but we cannot bring ourselves to ascribe such excessive sameness to the origin of a mythology so rich and varied. Why must we consider Aphrodite "the dawn as it springs radiant from *aphros*, the foam of the sea," rather than the foam itself? Why not, then, a sea-goddess? But for those who accept implicitly this school of interpretation this glossary will be very serviceable.

The Scientific Angler. By the late David Foster. Compiled by his Sons, and edited by Wm. C. Harris. Orange Judd Co.

Mr. Foster combined to a rare degree the art of catching fish and of telling how to do it. The English edition of this book has been several times reprinted, and in its arrangement and instructions compares very favorably with any of the standard works on angling. The chapters on the "Habits and Haunts of Fish" are particularly good, and bear strong evidence of having been drawn from the stores of personal experience. Mr. Foster does not agree with the prevailing opinion that anadromous fish will not feed except in salt water, and that their store of fat acquired in the sea is their only sustenance when absent from it. He says: "The young of both grayling and trout suffer greatly from the presence of salmon in the tributaries of our rivers. The former, particularly, are sought after and taken by them." We think the theory that salmon eat nothing in fresh water is being gradually given up, and on good grounds. Of course, there is a good deal in Mr. Foster's book that is of no practical use to the American fisherman—for instance, the chapters on the barbel, tench, and some other fish of which we have none on this side of the Atlantic; but these superfluities are not unpleasant ones, and the copious foot-notes by Mr. Harris, of the *American Angler*, are both interesting and profitable.

On the Conservation of Solar Energy. By C. William Siemens, F.R.S. London and New York: Macmillan & Co. 1883.

The remarkable hypothesis of Siemens that the sun draws his fuel from the gases in space—certain dissociated hydrocarbons flowing into his atmosphere at the poles and being expelled by centrifugal force at the equator—has provoked much criticism, and the author of this striking theory has collected in a small treatise his own papers and also those of his more prominent critics. If this theory had been broached by a man unknown to science, it would undoubtedly have awakened little attention; but Doctor Siemens has earned a right to be heard, by his important labors in applied science.

In England and Germany, which are the centres of physical science at the present time, hypotheses unsupported by experiment are little thought of, and Doctor Siemens brings forward but one experiment of his own to support his theory. He apparently showed that the solar rays could dissociate hydrocarbons at a low temperature and pressure, forming carbonic dioxides. Reasoning from this, he concludes that the sun's rays provide fuel from the gases of interstellar space which are drawn to himself and are burned, while the waste products are expelled by centrifugal motion into outer space, where they become enriched and are again acted upon by the solar rays. This process has all the semblance of perpetual motion, but Doctor Siemens avoids the non-allowable by supposing that the sun in his motion through space toward the constellation of Hercules is constantly moving into new regions. Yet at certain times he seems not averse to the hypothesis that the solar energy which is apparently lost in space is employed in raising the potentials, so to speak, of the consumed gases, in order that they may again be drawn into the solar furnaces and again be expelled. It is necessary for his hypothesis that some evidence of the constitution of the gases in interstellar space should be obtained. He therefore cites the observations on comets and the analyses of meteoric stones which appear to prove the presence of hydrocarbons. The extensive formations of limestone on the earth he also cites as possibly owing their existence to the earth's passing, at some epoch, through an atmosphere largely acted upon by the dissociating effect of the solar rays.

Doctor Siemens meets formidable critics in Hirn and Faye. The former thinks that if the gases drawn into the sun at the poles were dissociated by the great heat of the solar atmosphere, in being driven out a recombination would occur at no great distance from the sun, and the heat set free in the one case would become latent again, and there would be no gain to the sun. Faye thinks that the rarefaction of the gases in space supposed by Doctor Siemens is too small, and that it would oppose excessive resistance to planetary motions, and would add a mass of matter to the solar system 100,000 times as great as that of the sun. His own observations on the cyclonic movement of sun-spots do not support Doctor Siemens's hypothesis; the observations of Laugier, Carrington, and Spoerer show that the displacement of the spots in latitude is small, and that those remote from the equator tend toward and not away from the poles. The centrifugal force of the sun, moreover, being only 1-48000 of solar gravity, would not be competent to throw matter into space. Doctor Siemens answers his critics in turn, and always in an interesting manner. One cannot help observing, however, that in order to support his original hypothesis he boldly frames many subordinate ones, each of which has very little evidence to support it. We are reminded, in reading Siemens's papers upon this subject, of Tyndall's phrase, "the scientific use of the imagination," and feel perhaps that we owe a debt to Doctor Siemens for stimulating the imagination; but the training of a scientific man leads him instinctively to reject a mosaic of hypotheses.

The Principal Southern and Swiss Health Resorts: their Climate and Medical Aspect. By William Marcet, M.D. Scribner & Welford. 12mo, pp. viii.-408. Illustrations.

Doctor Marcet devotes himself to the following topics: (1) The main features of life at the watering places of southern Europe; (2) the climate of the French and Italian Riviera; (3) a description of some health resorts in Algeria and in southern Italy; (4) an account of an ascent of the Peak of Teneriffe, and of a three-weeks' bivouac for scientific purposes near its summit; and (5) a summary description of some of the leading health resorts of Switzerland. From this somewhat heterogeneous material Doctor Marcet has made a useful popular book. He contributes a number of original observations

on the climate of Cannes, which he studies in comparison with that of neighboring resorts; and the section on atmospheric moisture (pp. 75–85) is a clear treatment of a subject that is usually slighted or muddled. On the other hand, Doctor Marcet seems not to have heard of the new preventive treatment of sea-sickness by the bromides—a treatment, it may be added, which is certainly effective, but which has the serious drawback that it is liable to produce symptoms quite as distressing as those of sea-sickness itself. Acclimation, the hygienic value of long sea-voyages, the effects of great elevation above the sea-level in the treatment of pulmonary disease, and of occupation and of idleness respectively upon the invalid—these and many cognate practical questions are discussed here with the intelligence of an experienced physician. The book is well indexed, and has a number of folded lithographs of scenery in Madeira, Teneriffe, and Switzerland, one of which represents the valley of Davos, the latest balneotherapeutic find in eastern Switzerland. It is not a systematic treatise, like Sir Henry Bennett's upon a kindred topic, and it lacks the finished style which has made that work almost a popular classic in its line; but that it is readable may be inferred from touches like this, a propos of hotel life at Cannes and the *désagrémens* of the table d'hôte. Doctor Marcet says: "It is a time for those sitting near each other to break the ice, and there may be a fear of some clever person, with a discussive turn of mind, originating a general conversation which may, perhaps, take a turn unpleasant to many of the guests."

E. F. Bickford Inv. 21884

Correggio. By M. Compton Heaton. Scribner & Welford. 1882.

THIS twelfth biography in "The Great Artists" series briefly narrates what is known of the life of Antonio Allegri, commonly designated by the name of his birthplace, Correggio, and gives an account of his most important works and the circumstances under which they were executed. The book is modestly written, the author confining himself to what he has been able to gather from the most trustworthy authorities. In addition to a convenient index, a list of Correggio's principal works, including their present whereabouts, and a chronological table of the leading events in the master's life, are given. There are also nine woodcut illustrations of good average quality.

BOOKS OF THE WEEK.

Alcott, Dr. W. A. Tobacco: Its Effects on the Human System. With Notes and Additions by Nelson Sizer. Fowler & Wells. 25 cents.
Ammen, Rear-Admiral D. The Atlantic Coast. [The Navy in the Civil War.] Charles Scribner's Sons.
Appleton's General Guide to the United States and Canada, 1883. D. Appleton & Co.
Black, W. Yolande: a Novel. Harper's Franklin Square Library. 20 cents.
Blackwell, Dr. Elizabeth. Wrong and Right Methods of Dealing with Social Evil. A. Brentano & Co.
Broglie, Duc de. Frederick the Second and Maria Theresa. 1740–1742. Harper's Franklin Square Library. 20 cents.
Brooklyn Bridge: History, by W. C. Conant. The Bridge as a Monument, An Account of the Opening Exercises. Harper's Franklin Square Library. 20c.
Coan, T. M. Studies in Biography. [Topics of the Time. —No. 1.] G. P. Putnam's Sons. 25 cents.
Cunningham, F. H. Familiar Sketches of the Phillips Exeter Academy and Surroundings. With illustrations. Boston: J. R. Osgood & Co.
Day, H. From the Pyrenees to the Pillars of Hercules. G. P. Putnam's Sons. $1 50.
Düntzer, H. The Life of Schiller. Macmillan & Co. $2 50.
Durfee, T. Gleanings from the Judicial History of Rhode Island. Providence: S. S. Rider.
Enault, L. Christine. Henry Holt & Co. $1.
Franklin, A. Ameline du Bourg: a Tale of the Huguenots. J. W. Lovell Co. 15 cents.
Freeman, E. A. English Towns and Districts. Macmillan & Co. $4.
Fuller, E. Forever and a Day: a Novel. Philadelphia: J. B. Lippincott & Co. 50 cents.
Gilbert, J. H. Burning Words of Brilliant Writers: a Cyclopædia of Quotations from the Religious Literature of All Ages. Albany, N. Y.: O. R. Niver.
Gow, A. M. The Primer of Politeness: a Help to Home and School Government. Philadelphia: J. B. Lippincott & Co. 75 cents.
Green, Ana Katharine. X, Y, Z: a Detective Story. G. P. Putnam's Sons. 25 cents.
Handbook of Hospitals. G. P. Putnam's Sons. $1.
Hawthorne, N. The Hollyer Romance, etc. Sketches, etc. [Vols. xi. and xii., completing the Riverside edition.] Boston: Houghton, Mifflin & Co. $2 each.
Hawthorne, N. True Stories from New England History, 1620–1692. Grandfather's Chair, Parts 1, 2, 3. Boston: Houghton, Mifflin & Co. 15 cents each.
Hawthorne, N. Biographical Stories. Boston: Houghton, Mifflin & Co. 15 cents.
Hayes, I. I. An Arctic Boat Journey in the Autumn of 1854. New edition, enlarged and illustrated. Boston: Houghton, Mifflin & Co. $1 50.
Hinsdale, B. A. The Works of James Abram Garfield. Vols. ii. Boston: J. R. Osgood & Co.
——. The Second Campaign: a Novel. Boston: J. R. Osgood & Co.
——. Campaign. [Round-Robin Series.] Boston: Ro——.
Holmes, ——. Pages from an Old Volume of Life: a Collection of Essays. 1857–1881. Boston: Houghton, Mifflin & Co. $2.
Howe, Elizabeth. Hazleburgh: a Romance. W. B. Smith & Co.
Humphreys, General A. A. From Gettysburg to the Rapidan. Charles Scribner's Sons. 75 cents.
Huntley, S. The Spoopendyke Papers. John W. Lovell Co. 20 cents.
Jevons, W. S. Methods of Social Reform, and Other Papers. Macmillan & Co. $3.
Johnson, R. T. The Foundation of Maryland, and the Origin of the Act concerning Religion of April 21, 1649. Baltimore: Maryland Historical Society.
Kemp, E. L. An Idyl of the War. The German Exiles, and Other Poems. Philadelphia: John E. Potter & Co.
Leila-Hanoum. A Tragedy in the Imperial Harem at Constantinople. Wm. S. Gottsberger.
Lester, C. E. Life and Character of Peter Cooper. J. B. Alden.
Lippincott's Magazine. New Series, Vol. v. Philadelphia: J. B. Lippincott & Co.
Logan, A. S. Saul: a Dramatic Poem. Philadelphia: J. B. Lippincott & Co.
Macquoid, Katharine S. Her Sailor Love. G. P. Putnam's Sons. 50 cents.
Mahan, Commander A. T. The Gulf and Inland Waters. [The Navy in the Civil War.] Charles Scribner's Sons.
Marcet, Dr. W. The Principal Southern and Swiss Health Resorts: their Climate and Medical Aspect. Scribner & Welford.
Matheson, G. My Aspirations. Cassell, Petter, Galpin & Co.
Mayers, R. C. V. Life and Adventures of Lewis Wetzel, the Renowned Virginia Ranger and Scout. Philadelphia: John E. Potter & Co. $1 50.
Meyers's Hand-Lexikon des allgemeinen Wissens. 3d ed. Vol. ii. L–Z. Leipzig; New York: B. Westermann & Co.
Moody, W. G. Land and Labor in the United States. Charles Scribner's Sons. $1 50.
Murray, J. F. Father Tom and the Pope; or, A Night in the Vatican. Philadelphia: T. B. Peterson & Bros.
Myers, F. W. H. Essays, Classical. Macmillan & Co. $1 25.
Myers, F. W. H. Essays, Modern. Macmillan & Co. $1 50.
O, K. Skobeleff and the Slavonic Cause. London: Longmans, Green & Co.
Page, Dr. C. E. Natural Cure of Consumption, Constipation, Bright's Disease, Neuralgia, Rheumatism, Colds, etc. Fowler & Wells. $1.
Parker, F. W. Notes of Talks on Teaching, at the Martha's Vineyard Summer Institute. 1882. E. L. Kellogg & Co.
Paris, Comte de. History of the Civil War in America. Vol. iii. Philadelphia: Porter & Coates.
Payne, Rev. C. H. Guards in Character-Building. Phillips & Hunt. $1 50.
Paynter, Mary Moncure. Caleb the Irrepressible. Chicago: Henry A. Sumner & Co. $1.
Pollard, Josephine. Co-Education. Illustrated by Walter Satterlee. Ernest F. Birmingham & Co.
Ponce de Leon, N. Diccionario Tecnológico Inglés-español y Español-inglés. I.—Inglés-español. Parts 1, 2. New York: N. Ponce de Leon.
Princess Amélie: a Fragment of Biography. [No-Name Series.] Boston: Roberts Bros.
Richey, Rev. T. What is the Bible? Why was it Written? How is it to be Read? James Pott.
Robinson, A. Mary F. Arden: a Novel. Harper's Franklin Square Library. 15 cents.
Rolfe, W. J. Shakespeare's Venus and Adonis, Lucrece, and Other Poems. Harper & Bros.
Rollins, D. The Englishman's Right: a Dialogue in Relation to Trial by Jury. Reprinted from the Edition of 1772. Boston: Soule & Bugbee.
Ruggles, H. Germany Seen without Spectacles. Boston: Lee & Shepard. $2.
Ruskin, J. Modern Painters. Vol. ii. "Of Ideas of Beauty," and "Of the Imaginative Faculty." Rearranged and revised by the Author. John Wiley & Son. $1 50.
Saintsbury, G. Specimens of French Literature, from Villon to Hugo. Macmillan & Co. $2 25.
Sarmiento, D. F. Conflicto y Armonias de las Razas en América. Vol. i. Buenos Aires: S. Ostwald.
Schuyler, Julia. Tiger Lily, and other Stories. Charles Scribner's Sons. $1.
Schermerhorn, C. P. Atomic Creation, and Other Poems. New York.
Smith, Prof. G. False Hopes; or, Fallacies, Socialistic and Semi-Socialistic, Briefly Answered. John W. Lovell Co. 15 cents.
Spencer, H. The Data of Ethics. D. Appleton & Co. 50 cents.
Spinoza, Benedict de. Ethic, Demonstrated in Geometrical Order, and Divided into Five Parts. Macmillan & Co. $3 50.
Step, E. Plant-Life. Popular Papers on the Phenomena of Botany. Henry Holt & Co. $1 25.
Stone, Mary E. A Fair Plebeian. Chicago: Henry A. Sumner & Co. $1.
Sweet, A. E., and Knox, J. A. On a Mexican Mustang, through Texas, from the Gulf to the Rio Grande. Hartford: S. S. Scranton & Co.
Tennyson, A. Poems. 2 vols., Parchment Library. D. Appleton & Co. $1 25 each.
The Psalter; or, Selections from the Book of Psalms, with other Poetical Scriptures, for Responsive Reading in Public Worship. A. S. Barnes & Co.
Thom, W. T. Two Shakespeare Examinations: with some Remarks on the Class-Room Study of Shakespeare. Boston: Ginn, Heath & Co. 56 cents.
Thomas, Bertha. George Sand. Boston: Roberts Bros.
Thwing, C. F. The Reading of Books. Boston: Lee & Shepard. $1 25.
Troilope, A. Mr. Scarborough's Family. Harper's Franklin Square Library. 20 cents.
Trussedell, J. W. The German Facts Concerning the Science of Spiritualism. G. W. Carleton & Co.
Twain, Mark. Life on the Mississippi. Illustrated. Boston: J. R. Osgood & Co. $3 50.
Underground Russia: Revolutionary Profiles and Sketches from Life. By "Stepniak," with a Preface by Peter Lavroff. Charles Scribner's Sons. $1 25.
Usher, Archbishop. The Epistles of the Epistle of Barnabas, as printed at Oxford, A. D. 1642. With a Dissertation on its Literary History, by the late Rev. J. H. Backhouse. Oxford: Clarendon Press. 3s. 6d.
Ward, L. F. Dynamic Sociology; or, Applied Social Science. In two volumes. D. Appleton & Co. $5.
Waters, R. How to Get on in the World, as Demonstrated by the Life and Language of William Cobbett. James W. Pratt.
Wheatley and Delamotte. Art-Work in Porcelain. Also, Art-Work in Gold and Silver—Modern. Charles Scribner's Sons.
Wheeler, Ella. Poems of Passion. Chicago: Belford, Clarke & Co. $1.
Wise, Dr. I. M. Judaism and Christianity: Their Agreements and Disagreements. Cincinnati: Bloch & Co.
Worcester, B. The Life and Mission of Emanuel Swedenborg. Boston: Roberts Brothers. $2.
Zschokke, J. H. D. Meditations on Life, Death, and Eternity. From the German by Frederica Rowan. Boston: Houghton, Mifflin & Co. $2.

For Summer Reading.

Henry Holt & Co.'s

Leisure Moment Series.

Novels in a form suited to readers of taste. The books are sewed with *thread*—not wired—so they lie open easily; the paper, type, and printing are good, and the heavy paper cover bears a tasteful design.

Prices from 20 to 35 cents.

☞ All the *Leisure Moment Series* may be had in the *Leisure Hour Series*, printed on heavier paper, bound in English cloth, etc. Price $1 each.

Unmounted Photographs

OF ANCIENT AND MODERN WORKS OF ART,

Embracing reproductions of famous original paintings, sculpture, architecture, etc. Price, cabinet size, $1 50 per dozen. Send 6-cent stamp for new catalogue, 5,000 subjects.

The Nation.

NEW YORK, THURSDAY, JULY 12, 1883.

The Week.

THE most important feature in business and finance during the past week—or for that matter for the past several weeks—has been the continued decline in prices of the principal great agricultural staples, in view of the prospect of good crops. In grain and provisions the decline has been very marked. Cotton was already down to prices below the average of past years, and there are no indications of a recovery from these low prices. It is becoming apparent to bankers that credits based upon collateral of these commodities must be upon a lower range of prices than heretofore. This fact is coming home with great force to the banks, both East and West, which have advanced from $18,000,000 to $20,000,000 on whiskey in bonded warehouses (35,000,000 gallons in Kentucky alone), and which if now forced to sale, as a lot was at the West a short time ago, will scarcely bring the 25 to 30 cents per gallon advanced by the banks, to say nothing of the 90 cents per gallon of Government tax. The commercial agencies, in their semi-annual reports of failures in the United States and Canada for the six months to July 1, show a large increase both in numbers and in the aggregate of liabilities as compared with the three preceding years—the aggregate of liabilities for the six months of 1883 being $66,000,000, against $50,000,000 last year, $40,000,000 two years ago, and $41,000,000 three years ago. It is, however, believed that this increase of failures, which has resulted mainly from the fall in prices of goods and commodities in the last two years, will not be continued, because most articles are now either down to the cost of production or below it; and that merchants who are able to go on after this have little to apprehend from any further great decline in values.

The last three weekly statements of the New York banks have shown an increase of nearly $7,000,000 of loans, probably in connection with the increased movement of imports of goods which had been awaiting the operation of the new tariff laws on July 1. The supply of loanable funds has, however, continued abundant at the lowest rates usually made at this season of the year. Notwithstanding the abundance of money in the loan market, there is less disposition on the part of capital to invest in the securities of new enterprises, and the market for the new railroad bonds, of which there have been so many new issues in the last few months, is very dull. The same may be said of the stock market generally.

The Fourth is no longer a day of rejoicing and exultation, but of reflection upon and criticism of the condition of the country. At Woodstock on Wednesday, for instance, where they attempted to have an "old-fashioned Fourth," the ceremonial was really the only old-fashioned thing about the event. They had a brass band, which played patriotic airs, and we believe the Declaration of Independence was read, and a great number of distinguished persons, including an ex-President, were present; but when it came to the speeches and poem, we find them pervaded throughout by the spirit of patriotic reform. Colonel Wait, in his "words of welcome," reminded the audience that a nation could not be happy without being virtuous; Mr. Hayes dwelt on the necessity of national aid to education; while Bishop Coxe delivered an address on "National Perpetuity," in which he showed that the country was not likely to go on permanently prospering unless extravagance and luxury were checked, the tone of politics improved, and the moral law as laid down in the Bible generally recognized. Senator Blair spoke for an hour and a half on "National Evils and the Remedies Required to Exterminate Them," John B. Gough made a temperance address, and Mr. Whittier sent a poem, in which he managed to allude to the Indian question, temperance, civil-service reform, and female suffrage. This is really the type of the Fourth of July as it exists. To say that such celebrations as these show a decline in patriotism seems to us preposterous. They show a decline in bombast, in turgid rhetoric, in noisy and offensive self-laudation; but nothing could show better than the modern Fourth of July what a very seriously patriotic people we are. Nothing but a strong love of country would induce several hundred thousand people, on one of the hottest days in the year, to listen to reformatory addresses and poems, and critical lectures on the state of the country. For fireworks and triumphal rhetoric and pæans over their glorious destiny crowds can be got together anywhere, but a sober reformatory holiday is a very different piece of business.

One of the most curious illustrations of the embarrassment of the protectionists in finding plausible pretexts for the keeping up of high-tariff duties is the scheme urged by Mr. Wharton Barker, of Philadelphia, to distribute the surplus revenues of the National Government among the several States. He thinks that in this way State and municipal debts might be paid off, public schools might be maintained, and public improvements might be made. The mere statement of the proposition that the Government is to raise by taxation more money than it needs for its ordinary purposes, and to keep on raising this surplus systematically for the purpose of distributing it again among those from whom it was taken by way of taxation, is sufficient to show its eccentricity, to say the least. If it could be so distributed as to go back to the identical persons from whom it had been taken, it would be simply absurd. But if it were taken by taxation from some merely to be distributed among others, it would be communism.

Those who are anxious that the Government shall further embarrass itself in regard to the silver question by receiving as legal-tender coins the trade dollars, which have not been a legal tender for seven years, should study the Treasury statements for the last few years. The Treasury balances were larger on the 1st of July than on the 1st of June. At the former date the gold coin and bullion, less outstanding certificates, amounted to $136,713,215, and the silver dollars and bullion, also less certificates, amounted to $43,829,062. This is an increase of $2,995,112 and $2,500,259 respectively. But though this month's showing is more favorable to gold, in actual amount, than was last month's, the relative advance in the accumulation of silver is maintained. The standard dollars and bullion for them accumulated at the rate of 5 per cent. Gold coin and bullion accumulated at the rate of only about 2 per cent. The United States are already sufficiently loaded with silver coin without adding the trade dollars to the burden. The public eye will be attracted by the announcement that the decrease in the public debt in June was $17,500,000, and in the fiscal year $137,225,050; but the payment of the debt is by no means the only problem, or the most important one, suggested by the Treasury statement.

Mr. Theodore Van Wyck has very neatly unmasked the Cobden Club in the *Tribune*, and shown how it has been polluting the minds of the Western farmers with its pernicious literature. He declares that in 1880 he was informed by a depraved free-trader, who, like so many of his class, was a Democrat also, that the Cobden Club never sent documents to this country. Determined to ascertain the truth, he wrote to the Cobden Club, asking for some documents for his own reading. In about three weeks he received a heavy batch of works, the titles of which we hardly like to give. The worst of them is called 'The Western Farmer of America'; the least mischievous probably is the 'Cobden Club Committee Reports and Lists of Members.' Mr. T. B. Potter, the Secretary of the Club, also wrote Mr. Van Wyck a letter, saying that he could get more by going to "Cassell & Co.'s, 596 Broadway," and declaring that the Club had sent about $1,000 worth of this vile stuff to the United States. He mentioned, as if to excuse this, that he circulated half-a-million pamphlets in England during our war to show to Englishmen that the North was in the right. But Mr. Van Wyck was too shrewd a man to be blinded by so transparent an artifice. We trust that the defenders of the Club will make no further attempt to palliate their abominable activity.

The Cobden Club has done another very base thing, in offering a prize for an economical essay. A number of alumni of Williams College have, however, promptly protested against the "acceptance" of the prize by that college. The alumni, in their letter on the subject, which is certainly a curious production for educated men to put their names to, admit that the College is committed to free trade, or, in other words, teaches—as almost every college in

the country does—that the protective system is a delusion. This, these alumni say, is all wrong, because the College ought to teach "truth," and there is no such thing as "absolute truth" in political economy, the whole dispute about free trade being only a "political question." They therefore request that the College refuse to accept from "any foreign government, or political or commercial organization," any prize "for proficiency in this department." But this is only a half-way measure. If they are right, the colleges ought to give up teaching political economy altogether, and confine themselves to those branches in which "absolute truth" can be got at. This would, we presume, confine the curriculum to metaphysics.

Recently large quantities of whiskey have been preparing for a pleasure trip to Bermuda—not, as wine sometimes takes an ocean voyage, for the improvement of its quality, but to help the dealers to carry a larger stock than is needed for the trade. The production of whiskey has for some time exceeded the consumption, vast as the latter has been. Under the Federal law, the article has been allowed to lie in bond for three years without payment of the tax. The last Congress was asked to extend the time to five years, on the ground that to pay the tax before there was a market for the spirits would ruin the dealers. Congress refusing to grant the extension, the holders of whiskey hit upon the plan of exporting it to Bermuda and reimporting it to this country, so as to get more time in bond and thus postpone the payment of the tax. The customs duty on this article is about $2 a gallon, but it is provided by law that when a domestic article which has been exported, is reimported, "there shall be levied, collected, and paid thereon a duty equal to the tax imposed by the internal revenue upon such articles," which in the case of whiskey is ninety cents a gallon. When articles in bonded warehouses are withdrawn for export the lien of the internal revenue is discharged. The dealers' plan would work in this way. Whiskey would be formally withdrawn and the tax cancelled. It would be sent to Bermuda and after a reasonable time be brought back, subject to a duty of ninety cents. But imported articles, according to law, may lie in bond for three years, so that by this neat contrivance the dealers would get an even longer extension than they ineffectually sought to secure from Congress. The Attorney-General, however, has given the Secretary of the Treasury an opinion to the effect that such withdrawal and exportation are not within the meaning of the law. The plan will therefore fail, because while the dealers could afford to pay freight both ways on condition of paying a duty of ninety cents three years after reimportation, they could scarcely afford to pay the freight and incur a duty of two dollars.

Mr. Worthington, the Collector in Boston, has made an examination of the "assisted" Irish emigrants arriving in that port, owing to a note of alarm sounded by the Board of Health in that city, and reports that they are "fully up to the average standard of immigrants," and finds nothing to complain of in them. The truth is that the whole clamor about these assisted emigrants reflects but little credit on the Americans who have taken part in it. It was got up by the Irish agitators in this city as an enterprise in which they would be likely to gain some of the American sympathy which they have forfeited or repelled by their brutal indulgence for the policy of assassination. They thought that Americans would be pretty sure to join them in an uproar about paupers which would help to embarrass the British Government, even at the cost of compelling hundreds of their unfortunate countrymen to recross the Atlantic when on the very threshold of a new life. But there never has been any good foundation for it. The agitators doubtless well know that probably three-fifths of the 2,000,000 of Irish now in the United States came out as "assisted emigrants"; that is, their passage was paid wholly or in part by landlords anxious to get rid of them, or by remittances from friends in this country. The proportion of them who have come with the help of relatives who had preceded them is probably very large indeed, although no statistics on the subject are attainable. If no Irish emigrants had come over except those who could pay their way out of their own pockets, there would probably not be half as many in the country as there are. Nor does the fact that his passage money comes wholly or in part from the Government instead of from his own friends in any degree lower an assisted emigrant's value to this country, or increase the probability of his becoming a burden to the taxpayers. It simply shows that the times have been worse in Ireland than usual—so bad as to compel the Government to come to the aid of the local authorities in relieving distress. That his passage has been paid by the British Treasury raises no presumption whatever against an Irish laborer's capacity to support himself. It simply indicates that he could not at home have found the means of earning his passage even had he desired it.

Some features in the "assisted emigrant" discussion have bordered on the amusing. To read certain articles upon the subject, one might suppose that the United States was a country strictly reserved for small capitalists, and that only people of means, holding a letter of credit on a responsible banker, were allowed to land at Castle Garden. The truth is, however, that the reason why the vast majority of emigrants come here, and have always come, is that they are very poor, and, in a majority of cases, have just been able to scrape enough money together to pay their passage. The emigrants who come here with capital looking for investments are very few in number. The mass have nothing to dispose of but their labor. What heightens the ludicrousness of the recent denunciations of the Irish emigrant's poverty is that we have for one hundred years been announcing to the world that this was the place for "the pauper labor of Europe" to come, and that the only conditions of welcome and success were good health and willingness to work. Of course, it is against a man that he has been relieved from the poor rates, or has lived in the poor-house. But it would be monstrous to convert this into absolute and ineffaceable disqualification for emigration to the United States. There are paupers and paupers in all countries. The pauper we do not want and ought to send back is the man who will not work, and who habitually quarters himself on the rates to avoid work. A pauper who has become a pauper owing to the wretched condition of his country—that is, owing to the absence of all demand for his labor—is not *ipso facto* an undesirable addition to the population of a country in which the demand for labor is unlimited. And this is really the condition of the great bulk of the able-bodied poor in Ireland. No employer of labor has ever, we believe, in any part of Ireland found any difficulty in getting laborers.

The long and active life of one of the most eminent Roman Catholic prelates in this country ended last week. Archbishop Purcell was eighty-three years old. He had been a priest fifty-seven years, a bishop fifty years, and an archbishop twenty years. His official administration covered important and exciting periods in the history of the country and of his Church. He managed his diocese not only with tact and in a moderate and patriotic spirit, but in such a way as to secure from his followers the absolute confidence which enabled him to accomplish one of the most extraordinary financial feats on record. It might be said that Archbishop Purcell knew nothing more about finances than a child, were not the mere suggestion of the comparison perhaps unjust to the child. This ignorance did not prevent his acquiring and keeping for forty years an unquestioned credit which the best-managed savings bank or trust company might envy. People who, after the collapse of 1837, refused to trust any moneyed institution did not hesitate to trust the Archbishop. The most astonishing methods of doing business did not impair their confidence. His "books" were kept chiefly in his head—or in the head of his brother, Edward Purcell. It is said, for example, that "he would cover a scrap of paper back and front with memoranda of deposits, interest at 6 per cent., and withdrawals," and "sometimes entered a deposit on such a scrap, and absent-mindedly handed back the money." The money received on deposit, at promised compound interest, instead of being invested even at simple interest was used in building a $300,000-cathedral and other churches, in the simple faith that "the diocese in the end would redeem its obligations." Of course the diocese has not done this, and there is slight probability that it ever will do it. When the long-deferred explosion came in 1878 it appeared, so far as could be made out, that the Archbishop had received deposits to the amount of $1,000,000, and owed in principal and interest $4,000,000, for which there was nothing to show. The fact that throughout this matter his integrity has not once been questioned furnishes a very remarkable illustration of the value of character; but the history of the affair ought to do a good deal more than this. It should be an effectual warning against carrying on banking or other business on a spiritual capi-

tal. If it shall serve this purpose thoroughly, the painful experience which clouded the later years of Archbishop Purcell may really be more valuable than all the rest of his useful life.

The agreement arrived at between the War and Interior Departments with regard to the disposition to be made of General Crook's Apache captives is a very sensible and proper solution of the question. General Crook advised that the captives, instead of being treated like criminals, be put upon the San Carlos reservation like peaceable Indians, expecting that this treatment would speedily induce those still at large and in a semi-hostile condition to surrender, and thus put an end to the whole difficulty. The reservation Indians were opposed to this scheme, because they feared that the presence of the marauders among them might disturb and compromise them, and the Secretary of the Interior, in accord with the officers of the Indian Bureau, would have preferred to locate the captives somewhere else, where their unruly spirit would not contaminate the peaceable Indians. At any rate, he was reluctant to take upon himself the responsibility for the execution of General Crook's policy. This is quite intelligible. It naturally suggested itself that the originator or authoritative advocate of the policy to be pursued should also bear the responsibility for the execution of it, and that in case of the adoption of General Crook's scheme, he should exercise the police power on the reservation and make himself responsible for the orderly conduct of his captives, while the officers of the Indian Bureau retained the civil administration of the establishment. There is no reason why this exceptional arrangement should not work well if the Indian agent is as sensible and discreet a man as the General is known to be.

The Ottman compromise, according to a Washington despatch, is being carried out by the Attorney-General, and the $12,700 which was attached at Alexandria will shortly be distributed among "counsel," one of these being still alleged to be Mr. Richard Crowley. The compromise was effected in June of last year, when Mr. Crowley was acting as counsel for the Government; and if he is to be paid by anybody it would naturally be by the Government which he so ably served. But then how can the Government pay him with Ottman's money, after giving it up to Ottman? Altogether, it is a mysterious affair, and calculated to arouse suspicion and distrust among Democrats and other evil-minded persons. They will, however, probably investigate it, and then the facts in Mr. Crowley's case will come to light.

We are pleased to see from an interview reported on Tuesday with Mr. John F. Smyth that he considers the prospects of the Republican party in this State better than they were a year ago, although he acknowledges that this is not saying very much. He ascribes this to the subsidence of "discord" in some regions once ravaged by that great plague of our politics. We are inclined to think, however, that in the last analysis it will be found that any improvement which has shown itself is due to an agency which Mr. Smyth mentions, but only lightly and evidently without suspecting its potency—the fact that he himself has during the past year been absorbed in business and has let politics alone. If this be true, it will go far to account for any increase in "harmony" which Mr. Smyth has perceived. In fact, there is probably nothing which would help the party so much as the burial in their private affairs of about a dozen of Mr. Smyth's associates and co-workers. This seems at first a startling assertion, but it is true. Ordinarily, it is a bad thing for a community when its leading statesmen drop public affairs and devote themselves to making money. The philosophers all consider it one of the worst signs of politics. But the public joy in this State when it is known that a prominent statesman is exclusively devoted to any honest private calling, shows how little the philosophers know.

When Mr. Polk, the State Treasurer of Tennessee, who had appropriated to himself a large sum of public money to prevent its being misspent as interest on the State debt, was captured and put in confinement previous to his trial, some Tennessee papers rather proudly compared this achievement with the failure of the Pennsylvania authorities to catch Major Phipps, the thieving Superintendent of the Philadelphia Almshouse. Major Phipps has in the meantime not only been caught, but he has been tried and sentenced to five years in the penitentiary. There he is now, while we are still from time to time informed by telegraph of the slow progress of the Polk case and an occasional effort to "settle" the matter. As the Tennessee press has invited the comparison, it will be reminded by it that catching your thief is not the only thing required.

The way the ministers at the South are taking to the revolver is startling. Some weeks ago two young clergymen, brothers, in Louisiana murdered an older clergyman, and disputed between themselves afterward as to who fired the fatal shot, each claiming the credit of it. A day or two ago, in Arkansas, the Rev. Mr. Singleton, a Baptist minister "possessing talents of a high order," had a dispute "over some trifling matter" with "a much respected, quiet, and inoffensive" Mr. Moore. So he opened fire on Mr. Moore, and kept it up till he had sent three bullets into him. The excuse made for the reverend gentleman is that he has "the temper of a demon," which is certainly a serious defect in a minister, especially when he carries a revolver. After this, we should think his congregation would rapidly thin out, no matter how good a preacher he may be.

Physicians and patients will read with interest the letter of Doctor Seymour on the medical-code dispute, published elsewhere. With regard to the Wisconsin case, to our comments on which he refers, he seems to be laboring under a misapprehension. The regular physician was said to have deserted the patient, not because the family physician was not a surgeon, but because he was a homœopath. Doctor Seymour takes precisely the view of the matter that we expressed—that human life is a trifle compared with devotion to principle; that loyalty to the Code is more important than health; while he adds to this the important doctrine, which we confess we forgot to dwell upon, that the only persons to whom a doctor has any obligations whatever are "loyal, confiding patients," whom he can rely upon to help him fight the battle with the homœopaths and other designing foes. This picture of the Strong Man, surrounded by his little band of patients, making a gallant stand against the "weaklings and knaves" who wish to save as much human life as possible, is as striking as anything the Code controversy has brought out.

The report of the debate in the House of Lords on the deceased wife's sister bill shows that the example of the United States was used by both sides in a variety of ways. Earl Dalhousie, in advocating the bill, mentioned that he had made inquiries as to the effect of what is evidently thought to be our national custom of marrying deceased wives' sisters, and that the replies received from Americans of all classes and conditions showed that it was not believed here to have any perceptibly baleful results. This was rather difficult sort of testimony to meet, but Lord Cairns was equal to the emergency; he declared that there was nothing surprising in it, for "all Americans thought that all their institutions were good." Lord Cairns probably derives this impression from his reading of the standard British works on the manners and customs of the Americans, and from the "tall talk" of Americans when in England. But if he will run across here, as the Lord Chief Justice is wisely going to do, and study us in "our homes," the noble Lord will find that among ourselves we criticise our "institutions" with great freedom. If we may judge by this debate, an excursion to the United States by the House of Lords in a body, personally conducted by some one who understands the country, would do it a world of good.

It will probably be revealed some day what it is which impels Sir Stafford Northcote and the majority of the House of Commons to keep up their warfare on Bradlaugh. The only effect of it that is plain and certain is, that it will insure his reëlection by his Northampton constituents to the next Parliament, and in that Parliament it will be impossible to prevent his taking his seat, for he is ready to take the oath. The only open excuse for preventing his taking his seat in this Parliament is, that he once refused to take it on grounds which would make his taking it now a blasphemous mockery. Of this refusal, however, the next Parliament will know nothing, and cannot constitutionally know anything. To each Parliament each member comes without blemish, unless he is disqualified by statute. So that the Tories at best only get rid of the infidel for a year or so, while their persecution of him makes him a martyr.

SUMMARY OF THE WEEK'S NEWS.

[TUESDAY, July 3, to TUESDAY, July 10, 1883, inclusive.]

DOMESTIC.

THE Fourth of July was observed this year in a quiet manner throughout the country. One of the incidents of the day in this city was the return to the One Hundred and Sixty-fourth New York Regiment of a flag which was sent to them during the war by the city of New York, but which was captured on the way by the Confederates. It was returned by the cadets of the Virginia Military Institute. The ceremonies took place in the Governor's room at the City Hall. There were speeches by Mayor Edson and others. President Arthur received the cadets at the Fifth Avenue Hotel earlier in the day. The celebration at Mr. Henry C. Bowen's place at Woodstock, Conn., consisted of addresses by ex-President Hayes, Senator Aldrich of Rhode Island, Bishop Coxe, Senator Blair of New Hampshire, and John B. Gough, and the reading of a poem by John G. Whittier. Hanlan won first prize in a regatta at Lowell, Mass., on the Fourth. The Cornell crew won the inter-collegiate four-oared race at Lake George on the same day. The University of Pennsylvania was second, Princeton third, and Wesleyan fourth.

General Crook arrived in Washington last week for consultation with the President and members of his Cabinet as to what should be done with the captive Apaches. General Crook had a conference with the Secretaries of War and the Interior on Saturday morning, at which the question was discussed. An agreement was arrived at by the two Secretaries, of which the following is the substance: "The Apache Indians recently captured by General Crook, and all such as may be hereafter captured or may surrender themselves to him, shall be kept under the control of the War Department at such points on the San Carlos Reservation as may be determined by the War Department (but not at the agency without the consent of the Indian Agent), to be fed and cared for by the War Department until further orders. For the greater security of the people of Arizona and to insure peace, the War Department shall be intrusted with the entire police control of all the Indians on the San Carlos Reservation." This is the policy advocated by General Crook.

Secretary Chandler, of the Navy, has ordered that hereafter the officers of ships which are on a cruise, particularly the commanding officers, must leave their families at their "usual place of abode," and not select residences for them convenient to any foreign station where the ships may be. This is a revival of the severe discipline of former days.

Mr. John Roach has been awarded the contract for building the four new steel cruisers for the United States Government. His bids were the lowest offered.

Attorney-General Brewster has given an opinion to the Secretary of the Treasury that the exportation of bonded whiskey to Bermuda, with a view to its reimportation for the purpose of evading or delaying the payment of the tax, is not an exportation within the meaning of the law. The Attorney-General holds that the tax due upon the spirits at the time of exportation is collectible on their return to this country.

Postmaster-General Gresham decides that the order first issued by Postmaster-General Key excluding the Louisiana Lottery from the mails must be executed.

The Commissioner of Internal Revenue, Mr. Evans, says that Mr. Horton will not be allowed to assume the duties of the office to which he was recently appointed until all the charges against him have been cleared up. A report has been received from Boston which has not been made public, but which is said to be adverse to Mr. Horton.

The investigation of the affairs of Supervising Architect Hill's office has continued throughout the week in Washington. Testimony was introduced to show that he had exhibited favoritism in awarding contracts.

Crop reports from a wide area of the West and Northwest are very encouraging. Their tenor is that the grain crop, wheat excepted, will be equal to last year's yield.

One death from yellow fever was reported on Saturday from Galveston, Texas. It occurred on board a bark from Vera Cruz, in quarantine. There are other cases at Pensacola on shipboard.

A syndicate is said to have been formed which will ask Congress at the next session to refund to the States the $20,000,000 of direct tax which was assessed under the act of August 5, 1861.

There has been no material change in the Senatorial contest in the New Hampshire Legislature during the week, except that on Tuesday Mr. Rollins made a net gain of four votes.

The Mississippi Independents held a convention at Jackson on Wednesday. Gen. James R. Chalmers was one of the ruling spirits. A platform was adopted favoring a free ballot and a fair count, and a law to prevent fraudulent election certificates, and endorsing President Arthur's Southern policy.

About 250 delegates responded to the call for a national conference of Anti-Monopolists, which held a stormy session in Chicago on Wednesday. Dennis Kearney was excluded as a delegate. He declared in a speech that cheap freight did not benefit the laboring classes, and that the roads represented labor. A platform was reported on Thursday which advocates a postal telegraph system; abolition of the national banking system; establishment of a graduated income tax and of postal savings banks; amendment of the patent laws to secure more perfect protection of inventors; continuing the power of Congress to assess taxes for the necessary expenses of the Government only, and denouncing gambling in the necessaries of life.

At a meeting of the Niagara Falls Reservation Commissioners in this city on Friday a resolution was adopted to pay the expenses of the map of the proposed park out of the Commission's fund in case the Attorney-General decided it should be so paid. The State Engineer had been asked to prepare such a map, but said that he did not have the necessary funds for the work.

The trustees of the East River Bridge, at their meeting on Monday, ordered the erection of stand-pipes at each tower as a protection in case of fire. In case of an alarm the engines of the Brooklyn and New York Fire Departments will be run on to the bridge and will connect their hose with these stand-pipes. Chief-Engineer W. A. Roebling sent to the Board a letter, in the handwriting of his wife, tendering his resignation, to take effect at the end of the present month. The letter said that as the bridge was completed the trustees would no longer have need of his services. Colonel Roebling's resignation was accepted, and Superintendent Martin was appointed Chief Engineer in his stead.

Fourteen graduates of Williams College, Williamstown, Mass., have sent a protest to the trustees of the College against the way in which free trade is taught by Professor Perry. They especially object to having the Cobden Club prize awarded at the College. The trustees have appointed a committee of four to consider the advisability of having a course of protection lectures.

McGeoch, Everingham & Co., the Chicago produce firm which recently failed, have submitted a proposition to their creditors to pay 50 per cent. in cash, if all the creditors will sign the agreement. The terms have been accepted.

The Vermont Copper Mining Company, at Ely, Vt., of which Smith Ely, of New York, is President, has been in financial difficulties for many months, but has continued work since April without paying its miners, whose wages amount to $20,000. Finally, the miners were promised their pay on June 30, but the promise was not kept. The miners, stopping work, took possession of all the company's property and seized the corporation store. They were in great straits, some families being on the verge of starvation. On Thursday night ex-Governor Farnham, the attorney for the company, offered to pay the men 5 per cent. of their wages, but the offer was rejected. They took possession of Vershire and West Fairlee, threatening to burn the villages unless paid. They were well armed. On Friday Governor Barstow, of Vermont, ordered out 160 militia. They arrived at Ely early on Saturday morning, and quietly took possession of the town, capturing eleven of the ringleaders of the riot. This put an end to the danger, and most of the troops returned to their homes on Saturday evening. The mining company proposes to pay $2,500 of their indebtedness to the men at once, $2,000 in one week, and the balance, $15,500, as soon as the ore now in process of refinement can be put through and shipped. There being, in the opinion of the State's attorney, no case against the eleven prisoners, they were released on Monday.

The first through train on the New York, West Shore and Buffalo Railroad for Albany and Saratoga was run on Monday.

The stockholders of the Central Railroad of New Jersey met at the company's office in Jersey City on Friday afternoon, and ratified the lease of the road to the Philadelphia and Reading Company. Nearly 155,000 of the 185,000 shares were voted, of which 150,828 shares were in favor of the ratification, and 4,124 against.

Elam, the Virginia duellist, is considered out of danger.

Mlle. Marie Litta, the American prima donna, died at her home in Bloomington, Ill., on Saturday. Her illness was caused by overwork during her concert season last winter.

Archbishop Purcell, of the Roman Catholic Church, died at St. Martins, O., on Wednesday night, aged 83. He was made Archbishop in 1850. His latter years were made miserable by the memorable financial disaster that overtook him. He received deposits from Catholics without carefully recording them and judiciously investing them. The funds were drawn upon at will by the Archbishop for building the cathedral in Cincinnati, and for church edifices wherever they were asked for. In the fall of 1878 the crash came, and depositors tried to get their money. The Archbishop was quickly overwhelmed. He sent his resignation to Rome, but, as it was not accepted, he held his high office until his death. The deficiency amounted to fully $4,000,000.

FOREIGN.

The Sanitary Council of Egypt has ordered the population of Damietta to be removed from their dwellings and scattered in tents. The part of the town infected with cholera has been partly disinfected and partly burned. The death rate continues high in Damietta and Mansurah. It is asserted that the Egyptian medical service is in a state of chaos. The lazaretto at Beirut is crowded with fugitives from Egypt. Cholera is raging in Swatow, China. On Monday it was announced that provisions had given out at Damietta, and the people were starving.

In the House of Commons on Tuesday night, Henry Chaplin (Conservative) moved that, in view of the prevalence of the foot and mouth disease, the importation of live cattle should not in future be permitted from countries whose preventive laws, or the sanitary condition of whose cattle, did not afford reasonable security against the extension of the disease. Great Britain could not long rely upon America for meat, as the rapid increase

of the latter's population was causing the exportable surplus to become less daily. The motion was carried by a vote of 200 against 192, the members of the Government voting with the minority.

In the House of Commons on Thursday night Mr. Trevelyan, Chief Secretary for Ireland, in answer to a question as to whether, in view of the recent action of the Emigration Commissioners at New York, the deportation of paupers from Ireland to the United States would be stopped, said that orders would be given to suspend grants of money in cases where it was supposed that former inmates of workhouses were among those desiring to emigrate. Mr. Trevelyan also said that he believed very few of the state-aided emigrants were paupers, but that he was still inquiring into the subject. He thought it was not because of a few pounds more or less that immigrants were returned. In the course of a debate on the Relief of Distress in Ireland Bill, Mr. Trevelyan said that accounts of the state of the country were hopeful, and that there was no reason to expect exceptional distress. On Friday Mr. Trevelyan, in reply to further questions, said he had been informed that of a thousand emigrants who had gone to America, only two families had been inmates of the workhouse at Belmullet, from which section they came, and they had received money on landing and were doing well. At a meeting of the Catholic hierarchy in Dublin on Friday, motions were adopted condemning state-aided emigration, and pointing out that there are large tracts of land in Ireland which, if cultivated, would maintain the surplus population.

The House of Commons on Friday night, by a vote of 130 to 114, rejected a motion made by Mr. Hugh Mason (Advanced Liberal) in favor of female suffrage. Of the Government, Mr. Gladstone, the Marquis of Hartington, Sir Henry James, Mr. Shaw-Lefevre, Mr. Holms, and Mr. Duff voted against Mr. Mason's motion. Mr. Bright also voted against it. The privilege contemplated by the motion was to be limited to women who by virtue of the property qualification already possess the municipal franchise.

On the motion of Sir Stafford Northcote on Monday, in the British House of Commons, Mr. Bradlaugh was excluded from the precincts of the House until he engaged not to disturb its proceedings. The vote was 232 to 65. Mr. Gladstone and several other members of the Ministry withdrew before the voting took place.

The Joint Committee of the House of Lords and House of Commons, which has had the English Channel tunnel scheme under consideration, has rejected it by a vote of 6 nays to 4 yeas.

The report of the Committee of the House of Lords, which has had the Irish Land Act under consideration, was submitted to the House on Tuesday. The Committee say they find that the emigration clauses of the act have failed; that the modes of valuation of land are not to be relied on; that the relations between landlords and tenants have not improved, and that the tenants have become demoralized, and maintain the hope that a fresh agitation will bring about the passage of a new act.

At the Sligo (Ireland) Assizes on Saturday Rogerson, Tanzy, Kelly, and Haughton, implicated in the murder conspiracy, were found guilty. Two informers testified that the prisoners and a number of other persons, who were obeying the orders of a secret society, attempted in March, 1882, to blow up the Weston House at Galway with dynamite. On Monday Tanzy was sentenced to fourteen years' penal servitude, Rogerson to twelve years, Haughton to eight years, and Kelly to two years.

The report that James Carey, the informer, has left Dublin is confirmed. The Government refused to give him any reward or a written pardon. Having been given the alternative of being turned out unprotected in the streets, or a passage to London, and thence to some colony in the eastern hemisphere, he accepted the latter. His bankruptcy was announced on Tuesday.

Eight thousand iron workers in South Staffordshire and East Worcestershire, England, have struck work owing to a reduction of wages. Strikers marched to Dudleyport, Tipton, and Moxley on Thursday and entered the iron works at those places and quenched the fires in the furnaces, thus stopping work. The force of policemen on hand was powerless to prevent the action of the strikers.

A prisoner named Willsen, who is charged with committing arson in Copenhagen, has confessed that he set fire to the Victoria Docks, London, in 1881, with a view to obtaining plunder. The opinion heretofore entertained regarding the origin of the fire was that it was the work of Fenians.

During the launch of the steamer *Daphne* at Renfrew, near Glasgow, Scotland, on Tuesday, a terrible disaster occurred, which resulted in great loss of life. Two hundred workmen were on board at the time of the launch. The steamer left the ways at a very fast rate, and when she gained the water she rolled from side to side. The persons on board, fearing that she would capsize, ran to and fro. The vessel finally reeled over and nearly disappeared beneath the water. Boats hastily pulled to assist in the work of rescuing the unfortunate people, and succeeded in saving a large number of them. It is known, however, that there were fifty persons below in the *Daphne* when the vessel went over, and they were all drowned. Divers succeeded in recovering many of their bodies. The number of lives lost is estimated at 150. The vessel was of 500 tons burthen. She was built for the coasting trade.

It is reported from London that a number of holders of Confederate bonds have subscribed £10,000 for use in an endeavor to induce States wishing to reëstablish their credit to recognize a portion of their debt.

A dinner was given to Henry Irving, the English actor, in London, on Wednesday evening, at St. James's Hall. It was a farewell tribute, in view of his approaching visit to America. Many distinguished persons were present, and Lord Chief Justice Coleridge presided. There were 500 guests, and 400 ladies sat in the gallery. In toasting Henry Irving, Lord Coleridge paid a high tribute to the actor's profession. He said the best player ought to be a great man, to appreciate great qualities and to delineate them. The drama would die without the actor to breathe life into it. The greatest names were kept fresh by worthy interpreters. In conclusion, Lord Coleridge said: "America sent us Edwin Booth. We send her Henry Irving as a birthday present. Receive him with open arms, as we received Edwin Booth."

Prof. Thomas H. Huxley has been elected President of the Royal Society of Great Britain.

The Duke of Marlborough died suddenly in England on Thursday, at the age of sixty-one. He was found dead from heart disease on the floor of his room.

The American Rifle Team began practising at Wimbledon, England, on Monday. It is finally decided that they will not be allowed the use of wind-gauges except in the International match.

Notwithstanding the denial, it is asserted in Rome that the Curia differs from the Propaganda in regard to Ireland. Owing to the action of Mr. Errington, an inquiry has been sent to Cardinal McCabe whether he is well enough to come to Rome.

The relations between the Vatican and France have improved since the recent exchange of notes.

In the French Chamber of Deputies on Monday, M. Barodet (Republican) moved that amnesty be granted to those persons who took part in the Paris and Montceau-les-Mines riots, including Louise Michel. The motion was rejected by a vote of 304 to 89.

M. Achard has introduced a bill in the French Chamber of Deputies, authorizing the taking of soundings for piers for a railway bridge from Cape Gris-Nez, on the French coast, across the Strait of Dover to Folkestone in England.

At Hué, the capital of Anam, the French Consul has been insulted and attacked on the public streets.

In the French Chamber of Deputies on Tuesday M. Challemel-Lacour, Minister of Foreign Affairs, said that the French force in Tonquin was sufficient for any opposition it was likely to encounter. M. Challemel-Lacour continued: "It is now evident that the Tuduc is France's enemy. There is no longer any question of negotiating with him. France must now resort to fighting. M. Harmand, the French Civil Commissioner in Tonquin, will recommence treating as soon as possible after the opposition to France has been subdued. France will occupy only the Tonquin delta; she has no intention of conquering Anam. The reports of Chinese aggression are unfounded. I am able to state that pacific relations will be maintained with China. France's policy is to insure respect for her treaties. China at first objected to the occupation of Tonquin, but after the Ha-Noi affair she recognized France's right to chastise the Tuduc. If China, contrary to indications, shall follow disastrous advice, the Chamber will not hesitate energetically to defend the interests of the country." An order of the day expressing confidence in the firm and prudent policy of the Government was adopted by a vote of 371 to 82.

Li Hung Chang, the Chinese commander, has rejected the French proposals, and has referred M. Tricou, the French Ambassador, to the Foreign Board at Pekin.

It was reported on Friday that a French man-of-war had hoisted the French flag on the New Hebrides Islands. It was officially denied on Saturday.

The Comte de Chambord continued in a very precarious condition at Frohsdorff, Austria, throughout the week. On Saturday he had an affecting interview with the Comte de Paris and the Duc d'Alençon. On Tuesday, the Count, after a sleepless night, was very weak.

In the trial of the Jews at Nyiregyhaza, Hungary, on Friday, two of the prisoners, who are accused of having placed a corpse in the river with a view to passing it off as that of Esther Solymosi, the girl whom the prisoners are accused of murdering, declared that their confessions had been obtained by threats to murder them in prison. Other witnesses also testified to terrorism.

In the Spanish Chamber of Deputies on Friday Señor Moret introduced amendments to the Constitution providing for the better protection of personal rights and the sacredness of domicile, and extending religious tolerance. The Cabinet has resolved to consider the amendments.

It has been decided by the British India Government to grant the Amir of Afghanistan a large annual subsidy.

The Porte proposes to impose a tariff of 15 per cent. on articles imported for consumption, and a tariff of from 8 to 20 per cent. on other importations.

The decision of the home British Government to repudiate the proposed annexation of New Guinea to Queensland has caused discontent in that colony.

The Tea Adulteration Act of the United States has lowered the prices of that commodity in Japan. This, in conjunction with the expected shortage in the silk crop, has caused a depression in business.

"A NEW AND LIVING DEMOCRACY."

Mr. Hoadly, the Democratic candidate for the Governorship in Ohio, has made a speech opening the campaign. He is undoubtedly a man of uncommon ability and high character. He is also a man of an ardent temperament. When he was a Republican the abuses creeping into his party, especially during the Grant régime, alarmed him, and he felt it his duty to denounce them. In this respect he felt and acted as many others did. He took part in the Liberal Republican movement of 1872, but, discouraged by the nomination of Mr. Greeley, he supported General Grant for the Presidency. In this case also he acted as many others did. But he subsequently went over to the Democrats, while most of those Liberal Republicans who had supported Greeley had, by their very contact with the Democratic party, been brought to the conclusion that it might be a good club with which to punish the Republicans for their sins, but was not itself a fit instrument of reform. Mr. Hoadly, on the contrary, seems to have worked himself into the belief that the party to which he has recently attached himself is "a new and living Democracy," both able and eager to do all sorts of good things—a belief which he has loudly proclaimed in a recent letter. In this proclamation we take it for granted that he is perfectly sincere, and we wish with equal sincerity he were right; but we see good reasons to fear that he is not right, and that his sanguine expectations will be doomed to very severe and mortifying disappointment. We say this with great regret, in the face of the fact that the Democratic party will next year, in all probability, have a better chance to get possession of the national Government than it has had since 1860.

Mr. Hoadly seems to be already passing through some curious experiences. A Democratic paper in his own State publishes a letter written by him a year ago in which he denounces the spoils system, and declares himself qualifiedly for civil-service reform; but it does so with sneering comments, certainly not for the purpose of gaining votes for him, but of weakening him with his own party. He is bluntly told that what the Democratic party wants is to turn out the Republicans and distribute the spoils of office among the Democratic boys, and that no man who has any reform nonsense in his head is fit to be their leader. Mr. Hoadly may for a moment flatter himself with the delusion that this will blow over, or that he, with the support of the "better element" of the party, will be strong enough to impose his own reformatory spirit upon the organization. He will, however, not indulge in that delusion very long. Other Democratic leaders have indulged in similar delusions before him. There is ex-Senator Thurman, for instance, a very able and estimable man. When, after the crash of 1873, the struggle between paper inflation and specie resumption began, Mr. Thurman was a strong and determined hard-money man. He understood the question thoroughly. He hoped he should be able to stem the inflation craze which at that time possessed the Democratic masses, and he tried. What was the result? Instead of his being able to lift the Democratic masses up to his statesmanlike views they succeeded in dragging him down, until he yielded some vital principles to their crazy notions.

This is by no means an isolated instance. In looking round, Mr. Hoadly will find that there is one essential point of difference between the Democratic and Republican parties. There were a great many intelligent Democratic politicians who wanted to stand up for sound money, but, at least in the West, they had to deny their faith in order to remain in favor with their party. There are not a few Democratic politicians now who believe in civil-service reform, but they know already that the crowd will ruthlessly throw them aside if they stand up against the spoils system; and most of them will submit. On the other hand, there were many Republican politicians who favored paper inflation, but the sound and patriotic sense of the Republican masses soon forced them to accept the hard-money policy. There are many Republican politicians now who detest civil-service reform, but the pressure of the intelligent Republican masses has already forced them to accept the civil-service reform act, and they know that the same spirit will push on to the destruction of the spoils system.

On the Republican side the trouble comes from a number of active and influential politicians, but from the rank and file are constantly coming sound and vigorous impulses. On the Democratic side there are many able and well-meaning men among the leaders, but the trouble is with the instincts of the masses, who constantly drag down their leaders to their own level. Mr. Hoadly will soon discover that, in order to be strong with his Democratic followers, he must in some way satisfy them that he is not too good. He may permit himself to profess reformatory sentiments only if at the same time he can make the crowd understand that he is not in earnest. His talk about a "new and living Democracy" has already seriously alarmed the mass; and the speech with which he opened the campaign seems to show the effect of the alarm upon himself, for he confines himself to the liquor question, which he discusses cleverly; but there is no trace in it of that reform programme which his "new and living Democracy" is to carry out. This is to be regretted, for he must first reform the party from the bottom if he wants to carry out great reforms by means of it. At present it looks as if the first outcome of its success would be a grand spoils-debauch; and this, we presume, is not what Mr. Hoadly set out for.

IRELAND AND THE SEE OF ROME.

When the day comes, if ever it does come, on which the hidden treasures of the Vatican will be laid bare to the historian's curious eye, he will find nothing more interesting than the record of the dealings of the Holy See with Ireland. What the world already knows, what it has been able by observation and inference to conclude, as to the motives and schemes of successive pontiffs and their advisers, forms a remarkable chapter in Irish history. Whatever the causes may have been —and to a great extent they are still state secrets of the Vatican—the results are written in the varying attitudes of the Catholic priesthood, who have been always one of the most potent factors in Irish politics. The two events which have lately drawn public attention to this old matter—Mr. Errington's supposed mission, and the recent circular of the Sacred College of the Propaganda to the Irish bishops—require for their understanding a few observations on the general conditions and past history of the political situation.

Ever since Henry VIII.'s revolt against the authority of Rome, Ireland has been at once the delight and the difficulty of the Apostolic See. Her people, still three-fourths or four-fifths Catholics, as they were two centuries ago, have been exceptionally zealous Catholics, specially loyal to Rome as their spiritual head, because they had no willing allegiance to give to the temporal sovereignty of the British crown. They were valuable to the Pope in the seventeenth century, and are valuable to him even now, as a stronghold in the enemy's country, a solid Catholic mass in a Protestant kingdom. The extension of the suffrage and the popularization of the Government, throwing more power into the hands of the humbler classes, have even increased this value of late years. They can always be used with advantage against the British Government when the Pope has some cause of complaint or desires to obtain something from that Government. On the other hand, they must be used cautiously, for the Pope cannot afford to break with the British Government, which touches him in so many quarters. If he had committed himself to open hostility, or encouraged the Irish people to such a course, he would have provoked reprisals from England and brought further evils on Ireland herself. It has therefore been always the interest of the Roman Church, considered simply as a political power, to have Irish Catholicism menacing to the English Government, but not in actual conflict with it, and much skill has been needed to keep things on that footing.

Since the outbreak of the French Revolution further difficulties, and graver ones, have been added. The anti-English spirit in Ireland was formerly almost entirely religious and agrarian, the resentment of a down-trodden against a dominant creed, of a miserable peasantry against a landlord caste. But toward the close of last century a genuinely national feeling, a feeling of patriotism for Ireland as Ireland, grew up; and this feeling, seeking allies abroad, found them in revolutionary France, and repeatedly invited the landing of French troops. France was then not only anti-Catholic but anti-Christian, and the want of sympathy between Irish Catholics and the men of the Revolution was one of the reasons which prevented the French from giving any efficient aid to insurrection in Ireland. During the fifty years that followed, Irish nationalism, especially under O'Connell, largely resumed its religious character. But in the hands of the Young Ireland party it came again under non-Catholic influences. Several leaders of that party were Protestants, and the principles they preached savored of Continental revolutionism. They seemed to many pious Catholics to be the Irish counterparts of Maz-

zini and Garibaldi, of Kossuth and Louis Blanc, and were distrusted accordingly. Fenianism was a second essence of the revolutionary spirit; and when the Land League arose there was a flavor of socialism about it which repelled those who knew the Socialists of Continental Europe for the bitterest foes of the Catholic Church and of the (so-called) cause of order. The refusal to pay rent struck at Roman Catholic land-owners as much as at Protestants, and the prevalence of lawlessness appeared to threaten ecclesiastical as well as civil authority. The position of the Catholic hierarchy had thus become embarrassing. They could not associate themselves with the Nationalists, not only because it would not have been wise to assail the British Government, whose good offices they sometimes needed, but also because they were really alarmed at the progress of disorder and violence in Ireland, and at the increasing power of secret societies. Nor were these feelings merely political. As religious pastors, they saw with sorrow the spread of agrarian crime, and the corruption of the popular conscience which sympathized and protected criminals whose offences were perpetrated in the cause of the tenant or of nationalism.

These sentiments impelled them toward the side of the Government. But in many of them the hatred of England burned as strongly as it does in the Nationalist leaders. Some belonged by birth to the peasantry; most had the feelings, so natural to a Catholic priest, of resentment against the Protestant stranger who had displaced the old church as well as the old landholder. Moreover, it would have been more dangerous to oppose the national movement than to oppose the British Government. Although neither Protestantism nor infidelity spreads in Ireland, the people are no longer so obedient to the priesthood as they were in O'Connell's days. It would have been a very severe strain on their obedience to the Church to have been forbidden to support the Land League. In fact, such an order would in some districts and by many persons have been disregarded, nor would the priests themselves have been ready to communicate it to their flocks. The elder among them, the men of experience and moderation, whose ideas were formed forty or fifty years ago, when the bitterness toward England had not broken out so fiercely, and when habits of submission more generally prevailed, have not as a rule sided with the Land League, and in many cases have discouraged it. But the younger priests have mostly espoused its cause, not always openly, but so far as to let their sympathies be known. Now, even an absolute government, such as that of the Roman Catholic Church has become, cannot force the whole of its officials to a course they dislike. Their sentiments must be reckoned with, and there was further the danger of alienating the people.

In these circumstances neutrality was the easiest course for the Holy See, and neutral it has on the whole been. The Irish prelates have stood generally aloof, though a difference of sentiment has shown itself among them. The Cardinal Archbishop of Dublin has inclined to the side of order, and done his best to restrain the clergy from joining the agitators. The Archbishop of Cashel, on the other hand, has shown his sympathy with them, and gained great popularity thereby. Rome has listened to both, but, as the recently published letters show, has been influenced more by the former than the latter. In the collection of official documents just printed at Rome under the title of 'De Rebus Hiberniæ nuperrima Apostolicæ Sedis Acta,' there appear five letters. Three are from Pope Leo XIII. to the Cardinal Archbishop of Dublin, and are dated respectively January 3, 1881, August 1, 1882, and January 1, 1883. The purport of all is the same. Much sympathy is expressed for the sufferings of Ireland, and a cordial acknowledgment made of her loyalty to religion and the See of Peter. But the disorders and crimes of which the Pontiff has heard have grieved him, and he reminds the bishops of their duty to dissuade the people from joining secret societies, from a resort to violence, from pursuing lawful objects by criminal means, directing them to tranquillize the minds of their flocks, and to restrain the younger and more hot-headed ecclesiastics from taking part in public meetings. Two communications follow from the Sacred Congregation of the Propaganda to the Archbishop of Armagh, Primate of Ireland, and the other prelates of the island. The first, dated June 1, 1880, exhorts the bishops to resolve among themselves on the proper line of action in the troubles of the country, and to follow it out unanimously. The second, bearing date May 11, 1883, is the circular which has lately excited so much commotion. It begins by saying that, whatever is to be thought of Parnell (*qualecunque de Parnellio eiusque consiliis iudicium ferre libeat*), some of his followers have often disobeyed the previously-issued injunctions of the Pope by exciting men's minds and using unlawful means to attain their objects. It proceeds to distinguish between collections of money for the relief of distress and those which tend to inflame popular passions or palliate the guilt of crime, and winds up by condemning the Parnell subscription (*eam pecuniæ collectam quæ* Parnell Testimonial Fund *audit*) and forbidding ecclesiastics to advocate it. We already know how this utterance has been received in Ireland, and how little effect it seems likely to have in checking agitation or discouraging this particular subscription. But it bears witness to the sincerity of the Papal court, as the previous letters do to its consistency. They show that since the situation became grave in the year 1880 the attitude of Rome has been the same, although her deliverances are now somewhat more explicit. She abstained at first from condemning particular acts, as she still does from condemning particular persons by name. But she has all along disliked the violence of the agitation, and particularly the secret societies and the recourse to criminal methods.

This is so natural an attitude for the Pope, both as the potentate whom revolution has attacked and as the chief pastor of Christendom, that it is hardly necessary to suppose much persuasion to have been used by the British Government, either through Mr. Errington, or in any other way, in order to obtain his aid against revolution in Ireland. However, as one must expect in a constitutional country, a noise has been raised about Mr. Errington, and that not only by the Irish Nationalist members, but also by the Tory Opposition. The former, who are hostile to Mr. Errington personally as an Irish member who supports Mr. Gladstone's ministry, accuse him of having misrepresented the state of Ireland to the Pope, and acted as the tool of the Government for the sake of undermining their position. The latter endeavors to appeal to the Protestant sentiment of England and Scotland, which used to regard with the utmost suspicion any negotiations with the Pope. They argue that it is unworthy of an English Government to invoke the help of Rome, and ask by what concessions to Papal claims that help is being purchased. The obvious unwillingness of the Ministry to answer questions regarding Mr. Errington stimulated curiosity and suspicion, surrounding with an atmosphere of mystery what is now declared to have been all along a very simple matter. Mr. Errington was merely a Roman Catholic gentleman of high character and good social standing, who, when going to Rome two years ago, after the letters of 1880 cited above, asked the Foreign Office whether he could be of any use there. The Foreign Secretary said that if he would tell the Pope the truth about Irish affairs he would be doing a good thing, and sent him a letter recommending him as a trustworthy witness, but gave him no instructions, laid upon him no duties, offered him no recompense for any services he might of his own accord render. It is admitted that he has repeatedly given information to the Pope, but the Ministry insist that he is nowise an accredited agent. They now, however, undertake that a record shall be kept of what he does or says, and this is going some way to recognize him as having a mission. The incident is less important than it has been represented. It has not substantially injured the Government, though it has given their opponents good occasions for teasing them.

The more interesting questions remain: Have the Government made concessions to the demands of the Irish hierarchy, particularly in the matter of education (they are suspected of a design to throw the training of teachers more fully into the hands of the Roman Catholic Church); and what will be the effect of the exhortations which the Pope and the Propaganda have addressed to the Irish bishops? For the moment, it does not appear that these exhortations will weaken Mr. Parnell, or will even largely hold back those priests who sympathize with him. The Nationalist party seems strong enough to hold its own against Rome, so far as Rome has put forth her strength; and it is not likely that she will venture on any more decided condemnation.

A STRANGE STORY.

From time to time the Atlantic cable brings us scraps of news about a criminal trial going on in Hungary, at the little town of Nyiregyhaza. The defendants are several Jews, charged with having murdered a Christian girl for the purpose of obtaining her blood for

their Passover rites. The trial has caused immense excitement in that region; and the remarkable character of the charge, which is like a reminiscence of the darkest periods of the Middle Ages, the strange contradictions in the testimony, enveloping the whole case in mystery and suggesting some strange psychological puzzles, and, finally, the interest taken in it by the European press, make it a genuine *cause célèbre*.

The facts, as they appear from the "act of accusation," are as follows: At Tisza-Eszlar, a village not far from Tokay, on April 1, 1882, about the middle of the day, a Christian servant girl fourteen years old, named Esther Solymosi, was sent by her mistress to a shop in a neighboring village to get some whitewash and painters' colors. On her way back she met her sister Sophie and exchanged some words with her, but she never reached home. Her absence was remarked an hour or two afterward, and search was made for her, but she had disappeared, and has not been seen alive to this day. Some time afterward, in May, 1882, a rumor sprang up that the Jews had murdered her. It was said that Moritz Scharf, fourteen years old, the son of the keeper of the synagogue, Joseph Scharf, had made to somebody a confession to the effect that Esther had been killed by Jews in the synagogue. This caused great excitement, and the mother of Esther called upon the district magistrate, who opened an investigation about a month after the girl had disappeared. The suspected parties, as well as the boy Moritz Scharf, were put in close confinement, and the latter made the following statement: On that 1st of April the girl Esther Solymosi passed by his father's house; his father ordered him to call her into the house to arrange some candlesticks on the wardrobe, it being the Jewish Sabbath, on which the Jews do no work, and the "Sabbath woman" of the Scharf family having failed to appear. After Esther had done this she was asked by another Jew who had come in to go into the synagogue for a similar purpose. About a quarter of an hour after Esther had entered the temple he (Moritz) heard terrible cries coming from the building; he went to the door, which was locked, looked through the keyhole, and saw Esther stretched on the floor, partly undressed, two men holding her down, while another man cut her throat with a knife such as is used by Jewish butchers. Two earthen vessels were held under her throat to catch the blood; then the body was dressed again and put into the vestibule, where he saw four Jews so surrounding the body as to conceal it from his view. Thereupon he hurried into the house, telling his parents about it, but was silenced by his mother, and finally one of the Jews he had observed in the temple came in and told him to shut up the synagogue, which he did, seeing nothing of the body nor any traces of blood.

A younger brother of Moritz Scharf, Samuel, five years old, also told his story, which, however, differed in some important points from that of the older boy. According to him, their father, Joseph Scharf, had participated in the murder, and he (Samuel) and his brother Moritz had held the vessels to receive the blood. Aside from this, he said only in a general way that Esther had been murdered by his father and other Jews during a morning rehearsal of the hymns and prayers which were to be used during the Passover.

But a stranger thing was still to come. On June 18, 1882, the body of a girl was found in the river near Tisza-Eszlar, dressed in Esther's clothes, or clothes exactly like hers. This body bore no marks of violence at all. If this was really the body of Esther, the story of the murder in the synagogue was conclusively disproved. Several persons in the village recognized it as the body of Esther, but her mother and a few others did not. Of a commission of physicians examining the body, several declared that it was the body of a woman at least nineteen or twenty years old, while a commission of university professors, subsequently consulted, held that it might well be the body of a girl of fourteen. But then another most startling piece of testimony came in. Some raftsmen "confessed" that on June 7, 1882, they had been induced by a Jewish raftsman named Smilovicz, who offered them good pay, to carry a dead body which would on a certain day at a certain place be delivered to them, and that on June 11 they received that body from Smilovicz, and from a dark woman about thirty years old, apparently a Jewess, a bundle of clothes in which the body was to be dressed, while a handkerchief with some red and blue color was to be tied to its left hand. The body, so fitted out, was put in the water, where it remained several days attached to the raft. It was then produced by the raftsmen, who said that they had found it in the river. The impression made by this confession was of course that all this had been arranged by the Jews for the purpose of accounting in some other way for the disappearance of Esther, and thus disproving the murder.

Thus the case appeared in the act of accusation. The trial at once put it in a different light. The examination of the witnesses began some time ago, and was watched by the Jew-hating populace with the intensest excitement. Esther's mother testified that she knew the Jews had murdered Esther, for "God had enlightened her" on that point. The principal witness, the boy Moritz Scharf, presented a singular spectacle. He refused to testify in German, his native tongue, and spoke only Hungarian, which pleased the crowd. His testimony was given in a low voice, a singing tone, and always in exactly the same forms of expression, as if he were reading or reciting something by rote. In the cross-examination he stuck well to his story, but many questions which seemed to be unexpected to him, he did not answer at all, although they bore upon points which he should have known. He made several statements which created a great sensation. He had been told that "if he did not tell the truth, as he was telling it, he would be imprisoned for life." If he did tell the truth, as he did, "the Ministry of the Interior would take care of him." It was "part of the religious law of the Jews to kill Christian children"; he knew it, for "Catholic priests had told him so." He "hated the Jews and wanted to be a Jew no longer." He hated his father and his stepmother; he had once "thrown a knife at the latter, and was not sorry for it." He "wanted to be a Christian." His testimony has remained unsupported by any other evidence. Some women said they had heard something like a cry of distress in the neighborhood of the synagogue on the day of Esther's disappearance, but they differed about the hour, and it seemed not to have occurred to any of them to raise an alarm or even to speak about it at the time.

But it does appear that the local magistrate conducting the first examination in which Moritz Scharf's story took shape had pursued the case with the ardor of a fanatic. The public prosecutor himself, who afterward took charge of it, soon came to the conclusion that Moritz Scharf's elaborate account of the murder was an invention, pumped into the boy by constant drill, with the aid of threats and cajolery. And a recent cable despatch which speaks of the tortures inflicted upon the raftsmen to wring from them their "confession," indicates that the employment of such means was not confined to Moritz Scharf. It will not be at all surprising if the trial of the accused Jews should lead to another judicial inquiry into the attempt to fasten upon the Jews an old superstitious charge, which has pursued them for centuries, and been believed in and reiterated by the credulous and the evil-minded without a shadow of respectable evidence to substantiate it.

TWO NEW TYPES.

THE sudden development and discovery of new social types will no doubt one day be regarded as one of the marked features of our civilization. The æsthete, the dude, the masher all go to show that the nineteenth century compares very well with its predecessors in the production of types, and queer types, too, and that we may perhaps have been unduly lamenting the supposed prevalent tendency to uniformity and flatness of social tone. The latest additions made to the list are as interesting specimens of social fauna as any hitherto classified, and their development and increasing importance illustrate, if we are not mistaken, some striking tendencies of the time.

Of these the older in general recognition, if not in actual development, is the "bouncer." The bouncer's habitat is the hotel, the restaurant, and all places of public amusement managed by private owners. He cannot be recognized by any distinctive marks of dress, or conversation, or bearing, for he is in all these, perhaps, a shade quieter than those among whom he pursues his occupation; but habitués of the place are generally able to point him out. He is usually a large, or at any rate a powerful man, and he continually moves about, not listlessly or idly, but as one having a duty of some sort on his mind—not preying upon him, but giving him just that thoughtful air of authority which sits so well upon the police. The bouncer is, in fact, a policeman in all but the name, who ejects from hotels, restaurants, and places of amusement, or, in other words, "bounces," all noisy, disorderly, drunken, or otherwise objectionable persons. He is said to be, in many cases, a retired prize-fighter; in many cases, perhaps, he has no existence,

the mere name of his high office and his suspected ubiquity being enough to preserve order throughout his beat.

That the bouncer should play so important a part in American life is perhaps due to the fact that he supplies the deficiencies of the police. The police are an able, energetic, and vigilant body, but we know that, at least according to popular belief, they are apt to direct these valuable qualities into wrong channels. They are apt to club, kill, or bounce the wrong people. Feeling behind them the full power of the State, and being generally pecuniarily irresponsible, they are not afraid of exerting their authority to the utmost; and this fact, though it undoubtedly qualifies them in many respects for the performance of their duty, makes them less valuable for private purposes. A bouncer who bounced in a hotel as indiscriminately and impartially as a policeman does in case of a public disturbance, would make the house as unpopular with "guests" as the police is with the press, and this is, of course, just what it is necessary to avoid.

The quiet "bouncer" (the name is full of suggestions of noise and disturbance, strangely at variance with the usual modest demeanor of the strong, silent man who bears it) therefore supplies to the owners of all places of entertainment and amusement what the public never seem to be able to provide for themselves—an efficient and at the same time self-restrained police. The bouncer, who is the agent or servant of the proprietor, is, of course, careful in his bouncing, because erroneous or careless bouncing would lead to trouble and expense. This was shown by the bouncing case at the Fifth Avenue Hotel the other day, when a suit for assault was brought against the hotel for ejecting a guest for making a disturbance in his rooms. All the evidence introduced on the side of the hotel showed that great care and consideration had marked its whole treatment of the unfortunate guest, whom it alleged to have been drunk and uproarious; that the bouncer employed on the occasion, instead of proceeding at once to club him and his friends, and take them to the station-house, dealt with them with extreme tenderness, and even while bouncing them did it more in sorrow than in anger, much as a parent might bounce a loved but distrusted son. In fact, a true bouncer never shows anger, though he may no doubt often feel honest indignation.

A curious side-light has been thrown on the bouncer by the discovery of a different, though to a certain extent a correlated type, which is found in the large concert-rooms of a second-rate order, and is there known as the "whooper-up." The whooper-up is a female, who is employed by the proprietor in these places, not to repress disturbances, but to stimulate gayety by any and all means. As these places are not generally supplied with bouncers, and there is consequently little or no restraint in them at all, it shows how small the fund of general gayety must be that employment has to be found for persons who stimulate it by artificial means. The performances in a concert hall are generally of a character to depress the spirits of all to whom it is not a frequent place of resort; but that the spirits of the regular audience are so low as the existence of the "whooper-up" seems to imply, is a singular illustration of the decadence of animal spirits in the modern world.

The refined bouncer inhabits a different world from the reckless whooper-up. It is hardly possible to conceive of one invading the habitat of the other; for where bouncing begins whooping-up must end, and vice versa. Both types of course inhabit a social stratum below that of good society; the whooper-up at the greater remove of the two. And yet who can say, as extremes sometimes meet, that a place may not be found in course of time for the whooper-up at balls and dinners? Confessedly the tone of spirits in society is low, and the appearance of the dude tends if anything to make it lower than ever. There might be such a thing as refined whooping-up introduced as a corrective of this acknowledged defect, and something of the sort was actually suggested, either as a hoax or seriously, in the (old) *World* a few years ago—employment being offered to accomplished persons of either sex, who would let themselves out for the purpose of enlivening parties and dinners at $10 a head. Of bouncers, of course, society has no need. Bouncing is a thing that every host does best for himself, and is, indeed, the most sacred and jealously-guarded right derived from and dependent upon the obligations of hospitality.

THE VALLEY OF THE JAMES.

NATURAL BRIDGE, June 28, 1883.

FOR a generation or two after the close of the Revolutionary war the Natural Bridge in Virginia was coupled with Niagara as forming together twin wonders of the continent. Since that time its fame has been both positively and relatively declining, but the low-water mark seems to have been reached at last. Until the discovery of the Yosemite and the Yellowstone, its relative importance was unchanged, and its decline in reputation must be accounted for by accidental reasons—chiefly, its inaccessibility. Railways made Niagara a way-station between many large cities; the Natural Bridge was at a considerable distance from a petty line of railway, which itself was far away from the currents of travel, while the people of the country, themselves indifferent to the Wonder, were neither greedy of the money of strangers nor fond of their society.

But the social change, sometimes called the "revival of Virginia," which began with the close of the war, seems likely to make the Natural Bridge once more a general object of curiosity and interest. The new railway across the Alleghanies, besides fulfilling its purpose as a freight line, brings yearly to the spring and mountain region a large number of visitors from Ohio and other Western States; and other railways, also managed by non-Virginians, are developing "resorts" in an admirable manner. Nowhere, outside of 'The Sketch-book,' is a more picturesque or comfortable inn than that at Luray, built by the Philadelphia company which owns the railway and the well-advertised cave. The vale of Luray was famous for quiet beauty long before the discovery of the new "wonder," and the whole "Valley of Virginia" possesses that natural beauty common to fertile regions with a mountain background. But the road which approaches the other side of the Blue Ridge, through the valley of the James, is much more interesting, and the Natural Bridge, to my mind, more curious than even the "Caverns of Luray."

The old way of reaching the Bridge, superseded only two years ago, was by stage from Staunton (a distance of twenty miles), or by canal-boat from Lynchburg. The nearest route from the North is the latter, substituting for the canal the new railway, which bought the latter's franchise. It is the old James and Kanawha Canal, in the building of which Washington and Jefferson took such interest, and the opening of which, they expected, would give Virginia that commercial revival of which she even then stood sadly in need, and would make the State as prosperous in trade as it was in agriculture. But the canal, as they conceived it, never was opened, for it stopped at the foot of the mountains, and so missed altogether the chance of becoming a national highway. The railway goes no further, and though (while equally unprofitable) it doubtless serves the country better, I could not help a feeling of unreasoning regret as I gazed in succession at the dozen or more splendidly-built stone dams—a regret caused by any abandoned proof of man's engineering skill, whether it be a mediæval castle or a Virginian canal.

Half an hour from Lynchburg the James begins its course through the mountains, the precipitous sides of the gorge forming an admirable frame for the lovely mountain views, changing in outline at every turn of the much-winding stream. There had been heavy showers, and the peculiar red tinge of the muddy water afforded a novel element in the combination of colors—the red river, the green forest of the foreground, and the lovely bluish haze which clothes the green mountains beyond. The great dams and locks engaged my attention now in connection with the absolute bridgelessness of the river—the ease of bridge-building where such dams could be placed being obvious. A Southern acquaintance explained to us that this was because bridges were costly and the country thinly settled. But this explanation is plainly inadequate. Many parts of New England are as thinly settled and much poorer otherwise, without being destitute of bridges. I think the circumstance can be more readily understood by reference to the remark, attributed to an old-time Virginian, that every one who rode well a fine horse was essentially a gentleman, and that a man who could ride and would not, whatever other qualities he might have, was not a gentleman. The Natural Bridge stations of the Shenandoah and Alleghany railways are at the point where these roads cross, and the distance thence to the Bridge is three miles, uphill and through forest, over such a road as one dreams of in a nightmare, but meets only in Virginia—or, perhaps, in the Turkish dominions. But when the traveller reaches the cluster of clean, roomy, and hospitable inn-buildings, he remembers the jolting only as rendering food and sleep more welcome. I will say nothing about the Bridge, since we are all familiar with its outline from that early period of youth when lasting impressions were made upon our minds by what we spelled and saw in the pages of the Second or Third Reader. I may remark, however, that, whatever ideas of size or picturesqueness one may have brought with him, they probably will be more than justified.

Striking and interesting as is the Bridge, another spot, to my mind, affords far greater pleasure. This is the hill, distant about half a mile, whence one sees the lovely range of the Blue Ridge completely encircling him. I have never beheld a more beautiful mountain view. The White Mountains, relatively to the observer, are hardly higher, and their bald and ragged granite

peaks, while they inspire awe, hardly satisfy the eye that thirsts for beauty. The Alps, indeed, unite beauty with majesty, but the beauty of their snow-clad summits is altogether different. Here the eye follows, with a feeling of rest and content, softly-flowing lines of an apparently limitless range, in successive tiers, all covered from top to foot with dense forests, and suffused with the lovely haze which gives the Blue Ridge its name.

The phrase, "revival of Virginia," was constantly ringing in my ears, and made them more alive to the talk about me than they would otherwise have been. I heard no politics except uncomplimentary allusions to Mahone, and praise of the matchless oratory of Major Daniel, the defeated candidate for Governor, who was to deliver the address at Lexington. On almost every siding I saw cars loaded with elaborate farming machinery, and everywhere growing fields. There would seem to be no need of a further revival as regards agriculture; but Virginia trade, according to what I heard, is well-nigh totally destroyed through the influence of the railways, most of which have passed under the control of "foreign" corporations. The Shenandoah Valley, which is said to be the most enterprising of these, controls the Norfolk and Western, and diverts the legitimate trade of the leading Virginia seaport to Philadelphia, while the shipping facilities of Baltimore are so great as to prevent any revival of life in Alexandria. The same diminution of prosperity is said to have befallen the Virginia schools. For some years after the war the prestige of Virginia as a State and of its schools as nurseries of Southern patriotism, as well as of manliness and more or less mental culture, secured for them a throng of students from all the Southern States; but with each succeeding year this prestige, as opposed to literary and social particularism, has diminished, so that, while their literary and other excellence has not lessened, they are no longer frequented by many beyond the State. The Miller Industrial School, near Charlottesville, recently established by the will of a Lynchburg tobacco trader, is said to be a great success; and the girls' schools at Staunton, which send out agents to conduct pupils to and from their homes, after the fashion of Cook's tourists, are as prosperous as ever. W. M. G.

A SIGN OF THE TIMES IN ENGLAND.

LONDON, June 21, 1883.

ON Thursday, the 14th of June, John Bright spoke these words:

"The House of Commons, in a portion of its members, seems to me to be abandoning the character and the conduct of gentlemen as heretofore seen in that assembly. [Loud cheers.] The party of which I have spoken, in not a few of its members, appears willing to repudiate the authority of a majority of the constituencies. They know that the majority believes as the constituencies believe, and wishes to do for the constituencies what the constituencies demand; but they are determined, if it be possible, that the majority of the constituencies should fail in their efforts. [Hear, hear.] And what is worse at this moment, as you see—you do not so much see it here as it is seen in the House—they are found in alliance with an Irish rebel party [loud and long-continued cheers], the main portion of whose funds, for the purposes of agitation, come directly from the avowed enemies of England [renewed cheers], and whose oath of allegiance is broken by association with its enemies. [Cries of "Shame!"] Now, these are the men of whom I spoke, who are disregarding the wishes of the majority of the constituencies, and who, as far as possible, make it impossible to do any work for the country by debates and divisions in the House of Commons. [Cheers.] I hope that the constituencies will mark some of the men of this party [cheers], and that they will not permit Parliament to be dishonored and government enfeebled by members who claim to be, but are not, conservative and constitutional. [Cheers.] Our freedom is no longer subverted or threatened by the Crown or by a privileged aristocracy. Is the time come—I quote the words from history—is the time come to which the ancestor of Lord Salisbury referred, three hundred years ago, when he said that 'England could only be ruined by Parliament'? The great constituencies must look to this. [Hear, hear.] The ballot has given all electors freedom. On them the country must rely for the preservation of the honor and the free working of the House of Commons. [Cheers.] The reform must come, and cannot long be delayed. It must suppress the power and close the era of the men who now afflict the House, who from night to night insult the majesty of the British people. [Loud cheers.]"

No words more worthy of note have ever been addressed to the English nation by an English orator. My aim in this letter is not to criticise the language I have cited, by way either of praise or of blame, but simply to point out what seems to me the significance of utterances which, whether for good or for bad, may well mark an era in English history. Two reflections will almost force themselves on the mind of any one who studies with care the terms of mixed invective and warning in which John Bright winds up a speech that reads like a solemn appeal to the deliberate judgment of the British people.

First, the expression "rebel party" is something much more than a piece of inconsiderate invective: it is a blow struck at his foes by a man who knows how to hit hard, and knows perfectly well when the stroke goes home. It is the sign—one may almost say it is the commencement—of an "irrepressible conflict." It sounds like a defiance hurled by the leader of the English democracy against politicians who, in his judgment, are disloyal to the country. Nothing, it must be added, in the speaker's so-called explanations in the House of Commons, takes off from the effect of his words. To the "rebel party" he makes no apology whatever. He explains, indeed, that he was quite aware that the term applies, as it was meant to apply, only to a small body among the Irish members; he avows his readiness to apologize to any among the Home-Rulers who are ready formally to disavow the charge made against them; but when this challenge meets with no answer better than merely irrelevant taunts directed against the man by whom it was made, Bright utters not a word of explanation or retractation. The weightiest speaker among living Englishmen, the most trusted among English democratic statesmen, has deliberately denounced the manœuvres of the "Irish rebel party"; and, what is fully as noteworthy as the language itself, the denunciation has been received in an assembly of democrats, in the most democratic town of England, with "loud and long-continued cheers."

This is a fact which, whether we like it or dislike it, every wise man must lay to heart. To treat such a fact as a trivial incident of slight import is simple folly. The importance of Mr. Bright's denunciations, and of the manner in which they have been received, lies in this, that the world thereby obtains, almost for the first time, a glimpse at the sentiment among the masses as to the relation between England and Ireland. Bright, it is true, is old; he may have ceased to understand his supporters; his words, therefore, may express sentiments peculiar to himself. It is, however, the height of rashness to assume that the hero whom all the democracy of Birmingham have honored for a week with honors such as have never been bestowed on any other private citizen, is out of sympathy with the followers who have met together in thousands to testify their confidence and admiration. The far more probable supposition is that the voice of Bright is the voice of Birmingham, and that the voice of Birmingham is the voice of the British people. But if this be so, the inference inevitably follows that the English democracy are not prepared (for the moment at least) to look with calmness or indifference on the manœuvres of a party who are supplied with funds by the avowed enemies of England. Let this once be clearly ascertained, and every sensible man's whole forecast as to the future of English politics will be influenced by his knowledge of the feeling entertained by the British electorate; and this for two reasons, which, like most of the considerations that lie at the bottom of human actions, are more often felt than expressed in words.

The first is that, in the present state of the world, no fundamental change can be effected in the political relations between England and Ireland, such, for example, as the concession of Home Rule, or the establishment of Irish independence, except by the will, or at any rate with the consent, of the majority of the British people. Successful rebellion, or the armed intervention of any foreign Power, is at the present moment out of the question. The policy of the Home-Rulers and of the Land League is almost an admission that this is so. The English democracy may conceivably be induced to assent to the demands of Mr. Parnell by appeals to justice, to self-interest, to sentiment, or even to the weariness generated by a long contest. But without the consent of the British people the policy of the Home-Rulers can never be carried out. The reception of Mr. Bright's denunciations inevitably suggests that this consent cannot be obtained. The second reason which makes the knowledge of popular sentiment all-important is, that there undoubtedly prevails among many Liberals, as also among many Conservatives, an idea that the democracy, which is, in the last resort, the sovereign power in England, is more or less indifferent to considerations of imperial, or even of national, power and greatness. No one who has observed recent events, or who has kept his ears open to the conversation of his friends and acquaintances, can doubt the prevalence of this notion. The conviction that the notion is unfounded, if unfounded it be, would, I am convinced, modify the whole tone of political life. Are the sentiments of democratic electors imbued with what may be called political Quakerism? This is an inquiry of supreme importance. Nothing has happened more suggestive of a negative answer than the applause with which Birmingham has greeted the denunciation of the rebel party by the Quaker orator.

Secondly, John Bright calls upon the large constituencies to take up a new attitude toward the House of Commons. Is England, he in effect asks, to be ruined by her Parliament? And the answer more than suggested is, that Parliamentary factions will ruin the country unless the people of England are prepared to control the action of Parliament. No one can fancy that this warning will go unheeded. Observers of every shade of politics have noted for years a decline in the prestige and influence of the House of Commons. Liberals and Conservatives alike have, by their actions even more than by their words, testified to the conviction that the electors—especially the electors of the great constituencies—are now, far more truly than fifty or thirty or even twenty years ago, the rulers of England. Add to this, that the existence of a third party, with objects which are, to speak in the mildest terms, different from the aims pursued by English Conservatives and Liberals, greatly adds to the danger that the House of Commons may become a prey to faction. We may therefore safely conclude that the course of policy suggested by the most influential democrat of the day will commend itself to large

numbers of the English people. The House of Commons has, from the force of circumstances, concentrated in itself all the powers of the state. It has become almost a part of the executive. It is, therefore, both natural and right that the people should look to the action of the House with something of the care and jealousy which have hitherto been devoted to watching the action of the sovereign or of the executive. The truth, indeed, is, that at the present moment the Cabinet (as one of its members has intimated) represents the feeling of the people more truly than does the House of Commons. This phenomenon, which might easily be accounted for by examining into the mechanism and working of the English Constitution, is likely enough to recur. In any case the mass of the electors are almost certain to keep their eyes fixed on the conduct of the House, and the result of the debate on Monday night is an indirect acknowledgment that the House of Commons recognizes a change in the relation between itself and the electors. Every one must have felt, though nobody openly said, that the idea of Parliamentary privilege, in the sense in which the term was used by Sir Stafford Northcote, was out of date. The electors who appoint have clearly a right to criticise their representatives; but criticism of an agent implies the right to receive an account, even an unfavorable account, of his conduct. From the old theory that the House of Commons was placed above criticism, the natural result followed that to report a debate was a breach of privilege. When the press can both report debates and criticise debaters, it is little less than ridiculous to maintain that a member may not state freely to his constituents his opinion about the assembly in which they are represented. The majority who acquitted Mr. Bright on the charge of breach of privilege acted with that sound sense which in general characterizes English politicians; but they probably did not quite realize the whole bearing of their action. They tacitly admitted the sovereignty of the people.

A speech which contains the denunciation of a "rebel party," and which calls on the democracy of England to suppress the power of the men who from night to night insult the majesty of the British people, may be just or unjust, wise or unwise; but when delivered by a man such as John Bright, to a constituency such as that of Birmingham, is assuredly, whether for good or bad, a noteworthy sign of the times.

A. V. Dicey.

LAST YEARS OF MME. D'ÉPINAY.—I.

Paris, June 24, 1883.

The authors of 'La Jeunesse de Madame d'Épinay,' MM. Lucien Perey and Gaston Maugras, have been encouraged by the success of their work, and they now give us the 'Dernières Années de Madame d'Épinay.' The 'Memoirs' of Mme. d'Épinay, which are well known, end in the year 1763; they had not been completely printed. The Library of the Arsenal has the end of them. The manuscript, divided into small *cahiers*, tied with blue silk strings, was stolen in the year 1793 from Grimm's house, and this explains how one part is now at the Archives, the other at the Arsenal. After the year 1763, which marks the end of the 'Memoirs,' the only documents are the letters preserved by the family, the correspondence of Grimm and Mme. d'Épinay, her letters to her son, the correspondence of Diderot and Mlle. Voland, etc. MM. Perey and Maugras have thus been able to follow Mme. d'Épinay, so to speak, day by day up to the time of her death.

After six months of marriage, Mme. d'Épinay had been publicly abandoned by her husband, sacrificed to vulgar mistresses. She heard all her society profess the doctrine of free love and free choice; the philosophers, who were her friends, had invented a new code of morality; she succumbed, and became the "friend" of Francueil. Three years after, Francueil betrayed her, and Grimm became his successor. She was no longer rich; her husband had ruined her. She had for herself and her children only 16,000 livres a year. She was ill, and she resolved to go to Geneva and place herself under the care of the famous Tronchin. She left Paris on the 30th of October, 1757, and nearly died on the road at Châtillon, between Nantua and Bellegarde, in a miserable inn. The crisis at Châtillon was fortunately of short duration, and she was able to get to Geneva. Voltaire was waiting for her, and asked her to dine with him, but she declined his offer. "I was too tired," she says in a letter, "and besides, having two days before, at Châtillon, made my confession and received the communion, I did not think it proper to dine so soon with Voltaire." Mme. d'Épinay had preserved religious sentiments in the midst of her philosophical society.

M. d'Épinay, who had conducted his wife to Geneva, left her immediately; not before having dined with his wife at Voltaire's. The religious scruples of Mme. d'Épinay had not lasted any longer than the fatigue of her journey. In fact, she soon became intimate with Voltaire, and this is the style of their *billets*. Voltaire writes to her: "I ask to-day the privilege of my *robe de chambre*. Let each one be dressed according to his deserts. Mme. d'Épinay must have her hair done up by the Graces, and I need a night-cap." Mme. d'Épinay had quite enough *esprit* to meet Voltaire in his own style. She describes, in her letters to Grimm, the Genevese society. Speaking of the clubs, she says: "The gentlemen exhaust themselves in conjectures and discoveries on the views and projects of the potentates, and when the event does not confirm their conjectures, they are no less satisfied for having found out in their wisdom not what such and such a Power has done, but what it ought to have done." She praises the virtue, the honesty, the simplicity which are the basis of their policy—"all that," she says, "is spread over with a little varnish of pedantry, which is necessary with them to preserve their simplicity." Here is the description of the niece of Voltaire: "His niece is a roly-poly little fat woman, fifty years old, very feminine, ugly and good; lying unconsciously and without any bad motive; without wit, yet seeming witty; screaming; deciding, versifying, reasoning, unreasoning. . . . Voltaire likes her, laughs at her, and respects her."

Mme. d'Épinay fell ill again after a while, and Grimm went to see her at Geneva. He wrote to Diderot, March, 1759: "The excess of weakness in which I found her is inconceivable; it is evident to me that if she had not come here she would not now be alive." Meanwhile M. d'Épinay was ruining himself entirely. It is very characteristic of the time that he allowed Grimm to give him advice, to scold him, to reproach him for his absurd prodigalities—the diamonds, the hôtels which he gave to the "*petites Verrière*." M. d'Épinay was deprived of half his revenue as farmer-general, after some modification made in the farming of the taxes. He informs his wife of it; he tells her that he loses 60,000 livres of income. "I have made considerable retrenchment already; I have given up my box at the opera, and sold half my horses. . . . A thousand compliments to M. Grimm." Mme. d'Épinay answers him that the retrenchment of the box at the opera is not enough: what he must reform is his own conduct. He accepts her reproaches, and defends himself in this extraordinary and almost incredible way: "You will understand that, in my present situation, I have been obliged to curtail expenses which, by contributing to the pleasure and the comfort of Mlle. Verrière, to whom I owe much friendship, procured for me amusements which I found more delightful than anywhere else, as I felt them with more liberty and was their first author. I thought it best to disclose to her my situation. She was much touched by it; and I must say in justice that her first movement was to offer me her diamonds and her jewels. My first movement was to refuse." Then he confesses that on reflection, being in need of money, he accepted the offer of Mlle. Verrière, to the amount of 40,000 livres, on which he engaged to pay her, during her lifetime, 10 per cent. He adds that he had, two years before, given her already an annuity of 6,000 livres. He then enters into all sorts of details about the demoiselles Verrière, and promises not to go to any further expense for them; he will only pay the two charges he mentions. It is easy to imagine that love is in such a case not much after a *liaison* of eight or nine years; but friendship, he says, subsists—he almost says gratitude; he has found in the demoiselles Verrière amiable and estimable qualities. In short, he will live as he did before, and change nothing in his plan of life; he only pledges himself to behave in such a way that his children will have no reproaches to make him.

This letter of d'Épinay's is a sort of masterpiece. It is quite clear that it was idle to hope anything from such unconscious depravity, such reasoning madness. Mme. d'Épinay merely answered "that she did not wish to diminish the merit of the *sacrifices* of Mlle. Verrière, but she thought M. d'Épinay would never find it difficult to exchange diamonds for annuities, especially at 10 per cent., and on a head twenty years old." She only becomes angry when M. d'Épinay tells her to send her son back to Paris, where, he says, his education will cost less. "You ask me to send my son back to Paris. I would rather sell my shirt than let him go before I do." M. d'Épinay was borrowing money from his own servants, but gave at the same moment great fêtes at Épinay. Here is a delightful *trait* of his: "I cannot help noticing the passage in which you say that I pay 10,000 livres to Mlle. Verrière by way of annuity. It is quite true that I owe them to her, but not that I pay them."

Grimm remained eight months in Geneva; he liked its society, the de Saussures, the de Lucs, Mallet, Tronchin; he was on good terms with Voltaire, who was a great power in the eighteenth century. Grimm was eminently practical. While he was in Geneva he was named minister to Paris of the free city of Frankfort; he resolved at once to return to Paris. "My tender friend," he said to Mme. d'Épinay, "we must fulfil our vocation. Yours is not to live retired and solitary with me. We ought to give each other only the moments which our duties leave us. The happiness which we have enjoyed for six months was unforeseen; it is a gift of heaven for which we ought to be grateful—a happy epoch in our lives; but we should be guilty to complain of its short duration, as our duties call us elsewhere." Poor Mme. d'Épinay, who was all flame and passion, had to content herself with this dutiful and calculating lover. Grimm was a type, and very different from the people in the midst of whom he lived. He had to make a career, a fortune. He had talent, good sense, ability, and not much heart. He was a safe friend, and it is not to be wondered at if Mme. d'Épinay, a weak and often irrational woman, took refuge in his cold and ponderous friendship.

Mme. d'Épinay left Geneva in company with

Grimm. In Paris she felt free to compose her salon at her leisure and as she pleased, and she succeeded in conquering Diderot, who was a great friend of Grimm's, but who had hitherto shown no desire to make her acquaintance. Diderot soon became one of her *intimes*. In reality, the new salon of Mme. d'Épinay was composed by Grimm, who showed in this circumstance his usual tyrannical rigor: he admitted Saurin (who is now forgotten, the author of a bad "Spartacus"), Suard, Sedaine, Raynal, Damilaville. The Abbé Galiani became a member of the circle, and soon one of the most active and important.

The affairs of M. d'Épinay were in such disorder that, at the beginning of 1762, he lost his place as farmer-general. He had debts to nearly a million of livres. Mme. d'Épinay resolved at once to let the château of the Chevrette, which was too expensive for her, and to take a modest country house at La Briche. She retired to a small house in a faubourg of Paris with her old mother and her daughter Pauline. Her son Louis went to the house of his uncle, M. de la Briche. To do her justice, she was very indifferent to pecuniary considerations, and was quite satisfied to live with her mother and her children on a small income of 8,000 livres, which was left her. M. d'Épinay, who was the cause of all her misfortunes, quite disapproved such radical reforms, and complained of them; he said that it would not be possible to go and see Mme. d'Épinay in her new house. Poor man! he said that such conduct would completely ruin *his* credit. "I shall never forgive her in my life."

Mme. d'Épinay received proofs of the universal interest which her reverses inspired; all the people she had known or even once seen called upon her, except Duclos, the brutal Duclos, and Rousseau. All Geneva wrote her letters, with the kindest offers of hospitality. Grimm took lodgings at once in the neigbborhood of Mme. d'Épinay's new abode. Mme. d'Epinay felt almost happy in her new establishment: "If you knew how pretty it is: a small house between court and garden, a good air, a fine view. Our table is frugal, but cleanly served, and we can receive one or two friends a day."

Correspondence.

PROSPECTS FOR REVENUE REFORM.

To the Editor of The Nation:

Sir: The article in your issue of June 28 on "The Ohio Democrats" is, in the main, a just arraignment of their evasive, double faced platform. In implying, however, that it will be exactly equal, as regards revenue reform, whether Judge Hoadly or Judge Foraker becomes the next Governor, you do not, it seems to me, render exact justice to the good cause of reform. National and State politics are now very closely related; events in the latter field are quickly interpreted in terms of the former, and, since the next Presidential election is certain to be affected by the State elections of this year, it is fairer, in determining the status of the two parties in regard to revenue reform, to examine each from a national or Congressional rather than from a State point of view.

The Democratic platform just adopted in this State is truly an unsatisfactory document to all who wish for real instead of sham issues. In that respect it resembles party platforms in general, which, stripped of their verbiage and vaporing, are as weak and vague in affirmation as they are strong in negation. Principles, even when clearly stated, are often used in the most Pickwickian sense, carrying no obligation, and forgotten the moment victory is attained, or even abandoned under the fire of the Opposition before the day of election. The tariff-for-revenue-only plank in the platform of the last Democratic National Convention, and the repeated declarations of Republican platforms in favor of civil-service reform, are instances in point familiar to every one. Party government can only attain real efficiency and dignity when parties feel compelled to carry out *after* election the promises made *beforehand*. The state of opinion among the Democrats of this State in regard to the tariff is as yet unsettled. There is a general tendency toward reform, with a strong undercurrent in favor of protection. Frank Hurd, however, made a notable success of his free-trade canvass in the Toledo District last year, and, in fact, the Democratic success in all thirteen districts was achieved in the face of more or less direct assault by protective-tariff men.

The Forty-eighth Congress will certainly contain more revenue reformers than any Congress since the war, and the bulk are Democrats. The preliminary contest for the Speakership continues to rage, and the result (which cannot safely be predicted) will, of course, very largely determine subsequent action or inaction. Yet, whatever the result, it is certain that the non-reformer, Mr. Randall, will meet with formidable competitors in the pronounced reformers, Messrs. Carlisle and Cox. That the Republican party is irrevocably committed to the protective-tariff policy, is shown by the unanimity of their resolutions and platforms and the uncompromising attitude of their leaders. Senator Sherman has recently repeated his declaration of last autumn, that the party must stand or fall with this doctrine—that issues are joined upon it. The Republican party contains a small and very able, but considerably disregarded, minority, who insist upon revenue reform. The Democratic party contains a strong and growing minority—possibly a majority—who insist upon the same policy. The coming session of Congress will to a large extent determine whether the Democrats can be expected to effect any reform of the tariff. If they fail, then the out-and-out tariff-for-revenue-only party, of which the Detroit Conference was somewhat prophetic, may become an imperative need. Such a party ought to unite the reform wings of both existing parties. Pending that possibility, those who consider the tariff question the only vital issue now before the country may at least find less discouragement in Democratic than in Republican triumphs. F. C. E.

Columbus, O., July 2, 1883.

EDUCATION IN THE COLONY OF SOUTH CAROLINA.

To the Editor of The Nation:

Sir: Touching Mr. McMaster's statement, that "in the Southern States education was almost wholly neglected, but nowhere to such an extent as in South Carolina. . . . In that colony prior to 1730 no such thing as a grammar-school existed," I beg leave to call your attention to the "Act for Founding and Erecting of a Free School in Charlestown, for the Use of the Inhabitants of the Province of South Carolina." This act was passed on the 12th day of December, 1712, and is to be found in the 'Laws of the British Plantations in America, relating to the Church and Clergy, Religion and Learning. Collected in one volume, by Nicholas Trott, LL.D., Chief-Justice of the Province of South Carolina. London, 1721.' This act covers nine folio pages, and in the 24th and last section repeals an "Act for the Founding and Erecting of a Free-School for the Use of the Inhabitants of South Carolina, ratified in open Assembly the 8th day of April, Anno Domini 1710." A copy of the laws here cited, once the property of Mr. George Brinley, is now in the Pennsylvania State Library.—Yours respectfully,

Charles J. Little.

State Library, Harrisburg, Pa., July 6, 1883.

PHONETIC ASSIMILATION.

To the Editor of The Nation:

Sir: Having found that illustrations of linguistic laws are usually impressive in indirect ratio to their chronological distance, it seems worth while to call attention to a very recent instance of assimilation. I have noticed that children and uneducated persons almost invariably pronounce telephone telephome, assimilating the dental (cerebral) *n* to the preceding labial sound.—Yours very truly,

T. B. Lindsay.

Boston University, Boston, July 2, 1883.

JARVES'S ITALIAN RAMBLES.

To the Editor of The Nation:

Sir: In your review of Mr. Jarves's 'Italian Rambles,' the reviewer, *me judice*, puts far too much value on Mr. Jarves's opinions on art matters. His imagination is far greater than his acumen, and it is no service to art or art-archæology to allow his conclusions to pass into matters of faith. His "two busts in terracotta" are not supposed by any authority in Florence to be what Mr. Jarves believes them to be. Were they so, their value in art-history would be very great; as it is, they have acquired no importance here.

Mr. Jarves's power of distinguishing the old from modern imitation is curiously small. As an instance, I may say that he brought me one day what he regarded as a most important discovery—"a bronze repoussé bust of Michael Angelo, without doubt contemporary, and hitherto unknown." On looking at it, I found it to be a simple electrotype, without the slightest effort to disguise the fact. Mr. Jarves's great discoveries are proverbial in Florence, and his amiability and willingness to be advised by those who do know make connoisseurs willing to correct his mistakes; but it would be too much to allow his unconfirmed attributions to become settled in America as facts, or allow his opinions in art, unsupported, to acquire an authority to which they have never been entitled, and which must mislead a public opinion which the *Nation* has as a function to correct. The phrase, "Mr. Jarves's well-known artistic insight," used by your reviewer, conveys an impression quite the reverse of that which is held by the artistic world here, without, so far as I know, a valid exception, whether among dealers, amateurs, or connoisseurs.

It is not pleasant to have to say such things, but if art and art education in our country are of any consequence, it is important that people who have no knowledge should not acquire authority; and Mr. Jarves has been a long time in the field, doing, may be, not much harm, but certainly no good, by his writings, whatever he may have done by his assiduity in collecting.

Yours truly, W. J. S.

Florence, June 20, 1883.

GERMAN PROFESSORS AND THEIR PAY.

To the Editor of The Nation:

Sir: I have had repeated discussions with a German professor who had read your leader upon "The Real Weakness of American Universities," and I have had a rather hard time of it,

I assure you. Being a professor in a small college myself, with a small salary, I was inclined to agree with you; but having some doubts then in my deepest inmost, as the Germans say, as to the unselfishness of my opinion, I am thoroughly convinced now that you underrate the great advantages of the position of a German professor, and that the influence of your remarks is very bad upon young Americans.

As to the first point, a German professor is not so poor as is generally made out. My friend was very much disgusted. Professor A., at "So and So," has an income of 36,000 marks ($9,000), made up of his salary and doctor and lecture fees. When one receives a call to another university, it is accompanied by a raising of his salary. If his own university wants to keep him, they give him a "Zulage," and he will very likely stay. A professor's position is for life. No president, no trustees, no king, no minister, even, can remove him if he leaves politics alone. Thus, Professor B. at C. has not "read" in three semesters. He is threatened with softening of the brain; but he is not made to resign, and if he were he has his pension, and it would be no great hardship. I know of a professor who has been in ill health for twelve years. He has lectured now and then; his department is at the lowest ebb, but the Prussian Government does not remove him. If a professor dies, his family receives a pension, small, to be sure; but, as you say, plain living is the thing, and a professor or his widow suffers no more from that than any other Government officer.

But the greatest boon of his position is the glorious "Lehrfreiheit": the liberty to teach and to publish what he pleases—politics again excepted. This "Lehrfreiheit" is the cornerstone of the German University, the pride of princes and people. I do not wonder at all that two German professors refused calls to America at four or five times the salaries they now have. I asked a *Privat-docent* once, "Would you accept such a call?" Then he began to calculate: "Professor A. must soon resign, he has been ill so long. Professor D. has just died. The position at E. is not yet filled. *Das müsste man doch erst mal abwarten.*" This man gets 1,200 marks a year for conducting a seminary and gets about 500 marks in lecture fees. But think of what he is striving for—a Government office for life, an income as good as any official's, with a pension; a position of high social rank, liberty of teaching, long vacations, now and then a stipendium for travel, and better bargains with his publishers. There is no doubt a *Privat-docent's* career is a hard one; it ought to be; but this self-denial, poverty, and asceticism of the German professor "ist nicht weit her." What is remarkable in his career is this—and it should be held up as a shining light to our professors and students—that when the *Privat-docent* has become professor he does not lose what your correspondent "N. N." has forcibly called "the grit of spontaneous scholarship."

Depend upon it, a German professor is human. There are even professors in Germany who, instead of being martyrs to the cause of science, are selfish, lazy men, who do not do their duty. But they are the exception, to the great credit of German character. Here is one who "reads" as little as possible, or reads what costs him the least trouble. There is one who treats his work as if it were a year's vacation interrupted by lectures. One gets a travelling stipend, but instead of going during vacation, he goes when his lectures should begin, and stays away till the next vacation, etc. No; the German professor is neither a monk, nor a soldier, nor a saint, and it is perfectly safe to hold him up as an example to Americans in every respect, even in salary, and most of all in his devotion to science and in the difficulty of attaining his position. There lies the rub with us. For you to say that the real weakness of American universities lies in the low salary of the professor, in the unattractiveness of his position, amounts to this: Increase the salary of Government officials and never mind civil-service reform. Ask a president of an institution how many applications he receives for positions. There are too many candidates and too many of the wrong sort, who have no idea what a professorship means, who are no specialists. A certain president received an application from a candidate who was prepared for any department, but preferred the professorship of chemistry. If he could not have that, he would be satisfied with a janitorship.

But this is not to be wondered at. Our college system, "the good old college course," disregards that "one prudence in life," as Emerson calls it, viz., concentration, and leads to "the one evil, dissipation; and it makes no difference whether our dissipations are coarse or fine." The course is too long. University work is begun too late. Again, the question is one of supply and demand. A year ago I was asked by a college president if I could recommend a young man for the department of Latin, but he must belong to a certain branch of the church. I have heard of one call from the West for a professor who must have a good voice to lead the singing in prayer-meeting. The College of —— refused a certain candidate who had studied three or four years abroad, and was a trained specialist, because he would not promise to take his turn in conducting morning prayers. They wanted a "Christian," as they call it, and took a clergyman. The changing of departments is very frequent. You hear of a gentleman as a professor of Greek at one institution, as a professor of Latin at another, and, as a compromise (?), as a professor of English at another. Young men come abroad, travel in Germany, in France, in Italy, in Spain, and suddenly turn up elsewhere as professors of the languages of these countries. It is said that Yale College nominates several of the best scholars of a graduating class to be tutors. They may accept the position or not, and they may teach in whatever department needs help if they do accept. I showed a German professor the announcements of a professor of German at a certain college, which were as follows: Comparative grammar of the Romance languages and instruction in each language of the group; further, comparative grammar of the Teutonic languages, instruction in German, Dutch (?), Danish, and Icelandic. At last, lectures upon foreign literatures. My friend raised up his hands in horror and exclaimed: "Welche Vielseitigkeit! Welche Vielseitigkeit! Ist so etwas möglich?" Well, it is true, where such appointments are possible and where a professor is allowed to make such announcements in an official catalogue, there is something radically wrong in the educational system of the country. Harvard and Johns Hopkins Universities have within the last few years exercised a very healthy influence by making careful and deliberate appointments and more in accordance with German ideas, but everywhere else the presidents and trustees consider a university training—*i. e.*, a specialist's training—as a secondary matter. The question is generally: Is he Jew or Gentile? is he a graduate of our college? is he a clergyman? and what not. I believe it is not the low salaries paid that keep talent from devoting itself to the professor's calling, but such a state of things as I have described, and in that lies the real weakness of our universities. Why should a man who has the means, go to the expense of a specialist's preparation such as he could get in Baltimore, or Cambridge, or Germany, when the prospects of an appointment are so poor? The chairs are not at all numerous, but candidates are plenty.

LEHRFREIHEIT.

FREIBURG, June 17, 1883.

A NEW VIEW OF THE MEDICAL CODE.

TO THE EDITOR OF THE NATION:

SIR: I am greatly surprised that a journal usually so quick to grasp the vital factors of every question can be so blinded by partisanship as to take the position the *Nation* does in its last issue, regarding the liability of physicians and surgeons for declining to render services when called on, even in cases of life and death. The opinion used to prevail among the ignorant classes here that, as to the general public, the medical man was obliged to respond to every demand on his services or stand a lawsuit; some made the attempt, but ignominiously failed. The physician owes the general public no more than any other citizen, be he merchant, manufacturer, or priest, and not so much as a lawyer, who is an officer of the court, and may be assigned to defend a case. If, in the case of the Wisconsin surgeon, he was the only one capable of doing what was needed in the case, he, and he only, was the proper one to operate, to conduct the after-treatment, judge of the propriety of counsel and the fitness of counsel. By your very premises you state that the family practitioner was not a surgeon, and not competent to do what was necessary, and yet you apparently regard the surgeon as inhuman because he would not be trammelled by a man who could not do what he himself could for the case, and whose medical practice, if sincere, is founded on dogmas positively preventing any agreement. If the surgeon is worthy of the slightest responsibility in such a case, he should have absolute control of its treatment and the right to name his associates.

You have only blame for the man equal to the case mentioned, but none at all for the man who, self-confessedly incompetent, would not throw up his connection with the case. The inhumanity lies with the practitioner who knew he could not render the needed services, but who tenaciously held to a connection with the case he had not the skill to treat; and with the parents, who, by their partisanship, wished to trammel the only capable man by forcing upon him this self-confessed incompetent as an adviser. As to the liability to an indictment for manslaughter in the event of a fatal termination to a case such as you mention, I beg leave to differ from the *Herald* and the *Nation;* and I hold that every practitioner has a moral and legal right to decline to render his professional services. The only persons to whom a practitioner owes any professional obligations are his loyal, confiding patients; those who rest on his skill, integrity, and sympathy; those who, by their friendship, love, and loyalty have helped him to fight the battle against competition, chicanery, and ignorance. To these, rich or poor, every true physician will gladly render his best skill. To others he owes absolutely nothing, so far as his professional capacity is concerned. The fact is, the public prefers to have all the obligations and self-sacrifices on the side of the physician; it wants the privilege of decrying his professional skill and his moral character, and of building up his rivals; but when the latter are unequal to any situation, they also want him to answer without any hesitation the summons of those whose whole previous course has been to injure him, and be grateful for the opportunity, or to run the risk of an indictment for manslaughter. If a few cases in each community in which the

irregular or incompetent are unequal to the situation are allowed to die for want of the care and counsel of competent physicians, society will put itself in the hands of competent men. And as to the case you have chosen as a text, it is quite sure that in that vicinity future cases of fractured skull will be put in the hands of some one else than of the homœopath "who could not give the needed surgical care." If the strong men in the profession should thus treat the weaklings and knaves of every school, the weaklings and knaves would go to the wall, and a few funerals be the saving of many to society.

Very truly,

WM. WOTKYNS SEYMOUR, M.D. (Harv).

TROY, June 28, 1883.

Notes.

THE extraordinary features of the year 1882 make the 'Annual Register' just issued for that period (London: Rivingtons) certain to be consulted frequently hereafter. The Irish troubles, with Mr. Forster's resignation, the "Kilmainham Treaty," and the Dublin murders; the war in Egypt; the downfall and death of Gambetta; the electoral-reform and oaths' bills in Italy; the anti-Mormon and anti-Chinese legislation in the United States—such are some of the permanent landmarks of history. The obituary record is no less shining. What is noticeable here is, that the Americans seem to have been commemorated by their own countrymen—a liberal and on some accounts a wise policy for the editors. We remark that the space allotted to Emerson considerably exceeds that for Darwin; Garibaldi and after him Gambetta being the most favored in this respect. There are the usual running review of literature, science, and art; daily chronicle of events; and English statistics.

Columbia College has issued a "Circular of Information" in regard to the collegiate education of women and its own plan of fostering it. The first examination will be held on January 28, 1884.

The first civil-service manual which has fallen under our eye is an anonymous pamphlet called, 'Government Clerkships: How to Get One; How to Prepare for Examination' (Washington: R. Beresford). The introduction gives a summary view of the several steps leading up to the present institution of the competitive system; the rules established by the Civil-Service Commission are given at the end. In the middle are various questions based on actual examination papers, but more comprehensive than any single set, and "idiots and dunces" are warned that they "will derive no benefit from these pages" since they are the persons intended to be kept out of the service. Some useful hints to candidates complete the manual, which is commendable in spirit and in execution.

We noticed last week Mr. Wisner's Guide to the Yellowstone National Park. In the meantime we have received Dr. A. C. Peale's 'Report on the Thermal Springs' of that region, reprinted as an author's edition from Dr. Hayden's twelfth annual report (for the year 1878). This bulky volume is not well adapted for the tourist's satchel, but no party visiting the Park should be out of reach of a copy. It is in three parts, the first describing the several basins in detail, with the aid of charts and a wealth of woodcuts and lithographs, some of the latter being impressively colored to the life. Part second discusses the warm springs of the globe, and part third the science of thermo-hydrology, as Dr. Peale terms it. A bibliographical appendix covers a field as wide as the text. The bibliography of the Park itself is already very extensive.

With the growth of population the question of water supply becomes every year more serious, and there can be no question of the utility of Mr. J. J. R. Croes's 'Statistical Tables from the History and Statistics of American Water Works' (New York: *Engineering News*). An alphabetic list of towns having a public water supply satisfies curiosity as to the number of inhabitants served, the age and cost of the works, the source of supply, etc.; while another list, arranged according to population, adds further particulars as to expense, daily consumption, miles and size of pipe, meters, hydrants, etc. These tables will be revised and reissued from time to time, and will save a great deal of misdirected research.

Those who are interested in the definition of the terminal moraine of the great Northern ice-sheet, will find the glaciated area of Ohio described and delineated by Prof. G. F. Wright in the July number of the *American Journal of Science*. Roughly, the line extends from New Lisbon to Higginsport on the Ohio, in a general southwesterly direction.

The proceedings of the Court of Inquiry on the loss of the *Jeannette* have been issued from the Government Printing Office as H. of R. Exec. Doc. No. 108. They make a volume of 363 pages, illustrated with numerous diagrams and charts, including one in color of the fatal Lena delta, and a circumpolar chart based on the latest authorities, and drawn on a large scale. This last is nominally in two sheets, but only sheet No. 1 is found in our copy, and indeed is all that is needed for the story of the expedition.

In No. 104 of the Journal of the Berlin Geographical Society Dr. F. Boas has a concise and closely-reasoned paper on the former distribution of the Eskimos in the Arctic-American archipelago. He takes the ground that it is unsafe to argue from the northern remains of Eskimo settlements great climatic changes or a migration eastward. The shifting habits of this people and their dependence for food supplies on the contingencies of the seasons make it impossible to fix a boundary between ancient and modern occupation, while great uncertainty attends the determination of the age of Arctic remains. Each portion of the archipelago is discussed in detail from the works of voyagers; and on a map accompanying the article are shown the places at which Eskimo remains have been found, and the successive limits of settlement in our day from 1850.

We have received Mr. Appleton P. C. Griffin's bibliographical monograph on 'The Discovery of the Mississippi,' reprinted from the *Magazine of American History* (A. S. Barnes & Co.). This quarto pamphlet is accompanied by a reduced (but still large) colored facsimile of Joliet's map of the continent, dated 1674, and inscribed to Count Frontenac. Dr. De Costa has added a note on the subject of this map, comparing it with several earlier ones, and giving a section of Joutel's map of 1713, showing the great lakes and the Mississippi basin. Mr. Griffin deserves the thanks of all students of American history.

Two important articles distinguish the July number of the *Pennsylvania Magazine of History and Biography*. One is Dr. Edward Shippen's "Account of the Origin of the Naval Asylum at Philadelphia," the obscure Greenwich of America. The other is Judge J. W. F. White's historic-biographical review of the "Judiciary of Allegheny County"; a paper full of interesting sketches, ending with a tabular view.

Although Mrs. Lamb, concluding in the current number of the *Magazine of American History* her series of articles on "Wall Street in History," brings the tale down to the present year, she appears to have overlooked one function of the street, as a centre for popular demonstrations. Was it not on the steps of the Sub-Treasury that Mr. N. P. Banks confessed to the bankers and merchants that he was willing under certain circumstances to "let the Union slide"? And who can forget, too, the great meeting held there on the day following the assassination of Lincoln—not to mention other similar impressive gatherings which have made Wall Street in some sort our forum?

We have received the 'Constitution, By-laws, and List of Members' of the flourishing Georgia Historical Society for the current year. It contains also the act of incorporation, which dates from 1839. The resident members number more than 400.

The third edition of the 'Alumni Record of Wesleyan University' is a marvel of completeness. There are 1,314 graduates (to the class of 1882) and 935 non-graduate alumni (to 1881). Eight hundred and thirty pages are devoted to a record of their lives, in which there are no superfluous facts and few unnecessary words. If every university and college prepared such a volume (and all colleges are probably equally interesting to their alumni, so that if the making of this record is justified, all the others ought to be made), what a collection of biographico-statistico-educational literature we should have.

The Comité d'histoire et d'archéologie du diocèse de Paris has published the first number of a bulletin in which it intends to recount the history of the diocese and the biography of the ecclesiastics, high and low, and to describe its monuments and give their history. On such a diocese a work of this kind, if well done, will be interesting.

Among interesting reprints may be counted that of the *Journal de la Belgique* for 1815. It was the organ of the Allies, and related the important occurrences of that eventful year from day to day as they appeared to observers on the spot.

M. Georges d'Heylli, who had already published nearly a dozen monographs relating more or less closely to the Comédie-Française, was led by the announcement of M. Delaunay's withdrawal from the stage to prepare a brief biography of that best and most poetic of light comedians, and this sketch fitly appeared just as M. Delaunay received the decoration of the Legion of Honor and therefore withdrew his resignation. M. Delaunay is the first actor decorated simply as an actor: M. Régnier was not so honored until he had left the stage, and M. Got's decoration, two years ago, was given rather to the professor in the Conservatory than to the actor. Doubtless it will not be long before the third great comedian of the Comédie-Française and perhaps the greatest of all—M. Coquelin—will receive also his bit of red ribbon. M. d'Heylli's sketch of M. Delaunay's career is excellent, especially in its inclusion of a complete list of parts; there is an etched portrait by Lalauze.

—Exceptional interest attaches to the July number of the *New England Historical and Genealogical Register*. We might cite Mr. F. B. Sanborn's brief showing of the brotherly relationship between Peter and John Brown of Duxbury, the former being ancestor of John Brown of Ossawattomie; or Mr. Phillimore's full account of the Garfield family of England, which ends with a tentative pedigree for our late President; or still other valuable papers. The expert, however, will turn most eagerly and with greatest satisfaction to Mr. Henry F. Waters's "Genealogical Gleanings in England." Last December we had the pleasure of commending the mission which Mr. Waters is now fulfilling by means of a fund raised by the New England Historic-Genealogical Society. He took his departure

only in May last, but already has established himself in London and sent over the first fruits of his systematic search among the English record offices for families having American connections. In this he is guided by an unsurpassed familiarity with New England records and family names, which makes his selection almost instinctive, and of course also by the evidence of American connections which the documents themselves afford. Thus it happens that in the "gleanings" first reported occur a promising number of names pertaining to Virginia and Maryland. Mr. Waters has begun work among the records of the Prerogative Court of Canterbury, Somerset House, London, and the wills he abstracts are those of Coffin, Cockerell, Kaine, Atherton, Burges, Wilcocks, Green, Williams, Beavay, Sherman, Sumpner, Mason, Baker, Hill, Pargiter, Anthony, Reade, Rand, Geere, and Parker. Each will involves other names than that of the testator, sometimes in an association which can be matched in early New England settlements. Several of the individuals just enumerated were already well known to the local historian, and the editor of the *Register* and his colleagues have annotated these abstracts in a way to make them available at once for our genealogists. Indeed, we can fancy the readers of the *Register* (who ought now to increase rapidly) scanning with all the excitement of prize-drawing in a lottery the successive batches forwarded by Mr. Waters. The enterprise is in the best sense of the term public-spirited on his part and on that of the Society, who bespeak still further support for it, as the work will occupy years. Subscriptions may be sent to Mr. John Ward Dean, 18 Somerset Street, Boston. Mr. Waters's address is at the American Exchange, 449 Strand, London, and it will be remembered that his engagement permits him to undertake private searches for clients desiring his services.

—Mr. Charles Francis Adams, jr., has reprinted, with additions, from the Proceedings of the Massachusetts Historical Society, his monograph on Sir Christopher Gardiner, Knight, one of those mysterious figures, discernible in the very dawn of New England history, who pique curiosity, but have not often lured the steady-going historian from the track of more important personages. The author of "A Chapter in Erie" has notoriously a keen eye for the picturesque in human character, and an admirable patience in following tangled clews. His success in elucidating and chronologically rectifying the obscurer settlements of Massachusetts Bay, and in enlarging our knowledge of individual actors in the early New England drama, has been so signal that an historical paper from his pen is now sure to command attention. More than that, it is sure to interest. In the case of Sir Christopher Gardiner not much, perhaps, is revealed here beyond what was known before; but the facts have been collected and arranged and discussed in an original way, and the hero is presented more vividly and consistently than ever before. His career allows full play to Mr. Adams's humor and historical imagination, especially in connection with Sir Christopher's frail partner, Mary Grove. The attraction which this couple have had for New England poets and writers of fiction—Miss Sedgwick in 'Hope Leslie,' Motley in 'Merrymount,' Whittier in 'Margaret Smith's Journal,' J. T. Adams in the 'Knight of the Golden Melice,' and Longfellow in 'Tales of a Wayside Inn'—serves Mr. Adams as an excuse (for all he thinks these performances rather droll as history) for coming under the same spell.

—Every lawyer can enjoy reading Judge Thomas Durfee's 'Gleanings from the Judicial History of Rhode Island,' which forms No. 18 of the R. I. Historical Tracts published by S. S. Rider, in Providence. The development of the judicial system in this colony was peculiar, and the judicial prerogative exercised by the Legislature almost to the present date has perhaps no parallel elsewhere. This feature of the State Constitution, if it can be so called, is much dwelt upon by Judge Durfee and is very instructive. Another singular custom, which has, with a few modern exceptions, prevailed from the beginning, is that the town councils are courts of probate. The fact that they "have satisfactorily discharged these important duties for more than two centuries testifies strongly in their favor. Doubtless a critical inspection of records would discover numerous flaws and defects, but the jurisdiction has always been exercised not only with substantial justice, but also in a kindly, helpful, neighborly spirit which has disarmed criticism." In 1729 an act was passed forbidding the election of any practising lawyer as deputy to the Legislature, but it was repealed at the next session. In 1786 the Assembly passed an act enforcing the tender of paper money, and was shocked when the Superior Court dismissed the first case on the ground of the unconstitutionality of the statute. The judges were brought to book, but stood firm, even at the cost of their places, for they were not reëlected. This annual election of judges, by the way, down to 1827, had the usual result of elevating men unlearned in the law; but great evils were probably prevented by the smallness of the population. Judge Durfee notes the change which has taken place (in consequence of the increase in population and the complexity of modern society, industries, and commercial enterprises) in the favor with which criminal practice was once regarded. He thinks it not a matter of regret that the ambitious young lawyer, seeking money rather than fame, now prefers a civil business, since thereby "guilt is surer of its desert, and innocence, now that it has acquired the privilege of testifying in its own behalf, seldom stands in any serious jeopardy." When the Circuit Court in Rhode Island was held by Judge Story (1812–1845), "Rhode Islanders even expatriated themselves [by establishing a temporary residence outside the State limits] for the privilege of suing" in his court. Judge Durfee characterizes Story, Levi Woodbury, and Benjamin R. Curtis in traits which will be recognized as faithful and discriminating. Some early *causes célèbres* are narrated, and the little pamphlet closes with a tabular list of judges of the highest court (1747–1883).

—The death week before last of Professor Stephen Alexander, of Princeton, removes almost the last representative of that circle of scientists, among whom were Henry, the elder Silliman, Bache, the elder Draper, and Strong, who began their important labors early in the present century, and to whom the science of this country is incalculably indebted. Professor Alexander was educated at Union College, and had been connected with the College of New Jersey for fifty years. He is chiefly known as a practical astronomer, and in 1860 conducted an expedition, under the auspices of the United States Coast Survey, to Labrador, to observe the total eclipse of the sun in July of that year. His published papers relate to the observation of eclipses, to comets and the small planets, to the origin of the forms and present state of some of the clusters of stars and resolvable nebulæ, published in 1851, and to certain harmonies of the solar system, published in later years by the Smithsonian Institution. This was his last paper of importance. He lived to the age of nearly seventy-seven years.

—"Mr. Henry Irving," writes a correspondent in London, "is preparing industriously for his visit to America this coming fall. To this end he is now reviving for short runs the most of the plays in which the Lyceum Company is to appear in America. At the beginning of June were given the final performances of 'Much Ado About Nothing,' a most extraordinary production, as rich, as elaborate, as artistic, and as highly sensuous a spectacle as any to be seen at the Théâtre-Français. In nothing yet done at this theatre has the histrionic ability of the very fine company with which Mr. Irving has surrounded himself been seen to better advantage than in this difficult play. It was mounted magnificently, and was acted throughout with an ease, a grace, and a spirit of true comedy not often seen on the English stage or elsewhere. After the Shaksperian comedy came a French melodrama, the 'Lyons Mail,' roughly rendered into English by Mr. Charles Reade. As a manager, Mr. Irving is seen at his best in 'Much Ado About Nothing,' but as an actor he reaches his highest point in strong, melodramatic plays like the 'Lyons Mail' and the 'Bells,' in which latter he is to make his first appearance in New York. His unfortunate mannerisms of speech and carriage interfere with our full enjoyment of his remarkable gifts in comedy, and in the higher reaches of tragedy there is felt a deficiency; but in vigorous melodrama Mr. Irving is always admirable. The wily burgomaster in the 'Bells,' and *Dubosc*, the sodden ruffian in the 'Lyons Mail,' are set before us and explained by a dozen little bits of illustrative business, all appropriate, all well thought out by the actor, and all well wrought into the whole, until the result is a wonderfully elaborate character, of an undoubted and independent vitality. The burgomaster, as his eye glances on the cord he has just taken from the sack containing his daughter's dowry, just as that cord, slipping idly through his fingers, chances to fall into a hangman's noose; and *Dubosc*, as he lies on the floor of his upper room looking down with fiendish delight on the preparations in the square below for the execution of the man whose resemblance to him is so striking that the innocent is to be killed in place of the guilty—these are two unforgetable figures: and the actor capable of putting such figures before us is plainly one of the first histrionic intelligences of our time. After the 'Lyons Mail' and the 'Bells' will be given a few performances of 'Hamlet' and the 'Merchant of Venice,' of 'Eugene Aram,' 'Charles I.,' 'Louis XI.,' and of the 'Belle's Stratagem,' in which last and rather thin comedy Miss Ellen Terry appears to the greatest advantage."

STEPHEN'S HISTORY OF THE CRIMINAL LAW OF ENGLAND.—I.

A History of the Criminal Law of England. By Sir James Fitzjames Stephen, a Judge of the High Court of Justice, Queen's Bench Division. London and New York: Macmillan & Co. 1883. 3 vols.

Law may be considered in a twofold aspect, as a branch of history, or as a department of applied logic. The historical importance of legal studies is a discovery of modern times, revealed to Americans and Englishmen mainly through the works of Sir Henry Maine. His 'Ancient Law,' his 'Village Communities,' his 'Primitive Institutions,' and his 'Law and Custom' have done little less than open to all readers of English literature a new province of investigation. Holmes's 'Common Law,' Bigelow's 'History of Legal Procedure,' Bagehot's 'Physics and Politics,' Lyall's 'Asiatic Studies,' Leslie Stephen's 'Science of Ethics,' each show how widespread has been the influence exerted by the manner of

looking at laws and institutions which is suggested and stimulated by every line Sir Henry Maine has written. The only persons who (with the one impressive exception of Professor Stubbs) have not yet roused themselves to the conviction that the legislation of a country is as important a factor in the sum of national progress as its religion, and that English law, being the most original production of English genius, presents a side of English character which ought never to escape the notice of intelligent historians, are the writers of English history. Macaulay was a lawyer, and, when judged of by his Code, will in future ages be classed among the greatest of English jurists; but Macaulay depicted the great events which make up the annals of England without ever appreciating the fact that legal ideas and legal institutions both moulded and express the character of the race which has produced the one great legal system not grounded upon the law of Rome. Mr. Freeman, again, is intensely conscious of the fact that Englishmen are Englishmen, and have been the independent makers of their own fortune; he spares no pains to investigate the most minute problems of antiquarianism, and he has a good eye in general for the broad results of national progress. But for all this, he displays no interest in legal knowledge or study. He appears to hold that because Blackstone (following, by the way, the historians of his day) fell into gross errors as to history, English historians are morally dispensed from the duty of knowing anything about English law. Even the most versatile, the most brilliant, and the most many-sided intellect which has of recent times explored and illuminated the history of the English people, was never turned toward the connection between the legal and the social, not to speak of the religious, history of the nation. Yet one cannot doubt that if fate had spared Mr. Green to his country, a man endowed with his vivid interest in all sides of human life, gifted with his rapid and piercing insight into the striking phases of English development, and, above all, blessed with his readiness to receive truth and light from whatever quarter it might arise, would, long before his great task could have been accomplished, have fully perceived that you cannot tell completely the records of a nation of lawgivers without reference to the law of the nation.

The best excuse (such as it is) for the blindness of historians is, that the only school of lawyers which in the last generation gave signs of energy and life, approached law from the logical or analytical side, and, being immersed in schemes of reform and improvement, looked with indifference and ignorance on the study of the past. For if the historical study of law is the discovery, in England and America at least, of the present generation, the application of logic and analysis to legal rules and legal conceptions is due to Bentham, Austin, and (though the juxtaposition of names is an odd one) to Macaulay. The analytical jurists, and the utilitarianism of which they were the exponents, have bestowed inestimable benefits on the world. But their line of thought tended indirectly to discourage investigations into the past growth of existing institutions. Bentham knew little of the history of law. Austin, it is true, who knew more of Roman law than most Englishmen of his day, entered fields of knowledge unexplored by his master. But Austin's mind was unhistorical; his strength lay in that analysis of legal ideas which had so great a charm for his powerful though somewhat monotonous intellect, and we may well suspect that Austin's militant utilitarianism, which now wearies and perplexes his readers, seemed more important to himself and to his hearers than even the elaborate definition of a few leading legal terms to which is due the permanent and weighty influence among the present generation of his 'Lectures on Jurisprudence.' However this may be, it is certain that on both sides of the water the historical and the logical aspect of legal studies has, in the main, been developed by different teachers, pursuing different, and to a certain extent antagonistic, modes of thought, and that it would be hard to overrate the debt due either to the historical or to the analytical school of jurisprudence. But of recent years, more than one writer has attempted to combine in one and the same work the two methods of legal speculation. Mr. Digby's 'History of the Law of Real Property,' in which an excellent account of the antiquities of law is curiously interleaved with tables containing schemes of legal division based on the ideas of Austin; and Mr. Holmes's 'Common Law,' in which philosophical speculation becomes a sort of reverential commentary on the texts and precedents of the common law, each exhibit the tendency to combine logical analysis with historical narration. The same effort at combination of two different methods is distinctly traceable in Sir James Stephen's 'History of the Criminal Law of England.' It is at once an account of the growth of English law with regard to crime, and an elaborate disquisition on the most interesting and knotty problems of criminal jurisprudence. Of the great value which the work possesses as a contribution to the proper understanding of English history, we hope to write on a future occasion; and of the whole book, we may say at once that it is as noteworthy a product of intellectual energy as any literary work of modern times. Had it been produced by a professor sitting at ease in his library, it would have been a performance which scarcely any other lawyer or historian of the day would have had the boldness to plan or the vigor to bring to an issue. Being, as it is, the work of a judge, the greater part of whose time is consumed by public and arduous duties, it is a splendid monument of worthy and well-directed labor. The aim, however, of the present article is to call attention to the way in which the attempt to combine two different modes of treating law almost inevitably produces certain defects, which, if their cause is not perceived, may hide from careless readers the very substantial merits of several important treatises.

It is, indeed, with some hesitation that any one can censure a method pursued in common by writers so competent, and at the same time so different from each other, as Mr. Digby, Mr. Holmes, and Sir James Stephen. But it is just because there may be perceived in each and all of these writers some common faults that one may assert with confidence that these defects, such as they are, are due to a common source. In each case may be seen, though under different forms, the ill effect of attempting to combine the analytical and the historical treatment of law. In Mr. Digby's work, indeed, the analytical element is easily separable from the historical investigations. Holmes's 'Common Law,' on the other hand, has, with all its infinite merits, the defect, inherent, as it seems to us, in the method adopted, of confusing together logical, one may almost say metaphysical, questions—as to the nature, for example, of "negligence," of "possession," of a "contract"—with the quite different inquiry, What is the teaching on these various subjects to be deduced from the sacred dicta propounded by the sages of the common law? In Sir James Stephen's book, different results flow from the same cause when influencing a writer who may be described as primarily a logician and a legal controversialist, and only secondarily an historian of the laws of his country. The 'History of the Criminal Law of England' is the work of a disciple of Austin who has studied in the school of Maine. We should, we confess, prefer to have had the jurisprudential discussions, which make up a great part of the second volume, published as a separate work from the historical narrative which constitutes the substance of the book. The discussions, all of them interesting, and many of them most admirable in their way, would have lost nothing from the separation. The historical narrative, which is in many ways a most important contribution to the history of England, would, we are convinced, have gained much by separation from what, to use a legal term, we may call "contentious matter." The gain would have been twofold. The history itself would have been fuller and more complete. Sir James Stephen has done so much for historical knowledge that we confess to a perhaps ungrateful wish that he had done more. His investigations, as we hope to show in our next article, have absolutely proved, what intelligent students of law have long surmised, the intimacy of the connection between the legal, the constitutional, and the religious history of England. When we observe how much light our author has thrown upon features in the history of the seventeenth century which are often overlooked or ignored; when we find that the facts which he has collected about trial by jury go very far to explain the true development of a very peculiar institution; or when we notice how many clews to that most interesting branch of all knowledge—the knowledge of public opinion in past times—are supplied or suggested by Sir James Stephen's account of the law of treason, or of the law of libel, it is impossible not to feel something like vexation at our author's attention being diverted from investigations which might have produced the richest fruit, to violent assaults on such fallacies as that embodied, or supposed by the assailant to be embodied, in the well-known epigram:

"Treason can never prosper—what's the reason?
If it does prosper, none dare call it treason."

Nor does the evil of combining, or rather uniting, historical narrative with logical speculations end with its diverting the writer from the paths of investigation which an historian ought to pursue as far as they can possibly lead him. A worse result is, that logical theory and historical statement become blended and confused together. This is specially apt to be the case when the writer has to deal with that most curious topic, the gradual and only half-conscious development of law which is in reality nothing less than judicial legislation. An historian engaged on the attempt to discover what *is* the law deducible from the decisions of the courts, must in any case, from the nature of things, find it extremely difficult to keep apart his notions as to what the law ought to be from his view of what it actually is; and the only means by which to reduce the danger of this error to a minimum is to keep speculation or discussion as far as possible apart from narration. If this is not done, some sort of confusion or mistake is certain to ensue. Oddly enough, Mr. Holmes and Sir James Stephen appear on this matter to be liable to errors which, though dissimilar, are really due to one and the same cause. The American judge looks at the tendency of a line of judgments; he sees the results which they have actually led to—or, at any rate, to which they probably will ultimately lead—and, perceiving a principle on which the law (for example, in reference to negligence, as it is now administered by the courts) may be justified, he is certainly disposed to attribute to the judges of former days notions which are really the growth of modern enlightenment. The English judge, on the other hand, though in some cases

(as, for instance, in his admirable chapter on the connection between madness and responsibility) he exhibits a leaning toward what we conceive to be the error of Judge Holmes, more often looks upon past decisions as having far greater fixity than they in reality possess. We find it at least difficult to believe that his views as to the law of libel, or as to the law of blasphemy, do not rest upon the idea that a rule once judicially laid down has a kind of fixedness which, whatever ought to be the case, no man looking at the matter from a merely historical point of view would attribute to the fluctuating or flexible doctrines of judge-made law. In these and some other instances Sir James Stephen's logical and controversial habits, combined with the mode in which he has treated his subject, tend at least to perplex and unconsciously to falsify his historical narrative. We have pointed out clearly what appear to us its peculiarities or shortcomings; we hope in another number to prove that in Mr. Justice Stephen's hands the 'History of the Criminal Law of England' opens up new views on the whole history of the English people.

ACROSS CHRYSÊ.

Across Chrysê. By A. R. Colquhoun. New York: Scribner & Welford. 2 vols. 8vo.

Of the five famous "land-islands" to which the Greeks gave the name of Chersonesus, and the Latins Peninsula, it was said "the fifth, surnamed *Aurea* (ἡ χρυσῆ, the golden) lies in India beyond the Ganges." In the titles of recent books, which show how the coils of exploration are tightening around the Indo-Chinese peninsula, we see a revival in various forms of its ancient name. Captain Gill's 'River of Golden Sand,' Miss Bird's 'The Golden Chersonese,' and Archibald R. Colquhoun's 'Across the Golden' (as we may translate it) are cases in point. Ptolemy's Chryse Chora is but a literal version of the Sanskrit Suvarna-Bhumi, or Golden Land, applied in ancient India to the Indo-Chinese regions. The makers of the books we have named, instead of coining new titles, have adhered to classic precedents. "Indo-China" is but of recent application, and Cochin (Chinese Kiu-chin, nine divisions) China, though perhaps dating back to the Han dynasty (206–23 B. C.), is but one province of Annam. The elasticity of Ptolemy's geography is availed of by our author, whose trip was in reality across the three southern provinces of China.

Physically speaking, this division of peninsular Asia is a gridiron-shaped country consisting of ranges of mountains stretching southwardly from Thibet to the tropical oceans. The rivers flowing between these mountains are fed by the snow of the mid-Asian plateau, and by the natural supply of a very rainy country that yields the steam and malaria to which so many Europeans succumb. Ethnologically, we have in this section of earth a congeries of races produced by mutual contact of the Aryan and Mongolian races, and sharing the traits in lesser degree of both Hindoos and Chinese. In this century, this "last continental region toward the East," as the author of the 'Periplus' calls it, finds itself the unwilling object of emulation between two rival European nations. The English in Burma and the Straits Settlements knock at the western door; the French in Saigon and Tonquin are striving to prise open the eastern door; and trade, rather than politics, is the real motive power at the ends of the levers. To tap the interior commerce both of Indo-China and of the border provinces of the Middle Kingdom, *via* the sea-coast and rivers, has been the real object of English and French diplomacy, war, and exploration thus far. The Gallic pioneers have started from the sea, and up from the south, while the British, from China or Burma, have sought by overland routes east or west to be true forerunners, making straight paths for the gospel of trade. "Free transit through China" is the watchword of the British traders in China—a policy incarnated in Sir Harry S. Parkes, the newly-appointed minister to Peking. The impelling cause of the French war in Tonquin is the failure of the Annamese, after seven years' delay, to open the Red River to French commerce into Yunnan. Already the list of victims of exploration is large: Lagree, Garnier, Carné, and Mouhot among the French, and Margary and Wahab (the author's companion) among the Englishmen, "have been sacrificed in the work of Indo-Chinese exploration." Mr. Colquhoun's dedication, saving flattery, reads exactly like the inscription on a gravestone.

Like Columbus and other good discoverers, Mr. Colquhoun was incited to plunge into venturesome exploration by reading the tomes of Marco Polo. "Our mediæval Herodotus," as Colonel Yule calls him, had, nearly six centuries ago, accepted a commission from Khublai Khan, which took him through western China, and thence to Burma. Of the 1,500 miles of Colquhoun's proposed route in 1882, two-thirds of the distance would be over ground which, except a small portion of Polo's route, had been undescribed by a European. His object was to explore the rich vein of geographical, ethnological, and allied subjects, but the object nearest to his true British heart was trade extension. Since the French were moving in Tonquin, and at the mouth of a practically navigable river too, he hastened with all speed in order to head off French enterprise and open the way for British manufactures. As executive engineer of the British Public Works in India, as a traveller in Siam and the Shan country—about which he is now writing a book to be called 'Among the Shans'—he had gained experience with Asiatics, and a thorough practical knowledge of his craft. With such scientific training, with the true explorer's and surveyor's eye, with a superbly-knit physical frame, with abundant good nature, patience, and power of endurance, Mr. Colquhoun possessed the equipment of a successful traveller. We should gather this knowledge from a study of his likeness which faces the title-page of volume i., even if his bluff, unpolished narrative did not reveal it.

Obeying the old Dutch proverb "Raad voor daad" (counsel before action), he sought the advice of Colonel Yule, Captain Gill, Colborne Baber, and two missionaries of the China Inland Mission. After a few months' rest in England, following a thirteen years' absence in the East, he sailed in the French steamer *Pei-ho* for Canton, landing there December 19, 1881, with his companion Charles Wahab, a civil engineer. Donning Chinese costume, and obtaining an interpreter, since they knew no Chinese, and servants, who signed their contract-papers with thumb-impressions in ink, the party was ready to start after a delay of sixteen days. Their passports covered the six southern provinces of China; and a stack of vermilion-covered visiting cards, each having the superficies of a brick, was duly prepared for calls on official magnates. Their new designations were Messrs. Spear-man and Sucking-baby, though Mr. Wahab, who bore the infantile name, was "a dragon-bearded worthy," and Mr. Colquhoun a man of peace, who soon gave away his rifle, advising all travellers to eschew firearms. Packing their stores, medicines, and instruments in cases enclosing each a ten-days' supply, and weighing sixty pounds each—a half-mule or one-man load—the party of seven embarked on the evening of February 4, 1882. A seven-year-old daughter of an American missionary in Canton seems, among the large crowd of friends assembled to bid good-by, to have waved the last adieu. Leaving the Canton creek, they entered the Si-kiang, or Western River. This, the largest of the rivers of southern China, drains the valley between the Nan-lin range (in which the original Rip Van Winkle story is located) and the mountains bordering on Tonquin. The water journey was to extend through "the two Kwangs," Kwang Tung and Kwang Si, to the town of Pésé on the Yunnan border, and the head of boat navigation. Fulfilment of the Chinese captain's time contract of eighteen days was secured by a stipulation of rewards or forfeits based on the "flowery borders," vulgarly called dollars. Through gorges and under overhanging rocks of wonderful grandeur, past rocks of fantastic shapes covered alike with lore and lichen, fields of Indian corn varied by an occasional expanse of poppies, floating boat-villages, pagodas, and walled cities, junks, and cormorant fishers, old Tai-ping rebels' forts (now nests of robbers), occasional floating corpses of girl-babies or haggard opium victims, the explorers moved on, enjoying sights such as Polo saw centuries ago. In taking notes and photographs, studying Garnier's map, making calls on land at the yamens of the mandarins, the time soon passed away.

This part of the book, notwithstanding its freshness, in that the daily entries in the journal were reduced in semi-weekly tasks to text, does not greatly differ from the descriptions of ordinary travellers in China, except that everything is seen from the engineer's and trade-exploiter's point of view. The usual features of Chinese city life—the pagodas, official yamens, guildhalls, civil-service-examination stalls, pawnbrokers' shops, cremarium for reducing manuscript to ashes—are noted; and the reader is impressed with the homogeneousness of the mighty empire. The country folks were found to be civil, simple-mannered, and kind; but the city people were more hostile, and more easily influenced by the literati, or, to speak properly, the disappointed office-seekers. The idle scholars rejected at the Government examinations are the real mischief-makers who incite the people to hoot and throw stones or call out *Fan-qui* (foreign devil). On pages 279 and 280 of vol. i. the author sums up his impressions of the region traversed by the Si-kiang or West River, and the former theatre of the Tai-ping rebellion. The horrible destruction of the population, the frequent ruins of once populous cities, and the transfer of the carrying trade between Yunnan and Canton to the Yang-tse River account for the comparatively deserted appearance of the country and the small portion of land cultivated. Great prosperity once reigned along this river, and under good government may again return. In these provinces the character of the population has been greatly affected by the aboriginal tribes, which, after two or three thousand years of attempted rule, the Chinese seem not to know how to govern. On account of the lawlessness in these border lands, trade routes into Tonquin are as yet few and precarious, nor likely to be improved under the present Chinese policy of letting things alone. Protection to life, and light-draught steamers, would work wonders in commerce.

The second stage of the journey began from Pésé, through southeastern Yunnan, in light marching order, with little but instruments, canned soup, and flannel. This province is inhabited largely by the Lolos, or aboriginal tribes only partially under Chinese rule. They have a written language, and Mr. Colborne Baber has recently obtained several of their interesting manuscripts. For years, the Mohammedan re-

bels and the imperial troops devastated Yunnan, and everywhere were seen ruins of towns and cities, deserted mines and industries, while the population had been *reduced to one-tenth* of its former number. The wondrous variety of costume—a strange sight in China—brightened the scene. In this part of vol. i., and throughout vol. ii., the author drops the larger but commonplace illustrations, and sprinkles on nearly every page thumb-nail sketches of implements, ornaments, costumes, and faces, with larger cuts from photographs, and reductions from native drawings, which are of superlative interest. He meets personally some of the Chinese generals whose military prowess or cold-blooded treachery reëstablished the imperial rule after awful carnage. These mandarins, whose ignorance of topography is constantly criticised, seem unable to accommodate the ways of the aboriginal hill tribes to their own. Their only idea of government is that of coercion. They are especially unable to deal with a mining population, and hence discourage all attempts to develop mineral riches. A modern Kung-su is needed to induce the Lolo aborigines to "wear oxen at the waist and heifers at the belt"—which is the celestial method of beating swords into ploughshares. Under Western methods of government, Mr. Colquhoun thinks, all would be different, and wealth and population increase tenfold in a few generations. Both silver and gold are found in great richness in Yunnan. The rivers were crossed by suspension bridges, many of them of iron, and others of massive masonry on a series of arches. With much that was imposing in architecture, notably some quadrangular Mohammedan pagodas, much was out of repair. Mr. Colquhoun comes to the conclusion that the natural bed of the future railroad over which the traffic of Yunnan and southern China shall yet pass, lies in an extension from British Burma, and not through Tonquin or the Cambodia River valley. In other words, he believes that the English, and not the French, have already the "inside track." No wonder that three Paris publishers have broken off negotiations for publishing 'Across Chrysê.'

The closing part of the second volume becomes exciting as the reader travels in spirit with the brave explorers forcing their way through the wildest part of China across the frontier, amid the discomforts of malaria, plague, poverty, rain, and danger from brigands. Courage, quinine, and the aid of French missionaries, however, secure their safe arrival at Bhamo, north of Mandalay, where, in British Burma, they meet American missionaries, soap, bathtubs, linen table-cloths, "a fairy breakfast," Anglo-Saxon speech, and all the comforts of home. Mr. Wahab, who fell a victim to unboiled water, reaches England to die, while the author, despite the strain upon nerves and frame, may yet live to ride into Yunnan behind a locomotive.

The two superbly printed volumes which form the memorial of the latest, as it is one of the most brilliant, successes in modern exploration, are replete with fresh information of sterling value. Two folding maps give the land and water route at a glance, and the illustrations, especially of the second volume, are worth the study of costumers and artists as well as of the casual reader. The author's style is unstudied and easy, without repetitions or redundancies, and the narrative is enlivened with amusing as well as thrilling incidents. One learns to admire Mr. Colquhoun as well for his kindness of heart as for his tenacity of purpose. We close this review by appending his remarks about beards, which will serve as a specimen both of his style and of his powers of observation:

"The Chinese are never tired of ridiculing the beards of foreigners, but in reality they have the greatest reverence for hirsute appendages, as may be seen from the pictures and statues of celebrated men, nearly every one of whom is endowed with a beard which he probably never possessed. In the historical plays their famous characters are always bearded, and the stroking and management of the beard forms an important item of the actor's by-play. Again, the attention given by old men to combing the few straggling hairs which may give them any pretension to a beard, are proofs of the regard in which they hold them. Finally the Chinese phrase has it, 'San pu-chiu'; there are three things, not to be sought for or obtained, which are said to be—whiskers, a son, and wealth. The Chinese proverb says that one cannot have all these three *tzu*."

The English Novel and the Principle of its Development. By Sidney Lanier. Charles Scribner's Sons. 1883.

THIS volume is an apotheosis of George Eliot. The English novel, so far as it is the work of other writers, is treated of solely in relation to her, and very briefly. Only Richardson, Fielding, Smollett, Sterne, Thackeray, and Dickens can properly be said to receive any attention at all; of these the first four are abruptly dismissed by the author, with the remark, "If I had my way with these classic books, I would blot them from the face of the earth." Thackeray is described as the "somewhat slack, somewhat low-pitched satirist," who "worked so often in a mood of hate," while to Dickens alone is granted the laurel, mainly, it appears, because his sketches of the debtors' prisons had some influence in effecting practical reform. But the success with which, to our author's eyes, the rod of George Eliot has swallowed up the rods of all the false magicians, is most manifest in his fixing on that element of civilization which most plainly underlies her work as the principle of the development of the novel in general. As he states it, this principle, the distinctive mark of the modern age, is the heightened sense of personality which, about two hundred years ago, being felt in relation to Nature, resulted in the rise of science (Newton), and, somewhat later, being felt in relation to the Unknown and to humanity, resulted, in the respective cases, in the rise of music (Bach), and of the novel (Richardson). In regard to the immediate subject in hand the position is, apparently, that a warmer sympathy with mankind, induced by keener self consciousness, wakes the imagination of the novelist and engages the attention of the reader; or, more simply, in the novel we have philanthropy determined to artistic creation and enjoyment instead of to charitable works.

The working out of this theory is unsatisfactory because the survey of the facts involved is very incomplete, and the glorification of George Eliot is evidently a predetermined result. Every social principle affecting the development of the novel is ignored except the single one of the moral individuation of society, with the intention of degrading all novelists but the one most obviously and consciously humanitarian; and even in treating of this principle the author indulges in an exaggeration which gives his work the character of a special plea rather than of scientific investigation. There was hardly any necessity for him to prove the growth of the sense of personality as a factor of progress, for it has long been an accepted fact, as appears in the commonplace of criticism that the Greek drama is a play of fate, and the Elizabethan one of character; but he has entered on an elaborate contrast of Æschylus's 'Prometheus Bound' with Shelley's 'Prometheus Unbound' and Taylor's 'Deucalion,' in the course of which he states that the Greeks failed to conceive of personality, and discoursed of it as blind men of colors. The 'Prometheus Bound' itself is sufficient evidence against such an assertion. In that play, it is true, the fixity of moral character, the necessity the gods are under of using means to an end, and the prominence given to physical torture, indicate spiritual conceptions lower than our own; but the rebellion of the Titan, and his self-sacrifice for the benefit of an unrelated and inferior race, illustrate forcibly the power of being a law unto one's self, and the duty of obeying that law at any cost, which are fundamental in the modern idea of personality. The modern conscience is far more keen, the modern will is more free and more persistent, but the Greeks were by no means destitute of the sense of personality or ignorant of its value as a social power; to state that what is called moral individuation began later than the Periclean age, and that the rise of science, music, and the novel, about the year 1700, was due to the sudden energizing of this principle, is, to say the least, misleading.

In fact, the whole treatment of the sociology of the subject is so vague, slight, and discursive, and is, besides, so involved in doubtful literary criticism, that discussion of it is futile. When we read, for example, that the substitution of the conception of Love for that of Justice as the organic idea of the moral order of the universe "received clear expression for the first time in English literature in the works of Mrs. Browning and George Eliot," there is nothing left for us but to wonder and be silent. In the same mood, which is certainly not one of consent, we hear that Bayard Taylor contained explicitly "what was implicit in Shelley, and a great deal more," that "the Platonic Plato" was "a Zola," "the dialectic Plato" "a dreaming Buddha," and "the ideal Plato" "a brawny Whitman," and many similarly original *dicta*. In consequence of these preliminary utterances, however, we are not totally unprepared for the author's climax, in which he explains the substitution of the novel for the drama by pronouncing the latter an artistic form too simple and inflexible to express the modern spirit, which lifts the novelist to the rank of a god, omniscient in regard to the secret motives of character, whereas the dramatist—mere man that he was—was limited to its actual manifestation in word and act; a change, we are told, which is "simply another phase of the growth of man from Shakspere to George Eliot." Eulogy, and some will think infatuation, could no further go.

Here and there in the volume is much original and suggestive matter but slightly related to the main theme; but, in general, after the first pleasant shock of surprise is over, the ideas are rejected. Among these is the author's theory of the rhythmic speech of primeval man at the rate of ten syllables to a respiration, wherein he finds the basis of the pentameter; and also his definition of prose as poetry of very complex rhythm. These we have no space to discuss. In justice to the author it should be said in conclusion that he had never prepared these lectures for the press; doubtless they were interesting to the audience that first listened to them, but they have neither the thoroughness, impartiality, nor finish which evidently entered into Mr. Lanier's own ideal of a scholarly book.

Germany Seen without Spectacles. By Henry Ruggles. Boston: Lee & Shepard. 1883.

MR. RUGGLES, late United States Consul at Malta and Barcelona, has collected under the above title a series of articles originally written for the newspapers. They are all of a rather gauzy texture, and will not require of the laziest of summer readers any heating intellectual exertion. The title is probably more appropriate than the author is aware. By spectacles he evidently means colored spectacles—his aim being

to give an unbiassed and frank account of what he saw in Germany. But the lack of spectacles not infrequently obliges him to take a "short-sighted" or superficial view of things, as is commonly the case with tourists who "do" a country in a few weeks. This is specially true of the first chapters, on Heidelberg, which appear to be largely based on gossip, and to have been unfavorably influenced by Mark Twain's 'Tramp Abroad.' But in Mark Twain's book it is easy to distinguish the facts from the burlesque, whereas it is quite otherwise in Mr. Ruggles's chapters. He gravely informs the reader, for instance, that no strangers are tolerated in the beer-halls favored by the Heidelberg students; and if one does appear, he is hustled out. This is not true, nor is there any indication that it is intended as a joke. The same criticism applies to the statements that beer takes the place of coffee in the morning (whereas no German ever misses his morning cup of coffee); that in Heidelberg there is scarcely a night without street rows between students, citizens, and the public (whereas the reviewer did not hear of a single row during a residence of five months); that the professors interrupt their lectures and slip out of the room to get a glass of beer (!); that it does not require long years of preparation to enter a German university (which is true only in the case of Americans); that Stuttgart is one of the great musical cities of Germany; that there are no hand-organ grinders in Germany (whereas they are a perfect pest, and in Berlin are regularly licensed); that Germans are so prolific that a mother seldom has less than eight or ten children, etc. In the subsequent chapters these overstatements are not so frequent, and are more in the nature of exaggerations, such as a writer may legitimately indulge in for the sake of contrast, and in order to bring a scene more vividly before the reader's eyes.

A large variety of topics are discussed in the twenty-six chapters of the book, among them being "Fires in German Cities"; "Beer-Drinking in Germany"; "Baden-Baden, the European Saratoga"; Würtemberg and Stuttgart, including an account of how Mr. Jackson came to be the King's favorite; the Bavarian capital, its art-treasures and beer-drinking customs; Dresden, Berlin, and Potsdam; Americans abroad; cost of living; eating and drinking; the sugar-beet in Germany, etc. Of all the reprehensible features of German life, none seems to have annoyed Mr. Ruggles so much as the degradation of the women of the lower classes. "What the camel is to the Arab, woman is to the German," he exclaims; and one of his first pen-pictures is a small garden in which a woman incessantly toils while her husband sits near by and drinks his beer. The sight of "these poor creatures, many of them feeble and tottering with old age, working and toiling in the fields like bond-slaves from sunrise to sunset, shovelling, hoeing, and digging, supplying the places of work-horses or mules in dragging heavy loads through the streets and over country roads, toiling and bending beneath enormous burdens on their heads and shoulders," affords probably the greatest of all contrasts between America and Germany. It is considered improper for a robust man to carry home a small bundle or a satchel, but it is quite in order that a servant-girl of fourteen years should carry his heavy travelling-bag while he walks along swinging his cane. Mr. Ruggles spares his readers a long account of the evils of the military system, but it is evident that the state of affairs here alluded to, in so far as it is not a simple survival of the hunting stage of German civilization, is a direct result of the system which compels the young men to waste the best years of their life in the army, and leaves the work to be done by the women. In this connection Mr. Ruggles might have alluded to another odious custom of a similar kind—viz., that of using dogs to draw vehicles. The dog is not by nature fitted for such drudgery any more than woman, and he becomes completely demoralized and degraded by it. It is not an unusual thing to see a poor dog, with protruding tongue, exerting his utmost strength to pull a loaded cart up a hill, while the boy who ought to help him along is heartless enough to add his own weight to the load; and there is no Mr. Bergh to punish this cruelty unless it assumes the form of absolute torture, in which case the police may interfere.

Although it cannot be denied that the Germans take life more easily and enjoy their amusements more than we do, it is clear to the most superficial observer that in some respects their sense of personal comfort is not so highly developed as ours. They not only overtask their women and their dogs, but they deny themselves the absolute repose and comfort afforded by a well-proportioned and well-made bed. On this topic Mr. Ruggles is even eloquent. Like most tourists, he found that the bedsteads and sheets were usually several inches too short for a full-grown man, and, as double beds are unknown, little is gained by an attempt to "double up." This procrustean habit is perhaps the least excusable of all German nuisances, and it is difficult to account for it except on the ground of economy. A housewife who is capable of putting a cent's worth of matches on the bill as an extra, is not above figuring out the saving that may be effected by getting the planks and sheets of the bed a few inches too short. The mistress of the house has various ways of saving money, and one of the neatest is mentioned on page 122. The wages of servants are always very low, seldom exceeding two or three dollars a month; but when the family travels even this amount is withheld—"the pleasure of travelling and the privilege of seeing the sights of the outside world being considered a sufficient recompense for her services." It is only fair to state, however, that many well-to-do Americans, when they get to Germany, develop a taste for penuriousness which they never display at home. A case is mentioned of a rich American lady who had in Paris laid in a good stock of jewelry, and who subsequently beat down the wages of her German sewing-woman from thirty-six to twenty-four cents a day, while her husband offered a poor market-woman seventeen pfennigs for some vegetables priced at twenty, thus saving three-quarters of a cent. Mr. Ruggles has some interesting remarks on Americans who reside permanently abroad; their different types he analyzes with considerable acumen. His tirade against the American students who attend German universities displays a lack of personal experience. There are, of course, some among them who are too ignorant of the language to profit by the lectures of the professors, but the majority are sufficiently well informed to derive an amount of benefit from their foreign studies which they could never have secured at home. This remark applies particularly to the medical students who attend the hospitals at Vienna and Berlin, where they enjoy opportunities for observation which none of our colleges, with their dearth of eminent specialists, offer.

It is to be regretted that Mr. Ruggles did not go to Vienna and add a chapter on that city, which would have afforded him a much fresher field of observation than Dresden or Heidelberg, with the regulation chapter on that most dreary and stupid of all subjects—the students' duels. Considering how fond Americans are of Paris, and that Vienna is the German Paris, it seems strange that Vienna should be so neglected by American tourists. Few but medical students are to be met there, though it is safe to assert that the combined attractions of Dresden, Stuttgart, and Berlin (the three favorite American resorts) do not equal those of the Austrian capital, where the Orient meets the West, where the theatres and the opera are better than in Germany, and the people more sociable and more bent on having a good time, allowing the visitor to have his share. The main reason of this neglect is probably the out-of-the-way location of the city. Not long ago it was proposed to appoint a commission to investigate the causes of the scarcity of visitors and the best ways of attracting them. A novel of Viennese life by Mr. James or Mr. Howells would probably have as much influence as anything. If the authorities would confer the freedom of their city on one of these writers, and induce him to spend a year among them, their desires would probably be gratified.

Dr. Appleton: His Life and Literary Relics. By John H. Appleton, M.A., late Vicar of St. Mark's, Staplefield, Sussex; and A. H. Sayce, M.A., Fellow of Queen's College, and Deputy Professor of Comparative Philology, Oxford. London: Trübner & Co.

WE here have a record of the short but restlessly energetic career of a devoted scholar, together with a characteristic, if not the greater, part of what he achieved in literature. What with natural endowments of a high order, and superior scholastic advantages sedulously utilized, Charles Edward Appleton, though cut off before the completion of his thirty-eighth year, has distinctly made his mark among English thinkers. His was not, however, the life of a recluse and self-absorbed speculator. Though an ardent metaphysician, he was also thoroughly altruistic, as evidence is afforded in his founding the *Academy*, in his strenuous exertions on behalf of the endowment of research, and in the interest which he evinced in the question of international copyright.

Especially noticeable among the essays of Doctor Appleton now collected are the three chapters of an unfinished work on 'The Ego.' The first of them, "Strauss as a Theologian," while open to criticism for its brevity, and while espying importance in matters of materially small account, is equitable in statement and searching in comment. Both of the remaining chapters, entitled "A Plea for Metaphysic," are mainly concerned with the vagaries of Mr. Matthew Arnold. According to Mr. Arnold, as the world has been told with wearisome iteration, God is the "eternal not-ourselves which makes for righteousness"; on which Doctor Appleton well remarks that this "is not what we mean by God; it is simply the disembodied ghost of the *Zeit-Geist*." Again, availing himself of recent definitions which Mr. Arnold has given of "God" and "eternal," Doctor Appleton points out that, on his exegesis, a well-known passage of the Old Testament calls to be altered into: "Hear, O Israel: the habitual our seriousness is one habitual." Doctor Appleton, in words represented as substantially his own, "saw for himself, and hoped to aid others to see, the compatibility of a fearless philosophy with genuine Christianity." To him there was no avowed discrepancy in being, as he was, simultaneously a follower of Hegel, a devout member of the Church of England, and, possibly, a third indefinable something or other. From some one of his standing-points he was, therefore, able to enunciate that "religion originates out of curiosity," and that "all religions are at the outset profoundly immoral." Again: "To think of the Supreme as an individual man, as in Christianity, is only possible after the first tightness of the social bond is becoming relaxed; it is only

possible in a period of social decomposition. To us God is Nature; he is Humanity, or, as I should prefer to say, Sociality; and he is Conscience." That Doctor Appleton, if he had lived to reflect some years longer, would have found himself in an intellectual attitude different from that in which he was overtaken by death, is not to be questioned. None except one to whom but little has as yet become satisfactorily clear and certain could acknowledge, as he acknowledges, "We are all, in these days, detached from our old moorings, and are reaching forward, both in thought and emotion, into the unknown, and putting to sea without a compass. Our thoughts, instead of being thought out to the end of them, are crossed by other thoughts, and these by others; so that they are all broken and incomplete."

Art and the Formation of Taste. Six Lectures by Lucy Crane, with Illustrations drawn by Thomas and Walter Crane. London and New York: Macmillan & Co. 1882.

E F Bickford 1882 24584

THIS book possesses little freshness of thought, and it gives expression to some erroneous ideas, but it nevertheless presents some true principles in a clear and sensible way, and it may, therefore, be useful to a class of readers who have little time or inclination for extended study of the principles of design. It will help such readers to understand how superficial and meretricious is the greater part of what now passes for decorative art. It will help them, also, to see that the love of novelty and display—which so largely influences popular decoration—is distinctly opposed to what is good in any art. Miss Crane clearly shows that we are now suffering from what is being done in the name of art more than from any indifference to it—that popular art is largely capricious and fanciful, rather than an outgrowth of constant principles and true sentiment. If our undisciplined tastes are appealed to, we are satisfied, whereas she says truly that "it is not enough for us to like this or that, but we should know what is worth liking, and why it is so."

Among the erroneous passages is one on page 10, where Miss Crane treats of the "art of man in three conditions or stages," which are stated to be respectively: useful art, decorative art, and fine art. Miss Crane conceives that decorative art grows out of useful art, and that between decorative art and fine art there is such a distinction as to constitute them separate classes. To this we cannot subscribe. We apprehend that decorative art grows out of man's inherent sense of and craving for beauty, and not at all out of the useful arts. Architecture, for instance, does not grow out of any material use. Only building grows out of this. So far as material needs are concerned, building simply as such is entirely sufficient. But when our æsthetic needs are considered, then we require not building merely, but *beautiful* building, and the fine art of architecture is called into being.

The illustrations to the book are very poor. It does violence to one's sensibilities to see a portion of the Parthenon frieze, the façade of St. Mark's, and Michael Angelo's "Creation of Man" rendered in the manner of Walter Crane's toy-book illustrations.

Selections from the Poems of Ovid. With Notes by J. L. Lincoln, LL D., Professor of Latin in Brown University. D. Appleton & Co. 1882. 12mo, 238 pp.

IT has long been the custom, in some American schools, for boys to read Ovid in their preparation for college. The best forms in which this author has been accessible have been the Ovid in "Schmitz and Zumpt's Series," published in Edinburgh and reprinted in this country by Blanchard & Lea, of Philadelphia, and the selections in the Tibullus and Ovid of Doctor Ramsay, the learned Professor of Humanity in the University of Glasgow, the part of which containing Ovid has been lately reprinted at Oxford in the "Clarendon Series." To these is now added this excellent edition by Professor Lincoln, in which no place has been allowed to anything whatsoever that is unsuitable for the student to read. Ovid has certain characteristics that make him, when judiciously edited, a very fit poet for boys to read first; as, his power of description, which he must have gained by minute and patient observation, and his easy and lively style, which seems like a natural gift. The dignified Virgil and the learned Horace may well follow Ovid. Professor Lincoln would go so far as to substitute Ovid for Virgil in the reading of our schools, and at Brown University Ovid is accepted instead of Virgil in the requisites for admission; at Amherst College an equal number of lines of the 'Metamorphoses' are accepted instead of the 'Eclogues' and the first two books of the 'Georgics,' while Yale College, in addition to a certain amount of Virgil, actually requires 2,500 lines of the 'Metamorphoses.' We are sincerely glad to see any encouragement of the study of Ovid.

The chief objection to the view of Professor Lincoln is the fact that in America Virgil is regarded, and always has been regarded, as a schoolbook, as it was with the Roman boys—"Cum . . . hæreret . . . fuligo Maroni." So far as we know, Virgil is hardly read at all in our best colleges, and thus the only opportunity we have to know this author is at school. But there is no reason why both Ovid and Virgil should not be read in our schools; and with such admirable editions of these poets as we now have, American as well as English teachers are certainly at fault if they do not in a good degree master these great writers and teach them, with delight to themselves and their pupils, instead of making dull grinds of them as they too frequently do of their elementary books. Doctor Lincoln, from his previous labors in this field, on his excellent edition of Horace and of Livy, was well prepared to give us a good Ovid. These 'Selections' are mostly from the 'Metamorphoses.' A life of Ovid is prefixed to the work, and remarks on Ovid's versification. A commentary, filling ninety-nine pages, follows the text. The editor has drawn his materials from the best sources, from Siebel's and Haupt's and Ramsay's editions, and from Siebel's dictionary to the 'Metamorphoses.' It is a great convenience to the beginner to have a special dictionary to his author, as Professor Frieze's and Professor Greenough's to the works of Virgil, and Professor Lincoln promises one for the present volume. The indefatigable Germans have paved the way for us here by many dictionaries of this class, some of great fulness and of special value, as of Phædrus and Nepos and Cæsar, and of Horace and Virgil and Ovid. We add that the publishers have done their best with this book. The type is clear and handsome, the form handy; and the paper is of a yellow tone and unglazed—just what seems best for the precious eyes of the young student.

L'Électricité comme Force Motrice. Par le Comte Th. du Moncel et M. Frank Geraldy. Paris: Hachette; New York: F. W. Christern. 1883.

MANY believe that the great future of electricity is in the direction of the transmission of power rather than in that of illumination. Companies are already formed in this country and in Europe to propel street-cars by electricity, and to utilize this form of energy in driving small motors. One engaged in the study of electricity could have predicted with great certainty that Count du Moncel would publish a treatise on this subject. His pen is very prolific, and he is the modern type in science of the ancient flying messenger anxious to be the first to announce wonderful results to the world. On the whole, we are pleased with this treatise. It is true that the method followed is that of Knickerbocker's 'History of New York.' Du Moncel begins very nearly with the creation of the world of dynamo machines, and proceeds by easy gradients to the wonderful present.

"Alors qu'on ne développait à grand'peine, par les moyens électriques, que quelques kilogrammètres de force, aujourd'hui on fait travailler des charrues, des pompes à jets énormes, des grues, des scieries mécaniques, des machines à raboter, à percer, à forer, des tramways même!!!!"

The exclamation-points are Du Moncel's, and who will complain of superabundance when the richness of the subject and the enthusiasm of the author are considered?

Du Moncel gives, on the whole, enlightened criticisms of the various dynamo machines which have met his eye in the late expositions in Europe. He describes the small motors of Trouvé and of Despretz, and the various experiments with them, better than any previous writer has done. We find no reference to the application of storage-batteries to the transmission of power, and the electrical tricycle must apparently have a place in a new treatise.

AUERBACH'S POSTHUMOUS NOVEL.

Master Bieland and his Workmen.

By Berthold Auerbach, author of 'On the Heights,' etc. Translated by E. Hancock. 16mo, Leisure Hour Series, $1; Leisure Moment Series, 20 cents.

HENRY HOLT & CO., New York.

The Leisure Moment Series.

16mo, paper.

NEW YORK, THURSDAY, JULY 10, 1883.

The Week.

THE Civil-Service Reform Act went into operation this week, and it is worthy of note that there has for some time past been great activity in filling the vacancies on the old plan, so as to anticipate the examinations. There will probably now for a similar reason be for a good while great slowness in making vacancies. We shall probably hear of much fewer removals from places covered by the Act than ever before, and if so, it will furnish very strong corroboration of the theory on which the civil-service reformers have acted—that if you properly secure the entrance to the civil service, the exit will take care of itself; that is to say, if politicians cannot put their own "men" into the service, they will not trouble their heads about turning anybody out of it. They care nothing about making vacancies unless they are allowed to fill them. The examinations thus far held, too, have refuted that much-used story that the new régime would fill the service with boys fresh from college and quick in answering questions about the population of Timbuctoo and the weight of the moon. As a matter of fact, the candidates appear to be largely persons over thirty, with some experience of life. The examinations, again, are reported to be very simple and easy; so that the dislike of the politicians to have their "men" submit to them indicates a rather remarkably low order of intelligence among their followers. There is no longer any doubt, in short, that the system will work and work well, and not only have a purifying effect on the service, but on public life in general. It will relieve real politicians from an odious burden, and will disgust sham politicians with politics, and revive and fortify the idea, which was rapidly disappearing from the popular mind, that public office is a trust, and not a piece of private property, and that making away with public money under the name of salaries is as bad as making away with it under the name of plunder.

There are, however, now that it is fairly established, two things that the voters must bear in mind. One is, that the generation of politicians who grew up under, and have pushed their political fortunes through, the spoils system, will probably never be reconciled to the new régime, and will do whatever can be safely done to weaken or discredit it. Its fullest efficiency and value we shall probably have to look for at the hands of a new generation. The second is, that the reform will never be wholly safe until both parties have accepted it. At present the Democrats are avowedly hostile to it, and, if they got into power in their present temper, would endeavor to destroy it either by repealing the law or refusing appropriations to carry it out, or compelling their President by "pressure" to disregard it. Consequently, it is, as regards this, a prime necessity of the situation that they should never get into power until they have as frankly accepted the application of business principles to the Government service as the abolition of slavery and the other results of the war. They kicked against these as long as they could, and only accepted them when repeated defeats had made it plain that kicking was useless. The civil-service reform idea will have to be got into their heads by the same process, but it will take more time, because the lesson that there can be politics without spoils is probably the hardest they have ever had to learn.

Poor Mr. Rollins has put himself out of his agony in New Hampshire by withdrawing from the Senatorial contest. He did so, however, in a characteristic letter, which seems to have excited some amusement in the Legislature, inasmuch as it invited all his competitors to retire with him—on what ground did not clearly appear, except that it would make him more comfortable. The letter dwelt mainly on the regularity of his nomination and on the exceeding regularity of his own political career as a supporter of regular nominations and "accredited modes of action." He made some scathing allusions, also, to those who "repudiate their party obligations, and stand as candidates in defiance of the will of the organization." There is probably nothing which so bewilders men of Mr. Rollins's kind as the numbers and brass of this class in our time, and the way they laugh when they are called "kickers" and accused of "discord." Secretary Chandler has since been trying to get into his shoes, and show the world how a practical man runs for a Senatorship; but there appears to be too much discord even for him.

The demand of the Pennsylvania Republicans that Congress "adopt such legislation as will insure the full redemption" of the trade dollar, and "provide means for its conversion into other coin for circulation," is based upon the reason that "the depreciated trade dollar is largely in the hands of the laboring people." That it has been "largely in the hands of the laboring people," put there by employers who cheated their laborers by passing upon them a depreciated coin as one of full value, is unquestionably true. But it is not true that the trade dollar is largely in the hands of these laborers now, and it will not be henceforth, unless they permit themselves to be cheated with their eyes open. It is, on the contrary, "largely" in the hands of speculators, who have gathered it up at something like its bullion value, 90 cents or less, and who are hoarding it with the expectation of seeing Congress do the very thing the Pennsylvania Republicans recommend, so that they can dispose of it with a profit of 10 per cent. or more. The Congressional action urged will not benefit the laborers at all. They have been fleeced beyond recovery, for most of them had to spend their money almost as fast as they got it. They are therefore not the people to hoard large quantities of trade dollars, waiting for Congress to enhance their value. It is the speculating money hoarder who is now to be benefited, and we hope Congress will do no such thing, although the pressure will be strong.

The members of the colored press of the United States have been holding a convention. Its object seems to have been not so much the improvement of the newspapers represented at the meeting—an object which, indeed, can be best accomplished in the several offices of those journals—as the adoption of a comprehensive political platform for the colored people. It consists of a good many planks, such as co-education of the races; mixed schools and teachers; pursuit of industrial arts by negroes; opening of shops, factories, and industrial schools to them; the preëmption of public lands by them; the improvement of the Mississippi River; urging the negroes not to be the tool of any party; the promotion of "the best interests of the country and the race"; a demand for recognition of colored voters by parties. There is a mixture of good and bad in the resolutions, but they will perhaps compare favorably in practicability and sincerity with the average party platform. The convention further declared itself to be "in sympathy with the Republican party on the tariff question"—without saying which wing of the party and what view of the tariff. The only resolution directly pertinent to newspapers was a typographical one recommending that "the word 'negro' be written and printed with a capital 'N'"—a further advance from the abolition of the superfluous "g." But if the editors exhaustively discuss all the subjects suggested by the platform, they will be well stocked with topics.

The "private arrangement" by which Mr. Jay Gould has just paid a $1,400,000 dividend to the Western Union stockholders out of his own pocket is a fiscal and legal curiosity, and shows in a most interesting way the moral progress continually made by Gould. The company is enjoined from paying dividends, the courts being engaged in passing on the legality of a large part of the stock. Mr. Gould, in the benevolence of his heart, has determined that no one shall suffer for this accident of business, and out of the hard-earned accumulations of a lifetime will spare enough to put every stockholder in exactly the position he would be in if no "vexatious lawsuits"—as Mr. Gould, with honest indignation, calls them—had been brought. This, of course, does not affect the injunction, or the legal rights of anybody in any way. If the stock is hereafter declared illegal by the Court of Appeals, he stands a chance of losing a very large sum of money; but, then, nobody believes that he will really lose anything at all, for he never allowed his benevolence, great as it is, to mislead him into a foolish sacrifice of his own interests to those of others. Kind the act is, and we have no doubt that it is wise, too; and we feel sure that no stockholder will hesitate to accept the money out of dread of the consequences to Gould.

There is a good deal of excitement in Troy over the Bank of Lansingburg receivership. There seems to be no dispute about the facts. The bank failed in 1877, and Albert E. Powers, a wealthy oil-cloth manufacturer, was appointed receiver. He found that the assets, at the time, were only worth about $150,000, one of them, Jersey Central stock, being quoted at 8½. He therefore "held on," sold when he could advantageously, paid the depositors in full and the stockholders 75 per cent., and has now a surplus of $90,000 in hand. The receivership was so different from any the stockholders had ever heard of that they probably thought something must be wrong; at any rate, they opposed the receiver at every step. When he said that he wanted to hold on till Jersey Central improved, they fought him tooth and nail, and now, curiously enough, although he has saved their property, they want to pay him as little as possible for his services. Judge Ingalls, however, has decided that he must be paid in full under the Haggerty bill, and says that he "regards the receivership as the most successful on record." Still, it is so wholly unlike receiverships elsewhere that we hardly see how it can be compared with them at all.

The general commercial and financial situation in the past week has improved, in so far as the reports of damage to the wheat crop in the Northwestern States and Territories are acknowledged to have been exaggerated. The greatest damage done by drought has been in the newly-settled Canadian province of Manitoba, which, being outside of the United States, should not be taken into the account in comparisons with last year's crop in the United States any more than the other parts of Canada. But, aside from this, the crop prospects in all parts of the United States are good for more than the average of everything, unless the yield of wheat should fall as low as the average of the past four years, which is scarcely probable. The export movement of our principal staples, breadstuffs, provisions, and cotton, has fallen off considerably, partly because foreign consumers are awaiting lower prices before they buy largely. The expectation of large exports during the last five months of the year is also having the effect to depress the rates for sterling exchange, which have been reduced twice during the week, the decline being 1 cent on the pound sterling. The rates are, however, still 3½ cents on the pound above the gold-importing rates.

Money is very abundant in American markets, and especially in New York, and loans at unusually low rates (2 per cent.) for call loans. But capital seems more reluctant than a few weeks ago to make long investments. Many persons are apprehensive that, with large crops to move in the autumn, money will be tight, and this, with other less prominent influences, has caused a very decided movement in the last ten days to sell new railroad bonds and other similar investments made a few months ago. The result has been an important decline in prices of all railroad bonds, but more especially in the speculative bonds of new roads in new Territories. A similar realizing movement has been in progress in the stock market, where prices have steadily declined since about the middle of June until on Monday, the 16th, the average range was below that of the depression in the latter part of February, making the lowest prices recorded for most stocks for more than two years. During the past day or two, however, there has been an apparent revival of confidence, and an impression is gaining ground that there is not likely to be much further depression.

Marion County, Texas, is said to be in a state of terror, and the *Times* contains a long letter on the subject from Washington. According to its correspondent, the respectable citizens of Marion County have organized themselves as a league to prevent the trial of offences against United States election laws by means of wholesale murder. The only person who has been actually killed as yet is ex-Judge Haughn, whose wife, however, assigns an entirely non-political cause for his death. One reason for doubting the story is that it is usually perfectly easy to prevent a conviction in such cases, when the whole population is opposed to the Government, by a disagreement of the jury; and "slaying" all the Government witnesses, district attorneys, and so on, would seem to most people a clumsy and barbarous way of accomplishing what requires no bloodshed at all. That such stories are still believed in the North on very inadequate evidence, is due in part to the love of murder for its own sake which seems to possess so many respectable Southerners. We shall probably never hear the end of political murders and Kuklux until the South learns to punish private slaying.

Mr. John Devoy, who was sent to jail for publishing a libel on Mr. August Belmont, is turning his newspaper instinct to account in the Blackwell's Island Penitentiary. He has made close observations of the prison and its management, and has published them in the form of an interview. Curiously enough, he has a good word to say for England. He compares the jails he has inhabited there very favorably with the one he is now dwelling in. The cells of the latter are little more than eight feet long and three feet wide, and less than seven feet high. The English give a guest twice as much room. The ventilation is better also. The food is good and wholesome, though there is not a great deal of it, while on Blackwell's Island it is plentiful but very poor in quality. Perhaps when he comes out of jail Mr. Devoy—who says he shall not repeat his libels—will devote himself to the good work of proving that the professional Irish patriot is really better off in Great Britain than in the United States.

Judge Freedman, it seems, has been so much annoyed by the pretty general misunderstanding of his decision with regard to the souls of Mr. and Mrs. Gilman, that he has filed a supplementary opinion in the case, in which he says that he did not intend to decide that testamentary trusts for masses are void, but only that the particular arrangement made in the McArdle case, before the death of Mr. and Mrs. Gilman, was invalid, as not amounting to a trust. In other words, Catholics may have masses said for their souls if they leave money for it in their wills, but otherwise they stand a very fair chance of having the trust set aside as good for nothing. Judge Freedman, we regret to say, is not very luminous in his explanation, as he expressly stated in his original opinion that he held the trust invalid solely for the reason that the soul of a dead person "is incapable of taking an interest in property left behind"—a ground which seems to apply to testamentary trusts as much as to any others.

The difficulties the American heir has had in getting his ancestral English estates out of the hands of the Lord Chancellor and the Bank of England have led him to turn his attention to France, apparently with better prospects of success. He received news some time ago that he had come into a little property of two millions, accumulated at St. Remi by his uncle, the late Mr. James Dunlap, a wealthy "wine-grower." The history of the property since Mr. Dunlap's death is somewhat peculiar, and shows how different the procedure of the civil law is from that of the English system. Instead of the property being at once seized, as it would have been on the other side of the Channel, by the Lord Chancellor's minions, and deposited in the Bank vaults, possession of it was taken on the death of the owner by "the proprietor of the hotel in which Mr. Dunlap had boarded"—and where he probably lived on the American plan at $4 a day, with no extras except the usual fee of a quarter to the servant who dusted him off morning and evening. The hotel proprietor, true Frenchman that he was, took it, "claiming" that Mr. Dunlap "had told him he had no heirs," but now is "perfectly willing to give up the estate," having made a snug fortune out of it meantime. The right of the hotel proprietor, under the civil law, to administer upon the effects of all guests dying in his house without heirs, is something quite as singular as anything in the English law; but we are glad to say that the heir in this case is in communication with a distinguished French lawyer, who assures him that under the Code the rights of the hotel proprietor terminate on the appearance of heirs, and that he will get the property (less the usual 10 per cent. commission) very soon.

The *Tribune* had on Tuesday a curious article on an old subject—the want of enterprise shown by the London press. It insists that one great difference between a London and a New York newspaper is that the former is "wholly engrossed with what happens in the world outside London," local topics being "systematically neglected." The London newspapers, it says, "have not acquired the art of collecting local information"; while everybody knows that with our own press this art has reached a very advanced stage, and produced the journalistic type known as the "city editor"—not a London type at all. The theory of the *Tribune* evidently is that in its rudimentary stage the press occupies itself with the affairs of the world at large, and slowly works up to the point at which it

deals primarily with local news, subordinating the great events of the world's daily history to the various murders, prize-fights, "society" incidents, and sunstrokes which make up the real life of a great capital. If the *Tribune* is right, the most advanced type of journalism of all is that of the village press, which notoriously has a perspective with a purely local foreground. The rural newspaper all over the world satisfies the *Tribune's* requirements completely. We had always supposed that progress in journalism involved the subordination of the local to the generally important, and that this was what all great newspapers more or less tried to do. As a local sheet the Eatanswill *Gazette* beats the London *Times* all to pieces.

There is a curious delay in the receipt of confirmatory details of the outrages on the British Consul at Tamatave. The news came to the British Government through the English Consul at Zanzibar, but the French Consul at the same place says he has heard nothing of it. Moreover, a British steamer which left Tamatave after the British Consul's death has called at Natal without bringing any account of what must have been a very stirring occurrence. As the captain of the British man-of-war, the *Dryad*, is acting as Consul, and is not on good terms with Admiral Pierre, we are inclined to think that there is a good deal of personal susceptibility at the bottom of the whole matter, or, in other words, that it is rather a squabble between two touchy naval officers than an international complication. The one acknowledged fact of the case is that the French have taken Tamatave, and the British Consul and naval officer have apparently been unwilling to recognize the *de facto* government of the place.

The steadiness of consols in London showed that Mr. Gladstone's statement in the House of Commons, grave as were the terms in which he made it, did not excite in England serious apprehension of any difficulty with France. The misconduct of Admiral Pierre, if correctly reported, has luckily been so gross that it will be easy for the French Government to disavow or even recall him without wounding the national susceptibilities. The expulsion of a dying consul, and the prohibition of communication between the man-of-war of a friendly Power and the shore are offences so flagrant that a civilized government cannot have much trouble in atoning for them, and treating the Admiral as too indiscreet for his place. But the root of the Admiral's indiscretion is undoubtedly to be found in the condition of French feeling, which has been very sore ever since the occupation of Egypt. The dread of Bismarck has made all attempts at expansion near home under his awful eye impossible; hence the new colonial enterprises, for which the French people do not possess a single element of fitness, but about which Bismarck cares nothing. These have not prospered thus far, however, and there is a strong feeling in Paris that Rivière was sacrificed in the Hanoi affair, owing to the dilatoriness and irresolution of the home Government. His published letters show that he feared this. The reactionary energy which has since been aroused has probably inflamed the Admiral's imagination. Mr. Gladstone's language shows that he considers the affair one which can only be settled by ample explanation; but this he will doubtless receive. A war with England would be the end of the Republic, as the Republicans doubtless well know, and would probably before it was over give the Italians a chance to try their new ironclads, and make the French a little more respectful in the Mediterranean to the new kingdom.

There appears to be no doubt that when the late Khedive gave M. de Lesseps the concession of the Suez Canal, he supposed he was granting him a monopoly. There is just as little doubt that M. de Lesseps supposed that he was receiving a monopoly. The Judicial Committee of the Khedive's Council, which is composed in large part, if not wholly, of European lawyers, to whom the question was referred a month ago, held that although the concession does not expressly guarantee M. de Lesseps against competition, its conditions contain an implied guarantee of the strongest kind that no similar concession would be made. Mr. Gladstone in providing for a second canal, the need of which is undeniable, has acted on this view—that is, he agrees to allow the old company to make the new canal, to lend it $40,000,000 at 3½ per cent. for fifty years, and to obtain an extension of the original concession for ninety-nine years. This arrangement has given great satisfaction in France, where the bulk of the stock is held, and has been strongly commended by the Paris press as a proof of English fairness. It is difficult, indeed, to see how otherwise the Ministry could have got a new canal except by exercising its right of conquest in a somewhat brutal way. But the arrangement seems to be exciting the utmost indignation among commercial men in England. Meetings are being held all over the country for the purpose of denouncing it, on the ground that a new canal could have been made with British capital, and that, having conquered Egypt, the Government need not mind what the Frenchmen say—which shows that "the good old rule, the simple plan," has still a strong hold on the English commercial mind. Indeed, the popularity of Lord Beaconsfield's administration in the business world proved this abundantly.

In the trial of the Jews at Nyiregyhaza, Hungary, further testimony proved that the three Jews whom the principal witness on the side of the prosecution, the boy Moritz Scharf, had pointed out as the murderers of the girl Esther Solymosi, had not been in the synagogue at Tisza-Eszlar, at the time when, according to the same witness, the murder took place there. It was also shown that the girl said to have been murdered was seen alive after the hour indicated by Moritz Scharf as the time of the murder. According to later cable despatches, an expert testified that some details of the story told by Moritz Scharf could not possibly be true, and this testimony caused great sensation in court. The Vienna papers report that the court-room is constantly filled with an excited crowd of Jew-haters, consisting in part of people belonging to the educated classes, who by noisy demonstrations encourage the witnesses testifying against the Jews and try to overawe those saying anything in favor of the accused. There is a rumor that the public prosecutor in the case intends to withdraw the indictments against the defendants, and that the Hungarian Government will prosecute those who concocted the case. The disclosure of the means by which a boy fourteen years of age was prevailed upon to accuse his father of murder, and by which he was enabled to go through a searching cross-examination with a remarkable degree of firmness and consistency, thus constructing and sustaining an elaborate story, calculated to bring his father to the gallows, without any foundation of truth, will be a rare subject of psychological study.

The text of the protocol signed by Iglesias on behalf of Peru, as given in the *Herald*, evidently contains a mistake. The first condition mentioned is "the perpetual and unconditional cession to Chili of the department of Tacna." This should be Tarapaca; the second clause refers to Tacna and Arica, which are to be held and governed by Chili for two years, after which a plébiscite is to determine the ownership, the country getting them to pay the other $10,000,000. This amounts, of course, to a purchase by Chili, but on what are apparently very easy terms, for in the next ten years Chili is to have full legislative powers in the mortgaged district, and will no doubt use these to improve the property in a variety of ways, so that ten years hence it will be a bargain at $10,000,000. As the result of the war, therefore, if the Iglesias treaty is ratified, Chili will gain among other things an addition to her territory of the best part of Peru, extending some two hundred and fifty miles along her coast. The news of the treaty is said to have caused much trouble at Arequipa, where the "Congress" was at the time engaged in ceding Tacna and Arica out and out to Bolivia. The two plans are evidently inconsistent, but it is hard to see why, as Tarapaca is absolutely gone, any Peruvians should care much whether Tacna and Arica go to Bolivia or to Chili.

The cholera has broken loose in Egypt, and is spreading all over the country in spite of the cordons. It has shown itself in Cairo, and is showing itself everywhere. A rigid quarantine has been established in all the European ports of the Mediterranean, but it is doubtful whether quarantine can arrest cholera. At all events, it has never done so, and there is a fair chance of its passing the sea and showing itself in Italy and France. But it sometimes travels slowly. It has taken two or three months to get from India to Paris, and has also taken as many years. Egypt is, however, far on the road which it usually travels. If it gets to France and England it will probably continue on its westward way; but it has to contend everywhere now, after it leaves the Mussulman countries, with sanitary precautions, and sanitary machinery, and sanitary knowledge such as never before opposed it.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 11, to TUESDAY, July 17, 1883, inclusive.]

DOMESTIC.

THE Pendleton Civil-Service Act went into full operation on Monday, and hereafter all appointments to fifty-clerk offices must be made in accordance with its provisions.

Commissioner Evans, of Internal Revenue, has asked Agent Horton, of Boston, to resign, but says that the report on his case did not convict him of accepting a bribe. It is given out that "the Commissioner felt that it was better for all concerned, and that it was due to the Administration that the embarrassment should be relieved by the resignation of Mr. Horton."

A circular has been issued by Commissioner Evans requiring all dealers who sell "rock and rye" to take out a license as retail liquor dealers.

First Comptroller Lawrence, of the Treasury, has decided that a consul is not entitled to draw pay until after he has reached his destination and has entered upon his duties, notwithstanding he may have taken the oath and have given a bond. This decision will probably add to the difficulty of filling the minor and far-distant consulates with suitable men. He has also adopted the principle that no claim can be paid to a State or person so long as there remains on the books of the Government an unsettled balance against that State or person.

There is much dissatisfaction among naval officers with an order which requires them to obtain new and expensive uniforms. They maintain that the new styles are too close an imitation of the English to be adopted in the American navy. On Monday a general order was issued by the acting Secretary of the Navy that the regulation would not go into effect until the Department so ordered.

The Secretary of the Interior has approved the plans of Director Powell of the Government Survey for his summer campaign. Three hundred thousand dollars are to be expended in the North Atlantic district under the new law. A part of the State of Massachusetts, beginning near the western boundary and extending eastward as far as the season will permit the work, is to be surveyed.

The clause of the treaty with Mexico giving the soldiers of either country the right to pursue savage Indians across the boundary line has been extended for one year. It is reported that about seventy-five Chiricahuas are at San Bernardino, Arizona, waiting to surrender. On Saturday reports from Sonora, Mexico, were published to the effect that Apaches were raiding the districts of Montezuma and San Pareipa, committing murders and stealing cattle. A band of twenty savages attacked Hacienda Pareipa, six miles south of Opozura, killing three men. Colonel Bandola started in pursuit of the Indians, with thirty Mexican troops.

An harmonious convention of Pennsylvania Republicans was held at Harrisburg on Wednesday. There was no slate and no attempt at bossism by the Cameron ring. The Stalwarts had practical control of the Convention, but made concessions to the Independents. William A. Livsey, of Pittsburgh, was nominated for State Treasurer. He is a trained financier, and, though a Stalwart candidate, is comparatively unknown in political circles. Jerome B. Niles, of Tioga County, was nominated for Auditor-General. He was the leader of the Independent revolt in the Senatorial contest of 1881, and has opposed Machine methods. The platform adopted advocates protection in strong terms, and proposes that surplus revenue be distributed, from time to time, to the States upon the basis of population; favors the redemption of the trade dollar at par; protests against pauper immigration; endorses President Arthur's Administration; commends every effort "to inaugurate thorough and correct civil-service reform," and requires "that all offices bestowed within the party shall be upon the sole basis of fitness"; and provides for efforts toward an improvement of the method of holding primary elections. State Senator Thomas V. Cooper was on Monday elected Chairman of the State Committee.

The Minnesota State Prohibition Convention was held at Minneapolis on July 10. A resolution favoring tariff for revenue only was tabled by a vote of 44 to 26. The course of both parties on the liquor question is condemned in the platform, which favors the enfranchisement of women and the election of all officers by the people when possible. A full State ticket was nominated, Charles Evans Holt being the candidate for Governor.

The Iowa Greenback party on Wednesday nominated Gen. J. B. Weaver for Governor, with a full State ticket. The platform demands the abolition of all banks of issue and the substitution of legal-tender Treasury notes in lieu of bank currency, the volume to be regulated by Congress; favors an unrestricted coinage of gold and silver; opposes refunding the interest-bearing Government debt, and demands that it be paid as rapidly as possible; and advocates a graduated income tax.

In the balloting for United States Senator in New Hampshire on Wednesday the vote of Senator Rollins fell off to 79. On Thursday a letter was read in the Legislature from Senator Rollins, withdrawing from the contest. Secretary Chandler became a candidate, but his vote on the ballot then taken did not exceed 52. On Tuesday Mr. Chandler's vote was 65; Mr. Bingham's was 112.

A convention of the Negro Press Association was held at St. Louis last week. Among the resolutions adopted were the following—declaring it detrimental to the best interests of the negro race and repugnant to ideal political manhood to be made the tool of any existing political party or to be tied to any political kite; asserting that the Convention was in sympathy with the Republican party on the tariff question, and urging that the word "Negro" be written and printed with a capital "N."

In Texas a Colored Men's Convention was also held. It adopted an address to the people asserting that the negroes did not ask for social equality in railway travel, but would freely accept social separation with equal accommodations for equal pay. The Republican party was approved.

The *Times* of this city on Monday printed replies from 344 places in the different States to show the preferences of Republicans and Democrats as regards Presidential candidates for their respective parties. Blaine leads the Republican list, with Arthur second; Tilden leads the Democrats, with McDonald second.

Much comment has been caused by the publication in the New York *Times* on Friday of a long interview with an "old and intimate friend of Mr. Tilden," the tenor of which was that he would accept a renomination for the Presidency at the call of his party, and that his physical strength was equal to the duties of the office.

On Monday a committee of seven of the Telegraphers' Brotherhood presented to the officers of the Western Union, the American Rapid, and Baltimore and Ohio Companies a letter requesting a general increase of 15 per cent. in the salaries of operators, and a reduction of one hour in the hours of work, and requested that a reply should be returned as early as convenient for the companies. No time was fixed for it, and no threats were made. It is believed, however, that a strike will take place on Wednesday, and 13,000 men are expected to join in it. No concession had been made to the telegraphers on Tuesday evening, though it was rumored that the Baltimore and Ohio would yield their demands.

The Rev. J. Trumbull Backus, senior member of the Board of Trustees of Union College, and one of the leaders of the anti-Potter movement, on Friday called a meeting of the Board at Schenectady on August 2. The Potter party had not intended to have another meeting of the Board until early in the winter. Notice was served on Saturday upon the State officers of an application, to be made at Saratoga on July 24, for a writ of mandamus compelling the State officers to meet with the trustees at the above-mentioned special meeting.

Attorney-General Russell, of this State, has decided that it is the duty of the State Engineer and Surveyor to make a map of the proposed Niagara Park for the Commission, unless the appropriation at his service is inadequate.

General Bonaches, a Cuban revolutionist, is in this city, endeavoring to get men and money for a new revolt against Spanish authority in Cuba, and with that end in view has issued a proclamation.

The Rev. Charles W. Park was to have been installed pastor of the Howard Avenue Congregational Church in New Haven, Conn., on Wednesday. After waiting patiently for two hours, the large audience there assembled was informed that the Ecclesiastical Council had rejected Mr. Park on account of his beliefs—among them his opinion of the possibility of universal salvation, his rejection of infant baptism, and his views of the Divine authority of the Scriptures. The congregation, however, are determined to receive him as their pastor.

The failure was announced in this city on Thursday of the well-known publisher, Mr. Orange Judd. It does not affect the publishing company bearing his name. He was connected with a number of outside enterprises which were unsuccessful.

The laboratory, library, and museum of Indiana University, Bloomington, were burned on Thursday; loss $200,000.

Fire was discovered in the steamer *Niagara*, running between New York and Cuba, on Thursday morning, when she was off the southern coast of Florida, on her way to the island. It could not be extinguished. A steamer was happily sighted, which took off the mails and twenty-five passengers of the *Niagara* safely. She was then run ashore in sixteen feet of water, afterward raised, and run to Havana. She is a first-class iron steamship of 1,668 tons burden, valued at $350,000, and owned by the New York and Cuba Mail Steamship Company.

Charles Sherwood Stratton, better known as "General Tom Thumb," died at his residence in Middleboro, Mass., on Sunday morning of apoplexy. He was forty-five years of age. At the time of his death he was forty inches in height and weighed seventy-five pounds.

Judge T. C. Theaker, Commissioner of Patents in 1865, died at Oakland, Md., on Monday, aged 71.

FOREIGN.

Mr. Gladstone made a grave statement in the House of Commons on Wednesday afternoon. He said that when the French occupied Tamatave, Madagascar, and proclaimed a state of siege, the British Consul there was suffering from a serious illness, which the political crisis aggravated. His secretary was arrested in his presence. Admiral Pierre, the French commander, ordered the sick man to leave Tamatave within twenty-four hours. The Consul died seven hours after receiving the notice. Admiral Pierre also stopped communications between the British man-of-war *Dryad*, which was stationed there, and the shore. The flags of all the foreign consuls were hauled down. Mr. Gladstone also said that an English missionary named Shaw had been arrested at Tamatave and remained in prison. In conclusion, Mr. Gladstone said that they awaited those communications from the French Government which the case required, and which they had intimated that

they expected. The Premier's remarks were cheered.

The French Government on Thursday informed England that they awaited official advices from Tamatave before replying to the demand for explanations of the occurrences there. Premier Ferry believes that the reports from Tamatave have been exaggerated. The French Consul at Zanzibar on Friday telegraphed his Government that he had no knowledge of the alleged outrages.

In a telegram dated July 6, by way of Zanzibar, the French Admiral Pierre reports that he repulsed a night attack on June 23 and another on July 6. The Hova loss was heavy. The French loss was only one killed. Admiral Pierre does not mention any trouble with the English Consul at Tamatave.

In the French Chamber of Deputies on Monday M. Challemel-Lacour, Minister of Foreign Affairs, said he believed there had been at least an exaggeration in the accounts of the occurrences in Madagascar. He was certain that if Admiral Pierre had adopted any measures, they had been necessary, and that Admiral Pierre had complied with orders to avoid offending England. News of the occurrences was lacking, because the Admiral was unable to detach a vessel by which to send despatches. He declared that unexplained events could not impair the present good relations between France and England. He added that if a grave error had been committed or passion manifested, the French Government would not hesitate to fulfil the obligations imposed by a sense of justice and the interests of the country. The Minister's remarks were received with cheers.

In the House of Commons on Wednesday afternoon Mr. Childers, Chancellor of the Exchequer, said that the agreement arrived at between the Government and M. de Lesseps, providing for the construction of another Suez canal, had been signed. The new canal would be completed at the end of the year 1888. England, he said, would lend the canal company £8,000,000, at 3½ per cent. interest, the loan to be redeemable in fifty years. The Government would endeavor to obtain a fresh concession of land from Egypt and an extension of the original concession for ninety-nine years. The scheme was warmly approved by the French press and people. In England it has met with great opposition. The London Chamber of Commerce unanimously decided that the agreement was inadequate and unsatisfactory. Meetings were held by many prominent corporations making similar protests. In the House of Commons on Friday afternoon Mr Childers said the agreement would be submitted to the House by a motion made in the committee that the sum to be loaned to the Suez Canal Company by the Government for building the new canal be charged on the Consolidated Fund. M. de Lesseps expresses himself as indifferent whether England accepts the agreement or not.

It is understood in Paris that M. de Lesseps has refused to modify the terms of the agreement between himself and the British Government as to the new Suez Canal. The English Conservatives on Monday decided to oppose the agreement. In the House of Lords on Tuesday afternoon Lord Granville, Foreign Secretary, said that on grounds of expediency he justified the agreement made by the Government with M. de Lesseps, whose absolute monopoly of the power to construct a canal across the isthmus was not admitted in the negotiations. Lord Salisbury (Conservative) said he was surprised to hear that the concession of M. de Lesseps gave him the power to bar the passage between two seas. He argued that neither the Sultan nor the Khedive was competent to make such a grant.

Mr. Gladstone announced in the House of Commons on Monday afternoon that he could not propose any legislation in regard to the importation of cattle, but the Government would make an investigation as to whether a stricter application of the rules for the prevention of disease was necessary.

The Speaker of the House of Commons has written to Mr. Bradlaugh, informing him that he will be excluded from the House until he engages not to attempt to take the oath in disregard of the resolution of the House. Mr. Bradlaugh has made a reply, declaring that the action of the House in his case was illegal.

There was a riot in Wexford Borough, Ireland, on Tuesday, during the polling for a member of Parliament to succeed Mr. Healy. Great animosity was shown toward the Liberal candidate, The O'Connor Don. Mr. William Redmond, Parnellite, received 307 votes against 126 for The O'Connor Don. After the result was announced the defeated candidate drove through the streets under escort. The party was pelted by a mob. The police charged the crowd with bayonets. Several persons were wounded. Thirty policemen were injured, twelve seriously. Messrs. Healy and Sexton restored order.

A number of pauper emigrants who were sent back to Ireland by the American authorities have arrived at Queenstown, and all accounts published in England agree in describing them as a wretched class of people.

The ironmen at Wolverhampton, Staffordshire, England, have agreed to resume work at the reduction in wages against which they struck.

The British rifle team was announced on Monday. The Americans express themselves as satisfied with their reception in England. The Scotch team won the National Challenge trophy on Monday over England, Ireland, and Wales. Hinman, of the American team, won the St. Leger prize, members of the English team also competing.

The Very Rev. Archibald Boyd, Dean of Exeter, England, died on Wednesday, at the age of eighty. He was the author of a number of religious works.

Eighty bodies have so far been recovered from the steamer *Daphne*, which capsized on being launched near Glasgow on July 3. The steamer was partly raised on Friday.

The national fête day was celebrated in Paris on Saturday with great ceremony. The unveiling in the Place Château d'Eau of the great Statue of the Republic took place in the morning in the presence of Senators, members of the Chamber of Deputies, Municipal Councillors, and a vast concourse of people.

M. Paul de Cassagnac has been excluded from the French Chamber of Deputies for a fortnight for declaring, in the course of a debate, that the Tonquin expedition was due to stock-jobbing motives.

Advices from Tonquin, dated July 3, received in France on Thursday, say that General Bouet, the commander of the French troops in Tonquin, arrived at Hanoi on June 15. The defences at Haiphong were completed, and those at Namdinh and Hanoi were advancing rapidly. A Hong Kong despatch of July 12 reported Tonquin in a state of anarchy. The French have captured and hanged many marauders. On Saturday it was announced that 3,000 Chinese troops had been ordered from Canton to the Tonquin frontier.

The French Chamber of Deputies on Thursday, by a vote of 391 to 115, accepted the Ministers' proposal to begin debate on the subject of conventions with railway companies on Monday. The vote is considered as foreshadowing the adoption of the conventions and as obviating all fear of a Cabinet crisis.

The revenue of France for the first half of the present year was 28,000,000f. below the sum estimated in the budget. The imports into France during the month of June increased 64,000,000f. as compared with those for June, 1882. The exports for that month decreased 21,000,000f. as compared with the exports for June last year.

M. Waddington was on Tuesday appointed French Ambassador to England in place of M. Tissot, who has resigned on account of ill-health.

M. Louis Pasteur, the well-known French chemist, has offered to organize a mission with the object of investigating the nature and origin of the cholera in Egypt. The disease has been spreading rapidly. On Thursday it had appeared at Zitfeh and Shibin, about forty miles from Cairo. On Saturday it had reached Shubra. On Monday the first cases were announced at Cairo. A panic prevails at Alexandria.

The Spanish Cabinet have considered favorably the project of France for the construction of a tunnel under the Strait of Gibraltar.

The treaty of commerce between Germany and Spain has been signed.

A debate on the policy of the Spanish Government was held in the Chamber of Deputies of that country on Thursday. Señor Castelar, the Republican leader, maintained that democracy was incompatible with monarchy, and he attacked monarchy and defended republicanism amid great commotion. Prime Minister Sagasta spoke warmly in defence of monarchy. He denied the truth of the charge, and reiterated that he was willing to carry out the promised reforms without a modification of the Constitution.

Emperor William has given his sanction to the Prussian Church Bill.

The Berlin *North German Gazette* (Bismarck's organ) in a recent issue quoted a letter from Mr. Sargent, the American Minister, in which he says that Germany's pretence that the interdiction of the importation of American pork was owing to sanitary reasons, is now becoming the thinnest veil. The *Gazette*, in reply to the assertion of Mr. Sargent, reproduces an article from a Cincinnati paper in which it is declared that half of the lard manufactured in America consists of cotton-seed oil, tallow, clay, and water.

M. Krazewski, the Polish author, who was arrested in Germany on a charge of being connected with a conspiracy in Russian and Prussian Poland, has been found guilty and sentenced to two years' imprisonment.

In regard to the trial at Nyiregyhaza, Hungary, of the Jews charged with murdering Esther Solymosi, it is reported that the Public Prosecutor intends to withdraw the indictment against the defendants, and that the Hungarian Government will prosecute the concocters of the case with the utmost severity.

There are fears of an outbreak in Crete owing to the resistance of the people to the payment of taxes.

Serious fears are felt in regard to the health of the Shah of Persia.

Both houses of the Victorian Parliament, Australia, have unanimously voted an address to Queen Victoria urging the annexation of or the establishment of a protectorate over New Guinea and other Pacific islands, and offering to share the expense of such action.

Guayaquil, Ecuador, is rejoicing at the entrance of the insurgents, under Alfaro, into the city, and business is being resumed.

Late news from Guayaquil, Ecuador, asserts that the resistance of General Veintemilla was generally feeble, although the main fort held out vigorously. The townspeople received General Alfaro's troops with great enthusiasm.

Reports of a great battle in South Africa were received on Wednesday. The forces of Cetewayo defeated those of Chan, and the latter chief was captured. On Saturday there was a report that Cetewayo had been defeated. It is also reported that Chiefs Mapoch and Mamsoer have submitted to the Boers.

Cuba is alarmed over frequent daring robberies and assassinations which are encouraged by lax methods of punishment.

THE PROTECTIONIST LAST DITCH.

When we last spoke of the plan of raising revenue over and above the expenses of the Government for the purpose of distributing the surplus among the States, it was simply the speculative scheme of a protectionist professor in Philadelphia. It has been, however, seriously embodied in the platform of the Republican party in Pennsylvania, as a proposal for a permanent change in the fiscal system of the country. Nothing which has yet been said or done about the tariff furnishes so good an illustration as this does of the way in which the protective system debauches or perverts the minds of its votaries on nearly all political topics. In Pennsylvania it has produced a kind of fanaticism which in some of its effects is not unlike religious bigotry, and exerts a decidedly narrowing influence on the social and intellectual life of the State, as well as on its politics. It would really seem now, if we are to accept the Republican Convention as a fair exponent of the popular feeling in the State on this subject — which we are not by any means prepared to do—as if the Pennsylvania protectionists were ready to change the form of the Government sooner than submit to a reduction of import duties. They have apparently got into the state of mind of the French Legitimists, who would sooner see France ruined than see the Republic succeed. A great many of our high-tariff men have worked themselves into a sort of hallucination, in which a government carried on with low import duties seems almost the same as no government, and a high tariff stands side by side with security for life and property, among the essentials of a political organization.

This will not seem too strong language to those who seriously consider the probable effects on our system of government of the permanent collection of "redundant revenue, to be distributed from time to time to the several States, on the basis of population, to relieve them from the burdens of local taxation and provide means for the education of the people." And these effects are so plain that it would be affectation to suppose that the Pennsylvania politicians do not perceive them. The burdens of direct local taxation are the most legitimate and most useful burdens the people have to bear—so much so, indeed, that they may be called the corner-stone of our system of government. It is to the fact that so much of our taxation is local and direct that we owe the success of the republican experiment on this continent. It not only prevents the growth at Washington of a corrupt centralized power, with duties so multifarious, and an army of officials so vast and so scattered, as to be beyond the reach of any effective criticism or supervision, but it educates the taxpayers in the duties and responsibilities of government. It is because so much of their taxation is, and always has been, local taxation, voted on the spot by the men who pay it, and spent under their eyes by their own officers, that Americans are the best politicians in the world. If, however, the process of deriving local expenses from a central fund in Washington once began, no local taxation would long survive. The local interest in taxation would rapidly disappear, and each State, town, and county would commit its affairs to the management of a set of shrewd lobbyists permanently stationed at Washington, with instructions to make the revenue as "redundant" as possible. In fact, members of Congress would soon find that this was their principal duty. If any locality found itself short of schools, bridges, roads, or other improvements, it would simply send an appeal to Washington for more redundancy. And when its share of the redundancy came to be spent, far from feeling any of that interest in honest administration which is now the salt of our politics, the taxpayers would look on at its outgo with much the same mixture of indifference and amusement with which they witness the extravagance of a very rich man.

Nor is this all. We have at this moment a lamentably large number of States in which the willingness to pay taxes is at a low ebb, in which a very dishonest attitude of mind toward the public obligations is very common, and in which there is a large body of grossly ignorant and therefore easily corrupted voters Everybody knows where these States lie: we do not need to make a list of them. To these the adoption of the redundancy system would seem like the establishment of an annual scramble for vast sums of money, the most adroit and unscrupulous to have the largest share. They would sell their support at every Presidential election and at every division in the House to the party which promised most redundancy, and this would be one of the few party promises which would have to be kept. In fact, under the influence of the lively competition which we see between the parties in other things, we might eventually come to have redundancy enough to pay off the farm mortgages in some States and give pianos to the farmers' wives. The only thing certain about the working of such a scheme is that it would create a vast sea of corruption, in which the Government would either speedily founder or totally change its form. The local governments would not long survive their growing dependence for money on the Federal Treasury, and the Government at Washington could not manage the machine which the redundancy would create, without such an enlargement of the executive powers and a corresponding corruption of Congress as would soon leave little of republicanism beyond the forms. We are, however, glad on the whole that the Pennsylvania Convention has proposed the scheme. No free-trader could desire a better revelation of the "true inwardness" of the protective system.

THE THREATENED STRIKE OF THE TELEGRAPHERS.

The demands of the telegraph operators may, for aught we know to the contrary, be perfectly reasonable. It is quite certain that if they are reasonable, the present condition of the operators is very bad. What they ask for, supposing Sunday to be now one of their working days, is the equivalent of 40 per cent. increase in their pay. Leaving Sunday out of the question, they ask for a reduction of six hours per week in their work, and an increase of 15 per cent. in their pay, which are together the equivalent of 20 per cent. in their pay. If these demands are fair, they are now certainly a very ill-used body of men. On this point, however, no outsider's opinion is of much value. It could hardly be settled without knowing a great deal more of the ratio of the supply of operators to the demand than we make any pretence of knowing. If, as in case of a strike may appear a week hence, there has been the same rush of young men into telegraphing, as a clean, genteel calling, that there has been into all sorts of clerical work, the demand is probably unreasonable. Every man's labor is worth what some other man will do it equally well for, and no more; but of course, in this as in all cases, doing a thing equally well with somebody else means doing it with the same judgment, fidelity, and honesty. But it is for the telegraph companies and the operators to find out by the clash of demand and supply what the proper wages of an operator is. There is no natural rate for telegraphers any more than for bookkeepers or teamsters.

That which interests the public most, however, and which the public can form an opinion about, is the means to which the operators propose to resort in order to enforce their demands. A strike of telegraphers now, when so large a proportion of the business of the country in every department is carried on by telegraph that credit itself in the commercial and financial world may be said to rest on it, is a very serious matter indeed. Next to the stoppage of the trains on the railroads, nothing could work greater business dislocation and inconvenience. The stoppage of the mails could be more readily provided for, because as long as the railroads are at work the means of transporting and delivering of letters could be readily accomplished by some sort of improvised organization. But telegraphing is a mystery—a small mystery, it is true, but one which nobody can master in a day or in a week. So that the telegraph operators have it in their power to inflict enormous loss and inconvenience on the community by refusing to do their work until their employers comply with their demands.

Now, the question whether any body of men ought to be allowed for any purpose to inflict this loss and inconvenience on the public is one of which the growing complexity of modern society will soon compel a peremptory settlement. A few years ago there was a strike of engine-drivers on one of the Massachusetts railroads, and they actually undertook to carry it out by abandoning trains filled with passengers in the open country, remote from a station. A repetition of this device was promptly prevented by penal legislation, so that every locomotive engineer in Massachusetts now holds his place with the understanding that if he abandons his engine on the road for any reason, he goes to jail. A similar theory of the relation of other railroad employees to the public led to the railroad strikes in 1877 and the horrible resulting riots, with enormous loss to the country. If anything of the kind were attempted again, assuredly some stringent measures for its prevention would be resorted

to. The truth is that a society like ours, and like that of all commercial nations, has become so dependent on the post-office, the railroads, and the telegraph, that they may be said to stand to it in the relation of the nerves to the human body. The loss even for a week of any one of them means partial paralysis. The loss of all three would mean a total deprivation, for a longer or shorter period, of nearly everything which the community most values. It would mean a suspension of business and social relations equal to that caused by a hostile invasion, barring the terror and bloodshed. It is consequently something to which no country will long allow itself to remain exposed. It cannot allow strikes of employees in these great public services, any more than it can allow the corporations themselves to refuse to carry on their business as a means of extracting what they think fair rates of transportation. No Legislature would permit this, and one or two more experiences like the railroad strike will cause every Legislature to take measures against the other. Telegraphers, railroad men, post-office clerks, and policemen fill places in modern society very like that of soldiers. In fact, they together do for society what soldiers used to do. They enable every man to come and go freely on his lawful occasions, and transact his lawful business without let or hindrance.

If it be asked what should employees in these services do in order to settle the rate of wages by a fair trial of strength such as other trades resort to, we answer that they can readily devise some mode of arbitration for this purpose. They could, if so minded, in the present temper of the public, readily procure legislation making such arbitration compulsory on the companies. They can appeal to public opinion. They can, if determined to stop work in a body, give sufficiently long notice to make the inability of the companies to fill their places in time a plain proof that their demands are well founded. And, though last not least, they can keep out of a calling in which strikes are not allowable. There is no hardship in that. Many occupations are in that category. Soldiers cannot strike, nor lawyers, nor doctors, nor ministers, nor clerks, nor farmers, and they do not treat it as a grievance and ask what they are to do when they cannot have their way about their wages or their hours.

THE EVOLUTION OF THE SUMMER RESORT.

Nothing is more remarkable in the history of American summering than the number of new resorts which are discovered and taken possession of by "the city people" every year, the rapid increase in the means of transportation both to the mountains and the sea, and the steady encroachments of the Cottager on the Boarder in all the more desirable resorts. We called attention to this subject last year, and it every year grows in importance. The growth of the American watering place, indeed, now seems to be as much regulated by law as the growth of asparagus or strawberries, and is almost as easy to foretell. The place is usually first discovered by artists in search of sketches, or by a family of small means in search of pure air, and milk fresh from the cow, and liberty — not to say license—in the matter of dress. Its development then begins by the neighboring farmer's agreeing to take them to board—a thing he has never done before, and does now unwillingly, and he is very uncertain what to charge for it. But at a venture he fixes what seems to him an enormous sum—say $5 to $7 a week for each adult. His ideas about food for city people are, however, very vague. The only thing about their tastes of which he feels certain is that what they seek in the country is, above all things, change, and that they accordingly do not desire what they get at home. Accordingly he furnishes them with a complete set of novelties in the matter of food and drink, forgetting, however, that they might have got them at home if they pleased. The tea and coffee and bread differ from what they are used to at home simply in being worse. He is, too, at the seaside, very apt to put them on an exclusively fish diet, in the belief that it is only people who live by the sea who get fish, and that city people, weary of meat, must be longing for fish. The boarders, this first summer, having persuaded him to take them, are of course too modest to remonstrate, or even to hint, and go on to the end eating what is set before them, and pretending to be thankful, and try to keep up their failing strength by being a great deal in the open air, and admiring the scenery. After they leave, he is apt to be astonished by the amount of cash he finds himself possessed of, probably more than he ever handled before at one time, except when he mortgaged his farm, and comes to the conclusion that taking summer boarders is an excellent thing, and worth cultivating.

In the next stage he seeks them, and perhaps is emboldened by the advice of somebody to advertise the place, and try to get hold of some editors or ministers whose names he can use as references, and who will talk it up. He soon secures one or two of each, and they then tell him that his house is frequented by intellectual or "cultured" people; and he becomes more elated and more enterprising, enlarges the dining-room, adds on a wing, relieves his wife of the cooking by hiring a woman in the nearest town, and gives more meat and stronger coffee, and, little by little, grows into a hotel-keeper, with an office and a register. His neighbors, startled by his success, follow his example, it may be only *longo intervallo*, and soon the place becomes a regular "resort," with girls and boys in white flannel, lawn-tennis (which succeeds croquet), a livery stable, stages, an ice-cream store with a soda-water fountain, a new church, and with strange names taken out of books for the neighboring hills, and lanes, and brooks.

This stage may last for years—in some places it has been known to last thirty or forty without any change, beyond the opening of new hotels—and it becomes marked by crowds of people who go back every year in the character of old boarders, get the best rooms, and are on familiar terms of friendship with the proprietor and the older waiter girls. But it may be brought to a close, and is now being brought to a close in scores of American watering-places, by the appearance of the Cottager, who has become to the Boarder what the red squirrel is to the gray, a ruthless invader and exterminator. The first Cottager is almost always a Boarder, so that there is no means of discovering his approach and resisting his advances. In nine cases out of ten he is a simple guest at the farm-house or the hotel, without any discoverable airs or pretensions, on whom the scenery has made such an impression that he quietly buys a lot with a fine view. The next year he builds a cottage on it, and gradually, and it may be at first imperceptibly, separates himself in feeling and in standards from his fellow-boarders. The year after he is in the cottage, and the mischief is done. The change has come. Caste has been established, with all its attendant evils. The community, once so simple and homogeneous, is now divided into two classes, one of which looks down on the other. More cottages are built, with trim lawns and private lawn-tennis grounds, with "shandy-gaff" and "tennis cup" concealed on tables in tents. Then the dog-cart with the groom in buckskin and boots, the Irish red setter, the saddle horse with the banged tail, the phaeton with the two ponies, the young men in knickerbockers carrying imported racquets, the girls with the banged hair, the club, ostensibly for newspaper reading, but really for secret gin-fizzes and soda-cocktails, make their appearance, with numerous other monarchical excrescences. The original farmer, whose pristine board was the beginning of all this, has probably by this time sold enough land to the Cottagers to enable him to give up taking boarders and keeping a hotel, and is able to stay in bed like a gentleman most of the winter, and sit on a bench in his shirt-sleeves all summer.

Very soon the Boarder, unable to put up with the growing haughtiness of the Cottager, and with exclusion from his entertainments, withdraws silently and unobtrusively from the scenes he once enjoyed so much, to seek out another unsophisticated farmer, and begin once more, probably when well on in life, with hope and strength abated, the heavy work of opening up another watering place and developing its resources. The silent suffering there is in this process, which may be witnessed to-day in hundreds of the most beautiful spots in America, probably none know but those who have gone through it. In fact, the dislodgment along our coast and in our mountains of the Boarder by the Cottager is to-day the great summer tragedy of American life. Winter has tragedies of its own, which may be worse; but summer has nothing like it, nothing which imposes such a strain on character and so severely tests early training. The worst of it—the pity of it, we might say—is that this is not the expulsion of the inferior by the superior race, which is going on in so many parts of the world, and which Darwin is teaching us to look upon with equanimity. The Boarder is often, if not generally, the Cottager's superior in culture, in acquirements, and in variety of social experience. He does not board because he likes the food, but simply because it enables him to live in the midst of beautiful scenery. He eats the farmer's poor fare contentedly,

because he finds it is sufficient to maintain his sense of natural beauty and the clearness of all his moral perceptions unimpaired, and to brace his nerves for the great battle with evil which he has been carrying on in the city, and to which he means to return after a fortnight or a month or six weeks, as the case may be. We fear, in fact, that very few indeed of our summer cottages contain half so much noble endeavor and power of self-sacrifice as the boarding houses they are displacing.

MR. JOSEPH CHAMBERLAIN.

LONDON, July 1, 1883.

THE Cobden Club dinner took a new turn this year—that is to say, it had much more to do with certain aspects of English home politics than with the spread of free-trade principles in the world. This unwonted direction of the table-talk was in part forced upon the Club by the retirement of a few members of the organization, the most prominent of whom were Mr. Goschen and Lord Ampthill, only a fortnight before the dinner, for the reason (as given out) that M. Clémenceau had been elected an honorary member. The unreasonableness of the course pursued by these gentlemen need not be dwelt upon, because, as I am assured by everybody, they did not retire on M. Clémenceau's account at all, but on Mr. Joseph Chamberlain's account. Mr. Chamberlain had been chosen as the Chairman of this year's meeting, and Mr. Chamberlain is just now about the best hated man in England, because, being a member of Mr. Gladstone's Government and the leader of the Radical wing of the Liberal party, he has lately given utterance to opinions favoring manhood suffrage, representation by equal districts, and other republican notions. Perhaps, however, Mr. Chamberlain is hated more for what he is expected to say hereafter than for anything he has yet said. The concentration of dislike by the governing classes upon any individual is sufficient to make him an object of interest, and it was for this reason that I took a good look at him last night. A few words descriptive of this striking personality will be acceptable to Americans, to whom he is as yet only a name.

Joseph Chamberlain, M. P., the colleague of John Bright in the representation of Birmingham and President of the Board of Trade, is apparently about forty years of age —I am told that he is nearer fifty—about five feet nine inches in height, without an ounce of superfluous flesh, close-shaven except as to a suspicion of side-whiskers, with a complexion approaching paleness yet not pale, with the lithe figure of one going to take part in the Olympic games, and with an air of business rather than an air of command. He wears a glass, English fashion, in one eye, and had last evening an orchid of considerable merit in his buttonhole. Both going to and returning from the dinner I observed that Mr. Chamberlain was occupied with a cigar.

This is the exterior of Mr. Chamberlain as it presents itself to a stranger. When you are introduced to him he greets you in a rather business-like way, which is equally removed from cordiality and from indifference, as much as to say, "If you are an interesting person, I shall be interested in you; we shall see about it." When he rises to speak there is no expression in his face except in his gray eye, which burns cold like an electric light. With his hands locked behind him, or in his pocket, he begins in an elastic, measured, unhesitating way, without gesture and without exordium, to state his case. His voice is ample and his enunciation distinct, and you soon feel that you are listening to one who is entirely sure of his footing, who knows exactly what he wants and how to go about it, who is independent in all things, and as courageous as need be. His words are perfectly chosen to express his ideas, and there is neither redundance nor paucity in his style of diction. Nothing can exceed the logical and unadorned terseness of his last evening's speech. Only once did he raise his arm in the way of gesture, his only movements being the bending of the body and the turning of the head this way and that—all graceful enough, and yet not what we are accustomed to look for in a successful orator. Mr. Chamberlain can certainly hold his own in any debating body of our time or on any hustings.

It is customary at all English public dinners for the Chairman first to respond to two toasts—one to the Queen and the other to the Prince and Princess of Wales and the other members of the royal family. Mr. Chamberlain performed this duty with republican simplicity, and, as it struck me, in a strictly republican tone. He accorded to the Queen all the good qualities which can adorn a woman and a sovereign. He fully paid her the respect which is her due in both particulars, but he said no words of either respect or disrespect toward royalty itself. He also paid a compliment to the Prince of Wales as an untiring and zealous worker in the only department of activity open to him under the English Constitution, which consists of lending his presence and influence to whatever is useful to the people—a labor which can only be appreciated (he said) by those near enough to him to estimate its aggregate amount.

After disposing of these formalities, Mr. Chamberlain accepted without proof the fact that the schism (if it may be so far dignified) in the Cobden Club was caused by his presence in the chair, and not by that of M. Clémenceau on the rolls. Clémenceau, by the way, was not present at the dinner, and was not even expected, and no allusion was made to him by any speaker at the table. After some introductory matter on the guiding principles of Mr. Cobden's life, in the course of which free trade was rather incidentally than directly mentioned, Mr. Chamberlain proceeded with fine irony to show that the seceders from the Club were like the character in the "Bourgeois Gentilhomme" who was surprised to find that he had been speaking prose all his life without knowing it. Mr. Cobden had been in favor of manhood suffrage and equal representation, and of all the other reforms which are termed "radicalism" in England, and yet these tender-footed gentlemen had been marching under the Cobden banner about seventeen years, without the least suspicion of the interpretation that might be put upon them, until a fortnight ago. From this point Mr. Chamberlain went on to state his position as a member of the Liberal party, recognizing what was required of him by the conditions of membership, but asserting at the same time a freeman's right to hold, and maintain, and speak his opinions to any who might choose to listen, without being called upon for apologies. The reforms which he deemed desirable might not be ripe for adoption, but they were always ripe for discussion, and if anybody supposed that those who held views in common with himself on these subjects could be deterred from expressing them on proper occasions by considerations of office, the thought was as insulting to the intelligence as it was injurious to one's sense of honor.

This is not intended to be a synopsis of Mr. Chamberlain's speech, which must be read by those who desire to acquaint themselves with its uncommon solidity. Its effect upon the audience was not overpowering or "electrical," or anything of that sort, but was captivating by its business-like adaptation to the subject in hand. It made one feel that everything had been said that was needed, and that the way of saying it was exactly the right way. This is the essence and kernel of oratory, and yet Mr. Chamberlain is not an orator of the schools. He is an orator of practical life. His style, like his physique, is suggestive of whip-cord and steel springs. He disdains metaphor and tricks of speech, because they stand in the way and take up one's time. I am informed that he made his own fortune before he reached the age of forty-five, by superior skill and discernment as a manufacturer, and then deliberately abandoned trade and entered public life. His whole aspect bespeaks the English man of business. He impresses you as one who would know the right thing to do in case of a fire. He seems to be a man not likely ever to have a large *personal* following, perhaps not to desire one, and yet very likely to be one day at the head of the Government, because needed there.

THE MONAGHAN ELECTION.

LONDON, July 3, 1883.

IT is long since any Parliamentary election in Ireland has attracted so much attention and been watched with so much anxiety as that whose result was announced last night. For two years past it has been a matter of course that through the centre, south, and west of Ireland every vacant seat, as well in boroughs as in counties, should be filled by the choice of a Nationalist candidate. The only exceptions have been in the petty borough of Portarlington, with only 146 electors, and in the county of Dublin, which, under the comparatively high franchise that obtains in Irish counties, is a mainly Protestant and therefore Conservative constituency. Both these seats have been filled within the last eight months by the election of Tories, but no one attached any importance to that result, except as an indication of the weakness of the Liberal Ministerialist party. In the rest of Roman Catholic Ireland every new member returned has been a follower of Mr. Parnell.

Ulster, however, is, as everybody knows, a part of Ireland by itself, a region largely Protestant, and in some places filled by a population largely English or Scottish in blood. All its counties used to return Tory members, and have down till now, with the single exception of Cavan, a county which is almost wholly Roman Catholic, returned either Tories or Gladstonite Liberals, while all its boroughs except Dungannon, have returned Tories. Ulster was, therefore, the stronghold in Ireland of loyalty to the British connection. Not even the Home Rule party, much less the Nationalist party, which practically goes further than Home Rule, though no one knows how far, had effected any lodgment in it. The ten Liberals who came from it to the House of Commons were not only among the stanchest adherents of Mr. Gladstone, but were important as representing the possibility of reconciling an advanced Liberalism with complete fidelity to England. They embodied the idea that the policy of the Liberal party—that is to say, large concessions to the agricultural tenants, and large extensions of local self-government—is compatible with the maintenance of one imperial Parliament and the cordial union of Ireland with England. Thus their support strengthened the Government materially by enabling it to appeal to them as exponents of Irish opinion, and as typifying what Irish opinion generally might become when discontent had been appeased by a policy of continued conciliation. For the same reason the Nationalist

party has always longed and striven to gain recruits from Ulster. While it stood aloof from them they could not pose as representing a united current of Irish national feeling. They have more than once started candidates at Ulster County elections, not so much in the hope of winning seats for themselves as of defeating the Gladstonite candidates. But they have been always beaten. The tenant farmers of that province, who are largely Presbyterian and generally opposed to a policy of disunion, have stuck to the Liberal party. And the Liberal Government, which had so much benefited them by the Land Act of 1881, expected that their fidelity would be permanent, and even cherished the hope of winning the counties of Antrim and Down, where the strength of Orangeism has hitherto kept the representation in Tory hands.

However, the best gratitude to rely on in politics is gratitude for favors to come. The tenant farmers were enthusiastic for the Land Act immediately after it passed, but they soon discovered that it had done for them less than they expected. The block in the Land Courts was such that cases remained unsettled, and they have had to go on paying the old rents in the meantime, even when they feel sure that a reduction will be ordered by the Court. Leaseholders are excluded altogether from the provisions for fixing a fair rent, and yet in many cases the hardship of the leaseholders' position was scarcely less than that of tenants from year to year. Of the other grievances only two need be mentioned, the construction put on the clause of the Act which dealt with the question of reckoning tenants' improvements, in fixing the rent, and the fact that the Land Court has in many cases reduced the rent far less than the tenants had hoped and expected. Thus during 1882 there arose no small dissatisfaction with the Act, and meetings were held in the north of Ireland calling loudly for amendments in it. Early in the present session Mr. Parnell brought in a bill for the modification of the Act of 1881, embodying these amendments, together with others of a more sweeping nature; and they also appeared in a measure introduced by Mr. Dickson, the Liberal member for Tyrone, who is a sort of leader among the Ulster Tenant-Right Liberals. When Mr. Parnell's bill came on for second reading the Government opposed it. They admitted that there was force and worth in some few of its proposals, but they condemned the greater part of them; and when appealed to by Mr. Dickson to take up the subject themselves, and satisfy the just claims of the tenants, they replied that there was no time to do so in the present session; that England and Scotland must have their turn this year, as Ireland had occupied the two preceding years. This was a heavy discouragement to the Liberal party in Ulster—far heavier than the Government realized at the moment; and the consequences of it are now seen.

Little more than a fortnight ago it was announced that some appointment had been conferred on Mr. Givan, the Liberal member for the County of Monaghan, and his seat accordingly became vacant. In these cases the Government usually has a candidate ready, or at least the retiring member gives some notice to his party on the spot that they may prepare for a contest. However, in this instance no arrangements seem to have been made. The Liberals were for a time without any candidate, while the Tories at once put forward a Mr. Monro, a Dublin barrister, and the Nationalists announced that the seat would be fought by Mr. Healy. Mr. Healy is one of the most vehement and uncompromising of all the extreme party. No Irishman in the House of Commons has surpassed him in the bitterness of his hatred for England, or in the hard, dry, fierce bitterness with which that hatred has been expressed. He had been released, very shortly before, from an imprisonment to which he had been sentenced for refusing to give securities for good behavior when brought up for the use of inflammatory language. He was a specially suitable candidate, because he had fought very hard for the tenants' interests when the Land Bill was before the House of Commons in 1881; and his name had been given to the clause which secured, or was intended to secure, to the tenant the benefit of all his improvements. It was immediately foreseen that the contest would be a severe one, and that the fact that both a Liberal and a Tory candidate were running would give the Nationalists a chance which they could hardly have against one opponent only, whether Tory or Liberal. People in England began to urge that one or other of the "loyal" candidates should retire, so as to strengthen the other and keep Mr. Healy out. But the Liberals would not yield, alleging that, as the late member had belonged to them, the seat was prima facie theirs, and they ought to be allowed to fight it against the common enemy. On the other hand, the Tories would not yield, because they insisted, and the result has proved that they were right, that their man had a better chance than the Liberal. Thus all three went to the poll; but the Liberal, whether in consequence of reports spread by his opponents that he was retiring, or because he was a strong teetotaler, and therefore unwelcome to the whiskey lovers of Monaghan, received very few votes, and Mr. Healy came in by a number of votes somewhat larger than that which both his opponents received. We are still imperfectly informed as to the causes of his victory, but they seem to be, firstly, the belief of the farmers that he had been their effective advocate when the Land Act was being passed, and that he might be expected to squeeze something further for them out of the House of Commons, and, secondly, a disappointment that Mr. Gladstone's Ministry had not listened to their complaints, but apparently left their cause to be defended by Mr Parnell and his friends. Monaghan, too, it must be remembered, is very largely Roman Catholic, and as soon as it was clear that the Liberal tenant-right man (Mr. Pringle) would not get in, the Catholics went over in a body to Mr. Healy, leaving the Tory to be supported by Protestants only.

The result has spread dismay not only in Ulster but among some sections of the Ministerial party in England. It makes them fear that their last fortress in Ireland, the Ulster counties, is crumbling away, and that when next general election comes, they may see nearly the whole island divided between bitter Tories and furious Parnellites. Some things it has certainly helped to teach, though one might have thought the lesson was scarcely needed. One is that men's allegiance will go to those from whom they think they have something further to hope. Another is that the exhortations of the Pope or the Roman Catholic hierarchy will make very little difference in the political conduct of Irish Roman Catholics: Mr. Healy had spoken more contemptuously of the recent circular of the Propaganda than any other prominent member, yet he lost no Catholic votes thereby. And a third lesson is that the two English political parties dislike one another too much to combine even against so threatening a foe as the Nationalist. Neither would give way during the contest, though each knew he was thereby doing his best for Mr. Healy.

The dismay I have spoken of and the corresponding exultation in the Parnellite ranks are perhaps greater than the occasion demands. Monaghan is more Catholic than most of the counties of Ulster. It does not follow that Tyrone or Londonderry can be also wrested from the Liberals, who now hold them. Mr. Healy won his seat entirely on a land-reform platform, keeping the Home Rule or Separatist side of his platform in the background. Still, the example of such a successful invasion by the Nationalists of a new part of Ireland is calculated to increase the uneasiness wherewith English politicians regard the next general election in Ireland. Y.

THE MARRIAGE LAW AND ENGLISH OPINION.

LONDON, June 29, 1883.

YOUR readers must forgive me for calling their attention to a dreary subject, namely, that bill "to alter and amend the law as to marriage with a deceased wife's sister," which was yesterday evening rejected by the House of Lords. The topic itself is as dull as ditch water. Lord Beaconsfield himself could not have invented a single new argument or fallacy for or against the bill which he, like his early patron Lord Lyndhurst, would have attacked or defended with equal facility and with equal indifference. If the measure itself, and the reasoning by which it is supported or assailed, lack all novelty, the persons whose grievances the bill is intended to remove are hardly calculated to excite sympathetic interest. The wrongs of the slave, the factory hand, the martyrs to the anti-vaccination craze; the grievances, whatever they might be, of the compound householder, have all in my time gained the public ear and were all of them interesting, exciting, romantic in comparison with the complaints of the middle-aged widower who feels that life will be a blank unless he is allowed to marry the sister of his deceased wife, or (what is the more frequent case) unless the so-called "marriage" which, in defiance of the law, he has been pleased to celebrate, is, in the strange language of the bill, "deemed to be henceforth valid in the same manner as if it had been duly celebrated or contracted on the day of the passing of this Act." But for all this I am convinced that the bill, and still more the debates upon the bill, with their perplexing and illogical termination, will be found well worth the consideration of any one who wishes to understand the habits of thought and feeling which prevail among the upper classes of Englishmen. The discussions in the House of Lords suggest at least two reflections of some importance.

First. The whole of the arguments used as well by the opponents as by the advocates of the bill, have a strange, one might almost say a portentous, want of reality. In the whole mode in which the controversy is conducted there is something factitious and almost insincere. In no country but England (unless it be the United States) would it be possible for so many men of eminence—statesmen, judges, bishops—as have taken part on one side or the other of this controversy to argue about a plain and simple issue, and yet never to say exactly and precisely what they meant, or to mean exactly what they said. The only speaker who tried to speak out was Lord Bramwell; and Lord Bramwell, with all his honesty and vigor, was like a strong man giving hard blows with a hammer without ever quite succeeding in hitting the nail be aimed at on the head. But if we except his lordship, it may well be doubted whether any one who has addressed the public on this subject, either within or without the precincts of the House of Lords, has even tried to state his views in the plainest terms, and to use no argument which does not command his full and entire belief. Cant (which is quite a different thing from

hypocrisy) has been triumphant: conservatives and reformers have each canted so drearily that a plain man may well feel puzzled whether he ought to approve of a measure which is intended to carry out a reform required by the circumstances of the day, or to enjoy a grim and modified satisfaction at the rejection of a bill which tries to accomplish a wise and politic end in the most foolish and impolitic manner.

To justify this statement, let me examine for a moment the position first of the majority who have rejected, and next of the minority who have supported, the bill brought forward by Lord Dalhousie. The learned lords and right reverend prelates who stand (rhetorically speaking) aghast at any change in the marriage law, allege with more or less earnestness several grounds of opposition. The change is forbidden (they tell us) by the law of God; it shocks the moral sentiment of Christendom; it is the first step in a road which may lead us a good deal further than we at present see, and it is likely in practice to produce evil results. Now, it is not my object to argue out this matter for the edification or instruction of your readers. My aim is to point out that the greater number of the reasons alleged against legalizing the marriage with a deceased wife's sister do not command the full belief of the persons who use them. They are guiltless of dishonesty, but they are victims to unconscious cant. Can any one, for instance, without the grossest injustice to such men as the Lord Chancellor or Lord Coleridge, think that they would not exhibit a very different kind of energy from anything they have displayed if they held that the legislature were really about to violate the law of God? This solemn formula amounts, when examined, to a dubious inference from texts of Leviticus, from metaphors used in the New Testament, or from an alleged consensus of Christendom. But those who use it know that they are identifying the law of God with a very different thing, namely, disputable inferences from texts of Scripture. They know, also, that modern Englishmen of education do not for the most part admit that Scriptural texts, even of undoubted interpretation, are as such morally binding on the nation. They are using phraseology which had a real meaning in the sixteenth or seventeenth century, when the words of the Bible were believed to be in the strictest sense the authentic commands of the Deity, but which has a very doubtful meaning to those who now employ it, and which to many of their audience has no meaning at all. Nor can any man who does not confound words with facts talk seriously of a shock to Christian morality. Nearly every Protestant country except the United Kingdom allows the marriages which are conventionally supposed to shock moral feeling. Nor can much be made even of Roman Catholic opinion, for if, as a general rule, the Roman Catholic Church forbids, Papal dispensations in practice constantly allow, the unions which the bill aims at legalizing.

We may go a good deal further than this in our proof that the opposition to the bill is based on factitious sentiment. One English colony after another has, with the sanction of the Crown—that is, in effect, with the sanction of successive Liberal and Conservative Governments—made legal the marriages which we are now told are opposed to the law of God and to the conscience of Christendom. Can any one suppose that the men who have governed England for the last fifty years would tacitly have sanctioned legislation in any part of the British Empire which they genuinely held to be immoral, as, for instance, laws to legalize torture, to sanction fraud, or to establish polygamy among Christian populations? No one can hesitate to answer this question in the negative; but if this be so it is quite certain that statesmen of all parties have not in reality felt that to allow a widower to marry the sister of his dead wife was to shake the foundations of morality. The rhetorical horror avowed by a disputant in the heat of debate is a very different thing from the same man's genuine indignation at acts which really offend his conscience.

Of the two remaining grounds of opposition one need say little; they are in their way fair arguments. One may, however, be allowed to remark that reasoning based on the difficulty of "drawing the line" is in England one of those argumentative weapons which every one uses and to which no one attaches any importance. It may be described as a shot always fired by combatants who want to cover a retreat. Nor can I attach much importance to the practical evils which it is alleged will follow from a change in the law. The reason why I attach little weight to this consideration is my firm conviction that, were the whole question to be determined on grounds of expediency, the law would be changed to-morrow. Theological sentiment, a dread of change, and the natural dislike of Anglicans to all steps which lead England nearer to the Protestant and further from the Catholic world, have much more to do with the opposition to an alteration in the law which is absolutely certain to take place in the course of a few years, than any considerations which can be proved valid by the one criterion of sound legislation—the principle of utility. The point, however, principally to be noticed is the strange, though perfectly natural, attitude of the episcopate toward the Bible. They cannot make up their minds whether to rely or not to rely on Leviticus, and don't know for certain whether the texts of the Pentateuch are to be treated as irrelevant fragments of Hebrew legislation, or are to be considered the voice of God. In a work on the articles of the Church of England which I used to study when a boy, was a remark to this effect: "Bishop so-and-so has said that this text [the passage, I think, about the three witnesses] is probably spurious, but that it ought not to be given up without a fight." The prelate, whose name I have forgotten, was an admirable representative of his order.

But if Lord Cairns and the episcopal bench use arguments which are vitiated by unreality, they may urge with some reason that a hollow attack may be fairly met by a sham defence; for the position of Lord Dalhousie and his friends is only a trifle better than that of the Duke of Marlborough and the Bishop of Exeter. The advocates of reform are certainly not prepared to speak out boldly in defence of their own convictions. They dare not say that even if the best of Hebrew scholars should show that passages from Leviticus really forbade the marriage which it is proposed to legalize, this would no more affect the convictions of English Liberals than would proof that such a union was opposed to the text of Gaius or of Justinian's 'Institutes.' They dare not, again, meet "the thin end of the wedge" argument in the only way in which it can properly be met, namely, by boldly asserting that if English opinion should at any future time come to sanction marriages which it now condemns, English law must change with the change of national judgment. They hardly dare to urge that consanguinity will (it is probable) be ultimately made the basis of the greater part of the prohibitions on marriage, and that there is no reason whatever for supposing that rules which depend on various complicated considerations can in the long run be regulated wholly by one simple principle.

But the reticence of reformers as to the possible future results of legislation is not half so astonishing as their refusal to recognize the patent faults of the particular means by which they attempt to effect a desirable reform. The bill rejected by the Peers ought to be a simple measure for legalizing in future the marriage of a man with his deceased wife's sister. One clause of not more than five or six lines would accomplish every object legitimately aimed at by the reformers of the marriage law. Unfortunately, they wish to attain two other objects, which have nothing to do with the real principle of the bill. They wish to conciliate the clergy of the Church of England. Hence the bill provides, in a roundabout and almost surreptitious manner, that the marriages which it allows are in England not to be celebrated by the clergy. This astounding concession to clerical pretensions gives a legal recognition to the detestable theory that there is a difference between lay morality and clerical morality; it stimulates among the clergy the vicious notion that officials of the State Church are not bound to obey the State, and further, like all weak concession, is certain to beget unwarrantable exactions. The clerical press already mutters that the clergy will not admit to the Communion persons who take advantage of a law which the Church condemns. Reformers, again, wish to legalize so-called "marriages" which have already been made in defiance of law. They therefore at once fall into all the evils of retrospective legislation. A measure which on the face of it embodies a salutary reform becomes a direct encouragement to rich men to defy the law of the land, in the expectation that by means of wealth and agitation they may not only get the law changed, but also escape the penalties of lawlessness. The plain truth is, that the retrospective provisions of the bill are from a public point of view absolutely indefensible. But this plain truth is just one of those truths which neither Lord Dalhousie nor even Lord Bramwell dare boldly insist upon. For if the retrospective provisions were struck out of the bill, the rich law-breakers who support the agitation for reform would, it may be shrewdly suspected, keep their money in their own pockets. The present law presses hard on the poor. It cannot be repealed without agitation; you cannot keep agitation alive without money; and if you want money you must make the bill acceptable to the law-breakers who can supply the means of war. Why, you may ask, cannot a reasonable reform be obtained without agitation? My reply is, that in modern England the power of resistance to change under the Constitution is too strong. Here, as elsewhere, we move in a vicious circle: the exorbitant influence of the well-to-do classes and the excessive rights of the House of Lords make all improvement impossible which is not forced on the governing classes by visible exertions of popular energy. Conservatism begets agitation, and agitation constantly leads to vicious legislation.

Secondly. The whole course of the movement in favor of amending the marriage law is an astonishing proof of the power still retained in a country like England by wealth, by rank, by royalty. That the personal grievances of a limited number of well-to-do persons have had a great deal to do with keeping alive the active demand for reform, is past a doubt. It is equally certain that if the English Constitution had been in reality democratic, the resistance to a change which has been easily accomplished in most of the colonies and is in harmony with popular feeling would have been overcome years ago. Were it not for the House of Lords, the bill which the Peers have thrown out, or one like it, would be passed in an instant. Do not, however, suppose that I mean to represent the lay Peers or the bishops as being in this matter out of harmony with the part of the nation whose ideas the Peerage at once share and influence. Mr. Matthew

Arnold is, with all his talent and boldness, at bottom the prophet of the genteel and wealthy classes. When he mocks at a reform supposed to be demanded by Nonconformists and other Philistines, he undoubtedly commands the sympathy of the readers for whom he writes. There is not, further, I think, much doubt that the unanimous opposition of the bishops fairly represents the average tone of respectable churchgoers. The power of the House of Lords to resist reform is a testimony not so much to the isolated authority of the House as to the immense force still exercised in England by the conservative classes. To any one who knows the English world, the wonder is not that the Lords should have rejected the bill, but that they should nearly have passed it. The explanation lies in a little-noticed but very noticeable feature in English society. The royal family have taken a great interest in the proposed reform of the marriage law. Their feelings are (it may be supposed) a good deal influenced by German sentiment. In any case, the patronage of the Prince of Wales has been of infinite help to the reformers. His wishes have all but outweighed the authority of a unanimous episcopal bench. This fact is well worth the consideration of all who wish to understand the British Constitution. D.

A SUBSERVIENT REICHSTAG.

BERLIN, June 28, 1883.

ON June 12 the German Reichstag, after a long, but often interrupted, session of fourteen months, was closed. The Prussian Landtag, which for nearly the same period has been holding its sittings simultaneously, will dissolve by the 30th. Thus the political campaign has at last come to an end, to the great relief of all concerned and of the public at large, which had rather too many discussions and speeches to follow. Long and protracted as the latter were, the result of the work of the two bodies is not only small, but even humiliating in the extreme. I do not know whether the executive or the legislative power has suffered most; but so much is certain, that, in spite of the endeavors of the Liberals, all that is cherished by the German people has suffered a crushing defeat such as had not been thought possible. To say we are driven along in a reactionary current, would not fairly represent our present condition. Germany is handed over to a Conservative-Clerical alliance which, directed by Bismarck, is, and for the next few years will be, master of the field. It is true, the majority did not carry all its points at the last session: the tobacco monopoly, the threefold increase of duty on timber and on several minor articles, did not pass. Moreover, its victories—as, for instance, the carrying the new ultra-reactionary law on trade, professional business, and peddling (*Gewerbeordnung*)—can do no great practical harm, as the theoretical sophisms are easily refuted by daily life; but these and other measures show the tendency of the present majority, and undermine the respect of the people for the laws. Provisions which would be laughed at in your country by the most innocent backwoodsman have been engrafted on our statute-book. Thus, by an amendment of our squirearchy's, the present law prescribes that a peddler shall behave politely, clean his boots when entering a house, and bow to the owner while offering his wares. A book-peddler must carry with him a list of the books he proposes to sell. Immoral and scandalous books—there is, of course, no definition of the term—shall be confiscated. In this case the prohibition must be enforced all over Germany, and is stronger and more arbitrary than the old censorship which in 1848 contributed to a revolutionary rising. In fact, only catechisms, hymn-books, almanacs, and cyclopædias are broadly tolerated, and the policeman will henceforth decide whether Lessing's, Goethe's, and Schiller's works are moral or ought to be allowed or forbidden. Public showmen, dancing masters, theatre directors must satisfy the police as to their good moral character, and their license can at any time be withdrawn, thus preventing a large investment in a business of this character. The so-called reform of the Prussian civil administration is exclusively calculated to increase the power of the landed aristocracy, and to make all the rest of the population more pliant and submissive to those in power. These gentlemen do not even seem to appreciate the likelihood that some day they may be in a minority.

The passing of the budget ahead of the regular time, although formally constitutional, is, in fact, an attack on the spirit of the Constitution, and so a victory which Bismarck has achieved by the help of the Clericals. The greater part of the Liberals, perceiving that they were a helpless minority, joined the supporters of the Government and postponed some of the most important items of expenses, so that the Chancellor is bound to convene the Reichstag at the beginning of next year to submit to it a supplementary budget. Nevertheless, the defeat of the Reichstag is overwhelming, as, instead of taking up the cudgels, it yielded to the harsh demands of Bismarck. Even the fact that he won his success by a great sacrifice, introducing the imperial influence and wishes into party strife, cannot be pleaded as an offset against the real loss of dignity and authority which the Reichstag has suffered by its meek subservience.

The worst defeat, however, of all is the latest legislation on the relations of the Prussian Government with Rome and the Catholic Church. The advances made by Bismarck would be incomprehensible if his endeavor to gain the support of a powerful party did not control all his political actions. It is more than strange that so prominent a statesman as the Chancellor, led by the desire to subject everything to his dictates, disdainfully rejected the services and assistance of those who were eager to coöperate with him, and is now trying to win over to his side a party whose interests centre in Rome and in the principles of the Roman Catholic Church. In the first ten years after the establishment of the North German Union and the Empire, he carried every measure by the help of the thoroughly unselfish National Liberals (numbering from 150 to 180), and of a few so-called Free Conservatives. Since 1879 Bismarck has only exceptionally succeeded in carrying through his measures with the assistance of the Ultramontanes, who, like clever tradesmen, make their terms beforehand, and who have an advantage over him in the fact that he can no longer fall back on the Liberals, who, on the contrary, fight him like one man, while the Conservatives alone are mentally and numerically too weak. Thus the same statesman who in former years declared Windthorst an intriguing enemy of his country, and solemnly protested that he would never go to Canossa, has now proceeded further south on the road to Rome, and has just voluntarily, at least, if not cheerfully, passed under the Caudine forks.

You will remember that in the course of the last negotiations with the Pope the Prussian Government declared that it would abolish the most obnoxious Falk laws if the Church would bind herself to announce to the civil authorities every nomination to a cure of souls. This concession Rome refused to make, although it has complied with it in many other instances where Protestant princes were concerned. In his note of May 5 to Cardinal Jacobini, Herr von Schloezer declared that his Government would be compelled to regulate its relations to the Church exclusively by its own legislation; that, consequently, it would grant to the Catholic Prussians everything that was reconcilable with the indispensable state authority, and that then the law of Prussia would alone control the ecclesiastical relations. In this contingency a repressive policy would have been required instead of a preventive one, and the Government could easily have dispensed with the above announcement. Herr von Schloezer, of course, in his despatch, did not dilate upon the consequences of his communication, but they are apparent: a priest who did not obey the laws of his country would be punished according to the extent of his disobedience, and, first of all, lose his salary and income from the Government funds. The position of the Prussian Government was clear and impregnable; but, instead of maintaining it, Minister von Gossler, on June 5, even before Rome had answered the above note, lowered his own bid and laid a new bill before the Landtag, which gave up this point of view and asked the announcement only of those priests who are appointed permanently by their superiors. It does not require great wisdom to understand that nothing better could happen to Rome. The bishops, having been in the habit of making only temporary appointments in order to have the lower clergy more dependent on their arbitrariness, will only be encouraged in their old mode of action, and in their own interest will make no permanent appointments, to which the Government henceforth cannot object. And such a bill was passed by the House by a majority of 224 to 107 votes, and was, of course, sanctioned by the Upper Chamber. The cynical insolence of the leaders of the Clerico-Conservative majority knows no bounds. This cannot surprise us in the case of the Ultramontanes, but it is depressing that high Protestant officials and members of the gentry, actuated by spite against the Liberals, join in the triumphal chorus of the Centre.

It is a melancholy fact that, not only with the consent but at the instigation of the Chancellor, all those Falk laws are, or will be, repealed which ten years ago were passed amidst the general applause of the people. In 1873 everybody who tried to avert unnecessary severity was called an enemy of the country and of the Government; to-day the same reproaches are made to those who are not eager to pull down the creation of that time. The same men who then praised Bismarck for having introduced those laws now extol him in an equally lavish manner for doing away with them. What the Chancellor did ten years ago, when he provokingly turned a cold shoulder to the Conservatives, he now does by sacrificing his former friendly relations with the Moderate Liberals to an alliance with the Ultramontanes. Whether it will bear the fruit he expects from it will be shown in a comparatively short time. In my opinion, the unnatural union will not last long, the less because the Centre considers its present victory only as a payment on account of its claims, and will consequently ask more. The next demand will be the subjection of the school to the Church; but if the Government is willing to yield further, there will come a stop in such concessions, which ignore the traditions and the roots of the Prussian policy. Thus we are not at the end, but shall sooner or later reach the second act, of the *Kulturkampf*.

In recapitulating the results of the late parliamentary campaign, it is less the defeat of almost all Liberal measures which is to be deplored, in the interest of our constitutional development, than the bitter and exasperated spirit in which the political antagonists fought each other, the misrepresentation and malice with which the

motives of others were assailed, and the dissolution of old party ties. By this time all the old parties are broken up. The National Liberals are about to fall to pieces, especially since Herr von Bennigsen has resigned his seat and retired to private life. It is not my business at present to examine whether a party leader is justified in leaving the battle-ground, but in fact his doing so means the retirement of moderate German Liberals from our political life. Bennigsen is a very able and patriotic man, of high personal and political standing in life, who was always in favor of peace and compromise. He understands very well that Bismarck's autocratic rule rests on a great national basis, and that not from sheer stubbornness does he rule with an iron rod. But he has at last found out, as he says in justifying his withdrawal, that the embittered and daily growing contest between the Chancellor and Parliament, and the split among the Liberals themselves on the most decisive questions, cannot lead to a salutary solution of the pending difficulties; or, in other words, that middle parties at present can achieve nothing, and must make room for extremists in the political arena. Hitherto Bennigsen has been an independent and disinterested supporter of Bismarck, who, by the retirement of such a devoted friend, suffers an irreparable material and moral loss. In consequence of the new law in favor of Rome, the Free Conservatives have divided. The Centre, in its present complexion, cannot last much longer, and, having gained its ends, in the course of the next session will probably dissolve. I do not complain of this general decomposition—it is in itself a healthy progress; but in our present emergency it is rather doubtful whether it will produce sound and strong new parties. +++

THE LAST YEARS OF MME. D'ÉPINAY.—II.

PARIS, June 27, 1883.

WE left Mme. d'Épinay at the moment when, her husband being entirely ruined and having lost his place of farmer-general, she took a little house in the faubourg de Monceau. Society at first gave her many proofs of sympathy, and after a while, as usually happens, abandoned her and forgot her. Society likes to prove to itself that it has very fine sentiments, but when the proof has been given, it must think of something else. Mme. d'Épinay only kept her real friends. Grimm spent every evening with her. She spent most of her time in the education of her daughter Pauline. Her letters of that period are truly charming; she enjoyed her new life, her little "republic of hens and pigeons," her game of backgammon with Diderot, with Grimm; she enjoyed the absence of M. d'Épinay. When summer came, she went to the Chevrette, which had not yet found a tenant. She helped Grimm in his 'Correspondance Littéraire,' which had much success, and deserved it. Diderot spent much time with them. When she was obliged to leave the Chevrette, she took refuge at La Briche, which was a much smaller country-house. "There is the place to live in," writes Diderot; "not in that magnificent château of the Chevrette: immense ponds, with their shores covered with plants; an old bridge in ruins, and covered with moss; trees which grow as it pleases Nature, planted without symmetry; a space which is not large, but where one does not find one's self."

Mme. d'Epinay saw with much apprehension all the paternal instincts developing in her son Louis. He was not eighteen years old. She resolved to take him off the "pavé de Paris," and sent him to a friend of Grimm's, M. Bethmann, a rich merchant of Frankfort who had settled in Bordeaux, and who consented to take the young man into his office. He was a sort of power in Bordeaux; Catherine II. had appointed him Russian Consul. He was the type of the honorable, laborious, honest, charitable merchant, such as Sedaine has described him. Young d'Épinay, who was much spoiled, could not enter into such a severe and puritanic life; he could not be a clerk. In vain did Mme. d'Épinay give him the best of advice. After a little while M. Bethmann wrote to her that he could no longer keep her son.

Mme. d'Épinay tried in vain to get a place for Louis at Frankfort. She was afraid to see him come back to Paris. Her health was miserable; she had just lost her mother, who had been her constant and dearest friend. M. d'Épinay continued to spend all his time with the demoiselles Verrière. Mme. d'Épinay was afraid of the future of her daughter Pauline. Fortunately, the Vicomte de Belsunce, colonel of infantry, was seduced by the charms of Pauline, and married her. He belonged to one of the oldest families of Navarre, and took his young wife with him to the mountains of Mixe, where he had the hereditary charge of *grand bailli d'espée*. They lived in the old feudal castle of Méharin, which was very different from the Chevrette. Louis d'Épinay was admitted to the bar of the Parliament of Pau. He was agreeable in his manners, wrote pretty verses, was a good musician. His sister and his brother-in-law were influential and respected; but his natural folly was uncontrollable. He made debts, and was obliged to resign. M. d'Épinay asked for a *lettre de cachet*, and his son Louis was taken to Bordeaux and imprisoned, first at the Château Trompette, then at the Fort du Hâ. M. d'Épinay, who ought to have been more indulgent, kept his son in prison till the month of September, 1771; after two years of prison, the young councillor returned to Paris.

The salon of Mme. d'Épinay, notwithstanding her great reverses of fortune, was becoming more important than ever; it was now a literary circle. The foreign diplomats, Count Creutz, Baron Gleichen, Lord Stormont, Marquis Caraccioli, Marquis of Mora, Prince Pignatelli, liked to meet the literary men of the time at the modest house of the clever and amiable lady who was "ni bête ni conquérante." These foreigners liked nothing so much as Paris. When Caraccioli was appointed Vice-King of Sicily, the King made him his compliments: "Sir, you are going to occupy one of the finest places in Europe." "Sire," answered Caraccioli, "the finest place is the one I leave: it is the Place Vendôme." Creutz could never console himself for having lost the suppers of Mme. Geoffrin, when he became prime minister of Gustavus III. It must be admitted that nothing could be imagined more refined, more intellectual, more airy than the French society of that time. There was an indescribable grace in everything—in the manners, in the dress, in the furniture, in the material as well as in the intellectual details of existence. Some seriousness was added to the pleasures of the mind by the discussion of a thousand new philosophical problems, and by the new science called political economy. Theories on taxation were discussed as eagerly as the operas of Gluck and of Piccini. Rousseau had returned to Paris in 1770; he had written the 'Confessions,' and read chapters of them in various places. Mme. d'Épinay was much grieved at some passages of this work. She wrote to M. de Sartine: "The person whom I mentioned to you yesterday has read his work to M. Dorat, to M. Depezay, and to M. Dusaulx. When one takes these gentlemen into the confidence of a libel, you have the right to give your opinion, even if you have not received a formal complaint." She then asks M. de Sartine, who was at the head of the police, to order Rousseau to discontinue reading the 'Confessions.' She and Grimm were treated in them with the greatest severity and injustice. Rousseau saw M. de Sartine, and he stopped reading his libellous work.

Mme. Geoffrin was notoriously afraid of any sort of quarrel. The Abbé Galiani once wrote of her: "Mme. Geoffrin has had the erisypelas, probably because somebody told a piece of news in her house." Grimm laughed at her in this way in his 'Sermon du jour de l'an': "Mother Geoffrin informs her friends that, as in preceding years, it will be permitted to speak in her house neither of internal nor of external affairs; neither of the court nor of the town; neither of the affairs of the North nor of the South; neither of the East nor of the West; neither of politics nor of finance; neither of peace nor of war; neither of religion nor of government; neither of theology nor of metaphysics; neither of grammar nor of music," etc. Mme. d'Épinay was not quite so prudent. Grimm had given her a taste for politics, but she preferred, on the whole, literary and social topics. She wrote faithfully every week to her dear Abbé Galiani, and her letters are quite worth reading, even at this distance. She keeps her good humor in her letters, though she had troubles of all sorts. Her son Louis, who had been appointed lieutenant in the Mousquetaires, had not become wiser; he incurred new debts, left the Mousquetaires, joined the Dragoons, got into trouble, and, finally, was interdicted and retired to Berne. Grimm made longer and longer absences in Germany. Her health grew more and more deplorable. Diderot had gone to Holland and to St. Petersburg; he had been very well received by Catherine: "I found her, as she had been described to me," said he, "the soul of Brutus with the charms of Cleopatra." Grimm himself left for St. Petersburg; he saw Catherine very often. "She is, I assure you, a charming woman, whose house ought to be in Paris. . . . One would swear that she has nothing else to do than to be amiable, and one would not suspect that she has an Empire to rule; she calls it her breadwinner." Catherine took much pleasure in the society of the impetuous Diderot. "If I had believed him," said she, "I should have changed everything in my Empire: legislation, administration, politics, finance." She heard him complacently, and told him finally that he could make all sorts of plans, as he worked only on paper; she was a poor Empress, who had to deal with men.

Louis XV. died in 1774, and the new reign began in a fervor of enthusiasm. Voltaire and all the philosophers thought that their time had come: reform, reform was in the mouth of everybody. Galiani saw further, and wrote to Mme. d'Épinay: "You Freuchmen are just in the state which Titus Livius describes, when the Romans could no longer suffer their pains nor the remedies." After two years of absence, Grimm had returned to France; Galiani complimented him on his return, and, speaking of Diderot and Grimm, said: "We shall not learn much from our two travellers, for one will not say what he has seen, the other will say what he has not seen."

Mme. d'Épinay published in 1775 the 'Conversations d'Émilie.' She was obliged to spend the greater part of her time on her couch, and she found distraction in writing. The 'Conversations' are conversations, or pretended conversations, of Mme. d'Épinay with her granddaughter, Mlle. de Belsunce; they are full of the *sensibility* which was the fashion at the end of the thirteenth century; there is some grace, some delicacy, in the work, but, on the whole,

it is very feeble. Mme. d'Epinay's *esprit* shows only in her correspondence: she required a liberty, a *décousu*, a suddenness which cannot be found in a semi-didactic, semi-pedantic work. Of course, everybody admired the 'Conversations d'Émilie,' even Catherine of Russia. Mme. d'Épinay was consoled in her long illness by the conversion—the word is not too strong—of her son Louis, who lived in Berne, and who there married Mlle. de Boccard, who belonged to one of the patrician families of the Republic. This marriage filled her with joy; she needed consolation, as Grimm had left her again and had gone to Italy. She spent half her time writing to him and to Galiani. Her husband was not converted; the disorder of his affairs became such that he was interdicted in 1777; his family gave him 10,000 livres a year, and he was placed under a sort of guardianship. Grimm came back to Paris that same year, after two years more of absence; he found Mme. d'Épinay very ill, spitting blood occasionally, drinking opium constantly. She had her granddaughter with her, and this girl was her greatest comfort. Émilie was already canoness of a chapter of Notre Dame, and as such was called a Countess. Alas! the conversion of Louis d'Épinay had only been of short duration; no human influence could long stop him in his course of folly. Three years after his marriage he was again in debt, and M. de Boccard was obliged to ask for the interdiction of his son-in-law. Mme. d'Épinay could not do much for her son: she was now almost poor; her pension had been reduced. Catherine of Russia, through the faithful Grimm, was obliged to come to her aid. She became so ill that she could not write long letters; from her deathbed she sent verses to Grimm with some of her gray hair:

> "Les voilà, les cheveux que le temps a blanchis;
> D'une longue union ils sont pour nous le gage.
> Je ne regrette rien de ce que m'ôta l'âge,
> Il m'a laissé de vrais amis."

She remained cheerful, thoughtful, affectionate to the end, and died quietly on the 19th of April, 1783. Galiani wrote to Mme. du Bocage, who informed him of her death: "Mme. d'Épinay n'est plus, j'ai donc aussi cessé d'être." He told her frankly that he could not continue with anybody the correspondence which he had had with Mme. d'Épinay: "My heart is no longer among the living." The volatile little Abbé was capable of a true and profound affection. As for Grimm, he became a father to Mlle. de Belsunce; he made her a demoiselle d'honneur of Catherine, married her to the Comte de Bueil, an officer of the Gardes Françaises, in 1782, and when the Revolution broke out he took Mme. de Bueil and her children with him to Aix-la-Chapelle. In 1793 he conducted them to Gotha. Catherine died in November, 1796, but the pensions which she gave to the family of Bueil were paid to the end, even after the death of Grimm. Poor Grimm survived all his contemporaries; he spent his last years in Gotha, with the daughters of Mme. de Bueil, who became his secretaries. He died on the 19th of December, 1807, leaving all his fortune to Mme. de Bueil, to the dear Émilie, to the granddaughter of his ever-regretted friend Mme. d'Épinay.

Correspondence.

THE *NEW YORK GAZETTEER.*

To the Editor of The Nation:

Sir: In the *Nation* of July 5, a writer has called in question the existence of the *New York Gazetteer and Country Journal.* Bound copies of that paper are now to be seen in the rooms of the American Antiquarian Society at Worcester, Mass. The *Gazetteer* was "Printed and Published by SHEPARD KOLLOCK every Tuesday and Friday, at No. 32 Maiden Lane, where subscriptions are taken in at *twenty-four shillings per Annum.*" Each issue numbered eight small pages, with three broad columns on a page. In Vol. ii., No. 66, page 525, top of column three, is this heading: "New York, July 21. By the Sloop Monmouth, Capt. Freneau, in five days from Charleston." Under this is the notice, published at Charleston, by "the secret committee" for the benefit of "the Hint Club."

On Thursday, August 24, 1786, the *Gazetteer* (Vol. ii., No. 82) changed its name and became the *New York Gazetteer or Daily Evening Post.* Then the number of pages was cut down to four, the size of the page increased, and the price of subscription raised to five dollars a year.

Respectfully, JOHN B. McMASTER.

Worcester, July 14, 1883.

PURITAN AUTO-DA-FES.

To the Editor of The Nation:

Sir: On page 32 of his 'History of the People of the United States,' Mr. McMaster says: "Compared with Cotton or Hooker, a New England minister of 1784 had indeed made vast strides toward toleration. He was a very different man from the fanatics who *burned Roman Catholics at the stake,*" etc. Italics mine.

I am not learned in history, and will make no assertion; but perhaps the *Nation* or Mr. McMaster will be willing to answer two or three questions.

1. What Roman Catholic was ever put to death for his religion by public authority in New England?

2. Was any one ever "burned at the stake" in New England by public authority? If so, who was it?

3. Was any Roman Catholic ever burned for his religion by Puritan authority, even in *old* England?

In the first of the notes at the foot of page 12, it is said: "The Neck seems to have been quite a barrier to the daily travel between Boston and Charlestown." Did people habitually go round over the Neck to get to *Charlestown*, or is the word possibly a slip?

Respectfully yours, JAMES H. CROSBY.

Bangor, Me., July 10, 1883.

CAN IT BE THE COBDEN CLUB?

To the Editor of The Nation:

Sir: If the directors of the Mercantile Library had reflected a little, they would probably not have charged the repeated cutting out of the article "Political Economy" from 'Appleton's Cyclopædia' (mentioned in the *Nation*, No. 940) to the vandalism of New York readers. When we consider the strong protectionist flavor of the article, which was written by Henry Carey Baird, and which devotes to Henry Carey about the same amount of space as to Adam Smith, Ricardo, and J. S. Mill combined, need we doubt that the atrocious mutilations were due to the diabolical activity of the emissaries of the Cobden Club? X.

VÁMBÉRY.

To the Editor of The Nation:

Sir: In No. 936 of the *Nation* you speak of Vámbéry as having been "assailed and represented as a fraud by Russian travellers and scholars," as if the main motive of the attacks on him were of political origin. A Turkish officer who had seen much service in the Central Asian provinces, and who knew Vámbéry, told me that his famous expedition to Samarkand consisted simply in going out on the Samarkand route to where he could interview the pilgrims returning, and in getting from them all the details of information of the Samarkand world possible; but that in fact he had never approached that city. This was curiously confirmed by his mistakes in description, which were such as ignorant people and those not accustomed to accurate observation are likely to make, as shown by the Russian descriptions when their expedition occupied the city. My Turkish friend told me the name of the locality where Vámbéry camped, but this I have forgotten.—Yours truly, W.

Vienna, June 30, 1883.

DUELLING AND STREET-FIGHTING.

To the Editor of The Nation:

Sir: Your correspondent "E. I. R.," of Atlanta, in No. 939, urges the plea for duelling that it prevents street-fighting. But does it? If it does, there is at least one strong ground in favor of the institution. We do not think the plea can be sustained. The "Code," as is well known, provides in express terms, in several events, for posting (see sections 4, 5, and 6 of Seconds' Duty, 'Wilson's Code'). Now, what is posting? It is putting up in the street, or other public place, a placard denouncing the person posted, and it is expected that the person who posts another shall stand by armed to shoot down any one who attempts to remove the placard. This is the theory—a theory put in actual practice in two notable instances in the city of Charleston, some years since. In one of these, four highly-respected gentlemen, differing upon the punctilios in their arrangements for a meeting, in carrying out the theory and obeying the requirements of the "Code," made the corner of Broad and Meeting Streets their battle ground in the full blaze of day, and in this battle three of them were shot—fortunately, no bystanders. The other case is reported in our law-books (1st McMullan's Law Reports, St., p. 126). In this, likewise, four gentlemen were engaged—this time at the west end of Broad Street. Two of them attempted to stick up a paper on a lamp-post, and the other two shot at those who were doing so, in which shooting one of the party was severely wounded. The usual practice under the "Code" now is that, "when practicable, 'a card' published in a newspaper is substituted for 'posting'" (note to late edition of the "Code"). On such a publication, the parties shoot at sight, on the streets or elsewhere, as in Allston's case, to which your correspondent alludes. The "Code," it will thus be seen, regards street-fighting as a contingency, and one which, under certain circumstances, it in effect prescribes.

Street-fighting is not peculiar to the South; it has always been the accompaniment of duelling, and street broils have always been contemporaneous with its practice. The two things have gone together. Look over Doctor Millingen's history of duelling, and see how often public brawls are mentioned. It is one of the curiosities of literature that the person who is perhaps best known in history and fiction as a duellist is equally chronicled as a street ruffian. Every one will recall Thackeray's account of the duel between Lord Mohun and Lord Castlewood, in his story of 'Henry Esmond,' and the delicacy with which they ignored the real cause of enmity and put their difference upon a dispute about cards and the snuffing of a candle. Now, who was Lord Mohun? He was no creature of fiction, but a real historical character. He figures in all the memoirs of the times, and is cited as an illustration of them. Macaulay gives a graphic account of a street-fight in which this hon-

orable character is engaged in "standing by his friend," who, lying in wait for a famous actress, Anne Bracegirdle, endeavors to abduct her, and in the attempt thinks it quite in order to run his sword through the body of her protector. This gentleman Lord and his friend, a captain in the army, swagger sword in hand about the streets, daring the constables to touch them; and, as one of our own juries would in all probability have done had they sat upon his case, the House of Lords, by sixty-nine to fourteen, acquit their accused brother when he is put upon trial before them for this murder.

The death of this duellist is equally historical; full accounts of the duel in which he fell will be found in Bishop Burnett's 'Own Times' and in Doctor Millingen's work, but this is Thackeray's account of it. Thackeray is describing a gathering in which he brings together Bolingbroke and Swift and others of the great men of the time, but which, he says, meant to be a feast, in spite of drink and talk, was as dismal as a funeral. Among other things, he says, they talked about the "Mohocks" and the damage they were doing rushing through the town killing and murdering. In the midst of the attempted merriment, Swift, he tells us, came running into the hall, crying out:

"'Drink no more, my lord, for God's sake! I come with the most dreadful news.'

"'Is the Queen dead?' cries out Bolingbroke, seizing on a glass of water.

"'No; Duke Hamilton is dead; he was murdered an hour ago by Mohun and Macartney. They had a quarrel this morning; they gave him not so much time as to write a letter. He went for a couple of friends, and he is dead, and Mohun, too, the bloody villain who was set on him. They fought in Hyde Park, just before sunset. The Duke killed Mohun, and Macartney came up and stabbed him; and the dog is fled.'"

I am endeavoring, Mr. Editor, as you will observe, to illustrate the state of society in which duelling flourishes, and to show that street broils and fighting have always prevailed as an accompaniment of the custom of duelling. Who were the "Mohocks" about whom Thackeray's dismal party were talking when so startled by the death of Duke Hamilton? A full account of them will be found in Macaulay's 'Hist.,' vol. i., p. 369; Lecky's 'XVIII. Century,' vol. i., p. 522. They were a club of young men of the higher classes, young gentlemen, who, in order to keep their hands in, nightly sallied forth into the streets, sword in hand, swaggering about the town, breaking windows, upsetting sedans, beating quiet men and insulting women, and committing the most wanton and atrocious outrages. See also the brawls which accompanied duelling in Ireland (Lecky, vol. ii., p. 318). When duellists abound, Mohuns will always be found among them; and "Mohocks" usually flourish in the same community, if they form no part proper of their society. E. McC., Jr.

Charleston, S. C., July 4, 1883.

A SEQUEL TO THE BEIRNE-ELAM DUEL.

To the Editor of The Nation:

Sir: On Saturday, June 20, after the duel between the Virginia editors, Beirne and party stopped for the night at Baltimore. A friend of Beirne's, elated at the success of this hero, put his name down for an invitation to the "Baltimore Club"—the fashionable young men's club of this city. By the constitution of this club, any two governors may veto any invitation. Two governors were found who took, as it proved, the extraordinary view that a criminal flying from justice, with the blood of a fellow-man on his hands, was a proper person *not* to show civilities to, and exercised their right of refusing the invitation. Beirne's friends and friends' friends were aroused. They had a general meeting called, at which, by a vote of four to one, the Club passed a resolution regretting the unseemly conduct of the governors; in fact, the Club humbly apologized to the duellist.

It may in some way affect the disinterestedness of this act that many members of the Baltimore Club visit Richmond, and that the Richmond Club, of which Beirne is a member, on hearing of the aborted invitation, resolved never to invite any member of the former Club to partake of the latter's conveniences. But however we view this little occurrence, does it not prove that you are wrong, and that a duellist is a great man? H. O. P.

Baltimore, July 16, 1883.

JUDGE HOADLY AND THE *COMMERCIAL GAZETTE*.

To the Editor of The Nation:

Sir: In the news summary of your issue of July 5 are the following sentences referring to Judge Hoadly, the Democratic candidate for Governor of Ohio:

"His connection with the Archbishop Purcell troubles, as counsel for the assignee, in which capacity he contended for the sale of church property in the Cincinnati diocese, will also, it is asserted, injure his prospects. A decision in this case has not been rendered, and it is alleged that Judge Hoadly is trying to have it kept back until after the October election."

The first of these sentences contains what may be news to some of your readers, in its information that Judge Hoadly's rank in his profession is such that he was selected by the assignee of the late Archbishop Purcell to conduct one of the most important litigations ever before the courts of any State. It also contains what, perhaps, is of the nature of news, as to the political intelligence of the voters of Ohio, when it tells us that because Judge Hoadly has done his duty as an attorney in this case, by urging the sale of the church property to pay what, he argues, are diocesan debts, his prospects of election are injured.

The second sentence which I quote is an endorsement of a fair sample of that sort of low journalism which disgraces so many American newspapers, and which the *Nation* has always avoided and condemned. The suggestion that Judge Hoadly is, or has been, delaying the decision of the case referred to was first made by the Cincinnati *Commercial Gazette*, and is a specimen of the kind of political warfare to which Mr. Halstead's formerly respectable paper has descended since its *mésalliance* with the organ of "Deacon" Dick Smith. As a Republican, I am glad to say that the coming campaign in Ohio can be fought against Judge Hoadly and his party on honest ground much above the *Gazette* level; and being of counsel representing one of the defendants in the "Church case," I can say with knowledge that this story is so entirely without foundation that there can be no excuse for its first publication. It originally appeared as part of what was printed as a communication to the *Commercial Gazette* from an alleged creditor of the late Archbishop. A reputable newspaper would not have published such a communication without an inquiry as to the sanity of its writer, or some confirmation of his ridiculous charge against a respected citizen.

The limited intelligence of those poor people who loaned their savings to Bishop Purcell on faith was sorely tried by his failure. Some of them lost what minds they had, but the majority have only lost faith in all mankind, and, ever since the exposure in 1879, have been suspecting and accusing of dishonesty every one who has had any connection with the Bishop's estate. This is but the natural result of their ignorance and inability to realize that his great wealth never had shape except in his and their imaginations, and that a great lawsuit cannot be carried through the court of last resort in a few months. The patriot of the *Commercial Gazette* who, for the love of his party and in the face of all that is decent, permitted such a communication to be the sole foundation for that editorial from which you probably gathered your item of news, when he saw the circulation of his little libel aided by the *Nation*, must have gloried in this triumph of "journalism." W.

Cincinnati, July 7, 1883.

[The paragraph in the *Nation's* Summary was based upon a daily-press despatch from Cincinnati, doubtless having the origin above indicated, though not naming any. — Ed. Nation.]

Notes.

Mr. Charles Francis Adams, jr.'s recent Phi Beta Kappa address at Harvard, directed against making the Greek language a requirement at our colleges, will be immediately issued in pamphlet form by Lee & Shepard, Boston.

T. Whittaker will publish a revised and popular edition of Mr. F. Saunders's 'Salad for the Solitary,' with more than fifty illustrations.

A new novel, 'An "Ideal Fanatic,"' by Mrs. L. B. Porch, will be published next month by Henry A. Sumner & Co., Chicago.

Roberts Bros., Boston, announce for the holidays Gray's 'Elegy in a Country Churchyard,' with thirty designs by Harry Fenn, and some rejected verses printed with the early editions; Jean Ingelow's 'The High Tide,' with original designs by Church and others; Newman's 'Lead, Kindly Light,' illustrated by William St. John Harper and George R. Halm; and Lord Houghton's 'Good Night and Good Morning,' with illuminations and etchings by Walter Severn.

'Studies in Literature' is the title given to the third number of Dr. Coan's eclectic series, 'Topics of the Times' (Putnams). It opens with *Blackwood's* article on American literature in England.

Mr. Robert S. Minot has translated from the Italian Edmondo De Amicis's 'Jottings about London,' making a thin pamphlet of 63 pages 16mo (Boston: Alfred Mudge & Son).

A companion volume to the record of Wesleyan alumni is the 'Biographical Record of the Alumni of Amherst College,' not so thick (only 670 pages) and printed in larger type, but full of matter suggestive of many romances and much hard work. The theological bias of a New England college appears in the statistics. Of 1,968 graduates 887 have been clergymen, and 92 foreign missionaries, against 348 teachers, 305 lawyers, 233 authors, 181 physicians, and 178 engaged in business. The authors, we suppose, belonged also to the other classes.

From the *Railway Review* office, Chicago, we have received a pamphlet reprint of articles in that periodical on 'The Control of Defective Sight on Land and Sea,' a handy résumé of what has been done legislatively in this direction in this country and abroad.

The Agricultural Department has printed a report on the 'Scientific and Economic Relations of the Sorghum Sugar Industry,' made by a committee of the National Academy of Sciences, with Prof. W. H. Brewer, of Yale College, at its head. The original document was transmitted to Commissioner Loring last November. In the interval the committee have been able to add statistics of the industry for 1882, showing its success in New Jersey and Illinois particularly,

A bibliography of the subject concludes this valuable report.

The May-June issue of *Psyche*, "a Journal of Entomology," bears the numbers 109–110 of vol. v. This handsome small-quarto periodical is the third of the publications which make Cambridge, Mass., a marked scientific centre—viz., *Science*, the *Bulletin* of the Nuttall Ornithological Club, and this organ of the Cambridge Entomological Club, of which the chief editor is Mr. B. Pickman Mann, of the Agricultural Department's Entomological Division. His services, like those of his fellow-editors, are gratuitous, and *Psyche* is perhaps hardly yet self-supporting, though by personal sacrifice it has been kept "on the wing," as we may say, for ten years. Its contents are both purely scientific and practical, and a distinguishing feature is an elaborate bibliographical record.

The progress during the past year in the construction and equipment of the Lick Observatory, on the summit of Mount Hamilton, California, is thus summarized in *Science*: The dome for the twelve-inch equatorial has been entirely completed in a very thorough manner. It is, without any doubt, the most convenient and complete dome of the size in the country. The four-inch transit house and the buildings for the photo-heliograph are in capital working order. They were utilized last December in a very successful observation of the transit of Venus. The walls of the main building are half done, and the cellar for the dome of the thirty-six-inch equatorial is excavated. Many of the original arrangements of the buildings and grounds were only provisional, and these are being replaced by others more substantial and permanent. A brick reservoir, containing 83,000 gallons of water (derived from three springs) has been built during the season; another of 20,000 gallons (spring water), and another of 83,000 gallons (rain water), will shortly be begun. The roads have been extended. The house for the Repsold meridian-circle will be begun in a few weeks, as well as a house for the astronomers, and buildings to contain the appliances for heating and lighting the buildings and moving the dome.

The prizes offered by the manufacturers (the Joseph Dixon Crucible Co.) for drawings executed with their American Graphite pencils may be called, we suppose, protection to American art. The awards have just been announced, from which it appears that out of 354 drawings sent in (from 25 States) 126 were from boys' schools, and nearly twice as many, 238, from girls' schools—a difference in favor of the girls for which we cannot account unless drawing is more generally taught them. The prizes were 128 in number, and more than one-half in cash.

The August number of the *Magazine of Art* (Cassell & Co.) has an illustrated article, among others, on the glorious Plantin-Moretus Museum at Antwerp, and also gives a representation of the bust of Fielding by Margaret Thomas, intended for the Taunton (England) Shire Hall, based upon Hogarth's posthumous pen sketch, which is also shown in facsimile.

In the May-June *Bulletin* of the French School at Athens is discussed a unique delineation on a funeral stele from Athens of an athlete engaged in balancing a heavy ball on his right thigh. This relic is shown in heliogravure, as are also several very interesting additions to the Myrina figurines already illustrated in this publication.

Last November there was organized in London a Costume Society, for the purpose of publishing an annual album or portfolio of illustrations of historic costume taken directly from original sources, either contemporary manuscripts or surviving examples. The first collection of plates has now been issued. Each plate is 11x15 in., is accompanied by a sheet of letter-press description, contains one or more costumes, often with bits of detail on a larger scale, and is signed, not by the draftsman—for the drawings do not aim at any other merit than fidelity—but by the expert who certifies to its exact accuracy. The annual subscription is a guinea, and the success of the society is dependent on an increase in the number of its members. The eminent architect, Mr. E. W. Godwin, is the honorary secretary, and his address is 7 Great College Street, Westminster.

Mr. Bernard Quaritch's Catalogue No. 349 is of books in historical or remarkable bindings from the libraries of sovereigns or distinguished private collectors.

The latest French art periodical is the monthly *Bulletin des Beaux-Arts*—"France de 1500 à nos jours" (Paris: Fabré; New York: F. W. Christern). Its excuse for being is the disturbance of French traditions in art by foreign invasion, and a consequent desire on the part of the editors to recall the glories of the elder French art. Its plan seems to be to give brief biographical sketches, with specimens of the work of the artists commemorated. Woodcuts ornament the text. The queries department promises to be useful. There is also a department for auction sales, edited by Druot.

Mr. Beljames's book, 'Le Public et les Hommes de Lettres en Angleterre au 18e Siècle,' reviewed at length in No. 856 of the *Nation*, has lately been "crowned" by the Académie Française.

The directors of the New York Chorus Society announced a few weeks ago that a series of three concerts would be given during the coming season, under the direction of Mr. Theodore Thomas, if 400 membership subscriptions could be obtained. It is a pleasure to state that already more than half this number of subscribers has been secured. Further subscriptions will be received by the secretary, Mr. C. M. Wiske, at Steinway Hall. The concerts will be private, no tickets being for sale at the door. They will afford an excellent opportunity for those who are unable to secure seats for the Philharmonic concerts, as they will hear at them the same orchestra and conductor, in addition to a large and well-trained chorus of 300 to 400 male and female voices. Last winter the Chorus Society produced three of the most important novelties of the season — Gounod's "Redemption," Schumann's "Faust," and the third act of Wagner's "Parsifal." Its last concert was, beyond comparison, the most finished and inspired musical performance given in New York last season.

—"The chief object," writes a correspondent in London, "of Mr. Freeman's recent account of his impressions of America is to show the essential unity of the English race on both sides of the Atlantic. It is an old story that husband and wife are one also, but, as the henpecked man asked, the great question is, Which one? Now there can be little doubt that the ordinary British observer, in talking about the unity of the two English races, has in his mind the likeness of the American to the normal British type and not any departure from that type toward the American. Indeed, he is often not a little inclined to protest against any threatened Americanizing of British institutions. And yet one of the first and strongest impressions of an American in the habit of crossing over here every two or three years is to the effect that the American invasion of Great Britain goes bravely forward, and that the ultimate conquest of the right little, tight little island is only a question of time. Five years ago the most noticeable symptom of this assault was the sudden appearance in London of many 'American Novelty Stores' for the vending to the native of all sorts of imported American notions and devices. Two years ago the invaders had captured all the groceries and provision stores, and had entrenched themselves behind high walls of tinned fruits and canned eatables of all sorts. This summer the American advance guard has thrown out skirmishers and captured the book-stalls in all the railway-stations. The proportion of American books seen on a British newspaper-stand is not quite as large as the proportion of English reprints scattered over an American stand, but the difference is not very great. All sorts of American books have been reprinted in England—the good and the bad, the merely popular and the honestly worthy. Mr. James, Mr. Julian Hawthorne, and Mrs. Burnett are as secure of their audience on one side of the Atlantic as the other, while Mr. Bret Harte and 'Mark Twain' may find more and warmer admirers here than at home. The delightful little Scotch edition (Edinburgh: Douglas) of Mr. Howells's writings is meeting with great favor; and it has been followed by uniform issues of Mr. Cable's 'Old Creole Days,' Mr. Stockton's 'Rudder Grange,' and Mr. Burroughs's 'Winter Sunshine.' The new 'Riverside' edition of Hawthorne is reissued here, to compete with various cheap issues of the great American romancer. Other publishers have just discovered Theodore Winthrop. Mr. Crawford's 'Mr. Isaacs' and 'Dr. Claudius' have appeared simultaneously on both sides of the water. Of more recent novels there are English editions of 'A Daughter of the Philistines,' of the 'Led-Horse Claim,' and of 'But Yet a Woman'—of which last there are already four different issues by two different houses. Simultaneous with the new Boston Emerson appears an English edition, in six handsome volumes, to be introduced by Mr. John Morley, and published by Macmillan & Co., while a cheap single-volume edition is issued by George Routledge & Sons, and a final volume is added to the selection in Bohn's Library to make it more nearly complete. Needless to say that the 'Correspondence of Emerson and Carlyle' has been one of the great successes of the publishing season. The three American magazines continue to extend their circulation and indeed so fully recognized is the artistic superiority of the American illustrated monthlies that the name of the new English magazine which is to be edited by Mr. Comyns Carr and published by Macmillan & Co., and of which the first number is due in October, is in some sort a challenge to the invader; it is to be *England's Illustrated*."

—It is seldom that a college prize essay can be regarded as a permanent contribution to literature; but this is not too much to say of Mr. George Pellew's essay on Jane Austen (Boston: Cupples, Upham & Co.). It is a very clever piece of work, in which he analyzes with minute care the part played by Miss Austen in the development of the novel. In analyzing her anti-romantic novels, he is very successful, and the whole essay throws much light on the literary causes which tended, apart from her own individuality, to produce her novels. He points out in an interesting way the immense chasm which separates her simple, natural, superficial novels from the deep, altruistic, philosophical, psychological tale as elaborated by George Eliot, full of the pathos and tragedy of life, not the simple little life of individual human pigmies, but the life of the great *être humain*, with all its wonderful moral harmonies and discords. But after all, is not Miss Austen rather a relief after George Eliot? and is there not, we may add, a law of reaction in novel-writing, which forces a generation which has had an overdose of one sort of writing, to develop a taste for another

and opposite kind? It seems to us by no means impossible that a surfeit of immorality, for instance, might be succeeded by some later Miss Edgeworth, as Miss Edgeworth was succeeded by those who worked against her moralities. Mr. Pellew makes two remarks which will strike many of his readers with surprise (and by the way, they express opinions which are not connected organically with anything else that he says). Walt Whitman he refers to as expressing "the reaction against conventionality in poetry," Zola, "that against conventionality in novels and the drama." We should be inclined to go much further than this, and to say that Zola and Whitman represent the reaction against love of form and beauty in art, and are apostles of a creed which strikes at the root of these somewhat as Louise Michel's and Dennis Kearney's do at certain social and ethical doctrines. Whitman is not the first poet who has expressed an impartiality between vice and virtue, or a reaction against conventions, but as the teacher of equality between beautiful and ugly, clean and dirty, foul and pure, he is a pioneer. To say that he represents a reaction against conventionality is to "draw it very mild."

—The "international" novel bids fair to be as much cultivated on the other side of the ocean as here. Halévy's agreeable 'Abbé Constantin,' and Uchard's rather disagreeable 'Inès Parker' have shown that French writers are quick to appreciate the charm of piquant contrasts of character and of novel situation, and all the new combinations which the new element offers them. They appreciate, too, the opportunity of a freedom of action in the heroine which before could be found only in a widow or a *déclassée*. In the April number of the *Bibliothèque Universelle* is a pretty story of this kind by Jeanne Mairet. The heroine is a young lady—rich, of course, for the *oncle d'Amérique* has been replaced by the *jeune fille d'Amérique*—who comes alone to Paris and is cured of a slight illness by a young and struggling physician. He furnishes the heroic, as his mother, a sort of French Mrs. Pickwick, furnishes the comic, element of the sketch. But the heroine, Miss Nellie, is the most satisfactory that we remember in any of the French stories where Americans are introduced, because she is more like the American girl as we know her here Still, we must remark that the ease and rapidity with which the rich young American surrenders her heart to the suitable young Frenchman in a French story, or to the suitable young Englishman in English stories, is only equalled by the ease with which (in fiction) a penniless hero makes a fortune by writing for the press, and the rapidity with which (in fiction) the débutante, without any previous training in acting, rises to leading parts and a high salary.

—The views commonly received by astronomers with regard to the observations of the transit of Venus in 1769, made by Father Hell at Wardhus, have been that he delayed publishing them so long as to give rise to the suspicion of intending to alter them; that he showed them to no one until he had received the observations made at other stations; and that a cloud was thus thrown over their genuineness. The suspicions thus excited were confirmed in 1835 through the discovery and publication by Littrow of Hell's original MS. journal, which its author had neglected to destroy; and the examination of this journal seemed to show numerous cases of alteration and erasure of the original figures. The reason for all which was supposed to be that Hell desired to publish, not his true observations, but results which should be in the best possible accordance with the observations of others. Professor Newcomb, whose experience with the records of the early observers has been such as to entitle his opinion in these matters to the highest weight, has lately taken advantage of a visit to the Imperial Observatory of Vienna to make an examination of Hell's manuscript, which he has conducted in a very systematic and carefully detailed manner. This investigation leads to results very different from the hypotheses of Encke and Littrow, which have not heretofore been questioned by astronomers who have employed these observations in determining the solar parallax. In brief, his conclusions are, that the belief that there was any suspicious delay in the publication of Hell's observations, or anything in his course to give reasonable ground for a suspicion that he intended to tamper with his observations, is a pure myth; and that, with minor exceptions, it is proved by positive evidence, and beyond serious doubt, that all the essential numbers of observation given by Hell are printed as concluded upon and written in his journal at Wardhus, before there was any possibility of communication with other observers. It is gratifying thus not only to know that Father Hell's recorded numbers may safely be employed as the actual results of observations, but also to see the suspicion of falsification, so long resting on a genuine record, effectively removed by entirely competent authority.

—About eighteen months ago an Exhibition of the History and Geography of Brazil was held in Rio de Janeiro. The National Library, as well as other public and private collections, contributed whatever they possessed of interest in that line, and the exhibition was so full that in order to render its utility permanent the Government ordered a complete catalogue of it to be made and printed. Leuzinger & Sons, of Rio, have just issued the third and last part of this 'Catalogo da Exposição da Historia do Brazil' (viii.-98, 1,734 pp. large 8vo). It is the only existing 'Bibliographia Brasiliensis' that aims at completeness, and it is also a most valuable contribution to "Americana" in general. The editor, Dr. Benjamin Franklin Ramiz Galvão, librarian to the National Library, deserves great praise for the conscientious care he has bestowed on the work, in which 20,337 different works or objects are catalogued, each number being accompanied by a note with the name of the owner or exhibitor, and with an occasional bibliographical remark. The 'Catalogo,' which is well printed, has three parts, geographical, historical, and artistic. The first includes also the bibliography of statistical works and of the periodical literature of Brazil. Each part is subdivided into many classes. The geographical, for instance, has special headings for the coasts, rivers, mountains, boundaries, hydrographical and topographical charts, special geography of the provinces, etc. The historical section embraces civil, administrative, ecclesiastical, diplomatic, military, literary, economical, biographical, and natural history. The work is, indeed, very exhaustive. An excellent index of authors fills eighty-two pages, the name of each author being accompanied by the number of his works that were exhibited. Thus, five numbers are assigned to Humboldt and three to Darwin. The present Emperor appears eleven times; L. Agassiz, seventeen times; and Professor Hartt, who was his pupil and devoted his too short life to Brazilian geology and anthropology, thirty-five times. The 'Catalogo' is absolutely one of the most important works that have been printed in Brazil.

—It is not often that one meets with an historical lecture so comprehensive, compact, and lucid as is Dr. Alfred Wiedemann's 'Die ältesten Beziehungen zwischen Ægypten und Griechenland' (Leipzig, 1883), delivered at the University of Bonn in October last. Dr. Wiedemann had previously proved his familiarity with Egyptological studies by his 'Hieratische Texte aus den Museen zu Berlin und Paris' (1879), and a thorough knowledge of Egyptian and Greek history in their relations to each other by his 'Geschichte Ægyptens von Psammetich I. bis auf Alexander den Grossen' (1880). The reader who is not aware of his previous conclusions as to these international relations would expect from him, as an Egyptologist, a strong leaning toward the wonderland of the Nile, in tracing the earliest channels through which culture, science, and art flowed into the lands of the Hellenes. Few Egyptologists are free from such a bias, and, like the decipherers of hieroglyphs, the decipherers of cuneiform inscriptions are generally much inclined to magnify the importance of the field which they cultivate in the compass of human development. Dr. Wiedemann pleasantly (unless for those who are fond of the strange and marvellous) disappoints such expectation. He is the soberest cultivator of Egyptian lore whom we have ever hit upon. He discards, almost without reserve, all the assumptions—whether founded on Greek myths and historical legends or on conjectural expositions of monumental inscriptions—of a very early contact of the Hellenic isles and coastlands with the shores of the Nile. Formerly the hieroglyphic term *'hanebu*, which in late trilingual inscriptions corresponds to Hellenes, was believed to have that meaning also on monuments of the fifteenth century B. C. But this lecture shows that *'hanebu* signifies 'northern people,' and was in early times used to designate the people of southwest Palestine and even of the Egyptian Delta, becoming the term for Greeks only with a late change of the geographical perspective. Equally erroneous was De Rougé's interpretation of the inscription of Pharaoh Merneptah, of the close of the fourteenth century, concerning his victory over "the people of the sea"—an interpretation which turned the heads of many writers on those remote periods, from Chabas to Lenormant, by opening before them the vista of a naval descent on Egypt by a confederation of nations, in which Achæans, Tyrrhenians (Tyrsenians, or Etruscans), Sardinians, and Sicilians appeared side by side with Lycians and Libyans. But the grand discovery is now regarded as exploded—by Brugsch, Kiepert, Duncker, and almost everybody else—and Dr. Wiedemann presents the reasons why the *Akausha* cannot be identified with Achæans, the *Turisha* with Tyrseni, the *Leku* with Lycians, etc., and which render it highly probable that all these confederates of the Libyans specified in the inscription were themselves maritime tribes of Libya.

—Dr. Wiedemann also contends—though rather by way of assertion than of argument—against the view current among the ancients as well as among modern archæologists, that the Greeks borrowed many of their mythological conceptions and images from the Egyptians. According to him, the comparisons of Athena with Neith, of Dionysus with Osiris, of Heracles with Khem, of Zeus with Amon, and of Hermes with Thoth, all rest on resemblances in external details; in principle, origin, and function these divinities are entirely heterogeneous. The Egyptian ferry of the dead has been compared with the bark of Charon, but the resemblance is only on the surface. It transported mummies and mourners, not across a Styx to the land of shades, but across the Nile to the necropolises in the western mountains, whence we frequently see the mourners returning gayly to their homes on the eastern banks. Nor is the sphinx of the Greeks like that of the Egyptians. The former is a fabulous creature, a mixture of animal and human elements, resembling the colossal winged

bulls of the Assyrian temples or the cherubim of the Hebrew prophets; the latter is nothing but a plastically executed gigantic hieroglyph, representing an animal specially sacred to a certain god with a head of a certain king, and expressing the filial relation of the Pharaoh to the divinity. Criticism, Dr. Wiedemann asserts, has also proved the comparatively late origin and historical worthlessness of the Greek legends of Egyptian immigrations into Hellas; they were invented to explain similarities of features. He also defines the essential differences between Greek and Egyptian temple sculpture, which strongly militates against the assumption that Greece was in plastic art the pupil of Egypt. The excavations at Troy and Mycenæ have not brought to light a single object clearly recognizable as originally Egyptian. The Greek alphabet alone is of Egyptian derivation, but it was the Phœnicians who taught it the Hellenes. Direct communication between Greece and Egypt began only, as Herodotus correctly tells us, when Psammetichus, about the middle of the seventh century, opened the Delta to Hellenic colonists. The influence of these communications was mutual, it grew rapidly, and it was Egypt which received more than it gave. This land was on the decline, and the Hellenic race was in its full vigor.

—Herr Cauer, in his *atelier* at Kreuznach, has been making some experiments that may help to settle the long-debated question how much color the ancients used in their sculpture, and the other question whether the moderns can endure as much on theirs. For it is undeniable that painted marble, as it has been painted in the present century, looks altogether too much like wax-work to please a public brought up on pure white. But Herr Cauer proceeds in a different way. A close study of the frieze of the Parthenon convinced him that it had been gilded. It occurred to him that it might have been colored over the gilding. He tried the experiment on some of his own statuettes, of marble, plaster, and terracotta. It succeeded so well that he next tried it on a restored plaster-of Paris casting of the Panathenaic procession (the Parthenon frieze). The whole was first gilded; then over that he painted very lightly some colored ornamentation, using blue (for the groundwork), red, black, brown, green, and white. The gold underneath softens all these colors, it is said, and for some reason prevents the distasteful wax-work effect, and, what is more, it strengthens both the lights and the shadows, an effect which would be very much needed, in the comparatively dark original position of the frieze within the double row of columns that surrounded the temple—another argument in favor of the belief that Herr Cauer has discovered the process used by Phidias. If the accounts given can be trusted, the German sculptor has revived a method which will wonderfully increase the effectiveness and especially the lifelike character of sculpture.

—One of the most interesting commentaries on one of the most interesting points of Ionian archæology, is the book of the Florentine voyager Christopher Bondelmonte, 'Of the Islands of the (Greek) Archipelago,' containing the observations made during a voyage undertaken about the beginning of the 15th century. Of this book three manuscript copies are known to exist or to have existed—one in Florence, supposed to be the original, one in London, and one in Paris. That in Florence has evaded all late researches, but a recent discovery at Constantinople, in the Seraglio Library, by E. Miller, of a Greek translation of Bondelmonte's book clears up many points of the narrative hitherto incomprehensible. Mr. S. Reinach, one of the thorough and admirable archæologists whom the liberality of the French Government trains in the school of Athens, and whose joint work is the greatest item in the classical archæological progress of to-day, has put into a brochure his article in the *Revue Archéologique* for January-February, 1883, containing a careful and subtle collation of this Greek MS. with the Latin text hitherto known, with the result above indicated. The studies of Bondelmonte are of the first importance for the mythology of Delos, where Mr. Reinach and his confrères have done so much admirable work during the past six years, and Mr. Reinach's analysis of the information developed by the collation of the new MS. with the old is a model of thoroughness and insight. When we remember that in the latter part of the 17th century the Parthenon was intact, and that Bondelmonte, as Mr. Reinach shows lucidly by his collation, found more than a thousand statues in Delos, including one which his company with all their ship's tackle were unable to raise upright, we can gather how much more the relics of the antique civilization have had to suffer from the ravages of human ignorance than from time. The brochure of Mr. Reinach is published by Joseph Baer, Paris.

—The last number of the *Historische Zeitschrift* (vol. 50, Heft 1) contains an article by Arnold Gädeke which passes in review several recent works upon Mary Queen of Scots, especially the paper by Harry Bresslau upon the casket letters, in the *Historisches Taschenbuch* for 1882. Bresslau agrees with Schiern (whose 'Bothwell' was reviewed in the *Nation*, May 20, 1880), that Mary was in love with Bothwell, and had an understanding with him; but believes that all the casket letters were genuine except No. 2, the longest and most important. Holding that this was forged, he holds that Mary's connivance in the murder of Darnley cannot be considered proved. Gädeke takes issue with him here, giving strong arguments for the genuineness of this letter as well as the rest. These arguments touch the language and the spelling, as well as the internal coherence of the letter itself. For the matter of that, it appears to us, as we said in our review of Prof. Schiern's work, that when the Queen's guilty passion for Bothwell is once admitted, one need not hesitate to believe her guilty of conniving at the murder. The motive was present, and the circumstantial evidence against her is so strong that her only defence can be the unlikeliness of the crime—her character, her reconciliation with her husband, her innocence as regards Bothwell. Once give up these, and the crime becomes likely instead of unlikely.

—A universal history of literature from the earliest times and among all civilized peoples down to the present day, with illustrations from every literature, including extracts from the most illustrious living Italian and foreign writers, would seem, in Dante's words, *non è impresa da pigliare a gabbo*, even in this age of primers. That this vast undertaking is to be comprised in three series of six volumes each, and to be accomplished in two years, heightens our amazement, while it inspires very natural doubts as to the character of the result. It would, however, be unfair to condemn this enterprise on general principles, for the name of the author, Professor Angelo De Gubernatis, is a guarantee that the work will be done in a scholarly manner and as thoroughly as is consistent with the plan of the history. The author is one of the most accomplished of living scholars, well versed in the languages of the Orient and Occident, and withal a man of fine literary sense and general culture. The result of his work cannot fail to be valuable and interesting to a large class of readers who are obliged to depend on books of this kind for their knowledge of foreign literatures. Two volumes have thus far appeared, containing the history of dramatic literature with selections ('Storia universale della Letteratura': Vol. i. Storia del Teatro drammatico, vol. ii. sezione 1, Florilegio drammatico; Teatro orientale, antico e cristiano; sezione 2, Teatro moderno. Milan, 1883, 16mo, pp. 598, 775). In the seventeen pages devoted to the *Teatro sacro cristiano*, the liturgical origin of the mediæval drama is clearly set forth, together with the various stages through which it passed in Italy, such as the *laude*, *devozione*, and *sacra rappresentazione*. A slight error is made in referring the play on the subject of the Wise and Foolish Virgins (technically known as the *Sponsus*) to Provençal and not to Old-French literature. In the corresponding division of the *Florilegio* are given no less than fifteen specimens of this class: scenes from the "Χριστὸς πάσχων," attributed to Gregory Nazianzenus, from the Pseudo-Querulus, from two of Roswitha's plays, from a *laude* of the 13th century, a *devozione* for Good Friday of the 13th or 14th century, and from nine Italian *sacre rappresentazioni*. The English Theatre occupies but sixteen pages, nearly seven of which are devoted to Shakspere. In the *Florilegio* are given but five extracts: a scene from Marlowe's "Faust," the famous soliloquy from "Hamlet," a scene from the "School for Scandal," and one from Byron's "Our Boys" (*I Nostri Bimbi*), of which the author says: "It was played in England for two years in succession and was also successful on the Italian stage." As the reader can easily see, there is a lack of proportion in the work, but on the whole it is very meritorious.

STEPHEN'S HISTORY OF THE CRIMINAL LAW OF ENGLAND.—II.

A History of the Criminal Law of England. By Sir James Fitzjames Stephen, a Judge of the High Court of Justice, Queen's Bench Division. London and New York: Macmillan & Co. 1883. 3 vols.

Sir James Stephen is primarily a logician and controversialist; he is secondarily an historian and a legal antiquarian. His book reflects the character of its author. It is in the main a work on criminal jurisprudence; it is secondarily a history of criminal law. But though this is so, the originality and importance of Sir James Stephen's treatise lie in its historical character. The essays on jurisprudence which it contains are full of interest, but they neither exhibit a new side of their author's mind nor open a new field of thought: their merits are great, but among these merits can hardly be numbered originality. Of the historical portion of the book, one may speak in very different terms. There is (odd though the assertion sounds) real originality in the attempt to trace out the development of a province of English law. Sir James Stephen deserves in this matter the praise always due to a man who has broken fresh ground. The only English writer who has attempted much in the way of recording the history of English law is Reeves; and Reeves, who at the best was pedantic and unreadable, has been spoiled for the present generation by the pretentious editorship of Mr. Finlason. Indeed, Sir James Stephen's work has appeared but just in time to save Englishmen from the reproach that the legal history of their country excited more interest abroad than in England. Of the essential merits of M. Glasson's work, we are, we frankly admit, not yet in a position to speak decisively; but a mere glance at the 'Histoire du Droit et des Institutions politiques, civiles et judiciaires de l'Angleterre' proves that a French professor has, at any rate, attempted to gain a general view of the law of England which is not given by any Eng-

lish or American writer. As regards one large province of law, Sir James Stephen's labors have saved the English people on both sides the Atlantic from reproach. We may feel well assured that no foreigner has ever ventured on such a complete survey of English criminal law as has been undertaken and carried out by the English Judge.

Nor are the boldness and originality of his design by any means the sole or the greatest of Sir James Stephen's merits. His training, indeed, as a lawyer, and the fact that he approaches the history of law from the legal rather than from the historical side, does to a certain extent affect injuriously the flow of his narrative. To narrate with perfect clearness, to tell a story well, simple as the matter seems, is a gift possessed by very few among professed historians. Macaulay's eminence (as has been well pointed out by the best of his critics) lies in his strictly speaking "singular" talent for narration; and it is not to be expected that an author who takes up historical narrative as something like recreation from a quite different class of labors, should exhibit a skill in the art of story-telling which is not possessed by an historian of such preëminent literary ability as Motley or Froude. But if Sir James Stephen falls short in some of the acquirements which ought to be possessed by writers wholly devoted to historical composition, he may legitimately boast that he has, in more respects than one, revealed to the world aspects of English history which had escaped the scrutiny of regular historians. Our aim in this article is to direct the attention of our readers to a few among the many instances in which Sir James Stephen, while occupied in his proper task of tracking out the growth of legal institutions, doctrines, or practices, has thrown new light on the general course of English history.

What, for example, can be more instructive to an historian than the whole of Sir James Stephen's chapter on libel and kindred offences? The law of defamation reflects the different views held by different generations as to the relation between subjects and their rulers. If the sovereign of the state be looked upon as something essentially superior to the subject, censure of the Government is regarded as prima facie a crime only to be excused by very special and strong circumstances of defence. If, on the other hand, the Government be regarded as the servant of the people, the so-called subjects have, like any other masters, the right to criticise the so-called rulers, limited only by considerations of expediency or of justice to individuals. A perusal of the twenty-fourth chapter of the work before us will show any one how curiously the gradual change from one of these views to the other of the relation between people and king has been recorded in the equally gradual change of the law of libel.

"The main stages in the history [of the law of libel] are as follows. Under the Plantagenets the law of libel was comparatively unimportant, though the offence of libel, defined in the most general terms as a defamatory writing, was known to the law. Under the Tudors and Charles I., the law of libel became highly important and prominent. The definition of the offence was stringent though vague, and the law was administered by the Star Chamber, which decided both the law and the fact. During the latter part of the seventeenth century and into the eighteenth, the Court of King's Bench adopted the doctrines of the Court of Star Chamber, but as the mode of trial was by jury, efforts were made by very distinguished advocates—and especially, toward the end of the century, by Erskine—to get juries to adopt, for practical purposes, a definition of the offence of libel different from the one acted upon in earlier times. This caused the famous controversy finally ended by Fox's Libel Act, passed in 1792. The successors of Lord Mansfield and Mr. Justice Buller never gave up the view of the law which their predecessors had adopted, though they modified the practice in obedience to the directions of the Libel Act; but the change of public sentiment as to the free discussion of political affairs has practically rendered the law as to political libels unimportant, inasmuch as it has practically restricted prosecutions for libel to cases in which a libel amounts either to a direct incitement to crime, or to false imputations upon an individual of disgraceful conduct in relation to either public or private affairs. This history I now propose to relate in detail."

Now, this paragraph, which sums up in a few lines the results of pages, suggests at every turn reflections on the course of history. The stringency, for example, of the law under the Tudors and Charles I., emphasizes the extraordinary difference between the political sentiment of the sixteenth or seventeenth century and that of the eighteenth or nineteenth. The allusion to the adoption by the Queen's Bench of the doctrines of the Star Chamber recalls an often-forgotten fact—namely, that the jurisdiction of the Star Chamber was created, was tolerated, and was extended partly because the action of a court which has now become a byword for oppression was from some points of view beneficial, and met wants of the time which were not provided for by the common-law tribunals. The Star Chamber, it has been sometimes said, was a criminal court of equity. The dictum exaggerates the merits of an institution which fell amidst the universal execration of Englishmen, and one might with equal truth say that the courts of equity were in their origin little better than a civil Star Chamber. Still, a statement which is a one-sided apology for an indefensible institution does represent a forgotten side of a curious institution. The Star Chamber was destroyed because its tyranny was unbearable, but it obtained the power to tyrannize because the exercise of its authority was at one time beneficial.

The allusion, again, to the famous controversy which ended in Fox's Libel Act reminds us of the work done by the eighteenth century—namely, the carrying out of the transition from the ideas of the sixteenth and seventeenth to those of the nineteenth century. It recalls also the peculiarity of the mode in which this transition was achieved in England. A political controversy was fought out by legal methods, and the field of battle was the law courts. Mansfield and Erskine equally affected to maintain the established principles of the law; but the true point at issue between them was rather what the law ought to be than what it was. A revolutionary change was turned into a dispute over judgments and precedents. "The law," writes Sir James Stephen, "was modified, in the course of a long series of years, by changes which took place in public sentiment." We should ourselves prefer to say that the law was never really fixed, but represented the fluctuating and changing sentiment of the nation. But, whatever be the right way of stating the mode in which the law of England was modified, "with hardly any legislative interference," the fact of this modification by means of forensic conflicts is of supreme importance. There was but one country in Europe where revolution could thus have taken the disguise of conservatism; and if the kind of fiction under which changes were effected in England during the last century was, so to speak, the product of the soil, it is worth notice that the age was an age of fictions. The appeal to the law of nature abroad was neither more nor less an appeal to a fiction than were most of the theories, countenanced by Tories and Whigs alike, as to the rights whether of the people or the Crown under the English Constitution.

But we should greatly underestimate the historical value of Sir James Stephen's volumes if we let our readers suppose that the only way in which his book elucidates the annals of England is by throwing important light on the changes in the sentiments of the English people. The 'History of the Criminal Law,' at more than one point, directly suggests new solutions of very difficult historical problems. The readers of the *Nation* have more than once had their attention called to what may be termed the paradox of Puritanism. This paradox consists in a strange and, to a superficial view, incomprehensible combination of triumphant success, immediately followed by complete failure. From 1603 to 1660 the Puritan cause, to all outward appearance, triumphed over every obstacle; the Restoration of 1660 turned out to be not only a temporary defeat, but a complete overthrow of the whole forces of Puritanism. What is the explanation of a puzzle which most historians hardly attempt to solve? Its solution must probably be sought in several distinct causes; but we confess that we have never read any work which suggested so forcibly as does the one we are now considering, the existence of one cause which is almost sufficient of itself to account both for the victories and for the defeat of Puritanism. This cause is the dislike felt by the English people more than two centuries ago, as strongly as it is felt now, of clerical domination. No one who has not studied Sir James Stephen's account of the ecclesiastical courts under the Tudors can realize to himself the extent to which clergymen were then enabled to interfere with the domestic life of English laymen. These courts somewhat resembled the courts of modern police magistrates, with this difference, that the ecclesiastical tribunals "dealt with all sorts of irregularities as being sinful, whilst magistrates would punish, if at all, only on the ground of their being statutory offences." They had jurisdiction over all offences arising out of the relation of the sexes. Hence they were enabled to interfere with all the most private affairs of domestic life. The sanction, it is true, by which the ecclesiastical courts enforced their decrees was excommunication, but excommunication was much more than mere moral or spiritual censure. It might involve a variety of civil disabilities, and a refusal to submit to an enjoined penance led ultimately to imprisonment. The jurisdiction of these courts has, as Sir James Stephen well points out, a far more important place in general history than has usually been assigned to it. The difficulty at the present day is to understand how people submitted to it.

"It is difficult even to imagine a state of society in which, on the bare suggestion of some miserable domestic spy, any man or woman whatever might be convened before an archdeacon or his surrogate, and put upon his or her oath as to all the most private affairs of life: as to relations between husband and wife; as to relations between either and any woman or man with whom the name of either might be associated by scandal; as to contracts to marry; as to idle words; as to personal habits; and, in fact, as to anything whatever which happened to strike the ecclesiastical lawyer as immoral or irreligious."

Add to this the all-important consideration that, under the influence of Laud, the interference of the clergy and of the clerical courts was increased rather than diminished, just at the time when popular feeling was becoming more and more adverse to a system which had always been oppressive; and that the Stuarts mismanaged matters so much as to bring upon the Crown all the odium which was gradually accumulating against the clergy.

"There is no reason to believe that the activity of the ecclesiastical courts as instruments of moral correction was at all abated as the year 1640 approached. In the court of the Arch-

deacon of London, between the 27th of November, 1638, and the 28th of November, 1640, the Judge held thirty sittings, the number of entries of causes being more than 2,500. The number of persons prosecuted must have been considerably less, allowing that each person attended on two or three court days. The index, however, would show that about 1,800 persons were before the court in that year, three-fourths of whom, it may be calculated, were prosecuted for tippling during divine service, breaking the Sabbath, and non-observance of saints' days."

The last-mentioned offence is specially noticeable, for it must have involved the punishment of ardent Puritans for the refusal to comply with what seemed to them Papistical superstition. Note, also, that in the background stood the grand support of great and of petty tyranny —the Star Chamber. As one meditates upon these facts, one ceases to wonder at the hatred kindled among large masses of the people, in the first place against the clergy, and in the second place against the Crown, which had, for almost the only time in English history, identified itself with clerical domination. King James's doctrine, "No bishop, no king," was likely enough to lead to the practical conclusion that it was better not to be ruled by a king if this was the only condition on which the nation could escape the rule of the bishops. Now if, as seems highly probable, a growing hatred to clerical interference was at least one main cause of the unpopularity of the two first Stuarts, it is easy to perceive that the very sentiment which, in a measure, accounts for the fall of the monarchy, also, in a measure, accounts for the fall of the Commonwealth. The fall of the monarchy meant the fall of clerical despotism; the Restoration, whatever evils it entailed on the nation, meant the fall of Puritanic tyranny. The Restoration, moreover, did not restore either the Star Chamber or the system of Laud. The Revolution, while it freed the nation from all danger of royal despotism, did not restore that rule of the saints which, whatever was its true character, had impressed itself indelibly on the memory and the imagination of the people as the reign of hypocrisy. The people of England, in short, were, throughout all the political changes of the seventeenth century, consistent enough in their course of action: they wished to get rid of all interference, whether by clergy or by presbyters, in the affairs of domestic life. This end the English people attained. They cared little for the ecclesiastical and civil ideals either of Laud, of Milton, or of Cromwell; but they attained that kind of freedom from ecclesiastical despotism which Englishmen in all ages have felt to be an essential element in the comfort and happiness of life.

This, at least, is the reading of the history of the seventeenth century suggested by Sir James Stephen's investigation into the records of the criminal law. The suggestion is well worth consideration; it gives a new point to verses which, though they refer to the contests between England and Scotland, sum up roughly, but we suspect truly enough, the moral drawn at the time by the mass of Englishmen from the great conflict between Puritanism and the Stuarts:

> "He who considers well will find indeed,
> Till Holy Island parts us, not the Tweed,
> No other force could you from us seclude;
> No war was ever like a bishops' feud.
> All litanies in this have wanted faith:
> There's no 'deliver us from bishops' wrath.'"

SARMIENTO'S SPANISH AMERICA.

Conflicto y Harmonias de las Razas en América. Por D. F. Sarmiento, autor de Civilizacion y Barbarie. Vol. i. Buenos Ayres. 1883.

THIS volume is dedicated to Mrs. Horace Mann, an old acquaintance of the author; and a letter to that lady, signed on Christmas Eve, 1882, forms a "Prologue" to it. The septuagenarian ex President of the Argentine Republic recalls in his epistle his active career, largely devoted to the promotion of education, in which the late Horace Mann was his principal guide, and alludes to some of his former publications—'Civilizacion y Barbarie,' 'Vida de Abran Lincoln,' 'Las Escuelas de los Estados Unidos'—in which he set the men and institutions of the United States as shining examples before his countrymen. A strict imitation of the constitution of this country has been carried out in his, but it has not remedied the evils which it was expected to remove. These evils are not local, nor restricted to the Plata basin alone, nor even to all South America. They are common to Ecuador and Bolivia, Venezuela and Mexico. An immense material advance, it is true, has taken place in some parts; the aspect of the large cities has been wonderfully changed; palatial buildings, railways, steamers, telegraphs, new industries, have been created—partly in anticipation of the future—and presses, journals, colleges, and universities have been multiplied. But the political situation is perplexing and alarming, and demands serious consideration.

The new generation in the author's native republic, having been reared in peace, seems to be losing its way; there is dangerous retrogression; while the theory is excellent, the practice is wretched. Four thousand doctors of law have been created since the reorganization of the universities in 1853, and "in chambers and congresses, councils and cabinets, right is being more and more ignored. Lawgivers and executives vie with each other in violating the precepts which were sacred thirty years ago." Constitutional principles are learned in Spanish America as Hindoo children in India are taught by missionaries the doctrines of Christianity. The Hindoo pupil, at the examination, answers with the ready skill of a theologian. "Then follow these questions and answers: 'Are you a Christian?' 'No.' 'Do you want to be one?' 'No.'" Presidents of Venezuela, Ecuador, and other republics have themselves reinstalled again and again by servile tools, and a servile press lauds them as great men. Elections without a register of votes, majorities always given for those in power, insurrection deemed the only remedy of abuses, and servility here, revolution and anarchy there, corruption and insecurity everywhere—this is the general tableau. Add material stagnation or relapse in Peru, Bolivia, Paraguay, and Ecuador. The material advance made elsewhere, as at the mouth of the Plata and recently in Mexico, is mainly the result of foreign energy, while the resistance is native, constant, and general. The common roots of the evil lie deep. European prejudice finds them exclusively in the race peculiarities of the Spanish Americans. This view is both inadequate and injurious; a more comprehensive examination is required, and the aged statesman undertakes it—saddened by disappointments, but far from despairing, and invigorated by manly study. His historical survey is to embrace "both Americas," and set forth resemblances and contrasts, "conflicts and harmonies"; but his inquiring eye is mainly fixed on South America, and especially the Argentine Republic. The "Prologue" is followed by "Prolegomena," which open thus:

"We are going to ask ourselves, perhaps for the first time, who we were when we were called Americans, and who we are while we call ourselves Argentines.

"Are we Europeans?—So many copper-colored faces contradict our assumption.

"Are we aborigines?—Scornful smiles of our fair complexioned ladies give us the only answer.

"Mixed people?—Nobody likes to be thus classed, and there are thousands who dislike to be called either Americans or Argentines.

"Are we a nation—a nation not made up of accumulated materials, alloyed and cemented?

"Argentines?—How far, and since when? It is desirable to make this clear. . . .

"It is our purpose to descend to the depths of the social composition of our populations; and if examination should disclose the fact that we spring from distinct origins, scarcely fused into a common mass, we will penetrate upward to the remote heights whence the confluents have come down, in order to estimate their impelling power, the salubrity of the waters that formed them, and the nature of the sediments which they have dragged along."

This is the key to the book. After some wanderings through prehistoric ages and the airy domain of ancient myths, in which he indulges, with a strong inclination to demonstrate primeval connections between the two hemispheres of the globe, and the common origin of their primitive inhabitants, Señor Sarmiento passes over to a rather fugitive examination of the conditions in which the Spanish conquest found and left some of the principal native races of America, Quichuas, Guaranís, etc. Some of these pages are quotations from Don Juan de Ulloa or reproductions of characteristic old Spanish ordinances; a few of them are, unfortunately, twice inserted, and in part (like many of the foreign titles, citations from Latin authors, or English names, throughout the book) are shockingly misprinted. The barbarism that marked the subjugation and partial extermination of the aborigines is here brought into full relief. Our author, however, though unreservedly branding the iniquities of conquerors, rulers, and priests, is entirely free from maudlin sentimentality in favor of the victims. He detests the Christians who hunted the free Indians or worked the enslaved to death, but has no admiration for the savages who succumbed. (No Anglo-Saxon writer, free from all taint of both Spanish and American blood, could write with less bias toward either side.) He is especially hard on the Araucanians, and he quotes Ercilla, whose epic has immortalized them, and Molina, who describes them as a nation gifted with the noblest of virtues, only to sneer at those fantastic pictures. He admits that the modern Chilenos owe some of their bravery to the Araucanians, but only to those idealized in Ercilla's martial strains, whom they have not unsuccessfully striven to imitate—as in the late war with Peru, to which he applies these sonorous verses of the "Araucana":

> "Hubo allí escaramuzas sanguinosas,
> Ordinarios rebatos y emboscadas,
> Encuentros, y refriegas peligrosas,
> Asaltos, y batallas aplazadas,
> Raras estratajemas engañosas,
> Astucias y cautelas nunca usadas,
> Que aunque fueron en parte de provecho,
> Algunas nos pusieron en estrecho."

A slight irony seems to lurk in the last line of the quotation, and possibly Señor Sarmiento's remarks concerning the Araucanians have been accented with the intention of showing the trans-Andine neighbors of his republic that there is as little reason to boast of consanguinity with the western division of the "Arauco-Pampean" race, though improved by agricultural habits, as there is of consanguinity with the low eastern barbarians who roam over the Pampas of the Argentine Confederation.

Señor Sarmiento devotes some interesting pages to the grand Paraguayan enterprise of the Jesuits. "A religious association, animated by a wonderful spirit of activity, working under severe discipline and solely with the arms of persuasion possessed by the mentally superior white race, undertakes the task of organizing societies on a savage basis and a religious principle, with a theocratic government involving absolute spiritual tutelage. Such were the famous Missions of Paraguay, which for two centuries filled the world with their glory—produced, in fact, by eminent historians and pane-

gyrists of the order"—until the Spanish civil Government's jealousy caused the deportation of the *padres* to Europe, leaving, however, 60,000 Indians to be kept by the authorities imposed upon the Missions "in the picturesque towns adjoining the altars at which they were accustomed to pray and chant to the Holy Virgin rather than to God." The attempt involved a revolution more important than those proposed by Rousseau, Fourier, or Saint-Simon. The social experiment of the Jesuits was carried out in a blooming region and a placid clime, worthy of the paradise to be created. The work went on propitiously, but "when the artificial plant blossomed, it faded away and vanished from the face of the earth, as if broken by the southwest blast. . . . The support upon which it was leaning left it at the wrong time." The Jesuits bequeathed their lamentable Utopia and their system of administration to Doctor Francia, and Paraguay perished under Francia's second successor. The fatal blunder of the Jesuits, our author thinks, was community of possessions, which undermines every similar organization, and without which even the Mormons prosper, though building on a foundation of superstition resembling that of the Missions. In reality, however, the pretended community of property established by the learned missionaries was a sham. "The Indians were unsalaried laborers, fed and clothed out of common storehouses—baptized, cured, and interred, as every master's serfs are; and some had the honor of being called justice of the peace, *regidor*, or mayor, as supervisors of the works—of course under the tutelage of a Father Jesuit and the administrative auditorship of another, the two watching and spying each other, as the law of the order demanded." Satisfying the voracious appetite of the Indians was the most effective means of winning their hearts for Jesus Christ. But the sword which slays thousands was also used for getting neophytes. Surprises, massacres, transportation *en masse*, were not wanting.

Señor Sarmiento believes with Wilson, the historian of Mexico, that the destruction by the Spaniards of the forests of the plains was incomparably more fatal to the Indians than murderous fanaticism and the task-master's cruelty. Just as surely as the deer whom they hunted, the Indians were doomed to disappear with the forests, whose atmosphere was their life element. Few survived. Las Casas, in his ardor to save the Indians, misunderstood the conditions under which they could be saved. The importation of negroes to do their work was a misapplied remedy. The later missionaries learned the true remedy from longer experience. The "reduced" Indians were forced to labor, and those who did not succumb to the change and the exertion became the progenitors of a race of agriculturists, which is now repeopling Spanish America—degenerate, servile successors of indolent and coarse aborigines. "Be this as it may, the negro race entered as a cement into the metal out of which was to form itself the American people, breaking in its rise the barriers dividing populations into castes, as in India and Egypt, and perhaps also in the Empires of Mexico and Peru, . . . and proceeding, by right of numbers, to declare the general will by vote or otherwise." Meanwhile Spain, in which the fires of the Inquisition were burning out the traces and germs of new ideas, was jealously guarding its American dominions—and it did so for three centuries—against all contact with the non-Spanish world, prohibiting the entrance of a single free individual of non-Spanish origin. Thus the result was to be "a mixture of pure Spaniards as the European element with a sprinkling of the negro race, diluted together in an enormous mass of natives, prehistoric men of scanty intelligence"—three elements equally untrained to self-government. These races could produce no such homogeneous whole as did Gauls and Romans, Saxons and Normans, Iberians and Goths—peoples of one race, the Caucasian. There are all kinds and shades of mixture, all distinguishable, and apparently destined to relapse into more pronounced original types, instead of producing homogeneity. The prevailing types are marked by debility, lack of energy, and features devoid of character and expression.

Want of space prevents us from following the author in his extensive speculations on the Inquisition, the "Conquistadores," the Jews of Spain, the colonization of the territories now forming the United States, and a variety of other topics.

CELTIC BRITAIN.

Origines Celticæ (a Fragment), and Other Contributions to the History of Britain. By Edwin Guest, LL.D., D.C.L., F.R.S., late Master of Gonville and Caius College, Cambridge. London and New York: Macmillan & Co. 1883. 2 vols. 8vo.

Early Britain: Celtic Britain. By J. Rhys, M.A., Professor of Celtic in the University of Oxford, etc. London: Society for Promoting Christian Knowledge; New York: E. & J. B. Young & Co. 1882. 12mo.

THESE two books are testimonials to the strong interest felt at the present day in the history of the Celts of Britain and their relation to English history. Dr. Guest is placed by Mr. Freeman, along with Professor Stubbs, "at the head of living students of English history." Nevertheless, except for expressions like this from men whose judgment has weight, Dr. Guest would hardly be known outside of a small circle; for he was one of those men who accomplish great results in detail, but who lack the opportunity or the ambition to combine these results in a literary form. His 'English Rhythms'—philological rather than historical in its character—is his only considerable finished work. The present work contains complete papers, complete chapters, but no complete treatise.

The 'Origines Celticæ' occupies the first volume and about a hundred pages of the second; the rest of the work is taken up with "Historical Papers," thirteen in number, most of them read at the several meetings of the Archæological Institute. It is in these papers that Doctor Guest's great historical work was done, and it is upon them that his reputation will mainly rest. The main treatise is not only unfinished, but is on the whole of an unsatisfying and, we must say, disappointing character. The first volume is entirely introductory, consisting of twelve chapters, "The Kimmerioi and Cimbri," "The Iberes and Aquitani," and so on, ending with "The Belgæ." We are far from asserting that these chapters do not contain much valuable material, but they are made up for the most part of those investigations into primitive ethnology which are among the most fascinating of scholastic inquiries, yet at the same time are necessarily the most resultless. The man who once listens to the siren voices of Cimmerians, Pelasgians, and Tyrrhenians is lost; and this for the reason that, while there are not and never can be data for any positive conclusions, there is nevertheless enough material, at once seductive and exasperating in its fragmentary character, to keep him busy for his lifetime. The problem is even more hopeless than that of the ethnical affinities of the natives of America, because here we have the peoples themselves to study, while in primitive European ethnology we have only remote survivals and casual bits of observation made at a time when men had not learned to observe. One of the editors says (Prefatory Notice, p. xxvi.): "We have the links of his chain of argument, but the penetrating genius that would connect them and make them conclusive is withdrawn." For the reasons given above, we doubt whether this connective principle could ever have been added.

The four chapters in the second volume are devoted to the special subject of the work—"Britons, Scots, and Picts," "British Geography," "British Buildings and Weapons," and "The Itinerary of Antoninus." These are subjects calculated to call out the best powers of the author; unfortunately, they are even more fragmentary and unfinished than the earlier chapters. The papers which follow well deserve the praise given them in the preface (p. xvi.), as "these epoch-making discourses on the early history of our country, which have justly obtained for him the character, given by a great living authority, as 'the discoverer of early English history.'" Doctor Guest was, we believe, the first who brought the intimate knowledge of local topography to bear, in any thorough and systematic manner, upon the questions of early English history. It is not too much to say that his work alone rendered possible Mr. Green's best work, 'The Making of England.' As we have said, the original discoverer had not the time, or did not care, to embody his results in a continuous work: they have formed, however, the basis of all subsequent work, and in especial of that which we have indicated. We find in the preface an interesting description of Doctor Guest's method of investigation (p. x.):

"He used to undertake long walking expeditions to examine the face of the country, and trace out the remains of ancient occupation. On these expeditions he occasionally walked as much as forty miles a day. Often he went right ahead over hedges and ditches and through tangled copsewood, to follow the course of some faint vestiges of dyke or boundary, taking for guide sometimes a laborer from an adjoining village, sometimes one whom he shrewdly suspected to be a poacher, who knew every turn and cover of the surrounding country. 'Uncommonly clever fellows,' he sometimes found these guides, entering with intelligent interest into the object of his search, and beguiling the way by their graphic sketches and racy remarks on men and passing events. Very dirty and dusty, he was returning one day from an expedition of this kind, when, turning into the village, he met two clergymen. They recognized him, for Doctor Guest caught the look and tone of astonishment with which one exclaimed in an undertone, 'That's the master of Caius'—the quick glance round and the further remark, 'Yes, that's *he*.' 'No doubt they were astonished,' he said, 'seeing me in such a dirty condition, and in company, I have little doubt, of one of the black sheep of their flock.'"

We also have a graphic description (p. xvi.) of the appearance of Doctor Guest as he presented his views to the Archæological Institute—the "sonorous voice, . . . the kindling eye, the firm-set lip, the expressive gestures, while, as warming with his theme, he paced before his huge map, leading his hearers on step by step to the conclusion he had arrived at, and enabling them to realize it with the perfect conviction of a certain truth."

The special contributions of Doctor Guest to early English history are indicated by the titles of his principal papers. "The Early English Settlements in South Britain," "The English Conquest of the Severn Valley," "The Invasion of Britain by Julius Cæsar," "The Campaign of Aulus Plautius in Britain, A. D. 43," are perhaps the most important, but others speak in detail of the Belgian settlements, the Welsh boundaries, and the four "Roman Ways." All of these, it will be noticed, are concerned with southern Britain only, hardly, in fact, touching at all the

country north of the Thames. It may be said that Dr. Guest wholly reconstructed the early history of the kingdoms of Kent, Sussex, and Wessex, the account given by Freeman and Green being in the main that of the papers here given. It will be noticed, further, that most of this is *English*, not *Celtic* history. The most important portions of 'Origines Celticæ' are not those which are indicated by the title of the book. The second volume is illustrated by eight admirable maps, and there is a very complete index.

Professor Rhys is, we suppose, in his own field as high an authority as Doctor Guest in his. A brief statement from his pen, therefore, of the present condition of the Celtic question is a welcome contribution. It is, indeed, too brief. The author seems in some places embarrassed by the necessity of crowding so large a subject into such narrow limits. Perhaps the most interesting point brought out by this volume is that of the origin and history of the Kymry. This name, it is well known, is usually considered to be that of one of the two great branches of the Celtic race, and its obvious resemblance to *Cimbri* and *Kimmerioi* lies at the foundation of Doctor Guest's long-spun ethnological discussions. Professor Rhys cuts the foundation away from the theory by showing (p. 114) that Kymry is a national, not a racial name. It means "fel low-countrymen," and was appropriated by those Celts, consisting of members of both branches (Brythonic and Goidelic), who banded themselves together as a new nationality, in the face of the English invaders. It embraced Wales and Strathclyde, but it was, he thinks, "the fact of being [during the Roman occupation] under the charge of a single general, the Dux Britanniarum, that had the effect of marking off from the other Brythons those who gave themselves the name of Kymry, and first taught them, perhaps, in some measure to act together." This military organization, he thinks, was kept up in a degree after the withdrawal of the Roman troops in 410. As to the original territories of the new nationality, their boundaries can "only be guessed." The earliest known *Gwledig*, Cunedda—shortly after the above date—appears to have had his seat at Carlisle, from which point his authority extended over Wales and to the eastern coast of England. From this time we have a tolerably continuous history, with a succession of rulers who kept up the traditions of the Roman period. Chapter iv. treats of the annals of this dynasty—often, as might be expected, confused and wearisome, but possessing a real interest in the relations here sketched with the English kingdoms. The next chapter, "The Picts and the Scots," traces in the same way the history of the Celts of northern Britain. By *Pict*, as well as *Kymry*, Professor Rhys does not understand a racial distinction, as it included (p. 157) not only Brythons and Goidels, but also "non Celtic natives, to whom the term probably most strictly applied at all times." Both chapters carry the history down through the eleventh century, covering the Anglo-Saxon period.

Of special points, the author says in the preface that he "has accepted and employed the theory advanced by ethnologists, that the early inhabitants of this country were of Iberian origin." On page 135 we have an interesting theory as to the much controverted term "Bretwalda." He connects it with the Gwledig of the Kymry, and thinks it was "an exclusively Northumbrian title, assumed first by Eadwine after conquering the over-king of the Kymry in the person of Cadwalla." The leadership "of the four first kings in Bæda's list was exercised in Lower Britain as a continuation, probably, of the office of the Gwledig who succeeded the Count of the Saxon Shore, and there is no reason to think that it was ever known as that of Bretwalda or Brytenwealda: it survives, possibly, in the functionary called the Warden of the Cinque Ports."

AMOS'S SCIENCE OF POLITICS.

The Science of Politics. By Sheldon Amos. [International Scientific Series.] D. Appleton & Co. 1883.

Mr. Amos's treatise is to be looked at less as an original attempt to define the nature and limits of politics as a science than as a résumé of the work already done in this field. He touches upon almost every question that has engaged the attention of political writers or statesmen from the days of Aristotle to our own times, and what he has to say is generally safe and sound. But his book is chiefly interesting to us, as it appears to have been to him in writing it, through the questions which it continually suggests, and indeed asks, yet leaves unanswered. Of these, of course, the main one is: What is meant by the Science of Politics? What are its laws? How far is it a science at all?

In one aspect, there seems to be no branch of study which is further removed from the scientific stage than politics. A science, as we generally understand it, is a department of human knowledge which is studied by those who are interested in it for its own sake, and not for any ulterior purpose, however good. Our idea of a mathematician, or an astronomer, or a physicist, is of a man to whom mathematics, astronomy, or physics is an end in itself; and among scientific people there is no one who is viewed with more distrust and suspicion than a savant who pursues science either to make money out of it, or to "popularize" it, or for the purpose of meeting a "long-felt want" of any kind. If the late Mr. Darwin had had an interest in putting new breeds of pigeons on the market, which his experiments in natural selection were intended to subserve, his enemies would, instead of foolishly arguing with him, which was what he wanted them to do, have probably pooh-poohed his claims to recognition as a scientific man, and referred to him with contempt as a "pigeon-fancier," or something of the sort—all of which would have been a severe blow to the new science. Now, politics would not have any existence at all except for practical objects. There are only two kinds of objects conceivable in politics—the private ends of people who take part in the government of a country, or the well-being of the community. One of the objects of all improvements in the art of government is to make these two ends coincide, so that those who have the machinery of government in their hands may best promote their own advancement and success in life by first considering the public welfare. An ideal government would be one in which it was generally recognized that the prizes of political ambition, great and small, could only be secured through honest service of the public. This is the real Utopia toward which the modern world is always consciously or unconsciously striving.

But the fact that government is carried on solely for practical objects, and these as often as not sinister private objects, makes the idea of a science of politics seem sometimes almost grotesque. A parliamentary or congressional debate, which is one of the means used in all free countries both to inquire into political facts and determine what is to be done about them, is about as unlike any known scientific method of inquiry as can well be conceived. The inquiry is conducted in common by men who are familiar with all the details of the subject and by men who know nothing about it whatever; by men who are utterly indifferent to it and by men who have a personal, or even sometimes a corrupt, interest in it; and, in ninety-nine cases out of a hundred, by men who were not chosen on account of their acquaintance with it at all. Of the "arguments" which are put forward in a legislative inquiry of this kind, fully half consist of a scathing exposure of the motives of opponents—the assumed motives of one side always being to destroy civilization, and of the other to establish a tyranny of some kind. The humor of Bret Harte's account of the proceedings of the Society of the Stanislaus lies not a little in its being a scientific debate conducted according to legislative methods, burlesqued.

Notwithstanding all this, there is a general agreement among those who have given much attention to the speculative, as distinguished from the practical side of politics, that it has distinct claims to a recognized position as a science, but at the same time that very little is known as to what are its laws. If prediction be taken as a test, there is probably no field of human knowledge in which it has proved less successful. For successful prediction as to the fate of nations, we have to go back to Cassandra in mythical times. Probably nine persons out of ten, at first blush, would say that this settled the matter; and if politics were a physical science, perhaps it would. Chemistry, for example, would fairly be thought a poor sort of science if it were impossible to tell in advance whether a given mixture of hydrogen and oxygen would produce water or an explosion; whether a given precipitate would be crystalline or not so. But politics, of course, must differ from any such science as chemistry, as has been often pointed out, by the fact that, in any given case, the causes in action are infinite; and though we may be able to foretell what results any one or more of them *tend* to produce, considered by themselves, we cannot be sure how far the result will be altered or reversed by other causes which are left out of view. Nothing short of omniscience would enable us to predict the resultant of all the moral and material forces acting in politics at a given time, or in a given country.

This very fact indicates in what direction the study of politics as a science must proceed, and always has proceeded—that of ascertaining, as far as possible, the tendencies and effects of different kinds of governments, laws, or administrative systems. Economists discover the laws of economical science by treating man as a wealth-producing animal, and leave out of view all the motives which determine his actions except the desire for wealth. In just the same way, it seems to us, the scientific student of politics must, to arrive at any results whatever, treat man as an animal capable of government—*i. e.*, as an animal upon whose motives laws act in certain definitely ascertainable ways. If this is not the postulate of political science, then there can be nothing in politics at all except guesswork, and government is merely the art of getting and keeping offices. At any rate, if we deny that laws can be framed so as to produce calculated results, then the "science" must be found in some other part of the field, and no one has yet been able to say where. But, as a matter of fact, it has never been questioned from the earliest times that it is possible to ascertain the effect of particular kinds of legislation. That an over-severe penal code, for instance, will not deter from crime has been acknowledged ever since the time of Draco by all writers on the subject. That the system of raising taxes by taking for the Government a certain portion of every body's property wherever it can be found will lead to concealment and evasion, and consequently yield less than the

Government wants, can be proved by Asia or the New England States to-day. That the independence of judges cannot be secured except by a secure tenure of office; that place-hunting must spring up in any country in which places are the prizes of elections—all this is as well known as that a dear currency cannot circulate side by side with a cheap one.

Now, how do we know these things? How is it that we are so certain, for instance, that "tax-dodging" in Massachusetts is the result of the antique system of taxation in force in that State, and not, as the assessors always insist, the result merely of the wickedness and want of patriotism of the rich, or some other of the many thousand causes that may have produced it? Chiefly from what we know of human nature and the feelings that arbitrary exactions produce in our own minds. This is, therefore, the only kind of prediction of which the science of politics seems at present capable—prediction as to the effects particular kinds of legislation must have on the motives and actions of those whom it affects. For the verification of the prediction we must rely on experience, and, in fact, the whole thing is a question of experience: in the first instance, our experience of the action of human motives; in the second, our experience of the effects of legislation. Prof. Amos does not seem to us to have altogether clearly distinguished in his treatise what he himself recognizes as the practical, from the scientific side of the subject; but the moment we come to details, it is sadly difficult to do so.

Fielding. By Austin Dobson. [English Men of Letters.] Harper & Brothers. 1883.

This volume is strictly a biography. Too frequently, in late years, when the facts in the life of a man of letters are scanty, obscure, or commonplace, his biographer leaves them undisturbed, and infers from the author's works the personality of the man by a mode of criticism at once the most difficult, most doubtful, and most licensed. Mr Dobson has made the actual records of Fieldiag's life his starting point, and by continual reference to the concrete, tangible, verifiable fact, has disentangled truth from error in the gossipy romance of Murphy, and has given orderly arrangement to the scattered and ineffective corrections of that original biography which have been made by Fielding's apologists. It would be hard to instance a better illustration of scientific method applied to literary ends than is this scholarly and witty work, in which the special qualities of the man of science—patience in inquiry, continual watchfulness in verification, careful regard for details—are so supplemented by the heart, humor, and touch of the man of letters that we do not have a book of annals, like the Forster biographies, but a truthful account of highly interesting character. Mr. Dobson's distinction is not so much in the new facts of his own discovery, in the dates he has corrected or ascertained, in the notices he has exhumed from old papers, or the like, as in this blending of the scientific spirit and the literary treatment, which has resulted in a portrait of Fielding both more accurate and more honorable than any hitherto drawn.

Doubtless Fielding in his youth was no better than he should have been, so far as the self-indulgent vices are concerned: the suppers at the Rose, the wassail at his own table during his brief squirehood, the pawned finery and other picturesque incidents of Grub Street life in the last century we may accept; and, now that Thackeray has touched them with the unfading light, we cannot yield the wet towel and inked ruffles of the shadowy small hours. Possibly the young comedian did write one scene on the wrappings of his "Virginia"; but for all that, as Mr. Dobson remarks, "it is not fair to speak of him as if his youth lasted forever," and, he concludes, "if we press for 'better assurance than Bardolph,' there is absolutely no good evidence that Fielding's career after his marriage differed from that of other men struggling for a livelihood, hampered with ill health, and exposed to all the shifts and humiliations of necessity." Hitherto Fielding, in consequence of that too common misleading subjective criticism to which we have referred, has been too much confused with Tom Jones, many of whose qualities he of course shared; but, without traversing the ground in which Mr. Dobson has shown the folly of this impression, it is a satisfaction to think that many estimable people, the development of whose minds in regard to certain subjects was arrested at the stage of adolescence, will now have an opportunity to know Fielding not only as the author of a book to be burned or at least excluded from the Boston Library, but also as "the energetic magistrate, the tender husband and father, the kindly host of his poorer friends, the practical philanthropist, the patient and magnanimous hero of the 'Voyage to Lisbon.'"

In his preface Mr. Dobson excuses himself from any criticism on Fielding's work on the ground that he had been forestalled by Mr. Leslie Stephen; but this disclaimer of the critic's office does not prevent him from occasionally exercising his judgment on the worth and place of Fielding's several productions, and indeed it seems rather an adroit way of releasing himself from writing a page when he could put all that is necessary into a sentence. There is excellent criticism on all the later pages that does not need to be supplemented by Mr. Stephen's essay; especially the emphatic commendation given to 'Jonathan Wild,' both for its intellectual interest and literary power, will be a pleasing surprise to admirers of Fielding. In nearly all he wrote of a serious nature, including the novels, this intellectual interest pure and simple has no small part; it gives to the later novels that body, in addition to their vivacity, which is one of their best distinctions, and makes them prized by strong and active minds. Besides bringing out Fielding's intellectuality, Mr. Dobson is also singular in making the reader understand how intimately Fielding's personality permeates his novels, how absolutely in his case the voice and manner of the narrator are an integral part of the story; and thus he shows most effectively, in analyzing the successive volumes, that Fielding, instead of being a rough Bohemian all his days, was a much-changing man. Both as criticism and as biography we think this Life, which was one of the most difficult to be written in the whole series, is also one of the most admirable in temper, in knowledge, and in the literary skill which has made a register of obscure and tedious facts entertaining, and has graced it with the delightful surprises, the humorous turns, the quick, sure strokes that we have hitherto looked for only in its author's verses.

Genera Plantarum ad Exemplaria imprimis in herbariis Kewensibus servata definita. Auctoribus G. Bentham et J. D. Hooker. Londini: Reeve & Co. 3 vols. imp. 8vo. 1852–1883.

The completion of this great work marks an era in systematic botany. As the senior author is nearly eighty-three years of age, we may say that, essentially, it brings to a worthy close the long course of scientific labors of the most accomplished, sagacious, and continuously industrious phytologist of our day, almost the only survivor of those who personally knew Antoine Laurent Jussieu, and were associated with the elder De Candolle; one whose line of authorship, begun in the year 1826 (antedated only by that of the venerable Roeper), comes down to the present year, apparently, in almost unabated vigor, and is as remarkable for sustained importance as it is unparalleled in length. Upon the junior author, who should not yet feel the burden of years, however weighted with official cares, and upon such specialists as can be mustered, may devolve the responsibility of such *addimenta* as may be needed to bring the earlier volumes up to the date of the last, and even to supplement the work from time to time, as the 'Genera Plantarum' of Linnæus was supplemented by successive editors. But it is not probable that the task which has now been happily accomplished will be undertaken again, still less executed, before the twentieth century is well entered upon. Useful compilations we may expect, and monographs which may here and there better represent advancing knowledge of particular groups; but a production like this, covering the whole field of phænogamous botany, ordinally and generically, and with the uniformity of treatment and scale thus secured by two close associates in one continuous work, cannot be looked for again for a long while.

It has few predecessors. The first 'Genera Plantarum' in fact (though not exactly in name) was that of Tournefort, published in the year 1700. Then and there, as Linnæus declared, genera of plants, in the sense of scientific botany, were first established. There would probably be more recognition of this *dictum* if the present work were to be planned anew, and the genera which Linnæus himself admitted as of Tournefort, along with those which modern botanists have restored, could have been attributed to this real founder, without thereby compromising the proper position to hold in respect to herbalistic and ancient names. The second 'Genera Plantarum' was that of Linnæus, in 1737, of which the last edition revised by the author himself was that of 1767. The third was that of Jussieu, "secundum ordines naturales disposita," which appeared in the year 1789. That of Endlicher—a monument of literary or bibliographical erudition rather than of botanical research—was brought out in the main between 1836 and 1843, at about the same time with the more unpretending synoptical compilation of Meisner. These were important in their way. But the 'Genera Plantarum' of Bentham and Hooker, which began to be issued in the year 1862 and was finished in the spring of the present year, is the lineal successor of the three classical works above mentioned, that of Tournefort representing the botany of the close of the seventeenth century; that of Linnæus the first half, and that of Jussieu the latter part, of the eighteenth century. The present work — increased from the one small octavo of Linnæus to three thick imperial octavo volumes of nearly 1,200 pages each—stands in like relation to the nineteenth century, and is based, like them, or even more than they, upon actual investigation, and upon the comparison of a vastly greater number of original types than was formerly possible.

Unlike its predecessors, however—and in this respect agreeing with the other great botanical work of the century, the 'Prodromus' of De Candolle—the whole of cryptogamic botany is omitted. This vast field must be left to specialists. Fries, of Upsala, who died a few years ago, at a ripe old age, was the last phænogamic botanist who was at the same time master of one or two cryptogamic orders; and now even the best of cryptogamists can hardly aspire to more than a general and superficial acquaintance with any other department than the one to which he devotes himself. This inevitable state of things

has its disadvantages. The reasons for it do not really apply to the ferns and their allies, and it was naturally expected, as it is much to be desired, that these should enter into the present work. May we hope that this still may be?

Some idea of the progressive enlargement of the field may be had by a comparison of the number of genera characterized in these successive works. The phænogamous genera of

Linnæus, 'Gen. Pl.,'	ed. 1,	A. D. 1737, were	887
" "	ed. 6,	A. D. 1764, "	1,189
Jussieu, "		A. D. 1789, "	1,707
Endlicher, "		A. D. 1843, " (about)	6,400
Bentham & Hooker, "		A. D. 1883, "	7,585

If the last had been elaborated upon the scale of Endlicher, or with the idea of genera which is still common if not prevalent, the number of genera would have amounted to at least ten thousand. An estimate of the number of known species of each genus and higher group has been made throughout the work—a rough approximation only, mentioning first the number in the books, and the number to which, in the opinion of the authors, these may probably be reduced by botanists who adhere to the Linnæan view of species; from which it appears that upon the very strictest estimate their number, as now known to botanists, is at least 95,620. In round numbers, it may fairly be said that about 100,000 species of phænogamous plants are in the hands of botanists. The five largest orders, as well for genera as for species, are the following, and in this rank: Compositæ, Leguminosæ, Orchideæ, Rubiaceæ, Gramineæ. The high standing of the orchid family in the list will be a surprise to many. Linnæus knew only a hundred species; five thousand is now a moderate estimate—about half as many as there are of Compositæ, which hold to their proportion of one-tenth of the whole. In both families every country and district is largely peculiar in its species and types. The far greater prominence of Compositæ over orchids is owing to the vast number of individuals in the former, their paucity in the latter.

Those who desire to know the respective parts which the two authors have taken in the elaboration of the 'Genera Plantarum' may be referred to a short article on the subject in a recent number of the Journal of the Linnean Society of London. Great thanks from all botanists are due to them both.

The Greek and Latin Inscriptions on the Obelisk-Crab at the Metropolitan Museum, New York. A Monograph. By Augustus C. Merriam, Ph.D., Adjunct Professor of Greek in Columbia College. Harper & Bros. 1883.

THE subject of this erudite monograph is neither a hard-shell nor a soft shell crustacean, and this is no romance of the sea. And yet a romance it is; and even those who, like Professor Jowett, have not much respect for the study of inscriptions, cannot fail to catch from the perusal of this monograph something of the enthusiasm with which Professor Merriam sets out on his Egyptian exploration. However one may be disposed to quarrel with the Professor at first for the numberless details of the quest, yet when the pamphlet is laid down the ingenuous reader forgives the list of the Rubrii who had nothing to do with our Rubrius, the extracts from the London *Times* that refer to the other obelisk, and even the concluding bit of sentimentality about Mæcenas and Horace, neither of whom suggests sentimentality the least in the world.

To tell the story after Professor Merriam is to spoil it, but as the monograph is the record of a piece of hard work faithfully performed, it would be a pity not to give the general public some notion of the process which Professor Merriam found necessary in order to establish the reading of six words of Greek and ten words of Latin. The inscriptions on the bronze crab found under the New York obelisk were published by Commander Gorringe in the following form:

L H ΚΑΙΣΑΡΟΣ	ANNO VIII
ΒΑΡΒΑΡΟΣ ΑΝΕΘΗΚΕ	AVGVSTI CAESARIS
ΑΡΧΙΤΕΚΤΟΝ ΟΥΝΤΟΣ	BARBARVS PRAEF
ΠΟΝΤΙΟΥ	AEGYPTI POSVIT
	ARCHITECTANTE PONTIO

Of course ΑΡΧΙΤΕΚΤΟΝ ΟΥΝΤΟΣ should not have been divorced in this rude way. The word is clearly ἀρχιτεκτονοῦντος, corresponding to the *architectante* of the Latin; and, without any further knowledge of the subject, one might readily conclude that the mysterious L stands for ANNO. But discrepancies had been observed, and Professor Merriam began to explore the claw of the crab, undismayed by "knobs" and undeterred by the "cuts" and "scratches" and "poundings" with which the surface had been marred. The Greek had suffered less than the Latin, and the only thing to be done at this stage was to get up the history of the interpretation of the mystic L which parades itself at the head of the Greek inscription. This L, after a long muster of authorities, is set down, not as a representative of the Greek λυκάβας (with Letronne), but as a conventional hieroglyphic for ἔτος (with Gardthausen). ΚΑΙΣΑΡΟΣ, standing as it does alone, is referred, in accordance with Letronne and Franz, to Augustus Cæsar, and, this decided, we can draw a long breath, and pass on to the burning question of the year. "Year eight" does not help us unless we have "year one" to begin with. The era here meant, it appears, was not the Actian Era (31 B. C.), nor the Augustan Era (27 B. C.), when Octavianus received the title Augustus. The Egyptians had an era of their own, beginning two years and some months before 27 B. C., and a New-Year's Day of their own, August 29. When no month is added (and no month is added in our inscription), we cannot tell whether the eighth year is 23 or 22 B. C.

The Latin inscription calls somebody Prefect, but at this stage BARBARVS, so confidently printed by Gorringe, was still an "inarticulate combination of letters and marks," and our careful scholar had to satisfy himself with the hope that the Greek name and the Latin name would prove to be the same. Now, what Barbarus was Prefect in 23–22? None. One Petronius occupied that office from at least 25–20 B. C., and "Barbarus could not have been Prefect in 23–22 by any possibility." These conclusions, based upon ancient authority, Professor Merriam found to be supported by Letronne, Franz, and Merivale. The Professor, for the first time, is greatly puzzled. "Archæology," he gravely reflects, "must go hand in hand with history; at least she must not, in a moment of frenzy, dash her brains out against a solid wall of established facts." As nothing was to be done with the historical facts, the archæological side had to be explored still more carefully. We cannot go into all the details—the "gratifying" discovery that a letter might be S, G, R, or B; the emergence of a ☤ in the upper left-hand corner of the Latin inscription; the tracing of an I before H in the Greek; the joyous welcome of the "key that had thus unexpectedly fallen into the hands" of the explorer; the search for the volume in which the confirmatory inscription is contained; the cleaning of the inscriptions; the revelation of the obscured Latin words and the crowning mercy of the establishment of that I which brings the date down from 23–22 to 13–12, when, as we learn from other sources, P. Rubrius Barbarus *was* Prefect of Egypt. We are no longer to read H, but IH; no longer VIII, but XVIII. Archæology and history kiss each other, and Professor Merriam has a right to be proud of this feat of reconciliation.

The interest flags after the discovery is settled. As was said before, we do not care much about the extraneous Rubrii and the extraneous Petronius. The concluding story of Pontius, the architect, is not without its charm; but however interesting the antiquarian detail may be to professed antiquarians, it has not the thrilling character of the hunt that resulted in the capture of the all-important *iota*. "The introduction behind the scenes, as it were," says Professor Merriam, "may dispel some of the illusion of stage-scenery, but may also win credit where doubt will be eager to fasten." It must be a very cold-blooded doubt that could fasten on anything in so glowing an atmosphere as Professor Merriam's "behind the scenes." The detailed record of such an investigation will do young students more good than the quiet statement of the most important results. Of course in a *Corpus Inscriptionum* every *iota* could not be magnified to this size, but once in a while it is well that an enthusiastic hunter should give a detailed account of his run.

Gettysburg to the Rapidan: The Army of the Potomac, July, 1863, to April, 1864. By A. A. Humphreys. Charles Scribner's Sons.

THE contents of this book were intended as the opening chapters of General Humphreys's history of the campaign of 1864–5 in Virginia, but because of the length of that work are published separately. Compared with its predecessor, the present volume is very disappointing and unsatisfactory. The simple style, the clear statement of military movements, the absence of criticism found in the larger work are here also. But the narrative is too fragmentary, it assumes too much knowledge on the part of the reader, and there is a singular lack of all full returns of both armies. It is impossible to tell from this book the composition or strength of the forces which for nine months confronted each other in Virginia.

General Humphreys informs us on the first page that the effective infantry of the Federal army was but 47,000 men on July 5, 1863; but he does not say what this infantry was before the battle began. Had he given Meade's strength then (about 77,000 "enlisted" infantrymen), the difference between the figures would perhaps have suggested a satisfactory explanation of General Meade's slow pursuit, and the unwillingness of his corps commanders to engage Lee at Hagerstown. The latter part of the book is too much a defence of General Meade's operations in falling back to Centerville, in October, and of his subsequent abortive movement to Mine Run. Here again General Humphreys omits all full statements of numbers. With them before us, it is difficult to see why the Federal army, after flanking the Confederates (only half as strong) out of their well-entrenched lines on the Rapidan, should have retired, without fighting, from the hastily improvised field works along Mine Run. General Humphreys gives a fuller statement of the evidence in regard to the ferocious order of Colonel Dahlgren. Excellent maps accompany the text.

Lectures, Essays, and Sermons, by Samuel Johnson, Author of 'Oriental Religions.' With a Memoir by Samuel Longfellow. Boston: Houghton, Mifflin & Co. 1883. 8vo, pp. 466.

SAMUEL JOHNSON was a man hardly known, even by name, outside of the little band of radicals and transcendentalists of which he was reckoned a member, although even here his aversion to any merging of his individuality in

a collective name, of which we shall speak presently, kept him from any very active fellowship. Students of the ethnic religions knew him from his works on the religions of India and China—much the most important contribution, we suppose, made by this country to the comparative study of religion. Certain of his hymns will always be favorites with lovers of religious poetry, and the collection compiled by him and Samuel Longfellow—'Book of Hymns,' afterward revised as 'Hymns of the Spirit'—ranks among the finest collections of devotional poetry. A few had the privilege of listening to his sermons, preached before a small society in a hall in Lynn. To these the half-dozen sermons contained in this volume will be a precious memorial.

The volume contains a memoir in 142 pages, and thirteen papers—lectures, essays, and sermons. The three that we should class as lectures bear the stamp of foreign travel—"Florence," "The Alps of the Ideal," etc., and "The Symbolism of the Sea." The essays are practical in their character: "Fulfilment of Functions" (bearing upon education), "Equal Opportunity for Woman," and "Labor Parties and Labor Reform." To these should be added, we suppose, the long paper upon Transcendentalism, which comes last in the volume. The sermons are strongly marked by an earnest spirituality. Mr. Longfellow says of his friend's preaching (p. 40): "There was never any mere rhetoric; always the note of entire sincerity, revealed in the very earnestness of his tones. These qualities marked his prayers likewise; they were the outpourings of a spirit reverently conscious of a Divine Presence, and communing directly with the Infinite Life and Light."

We have spoken of Mr. Johnson's unwillingness to identify himself with organizations; he was, says his biographer (p. 42), "always fearful of the tendency of organizations to hamper individual liberty." In the essay upon Transcendentalism we find what appears to be a justification, on the ground of reason, of this attitude (p. 440). He speaks here of "that eternal dissatisfaction of idealists with the superficial doings around them—with the eager fret and self-waste, the paltry propagandism of book, church, sect; their exacting demand on human nature, which makes them, as Emerson said, 'strike work, in order to act freely for something worthy to be done.' Whoso scoffs at their refusal to do special things that may seem to him imperative, may well consider whether, after all, the best doing is not *being*. Let him not call it unsocial. What society most wants is criticism by the courage to choose what one respects, and to renounce and reprove what this disdains. We reach civility when men recognize that one in earnest to be doing his proper work is more likely to know what this is than ten thousand other persons who would set him upon theirs." For men of his own marked individuality here is an adequate explanation of an attitude of isolation. But for the ten thousand that he speaks of, how little noble work would be accomplished without organization!

Mr. Johnson had not, we are told, the gift "to put things in a way to catch the popular ear." We find, however, sentences here and there worth quoting for their point and vigor. For instance, in the fine sermon on "Living by Faith" (p. 399): "The one-sidedness of the theological Jonah or pessimist is shown in this—that, while a sin is to him something infinitely wicked, it never occurs to him to call a good action infinitely good." And again: "It is always safer to hope for men than to despair of them—safer for one's own power, at least, which depends on his faith in good materials to work in." The portrait prefixed to the volume is excellent, representing an individuality intense, noble, spiritual, remarkable for self-poise, and with a possibility of willfulness in it. Mr. Johnson's death, February 19, 1882, was a serious loss to American letters and scholarship; but we are glad to learn from his memoir that the third and last volume of his 'Oriental Religions'—"I should call it *Iran* rather than *Persia*, but shall not"—is so far forward that we may probably look for its publication.

History and Uses of Limestones and Marbles. By S. M. Burnham. With 48 Chromo-lithographs. Boston: S. E. Cassino & Co.

E F Bickford 192 24-84

Among the practical applications of geology, few present a greater interest or address a larger and more varied audience than those which relate to building and ornamental stones. To [illegible] a class which represents a formidably large [illegible] of the civilized world, these form practically the only geological specimens with which they come into familiar and daily contact. It would seem natural, therefore, that writers on popular science should have early turned their attention to this subject, and presented in a form intelligible to the untechnical reader a description of the rocks from which our buildings are constructed, and the ornamental stones which are used to decorate their interiors, of the sources from which they are obtained, and of the way in which they were formed. In point of fact, however, the literature of this subject, whether popular or scientific, is extremely meagre. On precious gems, which might properly come under the same head, there exist a number of small works, written, however, from the point of view of the dilettante or jeweller rather than that of the scientist. So far as we know, the only important work on this subject is that of Professor Edward Hull, Director of the Geological Survey of Ireland, on 'Building and Ornamental Stones,' published in 1872.

In spite of the fact that we are essentially a practical people, there has been, until of late years, an apparent reluctance on the part of our best scientific men to give a practical turn to their knowledge, and English geologists have, as a rule, been far more successful in popularizing geology in the true sense of the word. Among the many admirable investigations undertaken by the Tenth Census, that upon the quarry-stones of the United States, commenced by the late Dr. Geo. W. Hawes, Curator of the National Museum, would have supplied a great practical as well as scientific want. Unfortunately, his very zeal and devotion to his work proved fatal to it, as he was carried away by rapid consumption soon after the completion of he gathering of his material, and it will be almost impossible to find one so well fitted scientifically to carry out his plans. The volume before us, which is somewhat more limited in its scope, and less scientific in its mode of treatment than Hull's is or Hawes's would have been, is a carefully-compiled and well-written treatise, which does great credit to its author, especially if that author is, as we have reason to believe, a woman. It is a handsome octavo, of nearly 400 pages, adorned with 48 chromo-lithographs, illustrative of different varieties of marble and serpentine, the latter stone being not altogether inappropriately included under this head. Unfortunately, these illustrations are not directly referred to in the text, nor do their titles always appear in the index.

Although the author disclaims in her preface any intention of addressing scientific readers as such, her book will certainly be found of value to many scientific men, and that value might have been enhanced had she given a list of works consulted. It is essentially a compilation, but one that must have involved the laborious reading and critical digestion of voluminous material. The author evidently leans to the biological side of geology, devoting a chapter to the organic remains or fossils found in limestone, but making no mention of such investigations as Sorby's into its microscopical structure, and the evidence afforded thereby of its origin. Sixteen chapters, covering more than 230 pages, are devoted to what might be called descriptive geology, treating the subject by countries, and giving not only what is known of the limestones and marbles of the countries, but many other interesting geological details, so that they almost form an epitome of the geology of each country—at least of what is known of it, and we note no essential omission.

In looking over these chapters, it is interesting to observe how large a portion of the earth has been examined more or less closely by geologists. No known country of any importance is omitted, though the material is necessarily much more full in the civilized ones. Three chapters, for instance, are given to the United States, two to the rest of America, eight and part of a ninth to Europe, and one and a fraction to Asia, while one covers Japan, Australia, and Africa. These chapters, though necessarily crowded with facts, are yet written in a pleasant, discursive style, that sustains the interest of the reader without wearying him. The last four chapters, on antique stones and works of art, evidently a favorite study of the author, will be found full of interest by all cultivated readers. We might wish the index had been made by a more experienced hand, and the chromos as well, but where so much is well done, it would seem hypercritical, if not ungallant, to complain.

BOOKS OF THE WEEK.

Annual Register for 1882. London: Rivingtons.
Black, W. Yolande: a Novel. Harper & Bros.
Bothmer, Countess M. von. Aut Cæsar aut Nihil. Harper's Franklin Square Library. 20 cents.
Brehms' Thierleben. Chromo edition. Parts 85–89.
Bush, J. S. More Words about the Bible. John R. Lovell Co. 20 cents.
Carroll, H. Twelve Americans: Their Lives and Times. Harper & Bros.
Crandall, C. H. The Season: an Annual Record of Society, 1882–83. White, Stokes & Allen.
De Amicis, E. Jottings about London. Boston: Alfred Mudge & Son. 25 cents.
Everett, C. C. Religions Before Christianity: a Manual for Sunday-schools. Boston: Unitarian Sunday-school Society.

Henry Holt & Co.'s
EDUCATIONAL CATALOGUE
For the season of 1883–84 is now ready, and will be sent free upon application.
HENRY HOLT & CO., New York.

F. W. CHRISTERN,
37 West Twenty-third Street, New York,
Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.
A General Index to the Nation.
From July, 1865, to September, 1880.
Net price (no trade discount), $2 50. Purchasers will please remit with order. Address Publisher of the *Nation*, Box 794, New York, or Q. P. INDEX, Bangor, Maine.

Johns Hopkins University,
BALTIMORE, MARYLAND.
Collegiate and University Courses.
Announcements for 1883–84 will be sent on application.
GERMAN rapidly and conversationally taught in a few months. Send for circular.

The Nation.

NEW YORK, THURSDAY, JULY 26, 1883.

The Week.

THE strikes which in the last three weeks have put nearly 50,000 dissatisfied operatives, workmen, miners, etc., out of employment, have drawn renewed attention to the fact that capital is becoming extremely reluctant to take hold of new enterprises. For a good many months the feeling has been growing that further investments in factories, railroads, bridges, houses—in short, in almost every kind of construction—would be injudicious, because the need is already supplied. It is this feeling which lies at the bottom of the failure to market a vast amount of new railroad bonds which have been issued by corporations in furtherance of new railway construction. Some recent statistics from Paris and London show that the same feeling exists there in regard to excessive house-building, which has increased the unoccupied houses in the latter city 50 per cent. as compared with ten years ago, and our own great cities could tell a similar tale. The natural result of this is that money seeks employment in the loan market on security rather than in new enterprises, so that there is an unusual supply of money at low rates of interest on the safest securities, while the tendency is to advance the rates for mercantile discounts and depress the mortgage securities of new and unfinished railroads, into which, of course, enters the element of uncertainty. On the other hand, the prospects for this summer's crops continue to improve, and it is reasonably certain that we shall have more than the average exportable surplus of all our great staples this autumn. Accordingly it seems to be a foregone conclusion in London that the United States will draw considerable amounts of gold from Europe before the end of the year.

The suggestion made in many quarters that the telegraph strike should be stopped by a mandamus is the very strangest that the present troubles have brought out. It is made all the funnier by the fact that the papers which make it, calmly cite as a precedent the resort to a mandamus in the railroad troubles of last year. They have evidently forgotten the history of that application, and we therefore venture humbly to recall it to them. When the freight-handlers' strike began, the Attorney-General applied for a mandamus to compel the companies to receive and forward freight, and the companies replied that they could not do it because of the strike. When the matter came into court, Judge Haight decided that it could not be granted. Six months later the General Term of the Supreme Court decided that his decision was wrong, and that mandamus was a proper remedy in such a case. Of course, at that time the strike was all over. The idea of those who are in favor of a mandamus must be that under the decision of the General Term any judge at chambers would be compelled to mandamus the Western Union to receive and transmit messages. But, if he did so, how could he enforce his order in a strike extending all over the country? A New York mandamus is, no doubt, a mighty writ, but it does not run all over the United States. Proceedings even here would begin with a dispute over the facts, and this dispute would enable "counsel" to protract the litigation, probably until the strike was over.

The legal questions involved are supposed to be further complicated by the United States telegraph laws of 1866 and 1872, providing that any company which, "by its agents or employees," shall "refuse or neglect to transmit" Government messages shall be liable penally, for every despatch refused, in not less than $100 and not more than $1,000. It would, moreover, probably take from two to three years to get a final construction of the law. It ought not to be overlooked, either, by the jurists who are now turning their attention to this matter, that the mandamus decision of the General Term does not apply to the Western Union, unless that company is held to be a "common carrier" of messages, as a railroad is of passengers and freight. It will not do to assume this point. Taking one consideration with another, therefore, it seems hardly likely that a lawsuit would bring the troubles to an end. The validity of the notice which the company now attaches to its blanks, disclaiming all responsibility for delay, will probably have to be passed on by the courts; but this will be through private suits for damages, if any are caused. The question whether a telegraph company can exempt itself from liability for delay caused by a strike is an interesting point, which, we believe, has never been decided.

Secretary Folger has disposed of the question of the trade dollar, so far as the executive relations of the present Administration to it are concerned, and indeed, in the absence of legislation on the subject by Congress, the matter may be regarded as finally dismissed. On the 6th of July the *Evening Post* published a letter from Mr. James C. Hallock, jr., of Brooklyn, reviewing the legislative history of the trade dollar, contending that it was entitled to as much monetary consideration as the standard silver dollar, which contains seven grains and a half less bullion, and concluding that "the President of the United States has ample authority" to direct the Treasurer and Assistant Treasurers "to receive the trade dollars the same as the standard silver dollars, and, when so requested, to exchange them for silver certificates." Secretary Folger, in reply to Mr. Hallock, who forwarded to him a copy of the letter, directs his attention to a letter written by ex-Secretary Sherman, which is of interest, not because the facts and opinions which it presents are new or unfamiliar, but because it states very clearly the view of the trade dollar which has always prevailed in the Treasury and in Congress. Mr. Sherman shows that the coins at once went out of the country, and that it was never expected that they would go anywhere else; that when, upon the depreciation of silver, bullion dealers found it profitable to put trade dollars—which by classification with other silver coins had been made a legal tender to the amount of five dollars—in circulation on the Pacific coast, Mr. Randall introduced in the House of Representatives and Mr. Cox afterward reported a bill taking away the legal-tender quality, which was passed by both branches of Congress without any objection whatever; that up to this time the trade dollar had not circulated outside of the Pacific States, because it "cost more than a paper-currency dollar," but when upon the resumption of specie payments the paper dollars appreciated and the trade dollars depreciated relatively, the bullion dealers found profit in putting the latter in circulation in this part of the country. Thus, clearly, the Government had washed its hands of the trade dollar; had thoroughly discredited it as lawful money; had given notice in every possible way that it was not among the legal coins of the United States, long before the embarrassment now complained of began to be felt.

The rumor that efforts are being made to prevent the appointment of women to low-grade clerkships under the civil-service law revives the question what the true object of civil-service examinations is. It is not only to ascertain the mental capacity and acquirements of applicants for places, but also to exclude the element of personal or political favoritism from the exercise of the appointing power. Now, the accomplishment of the latter object would be of the highest importance even if the examinations were less reliable as tests of the fitness of candidates for public employment than they are. It is of especial importance with reference to the appointment of women, of whom a good many hundreds are employed in the various departments at Washington. They are mostly poor. Their salaries are all they have to live upon. Under the spoils system, as it always has been and always will be as long as it is permitted to exist, almost every one of those women owes her position—that is, her daily bread—to some one powerful man in public life. And every one of them knows that if that one man withdraws his favor from her, she will lose her place and her living, and, as is the case in many instances, be cast helpless upon the world. Now and then rumors of social scandals having a direct connection with relations thus established flit about the city of Washington, and now and then they get into the papers. We will not inquire whether such rumors tell the whole story. At any rate, considering the nature of the case, it is astonishing that there should be so few of them. The scarcity of these scandals is the most magnificent testimonial to the character of the women employed in the public offices that can be imagined. But surely a system which puts the living of every woman in the public service at the mercy of some one powerful man is an abomination. It is a disgrace to the Ameri-

can republic. Every American woman who respects the character of her sex must necessarily become a civil-service reformer as soon as she understands the case.

The Attorney-General, it seems, is not inclined to attach much importance to the story of the "reign of terror" in Texas, which is put forward as the explanation of Judge Haughn's murder. To the *Times's* Washington correspondent, to whose energy and enterprise is due the exposure of the plans of the Texas Kuklux, this is a serious matter, and he accounts for Mr. Brewster's indifference by suggesting that he has probably "not read all the correspondence on that subject" on file in the Department of Justice. If he had, he would have known that District-Attorney Guthridge had been writing letters full of "appealing language" and "calls for troops." What excuse Mr. Brewster can give for not reading such letters, or denying their existence when they are accessible to newspaper correspondents, we cannot imagine, but what he says with regard to Judge Haughn's murder is worth attention. As to this event there are two theories—first, that the Judge was killed in order to prevent his testifying in some "election cases"; second, that his death was an ordinary domestic homicide, the career of the Judge having made it necessary that he should be slain. The first theory is supported solely by the fact that he was expected to be a witness in these cases. The second is supported by the fact that the Judge's wife positively declares that his murder was an act of private revenge, caused by his abandoned life. We are, therefore, able to speculate with regard to this event to our hearts' content. From what we know of Democrats in the South may we infer that the Judge came to his end because they were determined that he should never expose their crimes? On the other hand, from what we know of wives, should we infer that a wife would or would not be likely to invent an explanation of her husband's death much to his discredit? Then, again, from what we know of Democrats and wives together, may we infer, first, that when any murder takes place in the South a "reign of terror" exists; second, that the reign of terror so affects the minds of the family of the murdered man that his wife will rather cover his name with infamy than put herself in danger from the terrible Kuklux? These are not easy questions to answer. Some will answer them one way and some another. Mr. Brewster contents himself with remarking that murder is a crime against the laws of Texas, and if the Texans do not punish Judge Haughn's murderers, he has nothing to do with the matter.

There are some who think that whenever an Indian makes mischief, there must necessarily be some white man in authority to blame for it. The raid recently made by a band of Apache marauders upon a settlement on Mexican territory is thus unhesitatingly charged upon General Crook. When he had brought the Indians captured on his expedition through the Sierra Madre mountains to the San Carlos reservation, he expressed the opinion that those not yet captured would probably soon come in and give themselves up. The fact that they have not done so proves, at most, that even so excellent an Indian fighter, and a man so well acquainted with the Indian character, is liable to commit an error of judgment as to what certain individual Indians are likely to do under certain circumstances. It does not prove by any means that General Crook's campaign was not, all things considered, a great success, or that its success could have been greater had he conducted it differently. Moreover, it is very doubtful whether those Indians who are again robbing and plundering in Mexico after General Crook's departure, will cross the border again into Arizona, where they would find him ready to meet them.

The proceedings in Boston against the captain of the English bark *Eme*, for "landing" a Chinese laborer, are of as much interest to ship captains as to Chinamen. The Act of 1882 provides that any one who shall "land, or aid, or abet the landing" in the United States of any Chinaman not authorized to enter the United States, shall be fined $100, and imprisoned for not more than one year. The word "laborer" is by the terms of the Act made to cover both "skilled and unskilled laborers" (Sec. 15). The facts agreed to by both sides in the case of Ah Chung are as follows: That Ah Chung shipped on the *Eme* as ship-carpenter; that he never intended to leave the bark at Boston, but to finish his voyage; that at Boston, however, he left of his own accord, alleging cruel treatment by the mate; that he requested the master to discharge him, which the latter refused to do; that he compelled the payment of his wages by means of a threatened libel of the vessel; that the captain, after paying him, requested him to return to the vessel and continue the voyage, which he, however, refused to do. There are a number of other points in the case, but these facts seem sufficient to show that the captain, however much in sympathy he may be with the desire of Chinamen in general to come to the United States, had no desire to land Ah Chung here at all, and that his act is therefore hardly within the spirit of the statute. On the other hand, the promoters of the statute would probably say that to punish a captain for the desertion of a Chinaman when in an American port would no doubt have a very deterrent effect on captains in general, and show them that we "mean business." Captains with Chinamen aboard would, on learning what our laws were, put them in irons on nearing the American coast, and we should thus in future be saved the trouble and expense of returning the wretches to their native country under Section 12 of the Act.

If Governor Butler has not been misrepresented in regard to his motives in entering upon the Tewksbury inquiry, he will be well pleased with the majority report of the Legislative Committee. It is quite probable that the report, somewhere in the fourteen columns which it fills, presents, to those who have patience to read it, a refutation of the Governor's charges; but that refutation, submitted briefly and compactly, would have been far more effective than any quantity of "scathing review" of the Governor's purposes and methods. General Butler has invited criticism for so many years, so many persons have tried their hands at it, there is so large a body of specimens to draw upon, that it was easy enough for any moderately clever committeeman to say any number of sharp things about him. The majority might have remembered that attacking Butler has lost its effect upon the public through familiarity, while, so far as he is concerned, it ought to be tolerably well known that the "scathing" process not only occasions him no inconvenience, but has become a part of his stock in trade. Some passages of the report are singularly weak. For example, the majority lament that "the people of this proud commonwealth" have been exposed to "shame and humiliation" by the Governor. This is childish. The reputation of Massachusetts is too secure to be affected by any charges that are false. To save the State from "shame and humiliation" it was only necessary to disprove the charges, as the majority were enabled to do by abundant evidence. Their mistake is in overloading the case with matter which directly plays into Butler's hands by joining issue with him in a personal and political wrangle, instead of meeting his charges with a brief, calm, and dignified refutation. The Governor will be further helped to turn the controversy to partisan account by the fact that the majority and minority are divided on strict party grounds—a division which he has managed to bring about with characteristic adroitness.

Another of those curious New England reunions—a family convention, this time that of the Boynton family—is to be held in Massachusetts next month, and has already begun to attract the attention of the press, which has shown a tendency of late years to treat these meetings with levity. It is evident that the family convention cannot long hold its own if the newspapers ridicule it. No family, however mighty or distinguished, can magnify its own fame by a festive celebration unless the general public takes the celebration seriously, and it is impossible to get the public to take anything seriously which the press treats lightly. The reported proceedings at these conventions are so strange that it is often difficult to make out how far they actually take place and how far they are the works of "reportorial" fancy. The *Times* had an account the other day of a convention of the Smiths, in which a member of that eminent family made a speech reported as having caused great delight among the assembled tribesmen. In this he traced the Smiths back to Adam and Eve Smith, "pointed with pride" to the blameless though short life of their son Abel Smith, acknowledged with regret that a bloody stain had been left on the family escutcheon by Cain Smith, traced the line down to the distinguished man who in modern times had thrown so much lustre on the name—John Smith—repudiated all connection with that snobbish branch of the family that had brought the

name into discredit by spelling it Smyth or Smythe, and "claimed" on behalf of the family as a whole, what was perfectly true, that from the earliest to the latest times the Smiths have played a most important part in the history of the world.

Mere family affection will not account for these meetings. The actual family unit, at its largest, is represented by such meetings as take place at Christmas or Thanksgiving, and these are only large enough to fill a room, or at most a house. A convention such as those that get together in New England, large enough to fill all the hotels and boarding-houses in a good-sized town, is not what any member of it really means when he speaks in ordinary conversation of his "family," beyond the limits of which family affection does not extend. Indeed, it may be doubted whether the sentiment felt in modern times for relatives and connections outside of this little circle—even in cases where they can be put to some use, in the way of hospitality or pecuniary assistance—is not one of dislike and suspicion; the poorer members of the family looking upon the richer as having got a share of the world's goods to which their intrinsic merits by no means entitle them; the richer looking upon the poorer with apprehension, as being likely to take unfair advantage of the family tie to intrude themselves into their society or to make unfounded boasts of a non-existent intimacy with them. On the other hand, the magnification of the fame of the family by means of a convention is by no means an easy task, partly because the public is sure in the long run to resent the use of such means. The repute accorded to any family, however distinguished, is, like the fame of individuals, the result of what they actually do—not of what they say about themselves, or even of the publicity which they give their own great deeds. They may by holding meetings undoubtedly increase their notoriety; but notoriety in this field will never do as a substitute for fame.

One of the counsel for the contestants in the Hammersley will case gave a reporter last week an interesting account of the history of the property which is to be fought for. It deserves the attention at least of all rich men about to make wills. It seems that it is now some forty-four years since any one knew positively who owned this property. It once belonged to a gentleman named Mason, who made the mistake of trying to dispose of it by will. His will was broken by his heirs, after a contest lasting thirteen years; but, meantime, to guard against the possibility of a contrary decision, the property was transferred by deeds, absolute on their face, and ultimately came to the late Mr. Hammersley. He died, leaving a will, and the lawyers now say in the first place that his will is good for nothing; in the second place, that, whether it is or not, the original transfers were void; or, if valid, that they had an entirely different effect from what has hitherto been supposed; and nothing, it seems, but a great number of very expensive and vexatious lawsuits can possibly determine who the owner is. Ten years, probably, is the shortest period that counsel can allow to settle the question. The difficulty about the settlement of any question of property in New York is always in the direct ratio of the size of the estate—a curious legal phenomenon unknown in other countries, and even in communities as near by as Massachusetts.

The Legislature of Georgia, which is now holding its adjourned session, is on the eve of considering the report of a committee appointed at the regular session last winter to inquire into the advisability of establishing a State school of technology. The members of the Committee are, as we judge from their published interviews, clear-headed men, alive to the needs of their State, and willing to learn from any competent instructor. They have, during vacation, examined the schools of Worcester, Hoboken, Boston, and New York, and the result is an earnest advocacy by them of the establishment of similar schools in Georgia. The press of the State, it is gratifying to observe, has warmly coöperated with them, though there is some difference among the leading journals about the grade of school which should be at first supported—whether, for instance, one conducted upon the general plan of those visited by the Committee, or one resembling the recently established school in Chicago. But they all heartily favor "the new departure" in education.

It was to be expected that Georgia would be among the foremost of the Southern States to take into consideration this question of technical training, and it is safe to predict that prompt favorable action will follow—if not on the part of the State, at any rate, of its enterprising citizens. Great progress has been made there in the last few years in agriculture. The intelligent system adopted by Furman has proved of such palpable benefit that there has been an utter abandonment (theoretically, at least) of the old system by all who have come within his influence. It is not improbable that the skilled labor which it seems now the intention of Georgia to possess, will secure even greater blessings to the State than the adoption of new systems of farming. The same may be said of the South generally. Already the young men from that section are to be found in the machine shops and technological schools of the North. Some of them are working at Altoona and elsewhere, having completed their academic studies at Southern universities, and having turned their backs upon positions once eagerly grasped by the class to which they belong. These are awaiting the change which is to come over the South, and which the report of the Georgia Committee, and the agitation which it will cause, whether or not it secures a legislative appropriation, will hasten.

The latest news from England shows the deep impression made by the success of the Parnellites in Monaghan, followed as it has been by the success of another of them in Wexford, where the O'Connor Don, one of the oldest and hitherto one of the most respected of the Catholic and Celtic gentry, who ran as a Liberal, was not only badly beaten at the polls, but was hooted through the streets by the mob. The reason why the Monaghan election has made so much stir is, as is now well known, that Monaghan is an Ulster County—that is, a county in the Scotch and Protestant district, in which the Nationalist or Separatist feeling has hitherto obtained but little support. The triumph of the Parnellites does not, however, indicate that the Nationalist cause is making positive progress in Ulster, because they did not put it forward in their canvass; but it does indicate that the Ulster voters are getting over their hostility to the Nationalists, and are willing to work with them and through them on the land question. The danger is that if they get into the habit of working with them and through them on the land question, they will get into the way of working with them on other questions, and finally on the greatest question of all, the political relations of the two islands. At all events, it has made a Parnellite force of seventy or seventy-five, which has hitherto seemed a vague possibility, a very palpable and very near probability.

An Irish vote of this size in the House of Commons, acting together and following out the Parnellite policy of treating every question as subordinate to Irish questions, and all Cabinets as worthy of overthrow on any question which did not accept Parnellite views about Ireland, would, of course, make the transaction of business in Parliament under the present system of attack and defence impossible. There is talk already of some understanding between the Ministry and the Opposition, with a view to preventing the Irish vote from affecting the game as now played; but it is difficult to see how any arrangement could be made which would accomplish this object. Suppose, for instance, that they were to agree that the Irish vote should not count so as to compel the resignation of a ministry; the adoption of such a plan would introduce a very startling and very dangerous innovation into the working of the Government. It would, in the first place, be a partial disfranchisement by the majority of an obnoxious minority, and it could not be prevented from forming a precedent which would reach other minorities besides the Irish. It would, in fact, be a new and extra-constitutional weapon in the hands of any majority made up of a combination between the Ministry and the Opposition. Moreover, it would be nearly as flagrant a disregard of Constitutional usage to say that the votes of a portion of the House should not count for the overthrow of a ministry as to say that they should not count for the defeat of a bill. It is not as well settled, but it is nearly as well settled, that a minister shall resign when there is a considerable majority against him on one or at least two or three important measures, as that a bill shall not become a law when it does not obtain a majority on three readings. If he refused to do so, he would be carrying Parliament to the Tudor régime, which now prevails in Prussia, where the minister stays in office as long as the King thinks proper, no matter how small his following in the Chamber. But the English people would never tolerate this.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 18, to TUESDAY, July 24, 1883, inclusive.]

DOMESTIC.

A STRIKE of the Telegraphers' Brotherhood was expected throughout the country on Wednesday, but it was postponed, evidently with the aim of giving the Executive Committee of the Western Union Company an opportunity to meet and consider the demands of the Brotherhood. The Committee met on Wednesday afternoon and ignored the Brotherhood, but appointed a sub-committee "to inquire into complaints of inequalities of compensation or conditions of service of employees of this company, if any, and report to this committee." The action of the Western Union Committee aroused the Brotherhood to final action. It is said that the members were notified at midnight of Wednesday by despatches sent all over the country that the strike was to begin the next day. At 12 o'clock noon, Washington time, on Thursday 473 men and women were quietly at work in the operators' rooms of the Western Union central office in this city. Suddenly some one blew a shrill whistle, and instantly nearly every key was deserted, and with cheers the operators walked in an orderly manner out of the building. Not one hundred of their fellows remained at work. A similar scene was enacted in all the large offices of the country at the same moment of Washington time. About 12,000 operators quit work. From no point was disorder or unlawful action reported. The strike extended to all companies whose operators were members of the Brotherhood. The press associations having leased lines were not interfered with, and the cable service was continued at full speed and efficiency, but in every other branch of business the result was noticeable. The New York Produce Exchange suddenly ceased to transact its accustomed business; all commercial messages were received for transmission with a proviso that no damages should be claimed on account of delay. Business was everywhere delayed for hours.

In this city the work of reorganizing a force of operators was immediately begun at the various company offices. There were many volunteer and inexperienced hands, and by Friday the Western Union central office claimed to have half the usual number of operators at work. The strikers asserted that there were not more than a score of skilled men in that number. Reports of a more or less encouraging nature were telegraphed from many cities during the day, but business seemed to be transacted with great delay. Operators were called in from country offices which were closed. Both employers and strikers were firm and confident. Mr. Jay Gould said on Friday: "We do not propose to recognize any committee of the Brotherhood, and if the employees of the company persist in their present action they will not get a cent." The strikers were greatly encouraged on Saturday by additions to their ranks, and held general enthusiastic meetings in this city. The situation remained practically unchanged on Tuesday, except that the operators were more confident than usual of success. There were well-founded reports of negotiations on the part of the American Rapid and Baltimore and Ohio Companies in this city for a compromise with the strikers. They however refused to carry on the negotiations, it is said, through the Brotherhood. The Western Union denied that it had made any advances toward a settlement. The Brotherhood assert that the railroad operators will strike whenever they are so ordered by the Society.

Ten thousand persons in this city, previously employed in cigar-making, were on Thursday out of employment. The doors of fifteen large shops were not opened, in accordance with the manufacturers' threats of a lock-out unless the 250 Progressive Union men formerly employed by S. Ottenberg & Brothers, in East Twenty-third Street, returned to work before Wednesday evening. The strikers positively refused to return to work while there remained in the shop the twenty-six International Union men who declined to strike against a change of the end of the pay week from Friday night to Thursday night. On Tuesday the workmen declined an overture from their former employers.

The first stage of the settlement of the question of priority of invention of the several parts of the telephone was reached on Saturday, when the Examiner of Interferences in the Patent Office promulgated his decision in "the speaking-telephone interference cases." Among other points decided, priority of invention is awarded to Bell for the art by which oral conversation or sounds of any description can be telegraphically transmitted; also for the improvement in the art of transmitting vocal sounds or spoken words telegraphically. Priority of invention is awarded to Edison, although he did not claim it, for the transmitter, consisting of the combination in an electric circuit of a diaphragm and a liquid or equivalent substance of high resistance, whereby the vibrations of the diaphragm cause variations in the resistance of the electric current.

In the Criminal Court, Washington, on Wednesday morning, Judge Wylie delivered an opinion upon the pleas in abatement by the defence and the demurrer entered by the Government in the case of the United States against William Pitt Kellogg, charged with illegally receiving money while a United States Senator for his action in connection with the expedition of certain Star-routes. He said the matter was entirely within the power of the Court to determine. All the pleas were overruled.

Thirty-one prominent citizens of Chicago have presented Gen. Phil Sheridan with a house in Washington, in view of his early departure for that city from Chicago to assume the position of General of the Army.

President Arthur arrived at Cape May on Monday from Washington in the steamer *Despatch*. He gave a public reception there, and left for New York near midnight, where he arrived on Tuesday.

The decision of the Secretary of the Interior in regard to the claim of the Southern Pacific Railroad Company to the unearned land grant of the extinct Texas Pacific Company has been postponed until September.

According to a recent estimate about $300,000,000 of the national debt, or less than 20 per cent., is held in Europe.

It is probable that Supervising Architect Hill will resign if the investigation now in progress finds him not guilty of any corrupt act. He says that he will not resign under fire.

Captain Payne, of Oklahoma fame, and his attorney, Colonel Waters, of Topeka, made application on Monday at Keokuk, Ia., to Judge McCrary for an injunction to restrain General Pope from interfering with the settlement of Indian Territory.

The Senatorial contest in New Hampshire was continued throughout the week. On Wednesday Mr. Chandler received 74 votes, and Mr. H. Bingham 116. The situation remained practically unchanged on Tuesday.

The Republican State Central Committee of Virginia met on Thursday, and elected John F. Dezendorf Chairman. Resolutions were adopted approving the course of Mr. Dezendorf in his defence of Republicans, and saying "that among the many able men whose names are being connected with the candidacy for the next President of the United States, James G. Blaine is the preference of the Republicans of Virginia."

The lower house of the Georgia Legislature on Friday passed, by 105 to 41, a bill taxing all railroads in the State in each county through which they pass.

The Tewksbury Almshouse Investigating Committee reports were submitted to the Massachusetts House on Friday. All the Republican members sign the majority report and all the Democrats the minority report. The majority report reviews at great length the evidence given before the Investigating Committee, and concludes by finding the main charges of Governor Butler "groundless and cruel." The report of the minority holds that by the technical rules of law adopted by the Committee of Investigation much important testimony was excluded, but that the evidence submitted leads them to believe that three of the trustees, Nourse, Elliott, and Spaulding, have been unfaithful to their trust, and that the retention of Marsh in his place all these years has been simply a crime, for which the trustees are mainly responsible. The minority are also of the opinion that the State Board of Health, Lunacy, and Charity cannot evade responsibility in the matter.

The Niagara Park Commission, at a meeting in this city on Friday, authorized the State Engineer to proceed to make a map of the proposed park, the expense not to exceed $1,000, and to be paid out of the funds of the Commission.

A pool embracing all the railroads Eastbound out of Chicago which supply business to the trunk lines was completed on Friday. It supersedes the old pool and includes the three new lines—the Chicago and Atlantic, the Chicago, St. Louis and Pittsburgh, and the Nickel Plate. It is to be in effect for five years from July 1. Commissioner Fink is to determine the percentages on the division of business.

General Swaim is quoted as saying that if Stephen W Dorsey can produce any letter to show that he was ever offered a Cabinet position, he owes it to General Garfield to do so. He says that while Garfield appreciated Dorsey's services as a politician, he had said to him (Swaim) that Dorsey had "a screw loose in his moral make-up."

Severe storms prevailed in Minnesota, Illinois, and Ontario on Saturday, doing much damage to crops and property.

Hanlan, the Canadian oarsman, defeated Wallace Ross at Ogdensburg, N. Y., on the St. Lawrence, on Wednesday evening, in a boat race (four miles with a turn) by almost a quarter of a mile. Time, 27:57½, beating the best previous record.

General E. O. C. Ord, of the United States Army, died of yellow fever at Havana on Sunday. He was sixty-five years of age. From January to June, 1865, he was in command of the Department of Virginia, engaging in the siege of Petersburg and the pursuit and capture of Lee. After the close of the war he commanded the Departments of California, the Platte, and Texas. He was made Brigadier-General in the regular army July 26, 1866.

Commodore William N. Jeffers, of the United States Navy, died in Washington on Monday evening. He entered the navy in 1840, and served with credit in the Mexican war and the rebellion. He was prominent in the Ordnance Department, and was at one time its chief. He was the author of a number of technical books.

Martin Millmore, the sculptor, died in Boston on Saturday afternoon at the age of thirty-eight. His last work was the bust of Daniel Webster for the State House at Concord, N. H.

Mr. Richard L. Dugdale, author of 'The Jukes' and a contributor to various magazines in this country and Europe upon social science, died in this city on Monday of heart disease, at the age of forty-two years.

Ginery Twichell died in Brookline, Mass., on Monday, aged seventy-two. He was a prominent railroad man, and a member of the Forty-first and Forty-second Congresses.

Captain Webb, the champion swimmer of England, lost his life on Tuesday in an at-

tempt to swim down the rapids of Niagara. He disappeared in the whirlpool.

A terrible calamity occurred at North Point, Tivoli, an excursion resort on the Patapsco River, ten miles from Baltimore, about 10 o'clock on Monday night, by which many lives were lost, the number being estimated between sixty and seventy. The accident was occasioned by the giving way of the outer portion of a pier on which several hundred persons were congregated, awaiting the boat to return to the city. They were an excursion party from a Catholic church of Baltimore. More than one hundred were precipitated into the water when the pier gave way. Many were rescued. Those drowned were mostly young girls and children. Sixty-five bodies were brought to Baltimore on Tuesday, and most of them were identified.

FOREIGN.

On Friday it was announced that Sir Charles Rivers-Wilson had gone as a representative of the British Government to interview M. de Lesseps in Paris on the Suez Canal affair. He asked that the number of British directors of the Suez Canal Company be increased from three to five; that the number of British members on the Committee of Finances be increased to three, and that the company have an office in London; also that the surplus profits of the Suez Canal Company be shared by stockholders and shipowners when the dividend reaches 21 per cent. On Saturday it was announced that the mission had been successfully accomplished, that M. de Lesseps had modified the agreement, and Sir Charles Rivers-Wilson had returned to England.

Mr. Gladstone, however, announced in the House of Commons on Monday afternoon that he would not ask Parliament at this session to sanction the agreement in regard to the Suez Canal, made with M. de Lesseps. The announcement was received with cheers by the Opposition. The agreement will be referred to a special committee. Mr. Gladstone also said that the consideration of the agreement had been dropped, owing to the general objection to the scheme and because more time had been asked for by some of the members. He declined to express his opinion relative to the bold idea in favor of an international committee to control the Canal, although he admitted that the Canal would be made to benefit all. England, Mr. Gladstone said, would not use her temporary exceptional position in Egypt to invade rights which had been lawfully acquired. M. de Lesseps had informed Sir Charles Rivers-Wilson, in their negotiations in Paris, that he considered that the Government was not in any way bound to press the agreement on Parliament. But whatever might be done a second canal would be constructed as rapidly as possible.

On Tuesday Sir Stafford Northcote gave notice in the House of Commons that he would soon move an address to the Queen, praying that in any negotiations relative to the Suez Canal she would decline to recognize any claim of the Suez Canal Company to such a monopoly as would exclude other undertakings designed for the purpose of opening a way between the Mediterranean and Red Seas.

A letter from M. de Lesseps to Mr. Gladstone, dated July 20, has been published in London. He points out that the agreement gives such just rights as are permitted by the obligations of a company which enjoys an exclusive monopoly for ninety-nine years. He fears that the unpleasant discussion which has arisen in England with reference to the agreement may prejudice friendly sentiments between the English and French peoples. He begs Mr. Gladstone, in the interest of general peace and of the Franco-English alliance, not to consider himself bound by the agreement. If it is suspended, or even withdrawn, he says, the Suez Canal Company, while it will immediately proceed with the construction of the second canal, will enforce reductions of dues as stipulated in the agreement. Mr. Gladstone has replied to M. de Lesseps, thanking him for his letter.

M. Waddington's appointment as French ambassador to England is considered throughout Europe as a pacific act. On Friday the London *Times* asserted that there was every appearance that the difference between France and England arising from the Tamatave affair would be easily settled.

Queen Victoria on Tuesday went to Osborne.

The great rifle match at Wimbledon, England, between the teams of British and American militia, began on Friday. Twelve men constituted each team. The shooting was done in rounds, seven at each distance. The highest possible score for each man in seven rounds was 35. The shooting began at noon in a light rain. The scores during the first day's shooting were as follows: American team at 200 yards 352, 500 yards 366, 600 yards 360; total, 1,078. British team at same distances, 340, 376, 354; total, 1,070. The Americans were therefore 8 ahead on the first day's work, and were elated and confident on account of their success. The second day was one of alternate rain and sunshine, with a wind unfavorable for great scores. The Americans increased their lead at 800, scoring 16 points more than the British; at 900 yards the British gained 34 points, giving them a lead of 10 points, which they increased to 45 at 1,000 yards. The scores for the second day were as follows: American team, 800 yards 346, 900 yards 263, 1,000 yards 219; British team at same distances, 330, 297, 254. Total for two days: British, 1,951; American, 1,906; British win by 45 points. The Americans were treated with great cordiality by the English. They were entertained at luncheon by the Lord Mayor of London on Tuesday.

The shooting for the Kolapore Cup took place at Wimbledon, England, on Wednesday. It was won by the English team, Canada, Jersey, Guernsey, and India also competing.

A memorial has been forwarded to the Earl of Derby by the Executive Council of Queensland urging the British Government to reconsider their decision to forbid the annexation of New Guinea to that province, and inviting them to take steps to provide a federal government for Australia.

Sir Charles Michael Wolseley, Baronet, was married on Thursday in the pro-cathedral at Kensington, England, to Miss Anita Theresa Murphy, daughter of Mr. D. T. Murphy, of San Francisco, Cal. The ceremony was performed by Cardinal Manning.

Sir Augustus Paget has been appointed British Ambassador at Vienna.

At a recent meeting of the International Literary Association, in London, the draft of an international copyright convention, which is to be presented at the conference to be held in Berne in September, was read.

Lord Penzance, Dean of the Court of Arches, has sentenced the Rev. Mr. Mackonochie, the well-known English Ritualist, to deprivation of his ecclesiastical preferment, with costs.

The steamer *Daphne* was floated near Glasgow on Thursday, and a great many more bodies recovered. The total number so far recovered is 123.

The London *Times*, in its crop report of Monday, says the area of wheat planted in the United Kingdom is from 10 to 15 per cent. below that of last year, and the yield will be below the average. Reports from the Continent are similar in their conclusions.

The South Dublin (Ireland) Union has given its consent to the emigration to Canada of eighty workhouse inmates.

Business in Alexandria, Egypt, is entirely suspended on account of the cholera. It was announced on Friday that the disease had ceased at Port Said. The European Powers increased their precautions against cholera during the week. A correspondent at Cairo asserts that unless the English authorities promptly take the direction of affairs, the checking of the disease will be hopeless. Quarantine was abolished on Saturday throughout Egypt, except in Alexandria and the Province of Fayum, where it is retained at the request of the British Consul-General. Two hundred and forty-two deaths occurred at Cairo on Friday, and about five hundred on Monday. The disease has appeared at Suez.

M. Challemel-Lacour, French Minister of Foreign Affairs, in the Senate on Saturday said that France had not declared war against Anam. There was no thought as yet, he said, of establishing a blockade in Anamese waters, but France would certainly do so if any other Power should supply Anam with arms and ammunition. Tuduc had not declared war against France; on the contrary, he had avowed respect for the existing treaties between France and Anam. M. Challemel-Lacour believed it to be untrue that the Tuduc had asked assistance of China. In conclusion, the Foreign Minister said: "Although there is not open war, yet all the acts and language of the Tuduc, and likewise of China and her ambassadors, have been such that we must consider ourselves at war with Anam."

The French Senate on Friday voted urgency for the Judicial Reform Bill, and decided by a vote of 169 to 114 to pass to the discussion of its clauses.

The harvest in Prussia promises well, especially in the northeastern provinces. It will be less in Pomerania and Brandenburg. Wheat in the former is below the average. In Schleswig-Holstein, Westphalia, and Rhenish Prussia drought has done much damage.

The court at Nyiregyhaza, Hungary, which is trying several Jews charged with the murder of Esther Solymosi, went to Tisza Ezlar on July 17, when the boy witness, Moritz Scharf, was compelled to look through the key-hole in the door of the synagogue, through which he alleges that he saw the murder committed. It was conclusively proved that it was impossible to see a group of persons, as he swore he did. A constable on Thursday testified that he had been compelled to torture one of the Jewish prisoners.

A clew to a Nihilist plot has been discovered at Tula, capital of the Government of that name in Russia.

The rebellion in the lower end of the State of Tamaulipas, in Mexico, is said to be gaining strength daily. It is reported that more than 400 men, headed by young Cortinas, attacked and defeated the Government forces. This is the first engagement which has taken place.

It was reported from Mexico on Wednesday that the Rev. Mr. Shaw, Acting American Consul at Monterey, had been attacked and beaten almost to death by a mob of Mexicans. The furniture and papers belonging to the Consulate were destroyed. On Monday news was received that the affair was an ordinary robbery.

The revolutionists remain in undisturbed possession of Miragoane, Hayti. Although the Government troops number 9,000 men, they apparently fight only when attacked.

A letter was published on Thursday in Lima, Peru, from Colonel Gorostiaga to General Lynch, dated Huanachaca Heights, July 10, in which he said: "After two days' cannonade and firing, the division under my command engaged the united forces of Caceres, Rocobarren, Elias, and other chiefs, obtaining a complete victory and entirely dispersing them. All their artillery is in our possession." Caceres had 4,000 men, six Krupp cannon, and an abundant supply of rifles, while Colonel Gorostiaga had only 1,600 men. It is calculated that Caceres lost 1,000 killed on the Heights.

THE PUBLIC AND THE STRIKERS.

THERE is one fact in the telegraphic troubles that is full of suggestions touching any attempt which may be made to provide a legislative remedy for such cases, and that is, the avowal made by the strikers that they chose this period of the year for the strike because it is that in which there is most telegraphing; or, in other words, because it is that in which the strike will cause most business and social inconvenience. It is the season at which most city men are away from their places of business, or separated from their families, and in which there are most travellers by land and sea, and, therefore, that in which the loss of the telegraph will cause most confusion and annoyance—not to the companies, be it remembered, but to the innocent public, which has never done either of the parties to the dispute the slightest wrong. It apparently has not occurred to the strikers that they have any duty to the public whatever, or that they are not at perfect liberty to inflict on it any loss or damage which will help them in their war with their employers.

This is certainly a queer state of mind for a large body of intelligent men, but it is not an unnatural state of mind in view of the public hostility toward all the great corporations for some years past. Every malcontent now thinks that if he cannot command the public ear on any other subject, he can at least command it on the tyranny of monopolists, and that if he cannot secure public sympathy in any other way, he can do it by telling a story of wrong done him by a railroad or telegraph company. The employees of the great corporations, therefore, take it for granted that when they strike, the public will be on their side, and that it will visit on the corporation whatever loss or annoyance the strike may occasion. It is not surprising that, holding this view, they should seek to make the loss and annoyance as great as possible. They are strengthened in this position, too, by the attitude of the courts toward common carriers. The law has always been very strict with common carriers, and rightly so. It takes no excuse, or almost none, for their failure to perform their contracts, except what it calls "act of God," or war or rebellion—that is, overwhelming necessity. It appeared, too, from the decisions in the suits arising out of the freight-handlers' strikes, a year ago, that the courts were not willing to consider a general strike of employees as a good excuse for nonfulfilment of a contract, on the ground that the companies could have all the freight-handlers they wanted by paying the wages demanded. Of course, strikers could not want a better weapon than this against an employer charged, like a railroad or a telegraph company, with a great public service. Under it, all they have to do in order to bring the employers to terms is to throw the machinery out of gear even for a few days. How readily this doctrine is applied to the telegraph companies, we see in the present case.

Now we are as desirous as anybody of seeing corporations compelled to do their duty and kept in their proper place. But there are the seeds of much confusion and disaster in the notion that they must and will be made to bear the blame of all loss or inconvenience arising out of disputes between them and their servants. Whatever fresh legislation may be needed now or hereafter to make them do their duty to the public, must therefore take cognizance of the duty of their employees also. The doctrine of the common law with regard to common carriers grew up at a period when a carrier who employed twenty men was a very great carrier indeed. In fact, the original common carrier, around whom the early judicial decisions cluster, was a man who carried on his business with one wagon or a few packhorses. When the excuses for non-delivery first took shape in the judicial and legislative head, the thought of a common carrier employing an army of twenty or forty thousand men had never entered it. Consequently a general strike was never thought of as one of the contingencies which ought to excuse failure in performance. And yet, with such organizations as modern corporations are, charged with the maintenance of communication and transportation over vast and thickly-peopled areas, a strike may be just as great an impediment to the discharge of their duty as a foreign invasion, a rebellion, or flood, or earthquake. Of course, they can end a strike by conceding everything demanded; but supposing that such a concession would destroy discipline, or make it impossible to conduct their business except at a loss, would not asking them to make it be asking them the equivalent of an impossibility? All mercantile corporations exist for the purpose of making profits; to impose on them conditions incompatible with profits is to convert them, against the will of the members, into philanthropic associations—something which neither law nor public opinion has any right to do.

We say all this without meaning to express any opinion whatever of the merits of the controversy now pending between the telegraph companies and their operators. No matter which of the parties is in the right, the use of the public loss, inconvenience, and annoyance by either of them to bring the other to terms is something which the law ought not to tolerate. Any legislation enacted for the regulation and control of corporations, therefore—that is, for the purpose of making them discharge their duty to the public, whether through commissions or otherwise—must hereafter take cognizance of differences with their employees. We cannot treat strikes as always justifiable on the part of the servants and preventable on the part of the employers. Sometimes one side is right and sometimes the other. More frequently still, each is half right and half wrong. There ought to be a tribunal for the decision of such controversies, which seriously touch the public interest and convenience, and, the decision once rendered, general strikes in defiance or evasion of it should be punishable in some manner.

WOMAN SUFFRAGE IN PARLIAMENT.

IT is now more than twenty years since woman suffrage was mooted in England. At first it was received with ridicule, and even the respected name of John Stuart Mill barely sufficed to procure a fair hearing for it. Then by degrees people became familiarized with it. Some were attracted by the abstract justice which appeared to underlie it. Some thought that Mr. Mill was right in believing it would enrich and elevate the lives of women, and make them fitter companions for men. Some looked to see certain legal injustices from which women suffered removed more quickly when the political rights of women had been recognized. In 1870, when the Education Act was passed, women received the right of voting at the elections of school boards, and even of being themselves chosen members of school boards; and soon afterward they were also empowered to vote at municipal elections. In both cases, the suffrage was extended only to spinsters or widows paying rates, so that the number enfranchised was not very great—less than twenty per cent. of the whole number of voters. Since this change, which, strange to say, was made without debate or opposition, and indeed passed almost unnoticed, the position of the advocates of female suffrage has been greatly strengthened. They are now able to use two new arguments. They can appeal to the fact that women already exercise the school-board and municipal franchise, and that no evil results have followed. They can ask what reason there is why, when the same standard of qualification, viz., the payment of rates (local taxes), is applied to men and women as regards the election of local councils and officers, the identical standard of qualification under which men receive the Parliamentary franchise should not confer that franchise upon women also.

Thus the movement advanced sensibly during the first few years after 1870. Some able and eminent men became converts to it, and one in particular, Lord Beaconsfield, carried a good many disciples in his train. It was, however, shrewdly surmised that his adhesion was due to his believing that the extension of the suffrage to women would greatly strengthen the Conservative party, and this belief has, perhaps, checked the ardor of some Liberals, who think that Lord Beaconsfield was likely to be right. A few years ago there seemed to be a slight reaction against the idea, and it is very hard to say whether or no it is gaining ground at this moment. It seems to spread among the women themselves. Although the great majority of women in the United Kingdom have, of course, never heard of it at all, and, even in the upper and educated classes, would not care about it if they had heard, still, it cannot be doubted that the number of female adherents grows, not perhaps rapidly, but steadily. The education of women has made great strides in England by the establishment of girls' high schools and colleges; and the number of women who have larger ideas than their mothers, with more eagerness to join in the pursuits and interests of men, is always larger. Politics themselves have been hotter during the last seven years than they had been for some time before, and are more talked about by women or in their presence. Nor is it by any means what are called masculine women that now support the agitation. Many ladies, not merely of high social position, but of cultivation and refine-

ment, perfectly feminine in their ideas and habits, take part in it, and bring their personal influence to bear on their husbands, fathers, brothers, sons, cousins, "well-wishers," and friends generally. Nevertheless, the progress of the cause among men is not rapid. Two distinguished persons who at one time favored it, Mr. John Bright and Mr. Goldwin Smith, not only withdrew, but have, the latter especially, expressed themselves decidedly against it. Other statesmen of scarcely less eminence have privately declared that although they had formerly voted for it, they would never do so again. Recruits continue among the younger politicians, but the weight of authority for it can hardly be said to be any greater (if so great) now than it was ten years ago.

It must be remembered that the form which the proposal takes in England differs widely from what we are familiar with in this country. There exists in the English boroughs a franchise which, although greatly widened by the Reform Act of 1867, is still far removed from universal or manhood suffrage. It is enjoyed (omitting minor details) only by ratepayers or lodgers paying a certain rent, and residing in the same house for a certain length of time, and practically gives constituencies not more than half as large in proportion to the population as they would be on our system. In the counties the suffrage is much more limited. Now, the proposition hitherto made by the woman suffragists, and advocated this year by Mr. Hugh Mason, in whose hands their case was placed, is to extend the Parliamentary franchise only to women who possess such qualifications as would give it them if they were men—that is to say, who pay their own rates. Married women, sisters who live with their brothers, daughters who live with their fathers, would therefore not be admitted, because the house is usually in the man's name and he pays the rates. Hence the addition to the number of voters would not be very large—perhaps from twelve to sixteen per cent. of the present voters—and thus the proposal seems a far less momentous one than it would be in a country where universal suffrage prevailed.

However, the advocates of Mr. Mason's motion were not altogether agreed on the subject. Some insisted that they were asking votes for single women only, and even admitted that the gift of the right to married women might be mischievous, as tending to endanger the peace of families; while some added that it was unnecessary, because the wife is, in a sense, represented through her husband. Others, however, felt that this position is one hard to maintain logically. Why, they say, should a wife be represented only through and by a husband who is perhaps inferior to her intellectually and morally, who may be opposed to her in politics, who may be living on her money? Why should marriage operate to disfranchise a woman who had enjoyed political rights before? She may be even more fit to exercise them as she grows older and learns politics in the society of her husband and other men. Moreover, by an act of the last session, woman at last enjoys the full ownership of whatever property comes to her by bequest or is acquired by her own exertions; so that, if property be taken as a basis, she would seem no less entitled, where she has it, than her husband. Naturally, to give the Parliamentary franchise to married women seems to most Englishmen a far bolder thing than to confine it to spinsters and widows; and the sense that it would be hard to find a logical stopping place if it was once conferred on the latter, with the knowledge that the present agitation would be resumed for the purpose of obtaining the further boon, doubtless operated to repel some who might otherwise have supported the proposal in the limited form which it actually took.

The division, which took place on the 6th of July, showed 116 members voting for woman suffrage and 132 against it, the numbers from various causes being smaller than had been expected. The majority, likewise, by which the motion was rejected was much smaller than any one would have dreamed of twenty years ago, and if the prospects of the cause were to be measured by the change between 1863 and 1883, they would seem brilliant indeed. But it may be doubted whether ultimate success is near. The Conservative party did not generally follow the lead of Lord Beaconsfield, and gave the motion only a scanty support. The support among Liberal members was, of course, far larger, but most of the leaders either voted against it, like Mr. Gladstone and Mr. Bright, or else, like Mr. Chamberlain, stayed away. However, the past history of the movement is such as may well discourage prophecy; but no one can doubt that whether women are fit or not for the franchise, they are fitter now than they were when Mill wrote, and are daily becoming more interested in and better judges of political affairs.

THE NEW SUEZ CANAL PROJECT.

LONDON, July 14, 1883.

THE most sudden and startling sensation of this session, otherwise, happily, much duller and flatter than that of 1882, has just fallen upon England in the proposals of the Government relating to the construction of a new Suez Canal. They were stated to Parliament two days ago, and since then nobody has talked of anything else. Although you will have learned long before these lines reach you how English opinion has expressed itself, still a contemporary reflection of the first impressions which the public has experienced may have some interest for your readers, who have perhaps scarcely realized the extent to which the topic has begun to occupy us.

For some months past, and especially of course since the pacification of Egypt, which followed the victory of last September, there has been a growing discontent with the management and state of the Canal. Its dimensions are unequal to the vast and always growing traffic which passes through it; vessels have to encounter great delays, and disputes arise in consequence. The dues are heavy, and the administration is said to be in many ways vexatious, giving the minor officials, who are, of course, mostly French, opportunities for making unreasonable exactions, even in excess of the heavy tolls and extravagantly heavy pilotage charges. Some three years ago the profits on the trade through the Canal increased rapidly, and in consequence the number and tonnage of vessels passing through has very largely grown, while as the greater competition for freights has reduced the profits, the pressure of the Canal tolls and charges is more severely felt. Four-fifths of the tonnage is British, so that British shipowners are more interested than those of any other country in procuring a lightening of the tolls and an improvement of the facilities for speedy and secure navigation. Early in the present year the complaints of the shipowners began to take shape, and while memorials have been addressed to the Government, meetings have been held at which projects were discussed for making another water way from the Mediterranean to the Red Sea. Three plans were put forward. One was a second canal through the Isthmus of Suez, generally parallel to the present one. Another was the construction of a canal from Alexandria, or some other point near it, to Suez, an enterprise which would cost, perhaps, twice as much as a canal along the existing line. A third was to make a deep cutting from the Bay of Acre across the Plain of Esdraelon to the Sea of Galilee, and thus to let the waters of the Mediterranean into the Jordan Valley, which, as everybody knows, is much below the level of the ocean. The result would be to submerge the Sea of Galilee, the whole line of the Jordan, the Dead Sea, and the deep depression which runs away south from it from Zoar toward Akabah, at the head of the easternmost arm of the Red Sea. This depression, however, the southern part of which goes by the name of the Wadi el Araba, is not continuous, but rises at one point some hundreds of feet above the level of the Red Sea; so that a deep cutting of many miles would have to be executed, at an enormous cost, to complete the water connection between the Mediterranean and the Red Sea. Hence the project cannot be seriously entertained, and the choice lies between the two other courses, the former of which, a canal parallel to the present one, is obviously the easier and cheaper. Here, however, comes in a new difficulty. The existing Suez Canal Company claims that it has an exclusive right, under the concessions made by the Khedive of Egypt, to the line of communication across the Isthmus of Suez; and it naturally refuses to permit any new company to step in and lower the value of its property by constructing a new, competing canal.

When the British Government, at the instance of those who complained that British commerce suffered by the inadequacy of the present canal and the high tolls charged, took the matter into consideration, their first step was to ascertain whether the claim of the existing company to a monopoly was well founded. Their law officers appear to have advised them that it was. They were therefore driven to the conclusion that the existing company were masters of the situation; that no rival canal could be made across the Isthmus; and that the only way to remove the grievances complained of was by amicable arrangements with the existing company. Negotiations were accordingly set on foot with M. de Lesseps, and the preliminary heads of agreement settled whose publication has excited such a clamor. The terms are already familiar to your readers, and the criticisms made upon them by our shipowners, merchants, and politicians no less so. It is alleged, firstly, that the arrangement is financially unfavorable to England, because she lends money to the company at 3¼ per cent. which could not have been raised in open market for less than 5 per cent., and, secondly, that the advantages gained in return for this boon are altogether inadequate, the reduction of tolls being too small and too long deferred, while the share in the control and administration of the Canal conceded to Englishmen is slight, and not such as to afford due protection to British interests,

whether commercial or political. (There are those who disapprove of the whole thing, and especially of the proposed loan of eight millions to the company for the execution of the new canal, on the ground that we are thereby committing ourselves more deeply, and indeed irretrievably, to future interference in Egypt which must lead to annexation; but this view is scarcely heard for the present among the complaints levelled against the particular terms of the agreement.)

These criticisms and complaints have not been primarily the result of any party feeling against Mr. Gladstone's Government. They proceed just as much from Liberals as from Conservatives, although no doubt Conservatives make them with more satisfaction, because they see in the affair a means of damaging the Ministry. When the Chancellor of the Exchequer read the heads of agreement out to the House of Commons on the 11th of July, the anniversary of the bombardment of the forts at Alexandria, the reception given them was ominously cold. Next morning the city of London, and the great commercial centres, Manchester, Liverpool, Leeds, Newcastle, were all agog over the proposals; and since then the newspapers have been full of the reports of meetings of chambers of commerce and other mercantile bodies at which the matter has been warmly discussed, resolutions passed, and memorials to the Government adopted, all, so far as shown, condemning the preliminary agreement, and insisting that better terms must be obtained. The Opposition in Parliament are not slow to profit by this feeling, and Sir Stafford Northcote promptly gave notice that when the plan was submitted to Parliament he would move its rejection. It is not too much to say that one finds in general society no one who approves or relishes it; those who wish to support the Government merely pleading for delay till we know their case more fully, and alleging that the present ebullition of opinion is transient and unreasonable in not allowing for the difficulties which the Government had to confront.

The Government itself, as represented by Mr. Gladstone's answers in the House of Commons and Mr. Childers's speech to a deputation which approached him from the associated chambers of commerce, does not defend the agreement as good in itself (though Mr. Childers insists that it will sensibly diminish the canal dues, and so abate the chief grievance complained of), but argues that it is the best which could be obtained under the circumstances. The French company, they say, had an impregnable legal position. It could make its own terms. It altogether refused to transfer its domicile (*siége social*) to England, to admit English directors in preponderating numbers, to reduce the tolls at any earlier times or to any greater extent. There was therefore nothing for it but to get not all that was desired but as much as could be got, or else to allow all the existing mischiefs to continue. If English opinion prefers the latter course, well and good; the negotiations will be dropped, and those who like may try some scheme for making a canal along a line which will not interfere with the rights of the present company over the isthmus. And besides all this, it is hinted that the Government, finding our political relations with France somewhat strained, desired to avoid so far as possible any further grounds of jealousy, and therefore gave the company better terms than it might otherwise have obtained.

There is obvious force in the way the Government put their case, and it is not yet clear what will be the line of criticism upon it and reply to it which the opponents of the scheme—at present overwhelmingly numerous, but likely to differ much among themselves—will adopt. Several lines may be suggested. Some will probably deny that the French company's monopoly is good in law, and will argue either that the Khedive's concession did not actually, if properly interpreted, confer a permanent exclusive right, or that he had no power to confer any such right. Others may perhaps go so far as to say that, admitting his legal title, the interests of the civilized world ought to prevail over legality, and that the monopoly of the company must be disregarded. Others, again, declare that, even admitting and respecting the company's rights, the Government might, if it had realized and represented to the French the strength of British opinion on the matter, have extorted better terms; others, that if no better terms could be now had it would have been wiser to break off negotiations, and allow the company to be frightened by the prospect of a competing canal along some other line.

As the agreement is expressed to be made subject to the approval of Parliament, it will drop if Parliament declines to confirm it. Some weeks may perhaps elapse before a debate takes place, and before then there will probably be fluctuations in public opinion, some reaction from the present chorus of disapproval, some suggestions of possible modifications, and a full discussion of the legal question which underlies the whole matter. Moreover, our political relations with France may affect the question. The high-handed behavior of the French admiral at Tamatave, in Madagascar, as telegraphed here three days ago, produced a painful impression. Unless apologies are tendered, there will be much irritation against France, and a less amicable disposition toward the Suez Canal Company; while on the other hand it is possible that the existence of the canal difficulty may incline the French Government to disavow the offences of its admiral, and give explanations which will soothe English feeling. Y.

NOTES ON THE RELATION BETWEEN HOME RULE AND ENGLISH POLITICS.

LONDON, July 7, 1883.

1. No change can be made in the legal relations between England and Ireland without the free consent thereto of the electors of Great Britain. No one who understands the present state of the world, hopes or fears that Irish local or national independence can be extorted from Great Britain either by armed rebellion or by means of foreign intervention. The triumph of 1780, the rising of 1798 are alike out of date. The system on which Ireland is to be governed must be determined in the Parliament at Westminster, and this determination must depend on the will of the representatives of England and Scotland. On this matter a score more of Home-Rule or Nationalist victories such as Mr. Healy's election for Monaghan can have no direct effect whatever. Suppose that at the next election Mr. Parnell could come back to Parliament supported by the whole of the Irish representation. No one can deny the moral effect which such a demonstration of Irish wishes would have, and ought to have, upon the resolutions of the English people; but the fact would still remain that, even under this extreme supposition, Mr. Parnell's followers would number not a sixth of the House of Commons. On the more probable supposition that they may, after the end of this Parliament, amount to about seventy-five members, they would number not an eighth of the House. The Irish representatives of the demand for Home Rule must, in short, be, under all circumstances, a comparatively small Parliamentary minority. The question at issue must be fought out in Parliament, and by Parliamentary methods. This is known to Mr. Parnell as well as to any English politician; his claim to statesmanship rests on his skill in Parliamentary manœuvres, but by no device can a minority gain or usurp the power of a majority. If Mr. Parnell ever succeeds in attaining his objects, he must do so with the consent of the representatives of England and Scotland—that is, in the long run, with the consent of the majority of the English electorate. The Irish party may, of course, it will be suggested, ally itself with a large English minority, and thus obtain a temporary majority in the House of Commons. This is, of course, quite possible as regards isolated questions; but an observer must have studied modern English politics very ill who believes that English or Scotch M.P.'s have the virtues or the vices of men who resist the pressure of public opinion. If the majority of the English electors proved themselves opposed to the demands of Mr. Parnell, and therefore opposed to any alliance between the Home-Rulers and English politicians, one may feel well assured that in one way or another the will of the English people would soon make itself decisively felt in Parliament. No one (it may be said) disputes the fact that no constitutional change, whether bad or good, can be carried through Parliament which is opposed to the deliberate wish of the electors of England and Scotland. But what no one disputes many people forget, and I conceive that in England, with which I am well acquainted, and probably in Ireland, with which I am not well acquainted, many persons fail to realize all the importance for good and bad of the supremacy in Parliament of the British electors. The electoral successes of the Home-Rulers in Ireland are in many ways most important, but their direct effect in enabling Mr. Parnell to force his policy on English governments is liable to a good deal of exaggeration.

2. There is no patent reason why the people of Great Britain should not, if they see fit, be able to maintain the present connection between England and Ireland. I do not assert or deny the justice or the expediency of maintaining the terms of union unaltered. My whole point is, that there is nothing in the circumstances of the time to make it specially difficult for the people of England to resist Irish demands for Home Rule, for the repeal of the Union, or for national independence. Foreign complications do not threaten the country with danger; the population of Great Britain are more united than at any other period of history; there is scarcely such a thing as a large discontented class to be found among Englishmen. Fifty years of reform have produced their legitimate effect; they have created national harmony, which is another word for national force. The strength, moreover, of government has, in England as in other countries, greatly increased—one might say alarmingly increased—during the course of the last hundred, and still more during the course of the last thirty, years. Any one deceives himself who draws inferences as to the present day from the memories of 1780, of 1798, of 1828, or even of 1848. The delusion that a popular insurrection is irresistible is now known to be a delusion. The worst-trained army is stronger than the best-armed mob. Add to this, that systematic insurrection is admittedly out of the question. I do not for a moment believe that the conscience of England would tolerate measures such as those which suppressed or followed the rebellion of '98. But there is no reason to suppose that a modern Premier can be reduced to that dilemma between civil war and concession which compelled Wellington to carry Catholic emancipation; and the experience of the last six months shows that it is possible by a vigorous effort to enforce the rule of law by the

use of legal methods. It is also well worth remark that there exists one circumstance which may make the English electors feel a doubt whether, even with a view to conciliating Irish good-will, or rather to lessening Irish discontent, it is necessary to yield to the demand for Home Rule. The success of the Land-Leaguers has been as conspicuous as the failure of the Home-Rulers. No agitation for any form of independence has evoked anything like that unmistakable popular response which has answered every appeal made to the tenants of Ireland to get and retain a grip on the land. Ireland is clearly in the midst of an agrarian revolution. The thought may, at any rate, fairly occur to thousands of Englishmen, that agrarian troubles are to be met rather by social than by political changes. The French peasants ceased to be Jacobins when they became secure of their position as landowners. The conclusions which this fact may suggest to English democrats are obvious, though they may, I admit, be found inapplicable to Ireland.

3. A large, a compact, and a zealous party of Home-Rulers, counting (say) seventy-five or eighty votes in the House of Commons, could not of themselves carry through any policy opposed to the will of the English people. The existence, however, of such a party would undoubtedly for a time immensely embarrass the action of parliamentary government in England. The idea that English electors would consent to get rid of these embarrassments by abolishing representative government in Ireland is, as it seems to me, monstrous. I should call the idea a palpable absurdity were it not for the eminence of one, at least, of the persons by whom this mode of suppressing what is, grotesquely enough, called the conspiracy of the vote, is advocated. Still less can any calm observer of modern English life believe that English electors would tolerate the permanent, or perhaps even the transitory, establishment of martial law in one part of the United Kingdom. Humanity and a sense of justice would, one may hope, make it impossible for the English democracy to tolerate courses of action which would be repudiated by the very advisers who now recommend them, the moment when the actual results of such courses became visible to all observers. The men who attacked and attempted to prosecute Governor Eyre would assuredly not tolerate in Dublin acts which they found unbearable in Jamaica. But in this matter we need not trust to the uncertain force of humanity or of justice: the commonest feeling of self-preservation would be sufficient to make the democracy of England resist the open suspension of the constitutional rights of the Irish people. Ordinary sense tells us that you cannot in the long run maintain democratic institutions in England side by side with despotism, however benevolent, in Ireland. Make the attempt, and the thought would soon occur to men, say, like Mr. Bright and Mr. Chamberlain, that the national independence of Ireland would be a far less evil to the English democracy than would be the maintenance in a European country, by a democratic Parliament, of a system opposed to every principle of popular government. Nor, if the electors of England were determined at once to avoid all schemes for ruling Ireland by unconstitutional methods, and at the same time to prevent parliamentary government from being rendered ineffective in England, need there be any substantial difficulty in their obtaining their wish. The strength of a "third party" like that of the Home-Rulers depends upon the existence of something like an equality between the two great parties which divide the field of English politics. As long as this equality or anything like it exists, a compact minority, with objects foreign alike to English Liberals and to English Conservatives, may exert an influence disproportioned to its numbers by holding the balance between the two great Parliamentary groups. There is nothing whatever in the character or antecedents of many notorious politicians to make us suppose that they would refuse to purchase a party success at the price of sacrificing the interests of the country. An Opposition which exists to oppose cannot be nice in the means taken to carry out the objects of its existence. But if the electors of Great Britain should become convinced that the Home-Rulers are obtaining undue influence by playing off one English party against the other, they have the remedy in their own hands. To return to Parliament a crushing Liberal or a crushing Conservative majority would be to reduce the Irish minority to Parliamentary impotence, and a majority elected to insure the energetic working of Parliament would soon find means of effectively checking obstruction. Some thought of this kind was, I take it, in the mind of Mr. Bright when he denounced, whether wisely or not, the tacit alliance or coöperation of Conservatives with the "rebel party." A denunciation aimed not at the manœuvres of the Home-Rulers, which from their own point of view are hardly blameworthy, but at the unscrupulosity of their allies, was much more than a piece of invective: it was, in fact, a warning to the English people. The admonition will not pass unheeded. Nothing is more likely than that an increase in Mr. Parnell's following may produce the complete though alternating predominance in Parliament of the Conservative or Liberal party.

4. The strength of the Home Rule position, which I have not the least wish to underrate, does not wholly depend on a possible alliance with unscrupulous factions. Englishmen of the most undoubted public spirit and soundest judgment are, it must be confessed, quite at sea about Irish affairs. Nothing shows this more than the constant attempt made by English Liberals to substicute what is termed "local government," "county government," or "self-government" for Home Rule or Federalism, and to persuade themselves that the extension of the powers of local government in Ireland may turn out a concession which may meet Irish demands and yet be in conformity with the principles of ordinary English Radicalism. Yet this notion appears to rest upon more than one confusion of ideas. "Local government," in the sense in which the term is generally used in England, has no connection at all with such Federalism as was advocated by Mr. Butt. If an Austrian statesman had proposed before 1866 to meet the wishes of Hungary or of Italy half way, by increasing the powers of Hungarian or Italian municipalities, any English Liberal would have seen through the futility of the proposal. It is difficult to see why a similar scheme for meeting the views of Irish Federalists should not be held equally futile. But one may go further than this. An English statesman who increases the powers of Irish local bodies—say, county boards or corporations—may be right or may be wrong in his belief that parochialism (which does not always appear such an admirable thing in England) possesses in reality all the merits ascribed to it by De Tocqueville and others, under the pleasing, if delusive, name of self-government. But however this may be, he is certainly contravening the essential principle implied in every form of Home Rule, of letting Ireland decide all matters of primarily Irish concern for herself; for the Imperial Parliament, in extending the sphere of local government in Ireland, is deciding that a decentralized, rather than a centralized, form of administration meets the needs of the Irish people. But the question whether this be so or not is one which, in an Irish Parliament, whether provincial or national, could hardly be decided without long debate. To a disinterested student there is certainly much in the known facts about Ireland to suggest that, were the country self-governed, it would create a form of administration more like that of France than of England. Meanwhile, English Liberals who show speculative leanings toward extending local government in Ireland do not exhibit any desire to leave local Irish questions, when they come before the Imperial Parliament, to the decision of Irish members. In any scheme of the most limited Home Rule, the poor-law, education, the police would assuredly be left to the Irish legislature for determination. I doubt whether there are twenty English Radicals in Parliament who would allow any one of these matters to be settled by the votes of the representatives of Ireland. Nor are these Radicals without valid reasons for refusing even this amount of concession to the Home-Rule principle. The members of the Home-Rule party are, for the most part, men in whom English politicians find it impossible to place any trust whatever. The very statements of fact used in a recent debate to support a demand made by Irish members for an extension of out-door relief were, I have been told by a person who certainly knew what he was speaking about, not trustworthy, and in fact untrue. Many English Liberals, however, between a genuine desire to give due weight to the wishes of Irishmen with regard to the government of Ireland, and an equally genuine wish to rule Ireland on what they themselves believe to be sound economical and political principles, are, as I have said, totally at sea. There is no denying the fact that this condition of feeling gives, and rightly gives, a chance of Parliamentary success to the Home-Rulers which they would not otherwise possess. A minority who know their own minds, and aim steadily at their own objects, may, as history has shown again and again, defeat or outmanœuvre a disunited and confused majority, consisting of well-meaning persons who do not know exactly what it is they would be at.

5. The action of English politicians will, however, as already pointed out, ultimately depend on the will of the electors. If the English constituencies care as much, or even half as much, to maintain the present constitution of the United Kingdom as did the Northern States of America to maintain the Union, the Imperial Parliament will certainly resist every form of Home Rule as strenuously as Congress opposed Secession. But the question whether the mass of the English electors do or do not look upon the maintenance of the present connection between Great Britain and Ireland as of vital importance is a point on which no one is really in a position to give a decisive opinion. It is, however, hardly necessary to remind you that, unless we were grossly misinformed in England, many politicians throughout the United States fancied, up to the very day the cannon was fired at Fort Sumter, that the citizens of the Northern States were prepared to acquiesce in disunion.

These notes have been written since Mr. Healy's election for Monaghan. Their substance, however, has been long in my thoughts, and I do not know that that election, striking though it be as a demonstration of popular sentiment, has caused me to write a word which I should not have written the day before he was returned at the head of the poll. What may be the value of my observations, the readers of the *Nation* can judge more fairly than I can myself. They point, however, in my mind, to this conclusion. The electors of Great Britain can, if they are so

inclined, maintain the present union with Ireland in the face of any conceivable success on Mr. Parnell's part in enlisting Irish support. What is the inclination of the British electorate is to a great extent a matter of conjecture. Whoever can ascertain it will have solved one, at least, of the problems of English politics.

A. V. DICEY.

JOUBERT AND HIS FRIENDS.

PARIS, June 6, 1883.

THE philosopher Joubert has a limited notoriety. His works have not been read out of a small and distinguished circle. In the 'Monde où l'on s'ennuie,' Pailleron makes the young wife of the sub-prefect quote "le philosophe Joubert," and his pleasantries have perhaps done more for the glory of Joubert than Sainte-Beuve's articles. Joubert published some 'Pensées'; but I do not agree with the author of 'Les Correspondants de Joubert,' M. Paul de Raynal, when he says, in this recent work, that these 'Pensées' have as much title to glory as those of La Rochefoucauld, of La Bruyère, of Pascal. It is something to come first, to create a literary form; and even Vauvenargues is only placed on a second line behind these great writers.

The work of M. Paul de Raynal has this merit, that it shows us the society of Joubert, and his society was perhaps more interesting than he was himself. He was born in Périgord in 1754, and came to Paris in 1778, at the age of twenty-four years. He was a type of the period which preceded the French Revolution. He was fond of good society, sociable in the extreme; he was carried for a little while into the great philosophical current of the time; but, as he was an idealist at heart, he was not long under the influence of Diderot. Sainte-Beuve says of him: "Diderot has a singular pupil in Joubert, a Platonist and a Christian in the end, fond of the finest and holiest ideal, studying and adoring piety, chastity, and finding for the expression of noble subjects no form sufficiently ethereal." Joubert was married during the revolutionary period to a Mlle. de Bussy, at Villeneuve-sur-Yonne, and settled there, making the acquaintance of Mme. de Beaumont, who became his intimate friend.

Mme. de Beaumont is known as the great friend of Chateaubriand. She was the daughter of the Count de Montmorin, who was Ambassador to Madrid and afterward Minister of the Interior under Louis XVI. from the opening of the States-General to the end of the Constituant Assembly. Pauline de Montmorin had been married at the age of eighteen years to the Count de Beaumont, the nephew of the Archbishop of Paris, who was himself only seventeen years old. The marriage was not a happy one; she was abandoned by her husband, and retired to her father's house. In the month of August, 1792, M. de Montmorin was arrested and imprisoned at the Abbaye, and perished during the massacres of September. His wife, Mme. de Montmorin, retired with her two daughters—Mme. de Beaumont and Mme. de la Luzerne—and her son to a country house between Sens and Villeneuve, belonging to a M. de Sérilly. This gentleman was arrested, and some time afterward all the inmates of the house were arrested, with the exception of Mme. de Beaumont, who had probably been forgotten. The château was closed, and Mme. de Beaumont, having no asylum, received the hospitality of the Jouberts. M. de Sérilly and his brother, and M. de Montmorin's son, ascended the revolutionary scaffold on the 10th of May, 1794, with the sister of Louis XVI. and eighteen other victims; Mme. de la Luzerne died shortly afterward at the Hospital of the Archevêché, where she was imprisoned. Mme. de Sérilly was in the family way, and her execution having been postponed in consequence, she was saved by the reaction of the Ninth Thermidor. Her *acte de décès* was already made out, and she was able to show it at the trial of Fouquier-Tinville when she was called as a witness.

Mme. de Beaumont was left almost alone in the world. She returned to Paris in 1794. She wrote to Joubert: "I am afraid to see this city, tainted with the blood of all that was dearest to me." She was a good friend of Mme. de Staël, whom she had first seen when Necker was the colleague of M. de Montmorin, her father. Mme. de Beaumont and Joubert exchanged letters constantly; the philosopher had become her intellectual guide, her literary director; he made her read La Bruyère, Pascal, Tasso in the original, Malebranche, even Plato. Mme. de Beaumont had a serious mind, and was not afraid of a little philosophy. Joubert was a little intolerant; he liked nothing of Voltaire except his letters. "Voltaire," he says, "is like a monkey: he has charming movements and hideous features." In another place, when Mme. de Beaumont offers him a complete edition of Voltaire, he says: "May God preserve me from ever having a complete edition of Voltaire!" They were both great admirers of Mme. de Staël. Joubert writes of her: "Of all the women who have printed anything, I like only her and Mme. de Sévigné."

Mme. de Beaumont had always been very delicate; she became consumptive in October, 1797. After the revolutionary *coup d'état* of Fructidor she writes to Joubert: "Everybody is uncertain, and preparing to run away; we have now the terror of deportation, as we had before the terror of the guillotine. I am awaiting my destiny rather firmly, perhaps only because I believe myself invulnerable, as I escaped a fate which seemed inevitable. However, I have no illusions, I have prepared for all possible journeys, and the journey from which there is no return is the one which I should not make with the least pleasure." The letters of Mme. de Beaumont to Joubert are very charming. She struggles constantly against her natural melancholy: "We ought to laugh before we are happy, because we might otherwise die without having laughed." She read much; she delighted in Voltaire's correspondence: "I confess that one must have much leisure in order to find charm in it; but then it takes the place of society, and of a lively, animated, spirited society. Voltaire has long been a very good man; he is often still so in his old age. He, and Tasso, whom I read with difficulty in Italian, and yourself, prevent me from becoming heavy and pedantic."

The law of 1792 had established divorce, and in 1800 Mme. de Beaumont was divorced from her husband. She did not intend to marry again, but she had the strongest reasons for keeping her independence. Her salon in Paris became one of the centres of society. Her intimate friends were Joubert, Fontanes, Bonald, Pasquier, Molé, Chênedollé, Mme. de Krüdener, the Duchesses of Duras and of Lévis; but the God of the Temple became soon Chateaubriand. The "young savage," as Joubert called him, was almost unknown: he had not yet published his 'Genius of Christianity.' In 1801 he published 'Atala,' an episode of his great work, and from that day he became famous. Mme. de Beaumont had Chateaubriand for a little while at her country-place at Savigny, and it was there that he gave the last touches to the 'Genius of Christianity.' In 1803 Mme. de Beaumont fell more ill, and was sent to Mont Dore, a watering-place in Auvergne. The journey was then a rather difficult one: "I would not advise a tyrant to exile himself to this place." The waters did her no good, and she resolved to go to Italy. Chateaubriand took her from Milan to Rome; she was so weak that she could hardly walk a few steps each day. She took a drive, but soon she became so feeble that she was confined to her room. Chateaubriand was with her in her last moments; he always worshipped her memory. He had a little monument built for her at the Church of Saint Louis des Français, near the tombs of the La Trémouilles and the Mortemarts. Mme. de Beaumont is seen recumbent, and round her are the medallions of the parents whom she lost during the Terror, with the inscription, "Quia non sunt." Joubert was never consoled for the death of this young woman, who "lived only to suffer all the evils of life."

A common friendship is a great tie: Joubert and Chateaubriand felt as if they were brothers. Their relations lasted from 1800 to 1824, the year in which Joubert died. Joubert became very intimate also with Mme. de Chateaubriand. This lady was married at the age of seventeen, at Saint-Malo, to Chateaubriand, at the time when he came back from America. He describes her in this way in his 'Mémoires d'Outre-Tombe': "She was white, delicate, thin, and very pretty. She had, like a child, long curly hair, which was left hanging. I knew her from a distance, on the shore, by her pink pelisse, her white gown, and her blonde hair flying in the wind." Mlle. de Lavigne had a fortune of 500,000 francs. The religious marriage was celebrated in secret by a priest who was not *assermenté*, as all *assermentés* were looked upon as heretics by the Catholics. After four months of marriage Chateaubriand was obliged to leave his wife, and he joined the army of the Princes. He has told us the history of his years of emigration; in his absence his wife was imprisoned at Rennes. She remained there till the 9th Thermidor, and showed a courage and an energy remarkable in so frail a body. We do not know why Chateaubriand on his return lived apart from his wife from 1801 till 1804. She never seemed to resent this long separation: she was devoted to him, she admired his genius; she fully approved his course when he made his protest against the execution of the Duke d'Enghien and resigned his functions of Minister of the French Republic.

Mme. de Chateaubriand made the acquaintance of the Joubert family in 1804, and became very intimate with them. She valued extremely the delicate qualities of Joubert. She had a very high appreciation of all intellectual matters. "I doubt," says Chateaubriand, "if there was ever a finer intelligence than my wife's; she reads the thought and the coming word on the forehead and on the lips of the person to whom she talks." Many of her letters to Joubert are found in the 'Correspondants de Joubert.' The correspondence begins in 1806, when Chateaubriand left for Greece. His wife accompanied him to Venice, but he would not allow her to go further, on account of her health. She writes to Joubert: "He has feared the fatigue of the journey for me. Everybody says here that this journey is not dangerous; but

"'Ego quid sit ater
Hadriæ novi sinus et quid albus
Peccet Iapyx.'"

Mme. de Chateaubriand knew Horace; and I make this citation in order to show what education was given to a girl in Saint-Malo at the beginning of this century. She had an odd turn of mind: "I am smitten by the departure of M. de Chateaubriand and by the sirocco. This wind cuts arms and feet. When it blows, an Italian can say nothing but 'Sirocco, sirocco,' and you answer, 'Sirocco, sirocco.' With this word, in summer at Venice, you know quite as

much Italian as is needed." Bollanche, the good Bollanche, took Mme. de Chateaubriand back to France.

This little volume has, besides many letters of Mme. de Beaumont's and of Mme. de Chateaubriand's, letters from M. de Fontanes, M. Molé, Mlle. de Chastenay, from an Englishman, Mr. Frisell, who lived always in France and was half a Frenchman, and was completely adopted by the best French society. There is not much unity in such a volume; it shows, however, some interesting traits of a society which was coming out of the horrors of the Terror and reviving again; it shows also a sort of intellectual *renaissance* which preceded the great romantic movement of the Restoration. Strange to say, politics plays little part in all these letters; it seems as if all these minds were tired of it. The French Revolution and the wars of the Empire had exhausted curiosity. Literature had become a solace and a consolation. Joubert was an idealist, and made idealists of his friends.

Correspondence.

BURNING AT THE STAKE IN NEW ENGLAND.

To the Editor of The Nation:

Sir: In the *Nation* of July 19 Mr. James H. Crosby asks the following questions:

"Was any one ever burned at the stake in New England by public authority? If so, who was it?"

Two notable cases of burning "at the stake" have been recorded by our historians. "The first to suffer such a death in New England was a negro woman who burnt two houses at Roxbury, in one of which a child was burnt to death. The negro woman was burnt to death on the 22d of September, 1681, in Boston." The lines here quoted are gathered from Increase Mather's diary. Cotton Mather ('Pillars of Salt—An History of some Criminals Executed in this Land,' p. 71) says "the Negro was *Burnt* to *Death* at the Stake, for *Burning* her Masters House, with some that were in it."

The second and last instance of execution by burning in New England is recorded by Professor Winthrop in the words following: "September 18, 1755. A terrible spectacle in Cambridge: two negroes belonging to Capt. Codman of Charlestown, executed for petit treason, for murdering their said master by poison. They were drawn upon a sled to the place of execution, and Mark, a fellow about 30, was hanged; and Phillis, an old creature, was burnt to death." Another account says that Phillis was "burned at a stake about ten yards distant from the gallows. . . . After the execution, the body of Mark was brought down to Charlestown Common, and hanged in chains on a gibbet erected there for that purpose." L.

THE UNITED STATES FROM A CHILEAN POINT OF VIEW.

To the Editor of The Nation:

Sir: The prevalent idea of Chile in the United States seems to be that she is a semi-civilized but pugnacious little republic, spoiling for a fight with our great but peaceful country. The intemperate and bombastic tone of our own newspapers, after the collapse of Mr. Blaine's "spirited foreign policy," many of which declared that we had been "slapped in the face by a third-rate South American republic," gave rise to this very incorrect view of Chilean feeling toward us, which I believe still generally exists.

The estimation in which we are held by a small Power like Chile is, of course, a matter of considerable indifference to the large majority of Americans; and if they ever think of her at all, it is with a kind of half-amused irritation that the United States should have permitted such a bantam of a nation to face her down and crow over her; but the same indifference toward us does not obtain in Chile. It is frequently a matter of surprise to Americans here, to find how closely intelligent Chileans have followed our political course. Our prosperity is a frequent theme of discussion in their journals, and any recognition of their own good qualities by us causes them lively satisfaction. An instance of this occurred, a short time ago, in the reprinting of the *Nation's* review of Markham's history of the still existing war between Chile and Peru. This criticism was first copied into one of the leading dailies of Santiago, under the title of "Important Opinion of Chile," and was thence copied by several of the provincial papers, not so much for the value of the review as a review, but because of the complimentary comparison drawn by the writer between the peoples and governments of Peru and Chile.

Before the war with Peru and Bolivia, which at this present writing seems at last to be in a fair way of definitive settlement, the popular feeling toward the Americans was extremely cordial, and the good offices of our representatives, who aided in the last adjustment of the boundary question with the Argentine Republic, as late as 1881, were gratefully received, and were believed to have prevented an appeal to arms. In Valparaiso, it is true, unpleasant recollections of the red-shirted forty-niners, who used to stop in that city on their way to the "diggings" in California, still survived with some of the old residents, and they had believed so long that these rough adventurers were fair representatives of "North Americans," that they have never been able to quite bring themselves to like their fellow countrymen. But the opinions of this small section of Chilean society did not greatly affect the general good feeling toward us.

When Blaine's emissaries interfered in the South American war, and Hurlbut intimated to the Peruvians that the United States would not permit Chile to annex any part of Peru, a strong and very general feeling of indignation arose at what was considered an unjust and unwarranted interference with the rights of Chile. Many of the fire-eaters of the Chilean army and navy, flushed with their triumph over Peru and Bolivia, were amazed that Chile did not at once and effectually chastise the impudent "Yankees," for attempting to deprive her of the well-deserved reward of her hard-earned victories. Among the ignorant at home, as well, this surprise at their country's forbearance was widely shared. The intelligent and leading men in Chile, however, never entertained any serious idea that such a war would be possible, and, although they shared the irritation of the aforesaid fire-eaters, and looked upon the action of the United States as a piece of bullying, they knew that, if their withdrawal from Peru and Bolivia should be insisted upon, they would be compelled to submit to the inevitable, and retire from those countries. Such resentful feelings as these were by no means inexcusable, for Chile had suffered severely in blood and money, and an extension of territory northward, to give room for her increasing population, which cannot spread laterally, was felt to be a national need, therefore a national right, and only a just reward for her courage and energy.

A deep and general unfriendly sentiment, based upon such substantial grounds as the Chileans thought they had, does not of course die out at once, although the reason for it may no longer exist; and it cannot be said that the old feeling toward us has entirely returned. The not altogether unfounded opinion held by the best informed Chileans, that the false hopes held out by Hurlbut to the Peruvians have been a potent factor in prolonging their resistance to the terms of peace offered by Chile, still keeps alive the remembrance of Blaine's unwelcome interference; and the old lurking dread of American filibustering propensities, which was always exaggerated in South America, was reawakened by that gentleman's diplomatic methods. The feeling, however, never takes an active, or even unpleasantly passive form, and if we "Yankees," who are in Chile, can judge by the social recognition we enjoy (not altogether a bad test), we are rapidly regaining our position in their good books.

Notwithstanding the intimate commercial relations of Chile with France, England, and Germany, she is strongly attached to the Monroe Doctrine, and looks upon the United States as the foremost and strongest champion of the non-interference policy. This is creditable to the intelligence of the Chileans, who, if they judged from the only evidences of our power they see—I mean our antique little war-junks—would feel some contempt for our assumption of the leadership of American republics; but their interest in and study of our affairs prevent their coming to any such hasty conclusion. At the time of the blockade of the nitre ports in Bolivia by the Chilean fleet, in the early part of the war, considerable pressure was brought to bear upon Chile, unofficially, by the Europeans who had business interests in those ports, to induce the Government to raise the blockade, and there was some apprehension felt at that time that the French and English Governments would take overt measures to protect the interests of their citizens. This apprehension would have been very much greater if the opinion had not been almost universal that the United States would not permit forcible interference by any of the European Powers, and that she was prepared to make such interference a *casus belli*.

Even at the height of our unpopularity with Chile, the dislike of the "Yankees" was never so great as to check the slow but steady growth of American commerce. Although our imports into Chile are still insignificant, American manufactured goods, particularly machinery and agricultural tools, are steadily growing in favor here. The new railroad from Santiago to Valparaiso is to be equipped with American rolling stock, and the English stock, on the existing Government railroad, between the same two cities, is soon to be replaced by a new outfit of American locomotives and cars. American street-cars run in the streets of Santiago and Valparaiso, American sewing-machines and pianos are found in almost every house, and our productions generally are considered by the Chileans to combine the strength of the English with the lightness and beauty of the French.

Geo. Arthur.

Valparaiso, Chile, June 17, 1883.

SCIENCE AND SECTARIANISM IN OUR COLLEGES.

To the Editor of The Nation:

Sir: All that has been said in the *Nation* editorially and by correspondents during the last few weeks upon some unfortunate aspects of our higher education is, in the main, true. As to prospective professors, there is hardly a denominational college in the country that will not inquire about a candidate's religious preferences before any other qualification. Within the period of a comparatively brief experience I have seen, perhaps, a score of letters to college

presidents asking for information in this order; often, it is true, adding a quasi apology for the circumstances that made such a query necessary. And yet, unfortunate as is this state of affairs, I question whether its effects are as mischievous as those resulting from the breeding-in system practised, with hardly an exception, by some of our oldest colleges. In the larger denominations there may generally be found men fairly competent in any department of instruction who possess the requisite religious qualifications; but this cannot be said of the graduates of a single college when the choice is further restricted for doctrinal reasons.

Mischievous as the effects of this policy are in the selection of professors, they are less so than the close watch that in many institutions is kept upon the orthodoxy of incumbents. A few years ago a professor of geology, a man of considerable eminence, in a prominent denominational college, fell under suspicion of heterodoxy in regard to the unity of the human race. He took considerable pains to explain that his views were in entire accordance with the Book of Genesis. The trustees, having in view, what is almost always the case, only the populousness of their institution, decided that his teaching was hurtful to its interests, and requested him to retract them. Refusing, he was expelled from his chair. Here the trustees assumed one of two things: either that they were more competent to decide a scientific question than a specialist, or that the truth or falsity of his views was of little import when weighed against what they regarded the prosperity of the college. This is an extreme case, but others nearly as bad might be cited, to say nothing of the many instances where professors are dropped for causes which the public can only conjecture. Not long ago the trustees of a Western college were reported to have passed a resolution to employ no teacher who should be obliged to prepare his lessons before recitation; on the ground, doubtless, that an incumbent could serve the college better in other ways than by sitting in his study. Ridiculous as this is, it is hardly more so than the common practice of electing a professor in one department to an entirely unrelated one, expecting him to "study up" during the few months to intervene before he enters upon his work

The most discouraging feature of the situation is that expediency candidates are about as likely to be chosen east of the Alleghanies as west of them. Even in that enlightened region the candidate who is an honor to his department stands next to no chance against him who is believed to be able to serve in a general way the interests of the institution to which he may be elected. It would be unjust, however, to charge trustees of denominational colleges with dishonesty or ignorance in laying so much stress upon the religious qualifications of college teachers. Most of them are men of high character, and some are men of much more than average intelligence. One does not need to be very familiar with the history of education in England to know that its affairs are generally managed with quite as narrow a spirit, and that there is less excuse for it. But neither English nor American colleges were founded in the interests of science. Their primary object was to instruct the young in the principles of morality and religion; and morality gets little credit with most church members unless practised within the pale of some orthodox sect. In the eyes of a good many worthy people, a moral non-churchgoer's chances for heaven are a good deal less than those of a bad man who may some time be brought within the fold. Nearly all the money that has hitherto been contributed for the endowment of colleges under ecclesiastical control was given for an avowedly religious purpose. It was given by church members for the good of the church to which they belonged, rarely by men who had any special interest in the advancement of science. It is being used strictly in accordance with the terms of the trust. This being the case, we have no right to blame the denominational colleges for their course in matters of religion; nor is it reasonable to expect any material deviation in the future.

In spite of the many discouragements, I do not regard the cause of science as a lost one in our higher institutions. While knowledge for its own sake may receive little encouragement in the majority of them, the State colleges and universities are trammelled by no conditions. Public opinion will, perhaps, never permit them to be irreligious or unreligious, but this will only affect their general management. The religious qualifications of the teachers will not be considered the chief criterion of fitness. The recent unprecedentedly large grants of money made by several of the State Legislatures are an encouraging sign of the growth of public opinion. I do not wish to draw conclusions more favorable to State universities than the premises will allow. I do not claim that they are now conducted wholly in the interests of knowledge; such is, perhaps, the case in rare instances. Often there are influences patent in their management quite as mischievous in their effects as over-zeal in matters of religion. But these are not traditional nor statutory. The public is rapidly learning that trustees are generally incompetent to select professors, and this duty virtually devolves upon the faculties. Their relative cheapness, taken together with the ease of supplementary study abroad, is putting them more and more on an equal footing with the older colleges, as the prestige of these grows weaker in the traditions and affections of the pioneer settlers. It is safe to predict a better time coming for the specialist in the professor's chair, though it may be too early to say that it is almost here.

While I incline to a hopeful view of the situation at home, I am compelled to believe that the German professor's path to promotion is not so plain and direct as it may appear to the casual observer. I have listened to not a few expressions of surprise at the inscrutable decrees that operate for the advancement of some men over the heads of the more deserving. It is only a few years since the flagrant abuses growing out of degrees conferred *in absentia* were rendered impossible in Prussia; and they are still possible in the rest of Germany. The friends of the lamented Grein were justly indignant that, notwithstanding his exceptional acquirements in Anglo-Saxon, he never got anything better than a subordinate professorship in a little university. The distinguished author of the 'Synonymik der Griechischen Sprache' reiterates the complaint, in the successive volumes of that work, that, in spite of his utmost effort, he has never been able to gain a position where his work would be in his chosen department, but that, on the contrary, he has been obliged to teach a great deal outside of it for the sake of making a living. Here we have obstacles precisely like those in the way of many an American professor. Where the appliances for securing the appointment of the right man are as good as they are in Germany, there is far less excuse for a mistake on the part of the appointing power than with us. That mistakes are, nevertheless, so frequently made, and injustice done to deserving scholars, only shows that the German governments, like the trustees of our denominational colleges, have rather often other ends to serve than the advancement of science.

PROFESSOR.

ATHENS, O., July 17, 1883.

THE GERMAN PROFESSOR AND HIS PAY.

TO THE EDITOR OF THE NATION:

SIR: The controversy carried on in your journal in regard to professorial salaries has not failed to attract considerable attention in Germany, and especially the comparisons instituted between the financial condition of American and that of German professors. As some wrong ideas seem to prevail in America on the subject of the remuneration of university professors in this country, I should like to call attention to the real state of affairs.

In the first place, it must be understood that a man who is elected to fill a chair at some German university is not expected to act merely as a teacher. His abilities as an instructor are, as a rule, regarded as a matter of minor importance, if they are at all taken into consideration on his appointment. But he is required to advance science; and, to enable him to fulfil the expectations entertained of him, the Government feels bound to make him financially independent. A grand laboratory or observatory or clinic is placed at his disposal, enormous sums are voted to defray the expenses of the most costly scientific experiments, and, in order to allow him to devote himself exclusively to the advancement of his science, a large salary insures him against the necessity of undertaking extraneous labor.

The salary of an "ordinary professor" amounts to 15,000, often 20,000 or 25,000 marks ($3,500 to $5,000) per annum. Besides his regular pay he receives the fees paid him by those who attend his lectures. At large universities, like those of Berlin, Breslau, Munich, and Vienna, these fees may reach extraordinary amounts. At Berlin, Reichert, the Professor of Anatomy, is paid 120 marks ($30) by each student for the lecture on anatomy and the concomitant dissecting exercises, during the winter term alone. There were over 400 students, and the sum thus received by one professor amounts to over 48,000 marks. A professor of law or philosophy generally gets 20 marks from each student for a course of lectures extending over one term, and delivered three or four hours a week. As a professor usually delivers more than one course of lectures a term, and as his lectures, especially at a very large university, may be attended by about 150 or 200 students, the emoluments which he enjoys besides his salary may be considered as affording him quite a respectable income. Added to this, the "ordinary" professor holds his position during good behavior. Should he choose to resign in his old age, he has claims to a good pension. Socially the professors rank as high as officers, which signifies the respect in which the devotees of science are held in this military country. Professor Esmarch, of Kiel, is allied by marriage to the Imperial family of Germany.

This care which the German people takes of its savants, in absolving them from the necessity of engaging in the "madding strife" for existence, is the main secret of the success of the German university system and German scientific triumphs. When the brain-power of the American nation shall be concentrated under such favorable conditions at a few grand seats of learning, and the drudgery of the pedagogue be exchanged for the fruitful labor of the independent scientist, then the youth of America will no longer be compelled to seek opportunities for intellectual development in Europe alone.

L. N.

STRASSBURG, July 8, 1883.

Notes.

THE two latest additions to D. Appleton & Co.'s "Parchment Library" are 'Shakspere,' volumes vi. and vii., embracing together "Henry V.," "Henry VI.," "Richard III.," and "Henry VIII." To say more of this charming edition is unnecessary.

The same firm have issued a cheap but even elegant edition of Mr. Bunce's 'Bachelor Bluff: His Opinions, Sentiments, and Disputations,' which originally appeared a couple of years ago. This, too, has a limp parchment cover.

Under the title of 'Old World Idylls, and Other Selected Verses,' Mr. Austin Dobson will publish in England, in October next, a selection from his 'Vignettes in Rhyme' (1873) and 'Proverbs in Porcelain' (1877). It will not differ materially from the American edition of 'Vignettes in Rhyme' (1880), introduced by Mr. Stedman. Within a year Mr. Dobson will also issue a new volume of verse, containing the poems written since 1880. He had engaged to edit Cowper's letters for the "Parchment Library," but he abandoned this when told that Mr. Benham had an edition nearly ready in the "Golden Treasury" series. Instead he has edited the 'Vicar of Wakefield' for the "Parchment Library," having been fortunate enough to find a mass of new material available in notes. Mr. Dobson is also engaged in preparing a volume of 'Selections from Steele,' by the request of the Delegates of the Clarendon Press, besides preparing for the "Golden Treasury" series a selection from Horace Walpole's letters.

A new edition of Ward's 'English Poets' is in preparation, carefully revised throughout and augmented by extracts from three poets who have died since the original issue of the work. Mr. Pater will introduce the selections from Rossetti, Mr. Edmund W. Gosse those from Arthur O'Shaughnessy, and Mr. Philip Bourke Marston those from James Thompson, the little-known author of "The City of Dreadful Night."

Mr. Gosse has prepared a volume of 'Seventeenth Century Studies' on the novel plan of selecting a typical figure for each decade. The ten worthies he has chosen to treat are, in chronological order: Lodge, Webster, Rowlands, Randolph, Herrick, Crashaw, Cowley, Mrs. Philips (the "Matchless Orinda"), Etheredge, and Otway. The chapters on Etheredge and Otway are especially rich in new material. The book will be published in this country by James R. Osgood & Co.

Miss Christina G. Rossetti, whose address is 30 Torrington Square, London, has in mind a memoir of Mrs. Radcliffe, provided there is any store of private information available in addition to what has already appeared in print concerning that novelist.

Thomas Whittaker announces 'Sermons on Future Punishment,' by Randolph H. McKim, D.D.; 'Notes on the late Revision of the New Testament,' by Daniel R. Goodwin, D.D.; and 'Pauline Charity,' by Joseph Cross, D.D., being a series of discourses on St. Paul's definition of charity.

John Wiley & Sons have published Ruskin's "carefully revised reprint of the second volume of 'Modern Painters,'" interesting both for the alterations made (which are scrupulously indicated), and especially for the autobiographical addendum, describing the conditions under which this volume was first composed. Mr. Ruskin's retrospective criticism of the product of his new birth in art and his conceit and presumption (as he acknowledges) is very readable and instructive. He concludes with satisfaction that "The public estimate of me, so far as it is wise at all, and not grounded merely on my manner of writing, is, I think, chiefly as an illustrator of natural beauty."

'A College Fetich' is the title of Charles Francis Adams, jr.'s Phi Beta Kappa address in its pamphlet form (Boston: Lee & Shepard).

In Mr. Charles F. Williams's 'The Tariff Laws of the United States' (Boston: Soule & Bugbee) the compiler has with infinite labor, but with much ingenuity and clearness, effected a comparison of the present tariff with its predecessor, adding notes incorporating the rulings of the Treasury Department and the decisions of courts in contested cases. An appendix gives the rates of tare; the act of January 9, 1883, concerning the importation of Canadian grain to be ground on this side of the border; the act of March 2, prohibiting the importation of adulterated teas; the text of the Hawaiian reciprocity treaty; and the statutes relating to drawback.

Dumanoir and Lafargue's 'Le Gentilhomme Pauvre,' a two-act comedy, is fourth in the "Théâtre Contemporain" published in this city by William R. Jenkins.

The ninth volume, 1880–82, of the Wisconsin Historical Collections possesses a chiefly local interest, and yet so much of its contents relates to Indian relics (like the famous animal-shaped mounds described by the Rev. S. D. Peet), Indian customs (as in Mrs. S. H. Baird's paper), and Indian experiences (as in Capt. Thomas G. Anderson's personal narrative), that the history of the aborigines of the Continent and of the settlement of the Northwest is largely involved. Among the longer obituary notices are those of the late Governor C. C. Washburn, who died while President of the Wisconsin History Society. His portrait accompanies the present volume. The library still prospers, and now numbers upward of 46,000 volumes, besides a larger number of pamphlets, documents, etc. The bound newspaper collection, carefully fostered, is probably unsurpassed in the country. It contains 65 volumes of the 17th century; 470 of the 18th; 3,237 of the 19th.

A pamphlet report on 'The Great Flood in the Ohio' last February, issued by the Cincinnati Relief Committee, will be valued hereafter as a record of a very memorable and (within the historic period) unprecedented inundation in the Ohio Valley. Full details of the Committee's operations, lists of donors and donations, and a summary history of former overflows, give a more than transient interest to this report. It is highly creditable to Cincinnati that more than $40,000 received from without was wholly and of set purpose expended in relieving distress beyond the city limits. As a manual of well-organized charity this report deserves to be read and preserved wherever a like emergency may arise.

B. Westermann & Co. send us the second issue of the 'Annuaire Diplomatique et Consulaire,' supplementary to the 'Almanach de Gotha.' The enterprise has met with the success which the publisher hoped for, and will probably henceforth enjoy a prosperity parallel with that of the indispensable 'Almanach.' The plates of national flags are repeated in the present edition, which in other respects has of course been altered in accordance with the changes in the diplomatic and consular *personnel*.

The July number of the *Studio* begins a second volume, and gives the first of a series of etchings which will hereafter form a regular feature of this interesting journal, in addition to reproductions from pen-drawings, etc. The publication office is at 128 Broadway.

The Chicago Railway Exposition is a proof of the enormous growth of the interest there represented. It is thought the time has now come also for an *American Journal of Railway Appliances*, of which the first number lies before us (New York, 67 William Street). It gives promise of being a very practical medium in a field which offers unlimited opportunities for inventive and constructive genius.

T. Fisher Unwin, 17 Holborn Viaduct, London, announces a limited *édition de luxe* (quarto) of Miss Helen Zimmern's 'The Epic of Kings' (Shah Nameh). It will be illustrated with etchings by Alma Tadema, and Mr. E. W. Gosse will furnish a prefatory poem.

Strange news we find in the London *Academy* (July 7), how that the Government of the United States has ordered a copy of Mr. Bosworth Smith's 'Life of Lord Lawrence' "placed not only in the library of every ship in the navy"—quite possible—"but also in every public library throughout the country"—quite impossible, were it merely so much as a single public library instead of every one.

Apropos of Mrs. Henry Pott's 'Promus of Formularies,' Dr. Eduard Engel has written a lively pamphlet, which he calls a contribution to the history of hallucinations, entitled 'Hat Francis Bacon die Dramen William Shakespeare's geschrieben?' (Leipzig: Wilhelm Friedrich). He expresses grave doubts as to the sanity of this lady, and shows how untrustworthy is her own account of her prodigious "careful" examination of a host of authors of the 16th and 17th centuries. Dr. Engel has begun issuing through the same publisher a 'Geschichte der Englischen Litteratur,' which will devote an appendix to American literature. Part one (out of an estimated eight or nine) has appeared, and in sixty-four octavo pages brings the subject down to Chaucer and his 'Canterbury Tales.'

'Rom und römisches Leben' is the title of a popular treatise on Roman private antiquities by Professor Hermann Bender, of the Gymnasium at Tübingen. It seems to meet a want not met by the dry systematic treatise of Marquardt, or Becker's 'Gallus,' which attempts to make the subject entertaining by putting it in the form of a story. It cannot compete with Friedländer's great work, as a complete and vivid presentation of ancient life at a particular epoch; on the other hand, it is not limited, as that is, to a particular epoch. It is in thirteen chapters, written in an interesting style, and contains nine full-page illustrations, besides a number of woodcuts in the text.

In tearing down a wall in the Schloss Pallaus near Brixen, in the Tyrol, a large number of theological pamphlets of the time of the Reformation were found. From the marginal notes it appears that the former possessor belonged to the Lutheran persuasion and hid them for fear of confiscation and punishment.

M. Joseph Demarteau has published a pamphlet on Théroigne de Méricourt (as the Parisians rendered her real Walloon name, Terwagne of Marcourt), "la belle Liégeoise," one of the beauties and one of the problematical characters of the Revolution. His work relates rather to her imprisonment in the Tyrol, where she was carried from Liége, when she fled thither to avoid the consequences of having taken part in the capture of the Bastille, than to the determination of her character, which in the accounts of her contemporaries vacillates between that of a prude and that of a light-o'-love.

—It is doubtful whether Colonel George Meade's pamphlet, 'Did General Meade desire to retreat at the battle of Gettysburg?' (Philadelphia: Porter & Coates) will promote the laudable purpose which inspired its preparation. General Meade's character and fame needed no defence against an author whose writings are perhaps more celebrated for what they lack than for what they contain. General Doubleday's narrowness of view and inaccuracy of statement are such as would seriously impair the worth of any author;

while his ill-temper and violent prejudices destroy altogether the value of his writings for historical purposes. An attack by General Doubleday on the superior who had removed him from command was, therefore, not greatly to be feared. But, guided by a natural feeling, Colonel Meade in his defence has overshot the mark. He has claimed for his father at Gettysburg more than is necessary to the vindication of the fair fame of a soldier whose modesty was as conspicuous as his merit, and whose courage and character are far beyond all question—more too, we think, than the evidence will fairly warrant. That General Meade had selected, not Gettysburg, but the line of Pipe Creek for his battlefield, is clear from his order of July 1. The unexpected attack of that day upon his two advanced corps, and the report of Hancock in favor of fighting at Gettysburg, led Meade to concentrate his army there on the night of the 1st. He then used every effort so to place his army on that field as to stem effectually the Confederate advance. That while doing this an officer who had been in command but a few days, and was now on a field unknown to him, where on the preceding afternoon two corps of his army had been badly defeated, should have directed the preparation of an order for retreat to the line of Pipe Creek, so that in case of necessity there might be no delay or confusion, is nothing incredible or derogatory. General Meade's denial in regard to this order is not so explicit as Colonel Meade seems to think. At any rate, Generals Gibbon and Williams as well as General Butterfield testify distinctly, under oath, to its existence. Nor is there anything derogatory to General Meade in his calling a council of war on the night of July 2, to determine whether or not the army should retreat. The calling of the council at all, the principal question proposed to it, as well as General Meade's testimony, in which he states his losses before the night of the 2d at 20,000 men, all show the doubt and anxiety which weighed upon him. Another day like the 1st and 2d meant defeat to the Federal army. General Meade was not willing to risk this without the distinct approval of his principal subordinates. He was cautious in his temperament, and at Gettysburg, as afterward at Hagerstown and at Mine Run, he relied much, at critical periods, upon the judgment of his corps commanders.

—Mr. W. S. Ward, formerly connected with the United States Mint at New York, and now Manager of the Morning and Evening Star Mines at Leadville, recently founded a fellowship in connection with the scientific department of Princeton College, the conditions of which were that the recipient should spend the summer in the scientific study of some important mine or mines. The first fruit of this most practical and useful endowment has just appeared as a handsome quarto pamphlet by Mr. Louis D. Ricketts, B.S., on the ores of Leadville, and their modes of occurrence, as illustrated in the Morning and Evening Star mines. Mr. Ricketts had already obtained a fellowship in chemistry, and the chemical ability thus demonstrated has stood him in good stead in the study of these ore deposits. He had, moreover, the advantage of a correct knowledge of the geological structure of the region, obtained from an abstract of a report on the geology of this district, published by Mr. S. F. Emmons, and the further advantage of working in Mr. Ward's own mines, where he naturally had exceptional facilities for study. All these advantages have combined to render his paper not merely an uncommonly able thesis, but a memoir containing a valuable contribution to the study of ore deposits, and one which may prove of practical advantage to the miners in the region in question. His detailed studies, made two years after the completion of the field work of the United States Geological Survey under Mr. Emmons, and when mining operations had reached much greater depths, furnish a most flattering confirmation of the conclusions arrived at by that expert. Mr. Ricketts's little pamphlet may be considered to mark a new era in the history of mining engineering in this country, and not only redounds to the credit of Mr. Ward, through whose liberality it has been published, but also proves the wisdom and far-sightedness of the policy instituted by Mr. King, first Director of the Geological Survey, in devoting the principal force of the new organization to the practical application of geology to mining, which had hitherto been almost entirely neglected by our Government surveys.

—Mr. J. Alfred Gotch has undertaken in the *Building News* to show what male attire should be; female garments he gives up as beyond reform. The figures that he presents look comfortable: a coat, buttoning high to protect the chest; knee breeches or knickerbockers and stockings; shoes or boots *ad libitum*, but in either case broad enough for the natural expanse of the foot; and any hat but the chimney-pot. For summer, a flannel shirt or jersey, a light soft coat with short sleeves showing the jersey below, a broad band rather than suspenders, the rest as before. Next, an indoor costume of white flannel, with loose coat, short trousers, black stockings, and belt and slippers. All these are more graceful and more comfortable than most of our present fashions, notably in dispensing with what campers contemptuously call "biled shirts," with their starched wristbands and collars, the latter the most uncomfortable part of male dress in hot weather. The evening dress would give more pause; the others looked practical, business-like; this looks theatrical, affected, "æsthetic." There is no waistcoat; for the starched shirt a soft white jersey is substituted, for trousers knee-breeches and silk stockings; a sash conceals the juncture of the trousers and the jersey, and gives a chance to enliven the costume with a bit of bright color. A full sleeve is comfortable and graceful, and stopping at the elbow it allows the curves of the forearm to show under the jersey. Mr. Gotch is too wise to expect any sudden adoption of his plan; but when one remembers how much male costume has changed for the better in the last fifteen years it does not seem too much to hope for the very moderate improvements which he suggests.

—The late Sir Edward Sabine, known in science chiefly by his pendulum-observations and researches in magnetism, was born in Dublin only five years short of a century ago, coming of an old family said to be of Italian origin, which settled early in Normandy. He had his early education at the Royal Military Colleges of Marlow and Woolwich, received his captaincy at the age of twenty-six, was elected a member of the Royal Society at thirty, and at about the same time was appointed astronomer of the expedition under command of Sir John Ross, which left England in search of the Northwest Passage. He received the Copley medal of the Royal Society when only thirty-three. While his published papers deal largely with the subject of terrestrial magnetism, many other branches of science are included, his earliest contributions relating to the birds of Greenland, the swinging of pendulums for determining the true figure of the earth, deep-sea temperatures, barometric measurement of heights, ocean currents, and the volcanoes of the Sandwich Islands. In 1835, in conjunction with Lloyd, Humphrey, and J. C. Ross, he contributed to the Reports of the British Association (of which he was General Secretary for twenty-one years) an account of the terrestrial magnetic force in Ireland, followed the next year by his own investigation in a similar manner for Scotland. In 1838, Sabine had so conclusively demonstrated the importance of magnetic observations being made in every part of the globe, that Captain James Ross was sent with the *Erebus* and *Terror* to make a magnetic survey of the Antarctic regions, Sabine accompanying the expedition. The establishment of magnetic and meteorological observatories at St. Helena, the Cape, and Van Diemen's Land was due entirely to his influence, and a general magnetic survey of the globe was begun by him, under the direction of the Admiralty. In 1846, he discussed the winter storms of the United States and the cause of the mild winters which sometimes occur in Great Britain; and later he gave an account of a magnetic survey of a considerable portion of the North American continent, and of the southern hemisphere between the meridians of 0° and 125° East, and parallels of latitude 20° and 70° South, followed in 1849 by a map of the magnetic declination for 1840 in the Atlantic Ocean, between the parallels of 60° North and 60° South latitude. This same year he was awarded the Royal Medal of the Royal Society. In 1853 he was the President of the British Association, at Belfast; and this year marks the beginning of his investigations relating to the moon's influence on terrestrial magnetism. In 1861, at the request of the General Committee of the British Association, he prepared a report on the repetition of the magnetic survey of England, and the year following he became the President of the Royal Society, which office he filled for ten years. In 1862, he entered into a discussion concerning the cosmical origin of terrestrial magnetism. His last contribution appeared in 1872, and consisted of a magnetic survey of the North Polar regions, to serve as a companion to his survey of the South Polar regions, which had already appeared. Sabine's scientific papers are nearly a hundred in number, beginning with the date of his election to the Royal Society, and ranging thus over a period of fifty-four years. A good part of them are to be found in the 'Philosophical Transactions.' In addition to his other well-earned honors, he had been made K.C.B. in 1869, and possessed the Prussian order *pour le mérite*, and was either an honorary or corresponding member of many foreign societies.

—The highly commendable tendency toward useful book-making which in these United States takes the form of compiling indexes, in France is rather more prone to satisfy itself with the equally laborious putting together of bibliographies. There is now scarcely one of the great writers of France who has not been honored with one, and many of the writers of secondary rank have received the same compliment. The latest is the 'Bibliographie des Œuvres de Beaumarchais,' prepared by M. Henri Cordier and published by Quantin (New York: J. W. Bouton). It contains a fine portrait, after Cochin, and the description of more than 500 books and editions of books by and against and about Beaumarchais. A careful examination of its pages shows that there is as yet no absolutely complete edition of all Beaumarchais's writings. M. Cordier has sought to include most foreign imitations and translations of Beaumarchais, and he has made due use of the invaluable catalogue of the British Museum, but he has not thought to utilize American sources of information. The 'American Catalogue' would have added a little to his list, and Poole's Index would have added much; especially Mr. John Bigelow's important paper on Beaumarchais's dealings with our Government. We note the omission of the English

adaptations of the "Barbier de Séville" and the "Mariage de Figaro," published by S. French & Son, of Brachvogel's harmless novel, and of the curious play in which "Monk" Lewis made use of "Tarare." It is a pity that M. Cordier did not attempt a list of the newspapers bearing the name of *Figaro*—we can recall at least four in New York in the past twenty years.

—In 1867 A. Jal published a 'Dictionnaire Critique de Biographie et d'Histoire, Errata et Supplément pour tous les dictionnaires historiques,' a thick work of over 1,300 pages, in which he pointed out a great many mistakes and, no doubt, incurred the enmity of scores of biographers and of descendants of noteworthy men. The next year Bordier published some 'Rectifications à l'Errata,' and Jal's conclusions have been controverted from time to time in various periodicals like *l'Intermédiaire* and *Polybiblion;* for besides other reasons it is always a pleasure to see the engineer hoist with (or even without) his own petard. Lately MM. Guiffrey and Campardon in the *Courrier de l'Art* have noted one slip whose discovery must have given great satisfaction to some of the discontented. M. Jal had made a long article on *cérographie*, a word which they say does not occur anywhere else. It is, however, to be found both in Littré, published four years before Jal, and in Poitevin, published eleven years before Jal, but in both instances without any quotation. M. Jal founds his article on a patent of Henri IV. to Philippe Danfrye père, the engraver, in which the King mentions his "belles inventions de cirgrafie." This last word Jal thinks must have been meant for *cérographie*. His two critics, however, point out that both here and in another text which they have found the word is *géographie*, the letter *g* of the period having some resemblance to a *c*, so that Jal's long dissertation on wax engraving and encaustic is waste learning. But if MM. Guiffrey and Campardon's assertion that the word is not found in any text is true, Jal can plead that at least he was not the first to insert it in French word books.

THE COMTE DE PARIS'S HISTORY OF THE CIVIL WAR.—I.

History of the Civil War in America. By the Comte de Paris. Published by special arrangement with the author. Vol. iii. Philadelphia: Porter & Coates.

It is more than eight years since the first volumes of the Comte de Paris's 'History of the Civil War' made their appearance. Nearly three years ago it was announced that the fifth and sixth volumes of the French edition were about to be published, and then it was stated that their publication was postponed, in consequence of the discovery of fresh material which would cause the author entirely to revise them. They have at last appeared, and simultaneously with them the English translation, which in one volume (number three) comprises the whole of the fifth and sixth volumes of the French edition. This long delay has not been without its fruits, for every page of the present volume bears evidence of the most careful study, the most painstaking examination of voluminous data, and the most impartial judgment. This volume more than sustains the reputation achieved by its predecessors, and the whole work is unrivalled among the military histories of the war for clearness of statement, fulness of detail, and soundness of criticism.

The events covered by this third volume are those of the year 1863 (omitting the operations around Chattanooga, which are reserved for a part of the next volume), *i. e.*, the great battles of Chancellorsville and Gettysburg in the East, and the campaigns of Grant and Banks on the Mississippi, together with a host of minor operations which really had little or no bearing on the final result, and have been almost forgotten. They are here narrated with conscientious fidelity, and serve the purpose, if no other, of recalling how far-reaching was the conflict and how vast its area. The description of the battle of Chancellorsville is divided into two parts, the first comprising all the events as far as the rout of the Eleventh Corps and the wounding of Jackson on the night of May 2; the second, the remainder of the battle and the return of Hooker's army across the river. To the first the author gives the name of Dowdall's Tavern, after the house at the intersection of the plank and turnpike roads where Jackson gained his greatest success and received his death-wound. This nomenclature is an innovation, for we believe the entire battle has hitherto been known by the name of Chancellorsville; but it is not inaccurate, though possibly the name of Wilderness Church, which is at a short distance only from the tavern, would have conveyed a more distinct meaning to the generality of readers. In describing this battle the Comte de Paris gives to Hooker the credit which is justly his due for the reforms and discipline which he had introduced into the army during the three months that he had commanded it, and for the general excellence of his plan of battle. His first mistake was in sending off his cavalry on a separate expedition at the very time it was most needed to assist the movements of the rest of his army, and his second and irretrievably fatal error was in withdrawing, on May 1, from the open ground near Salem Church back into the thickets of the Wilderness.

"Hooker, after making such excellent combinations and carrying out so successfully the first part of the plan of his campaign, seemed to have forgotten that the point the possession of which was to decide the fate of the enemy's army was not to be found in the forest of the Wilderness, but on the heights of Salem Church, which command Banks's Ford. Instead of hastening to take possession of this point with that zeal which had animated him when, as a simple division commander, he led his soldiers against the enemy, one would have supposed that he desired to allow the latter sufficient time to come to attack him among the entangled masses of the copsewood, whose thickness was so unfavorable to the largest army and the best provided with artillery. . . . The Federal generals were preparing to maintain the struggle when they suddenly received an order to fall back, each on the position he had quitted in the morning. Most of them would not believe at first that such an order had been issued. . . . Couch himself, a cold and reserved man, little disposed to assume any responsibility, implored his chief to recall such fatal instructions. It was all in vain; the General was determined. The soldiers shared the astonishment of their leaders when they saw that, after the first engagements of this offensive campaign, they were being brought back into the dismal forest of which they had believed themselves so happily rid; and the confidence which had animated them since the passage of the Rappahannock was considerably shaken. . . . The 1st of May, which might have produced decisive results in Hooker's favor, was lost through the order to retreat which he had so unfortunately issued. His most tried friends—and the author thinks he may count himself among the number—have never been able to understand the motives which prompted that fatal order."

No allusion whatever is made to the explanation, widely credited, which found the cause of this order in Hooker's intemperate habits, the author evidently deeming it beneath his dignity to descend to anything which might have the appearance of scandal.

On the following day Jackson made his ever-famous flank march, and crushed the Federal right wing; on the third day Hooker fought with three-fifths of his army cooped up in the narrow clearing around the Chancellor house, leaving two fifths of it idle. "The wound which he receives does not allow us to comment upon his conduct on this occasion as it deserves." Lee, with barely half his numbers, drove Hooker back, and was about to complete his total defeat when, during the afternoon, he found it necessary to execute a movement "more daring, perhaps, than that which the day previous had brought Jackson upon the flank of the enemy." Leaving a mere curtain of men in front of Hooker's large force paralyzed at Chancellorsville, he moved rapidly to attack Sedgwick, who was advancing from Fredericksburg. He checked Sedgwick's advance on that day, and on the next day, while Hooker remained perfectly idle, he forced Sedgwick across the river. Hooker then withdrew to the north bank of the river and slowly returned to Falmouth. No battle of the war was so brilliantly begun and so miserably ended for the Northern army. Of Jackson's flank march, it is stated that

"Jackson directed in person the minutest details of this decisive movement. When everything was ready, he was seen to enter his tent, the last he was to occupy, and kneel to offer a fervent prayer to the God of battles. . . . On the 10th of May he passed away like a soldier and a Christian, breathing the names of his brave lieutenants in his last humble prayers. He died in the zenith of his fame, after having seen his most brilliant operations secure a splendid victory to the Army of Northern Virginia, and, unfortunately for that army, the last victory it was destined to achieve in an open country. The battle of Chancellorsville is probably the most interesting to study of all those that were fought in Virginia, for the two adversaries depended upon complicated and boldly-conceived manœuvres for success. The Confederates prevailed over their enemies by reason of the greater mobility of their troops, the energy they displayed in the attack, the far-sightedness and decision of their leaders, and, finally, by reason of the errors of their adversaries."

After describing Chancellorsville, the author devotes a chapter to minor operations in the East, principally in the vicinity of Suffolk, and to the naval operations at Charleston and elsewhere on the coast. The destruction of the *Nashville* by Worden, the capture of the *Atlanta* by Rodgers, and the sinking of the *Hatteras* by Semmes, are all set forth in the most lucid manner. He then turns to the West, and describes the operations on the Mississippi ending with the fall of Vicksburg and Port Hudson. The account of these, although generally excellent, is hardly equal in merit to his description of Chancellorsville and Gettysburg. We believe that the Comte de Paris never visited the Western armies or the Western country, and hence he lacks that personal familiarity with the general traits of both which his service on McClellan's staff gave him in regard to Virginia and the Army of the Potomac. The various operations in the bayous in which the spring was passed, in tedious and fruitless efforts to get in rear of Vicksburg, are sketched somewhat rapidly, and then the final campaign of going below Vicksburg and operating in its rear is explained. "This was a bold plan, especially with an army possessing so few of the elements of mobility. All his generals represented to him the danger to be incurred, . . . but Grant's determination was not to be shaken." Porter, therefore, ran past the batteries with his fleet at night, and the transports, with more or less damage, soon followed. Grant's army was speedily ferried across the river, and at once attacked and overwhelmed, at Port Gibson, the detachment which Pemberton sent to oppose him.

"Thenceforth, Grant was firmly established on the left bank of the river. After four months of effort and labor he had at last turned the positions of Vicksburg; the real campaign was about to commence in earnest. . . . From this moment Grant's resolution was irrevocably formed. His plan was based upon a new conception peculiar to the American war. . . . His sagacious mind had perfectly understood that what was not feasible in Virginia, a coun-

PUBLIC LIBRARY

try impoverished by the culture of tobacco and with armies of a hundred thousand men moving slowly through it, might be undertaken in the State of Mississippi, a country rich in cattle, by an army of from thirty to forty thousand, which, being more easily put in motion, covered at the same time a wider area of ground. He, therefore, took Grand Gulf, not as a base of operations, but simply as a point of departure, and determined to throw himself into the enemy's country in order to place himself between Vicksburg, which he desired to reduce, and the rest of the Confederacy. In this way he would compel Pemberton either to come out of his fortifications to fight him in the open country, thus sacrificing all the advantages of his position, or to shut himself up in Vicksburg and allow himself to be invested."

The campaign on this plan was quickly put into operation, one blow following another in such rapid succession as to throw dismay and confusion among his adversaries. Johnston was overwhelmed at Raymond and Jackson (though the author gives Johnston great credit for his skill in withdrawing from the latter place), and Pemberton, refusing to obey Johnston's orders, was routed at Champion's Hill, "the most complete defeat the Confederates had sustained since the commencement of the war." While Johnston was left to recover his scattered forces near Jackson and vainly endeavor to unite with Pemberton, the troops of the latter were again defeated at the Big Black Bridge, and hastened back to the shelter of their fortifications at Vicksburg, a disorganized, demoralized mass of fugitives. Grant was close at their heels, and, having failed to carry the place by a *coup de main* on his arrival, he resolved at once upon a regular and determined assault. This assault is criticised by the author as being "bloody and fruitless," though his language is somewhat contradictory. In one place he says: "The ease with which they [the Federals] had carried the intrenchments at the Big Black River Bridge made it almost a duty on their part to try and carry these by assault, the success of which the discouragement of the enemy rendered possible, thereby sparing the army the labors and fatigues of a long siege." This perfectly accurate reasoning is, however, contradicted by an after-criticism which says:

"This bloody and fruitless conflict cost the Federals three thousand men, among whom was an unusual proportion of killed. The Confederates had only eight hundred disabled. The check which Grant had just experienced was complete and decisive. . . . This severe lesson taught Grant that it would require some other means to reduce the place. It did not, however, set him permanently against this system of simultaneous attacks against positions too strong to be carried by assault; for, as we shall see shortly, he tried the same thing again, although with another army, in the disastrous battle of Cold Harbor, which was an exact repetition of the assault on Vicksburg."

So far from Cold Harbor being an "exact repetition of the assault on Vicksburg," the conditions in the two cases were wholly dissimilar. At Vicksburg Grant was pursuing an army actually in flight, which had been completely demoralized by the most crushing defeats within the previous seven days, and which there was no reason to suppose would show the obstinate courage which it did show under cover of its works. His own army was flushed with victory, full of belief in its own invincibility, and anxious for the assault, concerning the advisability of which it entertained no doubts. No active commander has ever, under such circumstances, sat down to a siege without first trying what he could do in a vigorous assault. Had Grant done so, his army and the country would very properly have accused him of timidity. At Cold Harbor, on the other hand, the two armies had been engaged in the most deadly conflicts for more than a month, and, although Grant had constantly moved forward by manœuvring beyond Lee's flank, in not one of them had Lee been defeated. Grant's losses had been enormous, and his troops were already dispirited by the terrible slaughter which never led to actual victory. But for the facts that both were assaults and both unsuccessful, it is impossible to find any resemblance between Cold Harbor and Vicksburg, and to class them as "the same thing" is a fundamental error of judgment—the only one, we hasten to add, on so capital a question which, in our opinion, this book contains.

Having learned by actual trial—and there was no other way to learn it—that the works could not be stormed, a siege was naturally in order, and it was pursued to its termination in surrender on July 4. During its progress Johnston was receiving reinforcements and trying to form a relieving army, but Grant also brought troops from Memphis, with which he formed an offensive army under Sherman which reduced Johnston's efforts to nothing. In commenting upon this campaign, the author says that the responsibility for the disaster must be divided between President Davis and General Pemberton. He praises General Johnston as an "illustrious chieftain" who "had not the necessary forces to take the initiative, as was his wont," and whose advice, if followed, would have given a different turn to events; and, beyond the recital of the brilliant events themselves, he says but little in commendation of Grant and his able subordinates, Sherman, McPherson, Logan, Blair, and Ord. This omission is the more noticeable in view of the lavish eulogies interspersed throughout the rest of the book upon all the chief officers of the Army of the Potomac. As previously stated, this difference is doubtless due to the fact that the author did not have the same personal acquaintance and warm friendships with the officers of the Army of the Tennessee that he had with those of the Army of the Potomac. We also believe that a thorough examination of all the despatches which passed between Johnston and the Confederate Government, and of the returns of troops under the former's command, would modify the opinion that it was Johnston's "wont to take the initiative," or that his course in Mississippi was altogether wise or vigorous. Here, too, it is evident that Johnston's services in Virginia had brought him nearer to the author than the officers in far-off Mississippi.

LORD RONALD GOWER'S REMINISCENCES.

My Reminiscences. By Lord Ronald Gower, F.S.A. London: Kegan Paul, Trench & Co.; New York: Scribner & Welford. 1883. 2 vols. 8vo, pp. 422, 384.

Lord Ronald Gower belongs to a family notable for wealth and ancient descent. His grandfather, the first Duke of Sutherland, after inheriting the vast estates of the great Duke of Bridgewater, who opened the first navigable canal in England, was one of the richest men in the world. His mother was the celebrated Duchess of Sutherland, for twenty years the close friend of Queen Victoria, and no less famed for her great beauty than for the countenance she showed to the anti-slavery movement and to all philanthropic undertakings, as well as to literature and art. She is described correctly in the first chapter of 'Lothair.' Of the thirty dukes in the British peerage, about half-a-dozen or so are more or less nearly his relations or connections. Besides those already named, the Dukes of Argyll, of Westminster, and of Leinster are his brothers-in-law, the Duke of Devonshire was his mother's uncle, the Duke of Norfolk (Disraeli's Lothair) is his cousin. Of lesser peers who are his kin the name is legion, and it will be enough to add that the Marquis of Lorne is his nephew. Nor are literary laurels lacking, for Lord Morpeth and Lord Ellesmere were his uncles.

Lord Ronald Gower is a cultivated man of literary and artistic temperament, who has dabbled in journalism and done considerable work as a sculptor. In several respects he is a departure from the traditional Englishman of the highest rank. He thinks poorly of the sport of riding to hounds, takes little interest in horse-racing, and the only game of cards he knows is "Beggar-my-Neighbor." Although only thirty-seven years old, he has come in contact with kings and queens, statesmen, poets, painters, and all manner of distinguished personages in all parts of the world. In spite of all this, however, his 800 pages of reminiscences possess but moderate interest—at least for American readers. There are some good descriptions of fine houses and picture galleries, and a few pretty anecdotes of noted people, all of which might well enough have furnished forth a readable book of one-third the size of this one.

What strikes the reader at first is the enormous wealth and splendor of the English aristocracy. Of course the general impression of this every one has received from a score of books, but it is here set down in detail. Thus, when we read in 'Lothair'—

"His Grace was accustomed to say that he had only one misfortune, and it was a great one: he had no home. His family had married so many heiresses, and he, consequently, possessed so many halls and castles, at all of which, periodically, he wished to reside, that there was no sacred spot identified with his life in which his heart, in the bustle and tumult of existence, could take refuge," etc.,

we are apt to dismiss the passage as one of Mr. Disraeli's rhetorical nosegays. But what the novelist says is literally true, and the Duke referred to is the father of Lord Ronald Gower. In fact, the first four chapters are devoted to a description of the various houses and castles of the Leveson-Gower family. Stafford House, in London, is the most splendid of them, and the Queen, on making one of her visits to it, said to her hostess: "I have come from my house to your palace." Rogers, the banker poet, said that, although he had seen all the palaces of Europe, he preferred Stafford House to any of them. Among its art treasures are two Murillos, of which Spain was plundered by Marshal Soult, who got nearly fifty thousand pounds for them and another Murillo, which is in the Louvre; also, two portraits by Vandyck, besides a host of paintings by the greatest masters, whose mere names fill a page of the book. Perhaps the most picturesque possession of this family is the Castle of Dunrobin, in Scotland, the oldest inhabited building in the British islands, and for eight hundred years the property of the Thanes of Sutherland, who claim descent from the royal houses of Bruce and Tudor. In an account of a drive from London to York the young Lord describes a great number of country houses filled with pictures and statuary, among others Althorpe Park, Lord Spencer's place, which contains the finest private library in the world, and a very splendid collection of paintings of nearly every school. Thirteen rooms are filled with books, to the number of 45,000 volumes; those in one little narrow room have been valued at £60,000. Here is the famous 'Decameron' which was bought at an auction sale for £2,600:

"What was of much greater interest to me at Althorpe than seeing the backs of those thousands of volumes in their locked-up cases were the glorious Sir Joshuas in which the place abounds. Nearly every room boasts one or more. All the family seem to have been painted by our greatest portrait painter when at his

best. Many of those portraits have been exhibited, and many engraved. Every one knows the full length of the beautiful Georgiana Spencer, Duchess of Devonshire, which hangs on the staircase of this, her old home. Almost equally beautiful is the full-length of this same Duchess by Gainsborough, facing that of Reynolds.

"Besides family portraits, Althorpe is rich in pictures by old masters. In the drawing-room is a full-length portrait, by Vandyck, of Rubens. In the same room is a charming half-length, by Rubens, of his daughter. Here is also a fine Murillo, the portrait of an Infanta. Also, a Holy Family by Raphael, and some good Dutch works. Even the bed-rooms are rich in pictures. In one hangs a good Sir Joshua, his own likeness; Watteau, by himself, and many other artists' portraits, male and female, by themselves. You think you must have seen all the pictures in the place when you find yourself in a long gallery, full from floor to ceiling, of portraits. This is the picture-gallery which Horace Walpole, when here, in 1760, called 'a gallery of all one's acquaintances by Vandyck and Lely.'"

It will be seen that the fine arts are a hobby of Lord Ronald. He comes by it honestly. His grandfather was the first president of the British Institution, and presented to the nation the finest Rubens in the National Gallery, after purchasing it from the Doria Palace at Genoa for £3,000. The literary tastes of our author come probably from his father's brother, Lord Ellesmere, who translated "Faust" and "Hernani," and published some original poems, and from his mother's brother, Lord Morpeth. The natural inclination was confirmed by the frequent visits of literary magnates at the various paternal mansions. Thus, in May, 1863, Tennyson paid a visit to the Duchess, reading in the evenings aloud his "Idylls of the King" and his then unpublished poem "Enoch Arden." Motley, Prescott, and Charles Sumner were among the American visitors; and in Ticknor's 'Life of Prescott' there is a description of Trentham, one of the Sutherland residences. In politics the family were on the Liberal side, but both Disraeli and Gladstone were frequent guests, and the oldest son of the latter married a niece of Lord Ronald. A great occasion was the reception at Stafford House of Garibaldi, in April, 1864, which was attended with great enthusiasm on the part of the Londoners. Garibaldi remained for ten days holding daily levées, which began at six in the morning.

Lord Ronald was sent to Eton and to Cambridge, but left the university without a degree in order to enter the House of Commons at the age of twenty-three. He sat for six years, but only made a single speech, when it was actually incumbent on him to do so, since it was proposed to abolish the borough for which he was member. He describes as follows the admission of his nephew:

"Lorne had been elected member for Argyleshire on March 3, and took his seat on the 5th. Charles Howard, his great-uncle, and I were his introducers on that solemn occasion. After the swearing-in had been gone through, the Speaker told him that, just before he (Lorne) entered the House, a member, who had been making a speech about tramways, had quoted a passage from Lorne's book relating to his travels in America, and that the opinion quoted from that book had turned the scale against the bill which was then under discussion. . . ."

Like everybody else, our author paid a visit to this country. He expresses much admiration for the American people in general and for the inevitable Sam Ward in particular. He speaks rather lightly, however, of one or two of our great men. Paying a visit in London, in 1868, to the American Minister, he says: "Adams is a short, bald, gentlemanlike man, with a pleasing manner, and with but little twang." Again, a few years later, he calls on M. Thiers, and says: "More visitors were announced, the American Minister among others, Mr. Washbourn [*sic*], and 'his lady,' a pert little Americaness, who rattled away to Mme. Thiers in English, or rather in America-English, and also to M. Thiers, in spite of Mme. T. telling her that he did not understand that language; but this only made her speak the more and the louder." On the other hand, no one could speak with more veneration of an old cottage in the village of Little Brington where lived the ancestors of George Washington, and of the Washington tombs in the church of Great Brington, a couple of miles from the smaller village: "We here see the origin of the American 'star-spangled banner' and of the stripes, for on the coat of arms appear three stars, with the bars or stripes beneath them. The sexton told me that Charles Sumner had had a copy made of the larger slab by the local mason, and that both he and Motley, the historian, had taken great interest in these arms and inscriptions."

Lord Ronald, having an abundance of time on his hands, hunted up everything that was worth seeing and everybody that was worth talking to. In 1870 he followed the Crown Prince's army with his friend, W. H. Russell, or, as he affectionately calls him, "Billy Russell." Then he went to Paris, where he spent the days immediately succeeding Sedan. At various times he has paid visits to Victor Hugo, Taine, Doré, Ruskin, Beaconsfield; and some of his anecdotes would be worth quoting if one had room for them. He has made a number of statues—one of Marie Antoinette, a Hamlet, a Lady Macbeth, "The Old Guard," and others. He has also written a book about Marie Antoinette. Altogether, he is not an entirely idle young man, even if he has not spent his days in "bulling" Western Union or "bearing" lard, and his nights in playing "draw-poker."

THEOLOGY AND EDUCATION.

"*On the Education of Ministers.*" *Princeton Review*, May, 1883.

"*The Rational and Spiritual Verification of Christian Doctrine.*" By Prof. Geo. Harris, D.D. *Christian Union*, June 14, 1883.

The Freedom of Faith. By Rev. T. T. Munger. Boston: Houghton, Mifflin & Co. 1883. Pp. 397.

God and Creation. By R. R. Howison. Richmond, Va.: West, Johnston & Co. 1883. Pp. 578.

A Study of Spinoza. By Dr. J. Martineau. New York: Macmillan & Co. 1882. Pp. 371.

Hegel. By Edward Caird. [Blackwood's Philosophical Classics.] 1883. Pp. 224.

Final Causes. By Paul Janet. Translated from the second edition by William Affleck. Chas. Scribner's Sons. 1883. Pp. 520.

A Critique of Design-Arguments. By E. L. Hicks, Professor of Geology in Denison University. Chas. Scribner's Sons. 1883. Pp. 417.

The Works of Orestes A. Brownson. Collected and arranged by Henry F. Brownson. Detroit: Thorndike Nourse. 2 vols.

THE administrative aspects of the vast and many-sided question of ministerial education could hardly have been presented in a more timely, judicious, and forcible way than in a recent article by President C. W. Eliot, which has attracted wide attention, and found a somewhat unexpected degree of favor with even the religious press. From the larger, more essential, though ulterior, questions of the proper training of head, heart, and character for an office likely to be, for a long time at least, the most important of all for moral culture in most American communities, he for the most part expressly refrained. These problems, about which so many educational interests are likely to centre, will take form and find solution very slowly, so vast and complex are they. One thing, however, may already be said concerning them—viz., that they are likely to be discussed and settled in a far more anthropologic, psychologic, or subjective way than ever before in the history of doctrines; with more reasonableness, more attention to the origin than to the object of faith, and to the needs of thinking men. Dogmas are not pale abstractions, but inductions from history and human experience; the time has passed for believing things because they are impossible; dogmas must be revered and explained as the precipitate of the religious consciousness of great men and times; the Bible is the book of life, and must be accepted and confirmed by subjective processes, and can be understood only by a knowledge of human nature, and not by critical exegesis of proof-texts or by long chains of argument; history, reason, philosophy, science, etc., must be exhausted to widen experience; and change and growth must be constant, or infidelity is inevitable—such are in substance the positions asserted with force and yet moderation, and received with general approval, in an inaugural discourse by the successor of Professor Park at Andover.

Another representative Congregational clergyman, in a prefatory essay on "The New Theology," which he designates as a Renaissance, goes somewhat further, and characterizes it as indisposed to commit "retrospective suicide"; as holding only to a Trinity not merely "formal, or psychologically impossible"; to atonement as "a comprehensible force in the actual redemption of the world from its evil," and not as a mystery of the distant heavens: to judgment as involved in the development of the moral man; and to justification by faith as "a simple, rational process realized in human experience." Mere reason and, before revelation in time and in logic, "thought and feeling must pass judgment upon the content of revelation," and the two must always be on friendly terms. To understand inspiration, we must get back into the spirit of the writers, and read the Scriptures sometimes as literature, not in a hard, artificial way, using its texts as charms, and patching them together to form doctrine. The old theology, Mr. Munger tells us, is represented by "men apart from the world, out of practical sympathy with it, having no place for it in their theory, thinking on different lines, and making small use of its wisdom or its material." This explains the long, subtle antagonism between modern thought and the clergy. The new theology, on the other hand, feels kindly toward evolution, "induces the ethical habit of thought, and seeks to recover spiritual processes from a magical to a moral conception." Beecher's new departure, the increasingly representative standpoint of the *Christian Union*, the Andover conflict, and many other things less prominent, all conspire to show that Mr. Joseph Cook's stalwartism and dead formalism are fast being left behind by the fresher, younger, more ethico-psychological minds in his own denomination, where he has come to be only the loudest among several leaders of a strong minority devoted to the old and the past.

This line does not run through the Congregational denomination alone, but through all leading denominations, not even excepting the Catholic, and probably through all minds, where it is fast growing wider and more distinct. Instead, however, of exhausting our space in illustrating this latent or patent opposition in other sects, it will be more to our purpose to speak of this ethico-psychological drift in two or three of its special disciplines, enjoined in the ministerial

education of all our Protestant sects. Take, *e. g.*, the being of God. Nothing could be dryer, more abstract and barren and artificial than the old stereotyped cosmological, ontological, teleological arguments. Now, however, professional teachers of science or philosophy—semi-Darwinists, Hegelians, and Kantians—are invited to divinity schools from without to *philosophize* the theological proofs by an appeal to reason and the understanding, as well as to give special courses in ethics and public charities and reformatory institutions, etc. In a scholarly and thoughtful volume, 'God and Creation,' the divine existence, character, and creation are derived in a very modified Cartesian way from the simple datum, "Some being exists now," with unusual appeals to common sense and to science, and in the express hope that religion, "which now fails to make the wide and deep impression she ought upon the masses of thinking men," may be invigorated. Even Spinoza's monism is interpreted in a monotheistic instead of an atheistic and acosmic sense, and he is laid under tribute with increasing frequency to aid the ontological and cosmological arguments for a divine being. This is notably the case in Martineau's 'Study,' the best compendium that has yet appeared of his life and works. Again, not many years have passed since Hegel's fundamental assertion, that his logic of categories represented God as he existed before creation, was said by a very eminent theologian to be not only pantheistic, but blasphemous. Now, Hegelism is subtly filtering into and transforming our entire religious consciousness through a dozen secondary or tertiary sources—Caird, Wallace, Pfleiderer, and even Mulford and the Concord lecturers and summer schools of several names—even where the name of Hegel is scarcely known, and his influence unsuspected, or perhaps denied. His entire significance for the English and American mind thus far culminates in the sphere of religion, and Mr. Caird's popular exposition of his system, decidedly the best yet made in our language, sums it all up in the mystic phrase, "We must die in order to live."

The doctrine of final cause affords another good illustration of the rapidity and completeness with which religious questions are passing from the theological to the ethico-psychological stage. This argument has been for many centuries the one chiefly relied upon for proving the existence of God. It has been developed into unnatural proportions by prizes for competitive essays, by endowed lectureships, by being forced into higher educational courses and adapted to the crudest ranges of intelligence, where it is regarded as the chief prophylactic against all forms of evolutionism. Young men have been called on to believe in an all-wise intelligence ruling the world because teeth did not grow in the ear, but in the mouth, where they were designed to crush the food; because the human hand was digited, and not hoof-like; because fishes had fins, and not wings; and because the world is governed by laws, so that some things are more probable, under given circumstances, than others. Professor Flint, and especially Janet, and more lately Professor Hicks, have presented the latest and far higher development of this argument in the ablest and most attractive way. The comprehensive historical treatment of the latter, and the broad and candid concessions of Janet, are particularly admirable. The whole teleological question of natural theology, however, is made to turn more than ever before upon the psychology of plan and design and the consciousness of the purposive elements; the genesis of the notion of ends—whether planning is not a *pis-aller* when things are alien from or too much for the planner; whether the finalist's habit of seeing purpose in function disqualifies him from the study of nature in the sense of either Bacon or Spinoza. After physical theology is resolved into psychology, and the general tendency to believe that the universe is not aimless is justified, the question is raised whether we can specify or define any general or special end. Janet is content to say merely that the final or absolute end of all things is morality, with no attempt to define it, and that every other end is a means to this.

If any further illustration of the breadth of the tendency we speak of were needed, we might refer to two suggestive volumes of essays which illustrate how short and easy is the road between Rome and reason for an active and, on the whole, consistent thinker who had attained insight enough to judge and compare religions by their ethico-psychic validity, but who lacked the independence of mind and heart which dispenses with all rites and creeds when it has once come to feel at home in all. It is evident throughout that Brownson cherished Catholicism after leaving his earlier sceptical standpoint, not in the crass, material way of a devotee, but because he came to see in its forms and dogmas a clearer, higher degree of self-knowledge in which all knowledge culminates, and felt that he possessed exceptional power of vitalizing its dead traditions and dogmas into active psychic forms of moral life.

The above publications are taken almost at random as straws which show, we think, a very broad current in contemporary religious thought toward judging things divine by things human; toward regarding man, again, as the standard and measure of all things, and truth not understood as no truth at all, but either the most pernicious error or else as abracadabra—out of all relations to our faculties. In the theological bearings of all this we have little interest, and know but little, but its educational significance can hardly be too highly rated. Nothing has been taught in a more anti-Pestalozzian, anti-pedagogic way than theology. Hence its unpopularity, though so much wisdom is stored up in its frozen forms that when they melt "there shall come a flood" which is sure to lift society to a higher moral level. Perhaps the time has come, the need surely has. Whatever creed we prefer, we have common interest in this, that all religious training, whether of children, theological students, or church-goers, ought, and seems likely henceforth, to begin with man and his faculties, acts, thoughts, etc.; and that everything later and more remote which is not brought into intelligible relations with facts of human nature and needs cannot be real because it cannot be rational, and is liable to illustrate how immoral truth itself may be if only brought into mechanical connection from without with minds not large or ripe enough to receive it.

Rousseau. By Henry Grey Graham. [Foreign Classics for English Readers.] Philadelphia: J. B. Lippincott & Co. 1883.

In the series to which it belongs, this biography will rank among the best. It serves well the purpose of an introduction either to Rousseau's writings, for readers who have some knowledge of French, or to Mr. John Morley's essay, which will for a long time supersede every other and satisfy every cultivated need. Since the latter appeared, the researches concerning the greatest of Genevans have continued unceasingly, and Mr. Graham is able to add a few facts not accessible to his predecessor. They are not important, however, though they throw a little more light on the father of Jean Jacques. They correct the 'Confessions' in some particulars, but leave Rousseau's veracity where all the controversies of a century have left it, substantially unimpeached. It is easy to moralize harshly over his youthful disgraces, and Mr. Graham has not escaped the temptation to do so, omitting to remark, by way of mitigation—if any were needed, considering the kind of training the motherless boy had—that he might have concealed his worst traits from a world which was prompt to execrate him for them, when first learned from himself. But as our author goes on, his sympathy with his subject manifestly increases, in accordance with the experience of those who have studied Rousseau most intimately.

The narrative of the leading facts in his life is accompanied by brief analyses of the three works by which chiefly Rousseau acquired his fame, and exerted his greatest influence for good and for evil, namely, the 'Nouvelle Héloïse,' the 'Contrat Social,' and the 'Émile.' These are, indeed, his monument, and all his other productions must take a subordinate position; yet the former do not reveal the fulness of his genius or the principal source of delight for modern readers. His botanical enthusiasm, his musical achievements and criticisms, his familiar correspondence will attract long after the Savoyard Vicar's profession of faith—probably the last stone of the edifice to crumble—ceases to have a vital interest for men who insist on seeing things as they are. On these aspects of Rousseau's temperament we should have liked Mr. Graham to dwell with a little more appreciation, for they are more than incidental. Who can tell whether he would ever have emerged from obscurity but for his going to Paris with the bee of a reformed musical notation in his bonnet? And what idyls might we not have had from the pen that has recorded the episode of the periwinkle, had domestic intrigue and political and clerical persecution left the unfortunate writer to die in peace among the fields and woods of his native country?

In discussing the 'Social Contract' Mr. Graham justly remarks (p. 128):

"Writers up to Rousseau lived in a prescientific age of history; the past—except through classic literature, of which the myths were accepted as truths—was unknown: it was a blank space, in which every thinker either put his theories or found them. Where now we deliberately examine every historical tradition, and, by the aid of comparative sociology and ethnology, search into the conditions of primitive life and the origin of early institutions, they gravely cited Lycurgus and Minos as models, quoted Livy for their prehistoric facts, and Plato for their political theories; while they framed, as Grote says of mythology, 'a past which was never present.' They spoke of 'a state of nature' of which they knew nothing, and of a 'social contract' which never existed, as confidently as if this charter of humanity was as veritable a document on parchment as the Magna Charta of England."

The corollary of this is, that fictions which, having helped us to the principles of '76 and '89, with their attendant blessings, now furnish the staple of communism and socialism, with their attendant perils, can be effectually resisted only by the spread of the scientific spirit. Against the fictions of the theologian, with which they have much in common, they have held and are likely to hold their own; but there is absolutely no room on the same shelf for the 'Social Contract' and the 'Origin of Species' or the 'Descent of Man.'

Mr. Graham misleadingly translates the *Parlement* into the "Parliament" of Paris. He further not only misleads but misrepresents when, incidentally (p. 138), he says that "Washington, having freed his country, bequeathed his slaves to his wife," without mentioning their ultimate emancipation by the same instrument, and the legal difficulties in the way of their immediate freedom. Finally, on p. 137, he confounds Washington with Jefferson in crediting the

former with having abolished primogeniture in Virginia.

Modern Perspective: A Treatise upon the Principles and Practice of Plane and Cylindrical Perspective. By William R. Ware, Professor of Architecture in the School of Mines, Columbia College. Boston: J. R. Osgood & Co. 1883.

ORDERLY development and economy of statement are conspicuous in Professor Ware's treatise on perspective. By these he has compassed, in a duodecimo volume of very moderate size, a treatise of unusual comprehensiveness and fulness of detail. Its sequence, in truth, is of a kind to be attained only when a writer can carry his whole subject in mental suspension till all crystallizes together in proper form. The point of view is primarily the geometer's, and the treatment analytical, proceeding from the general to the special—in marked contrast to most books on perspective. Thus the phenomena of planes in perspective are introduced from the beginning, instead of being reserved for late mention, and lines are determined by the intersection of planes, as are points by intersection of lines. The notation adopted is new—carefully and even elaborately planned, so as to be in itself a record of the relations of the planes, lines, and points used in the discussions to the principal data (the picture-plane, the horizon, centre, etc.). We are disposed to wonder how much Professor Ware allows for the difficulty, and, what is of more account, the probable repulsion, that the ordinary student will have to overcome in mastering a notation which, ameliorated as it is by symmetry and significance, is nevertheless complicated and formidable in aspect. It depends much, we should say, on the individual how far the instruction conveyed in the notation will be offset by the effort required to master it; but he who is made to do so thoroughly, or who is enterprising enough to do so for himself, will find that it gives great clearness to his conceptions and notably shortens his subsequent road. The expert, on the other hand, who will read this book with pleasure for the sake of its method, its clear generalizations, and neatness of statement, will be thankful for a notation that relieves him of many pages of detailed discussion. As a matter of definition, we should prefer a different use of the word *trace*, here given for the vanishing line, or, as Prof. Ware also calls it, the *horizon*, of any plane or system of parallel planes. This word is so accepted in descriptive geometry for the intersection of a plane with the plane of projection that it is a pity to introduce it with a different meaning into a treatise which is necessarily founded on that geometry.

The first two chapters, under the heads of perspective phenomena in nature and in the picture, group together many facts which are apt to be scattered through a whole treatise. Presented as they are here, they will give the learner who reads them intelligently a sense of the scope and methods of perspective which will carry him well into his subject, perhaps before he suspects it. There is throughout an eye to the artistic use of perspective, and many visual phenomena which are noted are new to the books, and very useful to the artist. The chapters on the perspective of circles and on perspective distortions contain many things which painters ought to know, but which they are very apt not to know, to their discredit and sometimes to their confusion. These, and the final chapter on the "Practical Problem," should go far to bridge over the unnecessary gulf that lies between the draughtsman and the painter in the region of perspective. The atlas of plates that makes part of the book is full of suggestions for the artist as well as for the draughtsman. It shows the same skill in generalizing and grouping, the same ingenuity and sense of practical application, as is shown in the text. An example is in plate xviii., where there is an amusing cleverness in the use of the principle of divergent shadows to place the lady-love just within range of her serenader's eyes. So it is interesting to note the appropriation of the three engravings of circular halls in the Vatican as illustrations of the three projections of horizontal circles into ellipses, parabolas, and hyperbolas. The clearness and directness of Professor Ware's discussions, and their orderly progress, may, indeed, tempt the expert to read without looking at the plates, simply supplying diagrams in his own mind. The reader would lose by doing this, for he would miss many clever points in them which the text does not suggest. We may notice here, for correction in another edition, that an error in the lettering of figure 97, plate xxi., makes difficulty for the reader.

The book includes chapters on "Curvilinear Perspective," on "The Perspective of Reflections and of Shadows," both parallel (by natural light) and divergent (by artificial light). It is difficult to say how much is absolutely novel in such a treatise; there are a great many points new to us, and a great many familiar things are presented in new aspects or relations. Perhaps its greatest novelty is in the presentation and grouping. This is conspicuous in chapters xvii. and xviii., where first all the principles and geometrical relations of perspective, and then all its chief problems, are summarized with remarkable skill in their most generalized form. This is done with a directness and simplicity of statement that will give pleasure to mathematicians, though it may be a stumbling-block to the ordinary student, who is free to pass them by if he will.

A peculiarity of Professor Ware's treatment is the consistency with which the perspective plan is used throughout. This, reinforced as here by Mr. Adhémar's method of avoiding remote vanishing points, though comparatively little used, is of great value to the thorough perspective draughtsman, and ought to be generally learned. It is here extended by ingenious devices to relieve the crowding of lines in the remote parts of the plan—by Mr. Adhémar, through successive inclinations of the plane of the plan; by Professor Ware, through successive lowerings of the plan.

Egypt, Palestine, and Phœnicia: A Visit to Sacred Lands. By Félix Bovet. Translated by W. H. Lyttelton, M.A., Rector of Hagley and Canon of Gloucester. With a Biographical Sketch of the Author, by Prof. F. Godet, D.D. E. P. Dutton & Co. 1883.

THE "Biographical Sketch of the Author" is so brief, covering less than two pages, that it hardly deserved to be mentioned on the title-page; but it satisfies our curiosity. M. Bovet was born in 1824 in the town of Neufchâtel. He belongs to a family "which, in successive generations, . . . received many blessings through its relations with the Moravian Church." In 1843 he went to Berlin to study law, but soon chose theology in preference. He obtained instruction in Hebrew from learned rabbis. "After completing his studies, he determined not to receive holy orders, but to dedicate his life to the profound study of Scripture and to labors, quietly carried on, in the cause of Christ." He was for some years librarian and professor of French literature in his native city—a position which he exchanged for a chair of Hebrew. He is the author of a 'Life of Zinzendorf' and a 'History of the Psalter.' The work before us was written in 1858, and is descriptive of a tour made in that year. In French it has passed through eight editions, and it has been translated into German, Swedish, Dutch, and Italian. M. Godet, the author's compatriot and life-long friend, characterizes it—and we must say, justly—as "a flower gathered in Palestine, and brought away in all its freshness and fragrance."

We do not know the original, but we are inclined to believe that the book has lost none of its "freshness and fragrance" in Mr. Lyttelton's translation, and, though no longer the description of a recent journey, will give its readers plenty of faithful and vivid pictures, besides a mass of information and reflections—far from novel, but to pious souls always fresh and edifying—on matters connected with Scriptural topics. The whole work breathes piety and reverence. Everything touched by an ancient Hebrew seems to have become sanctified in the eyes of our author. Egypt and Phœnicia, the lands of Amon-Ra and Baal, he couples with Palestine as "sacred lands" (as his title shows), because the one was trodden by Moses and Jesus, and the other by Elijah. But he has also an eye for the present, and his narratives, partly in the shape of letters, lack neither humor nor sympathy with the living, and they would be as amusing as they are instructive, were they not overladen beyond measure with references to Biblical accounts and with quotations from the Bible. Thus, we have scarcely entered with M. Bovet, for the first time, a Judæan "upper room, round which is a divan, where they brought us hard eggs, bread, and milk," when we hear him discourse on "these upper chambers so often spoken of in the Bible," on the rich Shunamite and her guest Elisha, on Dorcas prepared for burial, and on Jesus celebrating the Passover in privacy with the Twelve. M. Bovet's Biblical knowledge is ample, and on various points, such as the topography of Jerusalem, he presents learned disquisitions. He enlivens his accounts by felicitous remarks borrowed from classical and French writers, and is very fond of Hebrew—but his Hebrew, as *printed* in the English edition, is abominable.

To show one example out of scores of misprints in Hebrew, the word which is correctly given as *mo'ed* in the beginning of a note (p. 89) is changed in the latter part of it, by the use of wrong letters slightly resembling the correct ones, into *srçd!* This is too bad in a book on Biblical subjects, composed by a professor of Hebrew and translated by a canon! But defective revision is not the only evidence of carelessness on the part of the translator—for we have good reasons to believe that the American republication is from his own plates—though, on the other hand, he has taken excellent care of his diction and grammar. To begin with, he has generally left the spellings of proper names as he found them in the French original, writing "Mamelouk," "el-Bedaoui," "Selim," and even "Melchisedek." Worse than that, instead of Charles the Fifth, we read (p. 99) "Charles *Quint*." Exceptionally we find a mistake arising from the opposite proceeding: the French *Nijni*, for instance, which is a correct rendering of what in English is best expressed by *Nizhni*, is altered into "Nidjni" (p. 79). Then, though he occasionally thought of adding in a note some information fresher than that contained in the author's pages of twenty-five years ago, the translator overlooked new facts which certainly ought to be stated. We do not complain that, while telling us in a note that one of the two obelisks seen by M. Bovet in Alexandria "was erected on the Thames Embankment a few years since," he shows no knowledge of the fact that the other was subsequently brought to New

York—English theologians may be pardoned for not knowing worldly occurrences specially interesting to Americans; but a Canon of Gloucester, writing in 1882, ought to have known that M. Samuel Gobat was then no longer Bishop of the Anglo-Prussian Church in Jerusalem. As such he is spoken of at full length in the text (p. 220), without a note to inform us that he died in 1879.

Alcoholic Inebriety: From a Medical Standpoint. With Cases from Clinical Records. By Joseph Parrish, M.D. Philadelphia: P. Blakiston, Son & Co. 1883. 185 pp.

THIS book advocates forcibly the theory that drunkenness or inebriety is "a disease that is curable in the same sense that other diseases are, its primary cause being a constitutional susceptibility to the alcoholic impression, which may be inherited or acquired." The author, Dr. Parrish, has devoted a considerable portion of a long and active life to the study of the subject and to the care of inebriates, and now seeks to enlist others, but especially physicians, in the search after the remote causes, physical or psychical, of inebriety. There can be little question that, should the victim of a desire for drink be regarded generally, not as a criminal, but as a man afflicted with a disease, oftentimes inherited, oftentimes the result of an accident or cause beyond his control, the measures taken for his relief would be more humane, rational, and effective. The "social and church ostracism" which necessarily follows this conviction of his criminality in yielding to a passion which he might and ought to control, to use the striking words of the inmates of an inebriate asylum quoted by Dr. Parrish, "in many instances deprives us of the very sympathies and forces that should combine for our relief and restoration." No one, we believe, can carefully read this book and hesitate to accept the author's conclusion that, "could the inebriate himself feel that his own consciousness of physical defect or injury was sustained by the intelligent sentiment of the society in which he moves, he would naturally and promptly seek counsel and relief, without the sense of shame and dishonor that sinks and drowns him and his comrades in hopelessness and death."

The most valuable part of Dr. Parrish's treatise to the unprofessional reader is that which treats of the premonitory symptoms of a desire for drink and the methods to relieve them. Were his hints and practical suggestions generally known and acted upon by inebriates and members of their families, there would be not only fewer victims of this appetency, but also more cures of those who have fallen under its dominion. We can only regret that a subject which is of such great importance should not have been presented in a more popular form so as to reach the persons most interested in its discussion. It only remains to add that, while this disease theory of drunkenness by no means puts aside the moral and religious arguments of temperance advocates as useless, yet it unhesitatingly condemns the sole reliance on these means. Upon this point Dr. Parrish is very outspoken: "I am satisfied that among the chief hindrances to recovery from a life of inebriation to a life of sobriety, is the false teaching of those who overlook the aspect of disease, and limit their labors and appeals to the domain of morals and ethics."

Walt Whitman. By Richard Maurice Bucke. Philadelphia: David McKay. 12mo, pp. 236.

THIS is an unadulterated eulogy by a man of very little culture or critical ability; and there is not much in it that was not better said by Mr. Burroughs a dozen or more years ago. Doctor Bucke has included, however, a long and amusingly vehement letter by Mr. W. D. O'Connor that enlivens his otherwise dull pages immensely. Doctor Bucke himself describes Whitman's moral nature as "perhaps the highest that has yet appeared." He tells us of his unbounded humanity, and of a mysterious and, indeed, miraculous magnetic power that works upon people he comes in contact with like champagne or falling in love. The impressionable Mr. O'Connor goes still further, and gets excited over the depravity of those who differ with him, squandering his adjectives with delightful profusion. One critic is a "filthy and malignant Philistine," a "missing link between the libidinous swell and the ferocious chimpanzee"; another is the "buzzard of the club-house kitchen"; and another is a "great liar and a dirty dog." Poe and Whitman, he contends, are the only great poets since Sha[illegible]

E. F. Bickford 1882 21484

Look[illegible]e poet's work carefully, one can see three pre[illegible]-marked stages in his career. The first thirty-[illegible] years were not promising. Idle and dissipated, his mental productions were very ordinary. Those which we have been able to identify were melodramatic stories, nearly all of them turning on ugly crime. Their moral purpose was good, but they showed no appreciation of nature or life, and there was an evident morbid attraction to physical horrors. Some of these have been reprinted in the 'Specimen Days,' but none of them are above the level of the low weekly story-papers; they are very undeveloped, and it is odd that a man of so much power should have been satisfied so long with such flat and unnatural work. The publication of the 'Leaves of Grass' marked a new era. The man had decided to be natural There was nothing very original in his philosophy or in the gross form which his fancy took, still less was there anything very distinctively American about it except its singular shape. Whitman represented a considerable and noisy element in our uncultivated public in mistaking uncontrolled feeling for soaring thought. There is no trace of sympathy in his pages with the real progress of modern thought. He does not care for logic. He feels no interest in modern science, or art, or religion. He notes only what he sees with his eyes and feels with his body.

> "When the psalm sings instead of the singer,
> When the script preaches instead of the preacher,
> When a university course convinces like a slumbering woman and child convince,
> When the minted gold in the vault smiles like the night-watchman's daughter,
> I intend to reach them my hand and make as much of them as I do of men and women like you."

Love was as remote as religion and science from his ken. There is no end of description of physical attraction, but of the idealizing, self-sacrificing, transfiguring devotion to one woman who becomes all the world to a man, there is not a trace. The other sex is simply a means of animal pleasure, without a hint of communion of soul.

With the war a change for the better came over the poet, who was evidently a man of slow development. Patriotism gave him an emotion outside of his own body. While he was a newspaper correspondent in Washington he spent his evenings, and sometimes part of his days, in the hospitals, and this gave him a broader, more sympathetic humanity. His imagination grew higher and stronger, and he painted instead of naming things. Unclean imagery came less readily to his mind when life supplied something better, and his verse acquired a larger and more resonant ring. If he had had sufficient taste to revise properly his more immature work, his reputation would have gained by it; but he saw nothing outside of himself to judge it by, and reprinted the strange, undigested mixture of bad French, bald prose, and fine poetry, profanity and reverence, filth and beauty, little altered. The 'Leaves of Grass' cannot be made moral by any process of expurgation. The immorality is more than verbal. Its author cries out against any "blurt" about virtue and vice. He wants to upset everything. Individualism is carried to the point of extremest selfishness, and no right or wrong is recognized but one's own bodily good, with no obligation to family country, or God.

BOOKS OF THE WEEK.

Filon, A. Histoire de la Littérature anglaise. Paris: Hachette; New York: F. W. Christern.
Flagg, I. Pedantic Versicles. Boston: Ginn, Heath & Co. 75 cents.
Freeman, A. C. The American Decisions. Vol. xiv. San Francisco: A. L. Bancroft & Co.
Grace Darling: the Heroine of the Farne Isles. Thomas Whittaker.
Green, Prof. T. H. Prolegomena to Ethics. Oxford: Clarendon Press.
Griffin, A. P. C. Discovery of the Mississippi. A. S. Barnes & Co.
Hale, E. E. Ten Times One is Ten: The Possible Reformation. In two parts. Boston: Roberts Bros.
Halkett, S., and Laing, Rev. J. Dictionary of the Anonymous and Pseudonymous Literature of Great Britain. 2 vols. Boston: Lockwood, Brooks & Co. $10 50.
Hardey, Dr. C. A. A New Departure in the Theory and Practice of Medicine. P. O'Shea.
Hardy, T. The Romantic Adventures of a Milkmaid. Harper's Franklin Square Library. 10 cents.
Hugo, V. La Légende des Siècles. Vol. v. Paris: C. Lévy; New York: F. W. Christern.
Keith, C. P. The Provincial Councillors of Pennsylvania, 1733–1776. Philadelphia, 1414 Spruce Street.
Kluge, F. Etymologisches Wörterbuch der deutschen Sprache. Part 5. Strassburg: Karl J. Trübner.
Littell's Living Age. April-June, 1883. Boston: Littell & Co.
Merriam, Prof. A. C. The Greek and Latin Inscriptions on the Obelisk Crab in the Metropolitan Museum, New York. Harper & Bros.
Moore, C. L. Poems, Antique and Modern. Philadelphia: John F. Potter & Co.

The Nation.

NEW YORK, THURSDAY, AUGUST 2, 1883.

The Week.

THE Foster-Hoadly correspondence in Ohio has culminated in the publication of a most remarkable letter. Governor Foster's original charge was that Judge Hoadly had admitted to a friend, who in turn told the Governor, that his (Hoadly's) nomination had cost him $50,000. The Judge denied the assertion, and called for the name of the informant. The latter person has now come before the public in a letter to the Governor, which is signed J. H. Woodward, and is one of the most interesting contributions to political literature that have seen the light for many a day. Mr. Woodward prefaces his confession—for that is what it amounts to—with an expression of deep regret that the Governor had betrayed him. He says he was going over the State to get the opinions of Democrats on his candidacy, and went to the Judge to talk the matter over. He was convinced that the Judge was "being robbed" and "would continue to be robbed," and what the Judge told him confirmed his view. While the Judge did not say that his nomination cost him $50,000, "he did say that it had cost him a great deal of money," leaving the impression on Mr. Woodward's mind that $50,000 was about the figure. Mr. Woodward went at once to Governor Foster and laid all this information before him. Why a Democrat should be thus eager to communicate secret information of so valuable a character to a Republican Governor who is so skilful a politician as Mr. Foster is, is not clear. Mr. Woodward says he did it "under the seal of confidence," and his grief at the alleged betrayal takes a form of expression at once so pathetic and so unique that we would not for a moment think of attempting to summarize it. He says: "I am sorry that you have in any way alluded to this matter, because I think the Judge did not want any publicity given to it. In fact, he said none of this talk was to be printed, and I know that he did not want the public to know that the thing had been so expensive. To make it public was painful to him, and had I thought that after two campaigns of your own you would have so little sympathy for a fellow-soldier, I would not have told you anything about it. I expected a better feeling from you toward my friend, but instead of giving him your sympathy you give the whole thing away to the public. This is not fair to the Judge or to me. If you cannot be trusted with an occasional Democratic secret, I will not tell you any more of them." The whole affair is likely to be so "painful" to Judge Hoadly as to give a powerful impetus to his already strong desire for a "new and living Democracy."

Senator Butler, of South Carolina, at a meeting of the State Grange and Agricultural Society last week, said that "the labor of the State was becoming more unsettled every year"; that never "had negro labor been more unreliable and worthless than now"; that "200,000 negro laborers could be safely spared"; that he wanted them "to go to Kansas, Indiana, or anywhere else," and was ready "to supply their places with Mormon laborers." These assertions are rather surprising, in view of the frequent reports of the rapid advance of the South in industrial prosperity. At the time of the Kansas migration several years ago it was charged at the South that the movement had a political origin, and was not due to any lack of a comfortable living for the negroes at home. It is curious at this late date to hear a leading Southerner recommend a like migration as a desperate and necessary remedy for labor troubles. That Senator Butler does not represent the opinion even of his own State in this matter appears from the fact that at the Grange meeting "his views were warmly opposed, some of the speakers showing that his conclusions were erroneous, the production of cotton having increased 150 per cent. in the State under the present system of labor, and other crops in proportion." The difficulty at the South seems to be political rather than industrial, when a representative statesman confesses in this wild way his inability to cope with the problems of his time. Before getting rid of her black laborers the South should be prepared with substitutes for them, and there are still some traces of social barbarism to be removed before 200,000 Mormons even could be induced to immigrate.

Mrs. M. M. Haughn has published a card in the Galveston *News* with regard to the murder of her husband, in which she positively denies ever having made the statement that she suspected the murderer to have been a negro "who sought to avenge a wrong done a daughter or sister." She states that no such cause existed, that her husband was a stanch friend of the blacks, and, finally, that she suspects no one at all. The card is dignified and temperate in tone; but we suppose it will not prevent ingenious speculations as to whom Mrs. Haughn would say she suspected if she did not say she suspected nobody. The methods of reasoning hitherto adopted in the case would lead to the conclusion that Mrs. Haughn would attribute the murder to the Kuklux, but for the fact that she is herself in such fear of them that she is forced to deny that she suspects them: the denial, therefore, is a strong proof of the existence of the Kuklux in Marion County.

The alleged abuses in the Norfolk Navy-yard are yet to be investigated. Mr. Dezendorf, who preferred the charges, says that Commodore Mayo, one of the persons implicated by them, was directed to convene a board of officers to investigate the matter; that this board was composed of junior officers, whose report would have to be submitted to Mayo and passed upon by him; that the complainant objected to this proceeding, which would really be the case of "Mayo investigating Mayo and sitting in judgment on Mayo"; that the complainant went before the Board, and gave in writing his reasons for not making any statement, and at the same time demanded a court of inquiry composed of officers of equal rank with Mayo. Of course lay opinion on a question involving the mysteries of naval methods would not be of great value; but any layman in the United States might venture to say to Secretary Chandler that his reputation as a reformer would be seriously affected by allowing a charge of misconduct against one of his officers to be examined and decided by the officer himself, unless the rules of the navy distinctly prescribe such a course.

The New Hampshire Senatorial contest is apparently as far from an end as ever. Ex-Congressman Pike is as bad a failure as a "dark horse" as his numerous predecessors were, and for the same reason—a suspicion that he is in alliance with the "bosses." It is a remarkable tribute to Secretary Chandler's influence among his party in his own State that a mere suspicion that he is in favor of a candidate is fatal to that candidate's chances for election. All authorities agree that if a "dark horse" could be discovered who could be shown to be in no way controlled by the "bosses," he could be elected instantly. In view of this situation, some of our contemporaries are calling upon Mr. Chandler to go back to Washington and demonstrate his devotion to the welfare of the Republican party by ceasing to be an obstacle to the choice of a creditable Senator. Appeals of this kind are based upon an erroneous conception of Mr. Chandler's character. In his mind the Republican party can have no true welfare which is not at the same time the welfare of Mr. Chandler. He appears to be thoroughly understood in New Hampshire, and this fact is the one pleasant feature of the tedious contest.

Polk, the defaulting Tennessee Treasurer, was on Thursday, greatly to his own surprise and the general satisfaction of the Tennesseans, convicted of embezzlement, the jury fixing the penalty at twenty years' imprisonment and the fine at the whole amount taken by him. The trial has been very short, and the jury, reported to be a very ignorant body of men, were practically instructed to convict. The result will do something for the reputation of jury trial, but not much. No one has ever doubted that convictions may be got out of an ignorant jury by a charge of this sort, and the danger is that the prisoner's counsel, who have moved for a new trial, may yet be able to find flaws in it, particularly as it is said to be the longest charge ever made by a judge. We sincerely hope that Polk may have to serve out his term; but he probably thinks that the sentence is a very severe one, considering that, after all, he only embezzled some public money which did not belong to him, but to the State's creditors.

Can a State, he would no doubt say, which habitually robs its creditors, fairly provide such heavy penalties for a similar offence against itself?

There are some things about the political situation in Virginia which are encouraging and others which are discouraging. Both the Mahone and the Democratic leaders admit that the balance of power is held by the negroes, and both are therefore cultivating the colored vote. This will not only insure a fair election and a fair count, but it will begin the work of eliminating the color line from the politics of the State. Nothing could be more desirable than this. The most discouraging aspect of the situation is the abandonment by all parties of even a pretence of further opposition to repudiation. The utter demoralization of public sentiment in Virginia on this question is due mainly to Senator Mahone, and Senator Mahone's power for evil would have been very much less had he not been sustained by the patronage of a Republican national administration, and encouraged by the open sympathy of short-sighted leaders of the Republican party.

The suicide of Mr. Barca, which at first was ascribed to the pressure of financial embarrassments caused by high living in Washington, has moved some of our contemporaries to moralize quite impressively on the extravagance of Washington society. In their opinion the social habits of the capital are of the most lavish and wasteful kind, so that people of moderate income cannot hold any social position without ruining themselves or stealing. This is a great mistake. In fact, the social tone of Washington is very simple, unpretending, and unexacting compared with that of New York. There is infinitely less "style" and display there than here. Although a large income will, of course, give certain advantages, there is probably no large city in the United States in which money, for its own sake, counts for as little as it does in Washington. In the circles which are called "the best," a good many gentlemen and ladies are moving who are known to be comparatively poor, and who are unembarrassed in their social relations by the scantiness of their means. The steady influx of wealthy people from all parts of the country who spend their winters in Washington, may be calculated to change this gradually, but the change is at any rate slow. As things are at present, an income which would scarcely be called "respectable" in New York will go a great way in Washington, and it is a well-known fact that many foreign diplomats prefer this post, for a time at least, for the very reason that it enables them to live modestly and to save money.

The Western newspapers have discovered a new field for professional enterprise which goes far beyond anything hitherto dreamed of. An heiress directory has been published by one St. Louis journalist, giving the names, ages, and incomes of the girls of the place, together with such descriptions of their appearance as would be likely to interest gentlemen on the lookout for wives. To "beat" this, a rival is getting up a beauty match. A coupon ticket is printed in his paper, which every reader is requested to cut out and fill up with the name of the handsomest woman in St. Louis, and return to the office. The editor will in due time announce the result. Colleges which are considering the advisability of founding professorships of journalism will see from such cases as these that the practical newspaper art is something which can never be taught by a professor. The knack of knowing what will "take" and sell in a particular community is a pure literary gift, and a man in whom it is not born can never get it by study, no matter how deeply he goes into the theory of journalism.

A tourist writes to the *Times*, complaining of the great discomforts of travelling in the Yosemite, which he insists are not at all necessary. The first morning after leaving San Francisco the traveller has to go to a hotel which is rather worse than a "second-class Bowery tavern"; he has for breakfast "leathery steak," "sogged potatoes," bad bread, and "vile coffee." At the next stopping-place, Coarse Gold Gulch, he has to pay $2 or $3 for "French claret," which it is needless to say is neither French nor claret. At the best hotel in the Yosemite, the windows have no blinds, and it costs twenty-five cents to have your boots blacked. The local excuse given for these deficiencies is one very commonly heard in resorts throughout the United States: "Well, a man must not expect all his comforts when he comes here." "G. H.," however, insists that this spirit is a dangerous one for those who provide resorts for the public, for there are places in Europe where the comfort of the tourist is really studied, and these compete with resorts such as ours—where complaints of any kind are sternly frowned down—and draw off from them a large amount of travel which they would otherwise get. "G. H." is evidently a European who certainly does not understand how Americans enjoy discomfort; and the warm-hearted way in which he speaks of the Alps, and the contempt he expresses for the Yosemite, will be easily understood by the California hotel-men. It is painful, however, to see such a letter published in a leading American newspaper without at least some protest from the editor.

There has been during the week a marked decrease in many kinds of business, traceable directly to the telegraphers' strike. This is especially true of the speculative operations in grain, provisions, stocks, etc., which cannot be conducted without the assurance of prompt and trustworthy telegraphic service. Other causes also, chief among which have been the failures in the shoe and leather trade, have induced a further conservative feeling on the part of capital, which is superabundant for loans on collateral security, but very reluctant to take hold for actual investment. The money market as thus affected is in a very remarkable, almost unprecedented, condition. Money is freely offered on the Stock Exchange at 1½ per cent. per annum for call loans on collaterals of railway stocks, and only a small part of what is offered is taken, even at these extraordinary rates. The new railroad projects, involving not less than three or four thousand miles in various degrees of progress in all parts of the United States, are being carried through with capital previously provided. The crop prospects are everywhere steadily improving beyond the expectations of the most sanguine a few weeks ago. Food of every kind will undoubtedly be very cheap during the next year, and, with the lower cost of living, labor, like capital, will be cheaper. One effect likely to result soon from this condition of things, however, is an advance in the prices of all first-class dividend and interest-paying securities.

According to a despatch from Berlin, Professor Putlitz, who committed suicide on Wednesday, killed himself because he had "drawn a death-lot in a so-called American duel." This seems to indicate a misunderstanding in Berlin, not only of the American duel, but of the American character. Of course, we have nothing to say against the settlement of quarrels by the suicide of the person who draws the longer or shorter of two pieces of paper. The method is in itself no more unreasonable than their settlement by a fight with knives, pistols, or shot-guns, and on some accounts a death-lot duel would be an improvement on any species now known. It insures the death of one principal, and thus has a far surer probative force than any of the ordinary kinds of single combat now in use, in which neither of the combatants may be hurt, or both be so injured as to make it impossible to say what the result does prove. The pitchfork duel lately fought at High Grove, Ky., forcibly illustrates this. The principals were two farm laborers, and the origin of their quarrel is not given. Whatever the precise issue between them may have been, however, they determined to settle it with pitchforks; Wilkes maintaining his side with a long-handled two-pronged fork, and McDougal his with a short-handled four-pronged weapon. The result is that both duellists are wounded, probably mortally, and with what effect upon the merits of the controversy no one can tell. The death-lot duel, on the other hand, disposes of the controversy altogether. Again, as everybody knows, the settlement of disputed questions by lot is a primitive form of trial, which was once very popular with all branches of our great and wise race, and its revival now among our Teutonic relatives is, apart from all other considerations, an interesting episode in the history of the institution.

But for all this, the Germans should not be misled by the late Professor Putlitz's example into supposing that the death-lot is a common form of duel in America. Almost every species of duel except this has flourished here, and Europeans who want novelties in duels can easily find them "in our midst." The duel with knives in a darkened room is said to have been much liked, and to have produced good results in Texas. The duel in which the combatants are tied to each other, or to a table, with the knife-arm free, has been

found wonderfully effective wherever it has been resorted to; everybody knows of the rifle duel with a rest, to get a good aim. These are really American forms of the duel peculiar to the country, just as much so as the club duel in the North, the peculiarity of which is that it always terminates pleasantly without bloodshed and in a restoration of amicable feeling, no matter how serious the "insults" may have been which led to the trouble. But notwithstanding its many advantages, we doubt if the death-lot duel will ever become popular here. There is a refined rationality about it, a neatness, a celerity, a certainty, which is not suited to the duelling classes as we know them. The chance of "slaying" your adversary is an essential part of the American duel, and this can never be replaced with us by the chance of seeing him slay himself.

Mr. Albert Rhodes, recently Consul of the United States at Rouen, France, in a consular report discusses the adulteration of wines in France. As proof that this adulteration is carried on there to a very great extent, he cites the fact that the French Government has found itself obliged, in the interest of public health, to establish laboratories for the analysis of wines and other liquids which are distributed throughout the principal towns of France Indeed, there could be no stronger proof of the existence of this abuse than the obligation the Government feels itself under to do something to limit its evil consequences. Mr. Rhodes very pertinently says that if the artificial wine made in France is not good for French people, it is not good for Americans, and that, therefore, the French have no right to find fault with our Government if it thinks of taking measures to subject the imported article to an equally thorough analysis. This will undoubtedly still more cut down the importation of French wines, which has already perceptibly decreased of late years, and it will enlarge the field of another method to deceive the public which has for years been extensively practised in this country—namely, the practice of selling California wines under a French or German label. These California wines are undoubtedly better for the health of the consumer than adulterated foreign wines. But it is nevertheless the selling of a cheap article for a high price under false pretences. It is hardly necessary to add that the extent to which this swindle is carried on is made possible only by that silliness which is always ready to pay for the foreign name, and thus invites deception. This practice, of course, benefits not the wine-grower, who has to sell his product under its right name, but only the middle man, who puts the foreign label on it.

The fancy in the mind of the British investor that the Confederate bonds will sooner or later be paid by somebody or other, is one of those delusions which no amount of experience seems to be able to cure, and speculators are still able at short intervals to get up a boom on the strength of it, which no doubt enables them to make a considerable sum of money. It appears from a published interview with Judge Lochrane, of Georgia, that the legal ground upon which the investor has been induced to rely has at length been discovered. The Fourteenth Amendment, our readers are aware, declares that neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, and makes any such debt or obligation wholly void. It has always been difficult for Americans to understand how it was that the British investor was persuaded to believe that the difficulty presented by this amendment could be surmounted. It now appears that what he is told is that the Fourteenth Amendment is "unconstitutional," and can be set aside by the Southern States, whose readmission into the Union was based upon their ratification of it. Lured on by this attractive legal bait, he is persuaded next to infer that if he only buys enough bonds, and creates enough pressure, the Southern States will begin to clamor to have the Fourteenth Amendment set aside and the Confederate debt assumed either by them or the United States. The pressure is, it seems, to take the form of "boycotting." The South needs emigrants, and is expecting an English emigration. All the English bondholders will have to do, therefore, is to form a league to keep emigration out of the South—to prevent the South from being settled. We must not forget to add that the legal basis of this scheme rests on opinions furnished by "Dutch and French jurists."

The British investor evidently does not understand this country, and it is apparently hopeless to attempt to teach the generation now on the stage. Fascinated as it is by the brilliant prospect, it will probably go on at intervals of a year or so buying Confederate bonds, on the strength of the opinion of French and Dutch jurists that the Fourteenth Amendment is unconstitutional; but it seems to us that it is not too much to hope that the rising generation of investors, the little innocent children now playing with their toys in their happy British homes, may be taught as they grow up that it is imprudent to buy these securities, and that they had better turn their attention to other classes of investments. By beginning early with them, and accustoming them to look upon the bonds as worthless; by using the family investment in the debt to light fires with; by having trunks lined with it, and so on, some good might be accomplished by prudent parents. Something might be done, too, in the schools—unless, indeed, in cases where the hallucination is hereditary. For an hereditary belief that the Confederate bonds will ultimately be paid it is hard to suggest any remedy, except that which thus far seems to have produced no relief—constant attempts to get the money.

The late Peter Goelet, of this city, who died a few years since, was a millionaire on a quiet scale, and as he died unmarried his property descended to his nephews. A lawyer named Wolf has now appeared, who "claims" to have found evidence showing that Mr. Goelet contracted a marriage in Indiana in 1845; that a child was born in 1847; that the mother died within three weeks; that the child was left with a guardian, who subsequently reported it dead, too. Far otherwise was the fact, for the poor little remote Indiana child lived to grow up to be a woman, married one George Myers, and now Mrs. George Myers lays claim to the Goelet estate in New York. Mr. Wolf says he has been at work on this little matter ever since 1880, and "has written five thousand letters about it." People often complain of the want of romance in New York life, but no millionaire ever dies here without showing how unfounded the charge is. Mr. Wolf expresses great surprise that his discovery should have been made public, for he wanted it "kept quiet."

The practice of giving a letter of recommendation to a man, and then following it by a private note saying that he is not to be trusted out of sight, has been improved upon in Georgia by the Clerk of the Hancock Superior Court, Mr. J. T. Andrews. W. J. Reynolds, having committed bigamy and been detected, applied to Mr. Andrews for a letter explaining that the bigamist Reynolds was "another man of the same name." This he most obligingly gave, writing to the editor of the Lexington *Dispatch* fully on the subject. But on the same day he sent another letter to the same editor, explaining that he had "fixed up" the first because of Reynolds's "great distre s about his trouble," and to enable him to "wind up his business." He adds, thoughtfully, that "after reflection" he has decided to withdraw the first communication as being entirely false.

In the House of Commons on Monday the Suez Canal question was again brought up, and resulted in a victory for the Government, which a month ago would hardly have been predicted. Sir Stafford Northcote moved an address to the Queen, praying that in any canal negotiations she would decline to recognize the claims of the existing company to a monopoly. Mr. Norwood offered an amendment declaring that it was undesirable to prejudge the action of the Government, and that the House declined to pass any resolution on the subject. This amendment was supported by Mr. Gladstone, and carried by a vote of 282 to 183, the Parnellites abstaining from voting. Mr. Gladstone has therefore succeeded in getting exactly what he most needed—a postponement of the whole matter. He explained, in the course of his speech, that the monopoly question would have to be settled in the courts of Egypt.

The fate of the informer Carey was precisely what nearly everybody expected it would be. He had a mortal enemy in every "Irish patriot" the world over, and his assassination was only a question of opportunity. There will be no sympathy for him from any quarter. He was the most cowardly member of one of the most cowardly and bloody conspiracies of modern times, and only escaped the legal penalty of his crime by betraying his associates. He was shot because he was an informer, but he merited death because he was an accomplice in murder. His slayer stands an excellent chance of being hanged for murder, of which he is as much guilty as he would have been had he shot an innocent man.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 25, to TUESDAY, July 31, 1883, inclusive.]

DOMESTIC.

DURING Wednesday the vexatious delay of business on all commercial telegraph lines throughout the country still continued, neither strikers nor employers showing any signs of yielding. Negotiations had, however, been secretly going on, and at 4 o'clock in the afternoon it became known that the American Rapid Company had effected a compromise with the Brotherhood. While both sides declared that the agreement was satisfactory, they declined to make its terms public for the present. It is generally understood, however, that the basis of the agreement is a full recognition of the Brotherhood, an increase of ten per cent. in all salaries, eight hours for a day's work, seven hours for a night's work, and extra pay for all Sunday work. On Monday these terms were reported to be false. It was said that the apparent concession of the Rapid Company had been made by agreement with the strikers in order to force other companies to compromise. An incident of Thursday was the so-called "discharge" in Washington of seven first-class operators who had signed an agreement to strike on that day unless some action should be taken looking to a compromise. The operators assert that Superintendent Zeublin appealed to them to remain, and when they refused he discharged them, alleging that they had wilfully mutilated the company's business. This charge has created great indignation, and threats of a suit are made. The Produce Exchange of this city on Friday passed a resolution favoring inquiries as to the feasibility of building a line of telegraph for their own use and that of other exchanges in the larger cities. On Saturday the Western Union in this city took down its notices receiving all messages "subject to delay." On Tuesday the situation was practically unchanged, neither side showing signs of yielding.

President Arthur left Washington on Monday for the Louisville, Ky., Exposition, and for an extended Western tour. He does not expect to return until the latter part of September.

The Civil-Service Commissioners have recently given a decision which some of the friends of the reform fear will defeat the real purpose of the new law. To a question submitted by Secretary Folger, whether or not a woman drawing $900 salary could be promoted to a $1,200 position without a competitive examination, they have returned an answer in the affirmative. In response to the question whether or not competitive examinations would be required for promotions in the three grades, from a $1,200 clerkship to an $1,800 clerkship, they answered that the usual pass examinations would be all that was necessary.

The Government has recently established an agency in Massachusetts for the examination of the Government bank-note and bond paper. It became necessary to appoint ten counters who should be experts. Commissioner of Internal Revenue Evans appointed ten friends who were not experts. The appointments came before Secretary Folger, and he refused to confirm them.

The Commissioner of Internal Revenue has written a letter to Secretary Folger in regard to the operations of his office, in which he states that the estimated annual reduction of internal taxation is $42,637,563. The total receipts for the last fiscal year were $144,553,366.

A call for outstanding 3½ per cent. Government bonds was issued by the Treasury Department at Washington on Thursday afternoon.

In the District Criminal Court at Washington on Monday Judge Wylie rendered a decision overruling the motion to quash the indictment in the Kellogg Star-route case.

The Virginia Democratic State Convention met in Lynchburg on Wednesday. There was a large attendance. After several speeches, the Convention adopted a series of resolutions. These oppose any increase of taxation; accept as final the recent (Readjuster) settlement of the State debt; favor immediate abolition of the internal-revenue system; approve a tariff plank which is the same as that of the Ohio Democrats (which may be taken to mean almost anything); oppose mixed schools; demand economy, real civil-service reform, and anti-Machine methods; and finally arraign the national and State administrations.

The Massachusetts State Republican Committee on Tuesday designated Boston as the place of holding the State Convention, and Sept. 19 as the date. Charles R. Codman, of Boston, was invited to preside.

The Massachusetts Senate accepted the majority Tewksbury report on Thursday without debate by a strict party vote. This finished all the business, and the Legislature adjourned after the longest session on record in that Commonwealth.

The Pennsylvania House of Representatives passed the Stewart Congressional Apportionment Bill on Wednesday, but it was rejected by the Senate on Thursday. The deadlock continues. New bills were introduced on Tuesday.

A conference of Republican members of the New Hampshire Legislature was held on Thursday, but no solution of the Senatorial contest was reached. Mr. Chandler lost twenty-five votes on Friday. On Tuesday Mr. Chandler's vote was reduced to 21. Austin F. Pike received 80.

Charles W. Copeland & Co., shoe manufacturers, of Boston, on Monday indefinitely suspended, and their liabilities will amount to $750,000, which the firm says it has sufficient assets to cover. Firms in New York, Baltimore, and Norfolk, Va., also suspended on account of connection with the Boston firm.

The assignment of Shaw Brothers to Ferdinand A. Wyman, an attaché of the firm, was also made in Boston on Monday. It includes all the large assets—real estate, stock, and personal property. This firm owns more than 1,500,000 acres of land in Maine, and immense tracts in Northern New York, New Brunswick, and the Province of Quebec. The firm employed in various capacities between ten and fifteen thousand people, the annual product of whose labor is valued at between $3,000,000 and $5,000,000. At the beginning of the present year the firm's quick assets were estimated at $3,179,256; other assets, $2,362,256; total, $5,541,512. Direct liabilities, $737,000. The creditors of Shaw Brothers are chiefly Maine, Boston, and New York banks, and some of the largest hide and leather houses in Boston.

Ex-State Treasurer Polk, of Tennessee, was on Thursday found guilty of embezzlement by a jury, which fixed the penalty at imprisonment in the penitentiary for twenty years and a fine to the full amount of the embezzlement.

Comptroller Allan Campbell, of this city, resigned his office on Friday afternoon, on account of ill health. His successor has not yet been appointed.

Judge Bockes, of this State, has denied, without costs, the mandamus in the Union College matter, which sought to compel the attendance of Governor Cleveland, Lieutenant-Governor Hill, and other State officers ex-officio members of the Board of Trustees of Union College, at a meeting called for August 2.

The will of the late Henry L. Kendall, of Providence, R. I., leaves to the Public Library of that city the income of about $175,000.

The persons appointed by the Court to appraise the estate of the late Henry W. Longfellow, the poet, have filed their report in Boston, from which it appears that Mr. Longfellow left property the appraised value of which is $356,320 80.

A reunion of several hundred members of John Morgan's famous Confederate command took place at Lexington, Ky., on Wednesday.

A merchants' caravan was attacked by Apaches near Arispe, Mexico, on Sunday. The merchants were defeated in an engagement, and one was killed and another wounded. The Indians plundered the train of goods and $5,000 in silver.

Onondaga, a small village of Michigan, was, on July 23, almost swept away by a cyclone, which also visited Eaton County with destructive effects.

Twenty-three persons were killed and many injured by a railroad accident on the Rome, Watertown and Ogdensburg line, near Carlyon, N. Y., on Friday night. An express train came in collision with a freight car.

The body of Captain Webb, the English swimmer who lost his life in an attempt to swim the rapids of Niagara, was found and fully identified at Lewiston, about six miles below Niagara, on Saturday. The inquest showed that death probably resulted from the shock received in the whirlpool rapids, and not from drowning.

Montgomery Blair died at his country home at Silver Springs, Md., on Friday. He was seventy years of age. His father was a prominent Democratic editor of Washington from 1830 to 1845. Montgomery was well known in early life as a lawyer and judge in Missouri. In 1852 he removed to Maryland. He became a Republican after the repeal of the Missouri Compromise. President Lincoln appointed him his first Postmaster-General. He held that office from 1861 to 1864, and instituted many notable improvements. After 1864 he acted with the opponents of the Republican party, and was an ardent supporter of Tilden in 1876.

Señor Don Francisco Barca, Spanish Minister to the United States, shot and killed himself in his rooms in the Albemarle Hotel, New York, between two o'clock and sunrise on Sunday morning. He had arrived in this city from Washington July 20, and was making preparations for the departure of his wife and daughter to Europe on August 1. His secretary was with him until 2 A. M., and left him in his usual spirits. Before committing the deed he wrote twenty letters of farewell and explanation to various persons, but it does not yet appear that he clearly revealed the reason for the act in any one of them. It is supposed that he was despondent on account of his indebtedness in this country caused by extravagant expenditure. Others think that the proposed departure of his wife affected his spirits. He was fifty-one years of age, and was a Liberal politician of prominence in his native country. He had been in this country since 1881, and was popular in Washington. His wife and daughter will take his body with them to Spain on Wednesday.

FOREIGN.

The town of Casamicciola, on the island of Ischia, near Naples, was almost entirely destroyed by an earthquake on Saturday night. The neighboring towns of Forio and Lacco-Ameno were greatly damaged. The shocks began at half-past 9 o'clock. A majority of the people of the upper classes were at the theatre. Nearly all of the houses in the town collapsed. The number of lives lost is estimated at about 5,000. One thousand persons were wounded, and steamers loaded with them were constantly arriving at Naples on Sunday and Monday. The health resorts of the island were filled with prominent Europeans, many of whom were killed. Sappers were hard at work on Monday, rescuing people from the ruins. The municipal authorities of Naples did all in their power to relieve the sufferers. The dead at Forio number 300, at Lacco-Ameno

500, and at Fontana Serrara 200. Twenty-four children perished in the Misericordia Asylum. The King and Queen of Italy have subscribed 100,000 lire, and the Pope 25,000 lire, for the relief of the sufferers. The only American known to have been injured was a Miss Van Allen, and she is only slightly hurt.

The cholera continued to spread in Egypt throughout the week. The alarm in Europe increased, and many precautions were taken. The French Government have introduced in the Chamber of Deputies, and demanded urgency for, a credit of 50,000 francs for paying the expenses of a scientific commission which it is proposed to send to Egypt to investigate the cholera epidemic. The American Vice-Consul in London appointed on Wednesday a physician to inspect all vessels going to America. Several of the Powers were reported to be negotiating for the establishment of an International Sanitary Board. The Liverpool Town Council having called the attention of the Privy Council to the danger to public health arising from large cargoes of rags received there from Egypt, the Privy Council sent a reply in which they declined to interfere in the matter. The particular cargo cited in the Town Council's communication as a cargo of Egyptian rags was not intended to be landed at Liverpool, but to be conveyed to Boston. Secretary Folger, of the United States, has given the Collector of the Port of Boston full authority to burn the cargo of rags on its arrival there. Several cases of cholera were reported in England on Friday, but Sir Charles Dilke declared in the House of Commons that they were simple cholera, and not Asiatic. There was a decrease in the number of deaths in the Bulak quarter of Cairo on Friday. On Tuesday the situation at Cairo was more hopeful.

It was announced on Monday in London that James Carey, the informer in the Phœnix Park murder cases, was shot dead on Sunday on the steamer *Melrose*, while she was between Cape Town and Port Elizabeth, Africa. The deed was committed by a fellow-passenger named O'Donnell, who had recently sailed from London. The news caused intense excitement in the West End of London and in the House of Commons. It had been reported on Sunday that Carey was supposed to have just arrived in Montreal. The British Government has little doubt that James Carey was followed from London by O'Donnell. They believe that the Fenians had taken most elaborate measures to prevent his escape. O'Donnell surrendered himself quietly. He was placed in irons, and was handed over to the police when the *Melrose* arrived at Port Elizabeth. Carey was travelling under the name of Power. His family were with him. From Madeira he wrote a letter to the authorities, in which he described the voyage, and said he had shared in a conversation in which the Invincibles and "the miscreant Carey" were especially denounced. He said he intended to forget that Ireland ever existed. The news of Carey's death caused many exhibitions of delight on the streets of Dublin. The London *Times* pronounces the death of Carey a public misfortune, calculated to encourage lawless spirits to commit acts of violence. O'Donnell is an Irish-American. He denies that he knew who Carey was previous to his arrival at Cape Town.

In the House of Commons on Monday night Sir Stafford Northcote (Conservative) moved an address to the Queen, praying that in any negotiations relative to the Suez Canal she would refuse to recognize any claim of the Suez Canal Company to such a monopoly as would exclude other undertakings designed for the purpose of opening a way between the Mediterranean and Red Seas. Sir Stafford Northcote wished to do nothing to discredit the Government. He only asked the House to express such an opinion as would relieve them from the embarrassment arising from a practical recognition of the monopoly of the Suez Canal Company by some members of the Government. Mr. Norwood (Liberal) offered an amendment declaring that it was undesirable to prejudge the action of the Government, and that the House declined to pass resolutions concerning further negotiations or proceedings in connection with the Canal. Mr. Gladstone, amid great applause, cordially supported Mr. Norwood's amendment. He maintained that the late Government was aware that when it bought the Suez Canal shares M. de Lesseps claimed rights even more exclusive than he does now. The passage of Sir Stafford Northcote's motion, he said, would greatly diminish the Government's sanguine hopes of coming to an agreement on the Canal question. Mr. H. C. Childers, Chancellor of the Exchequer, said he was confident that before many months or years the Government would succeed in making a satisfactory agreement with regard to the Canal. Sir Stafford Northcote's motion was rejected, and Mr. Norwood's motion adopted by a vote of 282 to 183. The Parnell members abstained from voting.

In the House of Commons on Friday night a motion made by Mr. Onslow, Conservative, expressing regret that part of the cost of the Egyptian war had been charged to India, was rejected by a vote of 210 to 55. Before the vote was taken Mr. Gladstone explained that if the motion was adopted the Government would resign, adding (aside) that he did not know whether he should personally regret it if the motion were passed—a remark that caused much comment.

A dinner given by the British Volunteers in honor of the American riflemen took place at the Criterion in London on Wednesday night. There were about 100 persons at the tables.

Owing to the quietness of Ireland the British Government have relieved Mr. Clifford Lloyd, resident magistrate, from the special duty to which he had been temporarily assigned.

General Sir William Fenwick Williams died in England on Thursday at the age of eighty-three. He was celebrated for his tenacious defence of Kars, in 1855, against the Russian General Muravieff.

Advices from Tamatave, Madagascar, under date of July 13, assert that the state of siege is strictly maintained by the French. Six English missionaries with their families are detained in the interior. It was reported in Paris on Friday that the British commander at Tamatave had demanded that the siege be raised, but Admiral Pierre refused to comply.

A despatch was received at the Ministry of Marine, in Paris, on Saturday, announcing that the French troops under Colonel Badens made a sortie on July 19 from Namdinh with a force of 500 men. He captured seven pieces of artillery and killed 1,000 of the enemy. The loss of the French in the movement was but eleven men. The enemy was taken by surprise.

It is reported from Vienna that China has proposed to M. Tricou, the French Minister, that negotiations be opened for a formal treaty, and that France readily agreed to the proposal.

The French Cabinet has fixed an extra budget of 254,000,000 francs.

An interview between the Emperor of Germany and the Emperor of Austria has been arranged to take place at Ischl on the 7th of August.

Intelligence has reached Rome from Berlin that Prince Bismarck will continue to negotiate with the Vatican for the settlement of the differences between it and Prussia.

The Catholic Bishops of Prussia have begun to use the powers granted them under the provisions of the Government's Church Bill, recently passed. They have ordered all vicars and candidates for the priesthood to return to Prussia.

It is reported in Constantinople that Germany has refused to conclude the treaty admitting Turkey to the triple alliance, but promises her assistance to the Porte in case of necessity.

Mr. Wyndham, the British Chargé d'Affaires, and General Wallace, the American Minister in Turkey, maintain their opposition to the proposed patent law. The Turkish Government has offered to appoint an Ottoman delegate to revise the tariff, but has declined to prolong the treaty of commerce with the United States.

A convention between Switzerland and the United States, according to which any differences between the two republics are to be settled by arbitration, is about to be submitted to the Swiss Federal Assembly.

The Belgium Chamber of Deputies has adopted the bill increasing the duty on tobacco, with an amendment fixing the duty on manufactured tobacco at 75 francs per 100 kilogrammes.

In the Jewish trial at Nyiregyhaza, Hungary, the Public Prosecutor said, on Friday, that there was no ground for further criminal proceeding against the prisoners, and left the matter in the hands of the Court.

A great sensation has been caused in Berlin by the suicide of Dr. Pudlitz, Professor of Political Economy at the Berlin University. It is asserted that he drew a death-lot in a so-called American duel. He refused to fight in the ordinary way, because his antagonist was near-sighted.

The Academy of Sciences at Munich has appointed Prof. O. C. Marsh, of Yale College, a member of that Society.

It was reported in Rome on Saturday that the Pope was drafting an encyclical letter against divorce.

The death is announced of the Count de Persano, ex-Admiral of the Italian Navy, in the seventy-eighth year of his age. He commanded the united fleets in the war with Austria in 1866. He was surprised and defeated by the Austrian Admiral in July, and the Government was forced to impeach him. He was declared guilty of foolhardiness, negligence, and insubordination, and sentenced to the loss of his rank and to pay the cost of the trial.

Jean Adolphe Jerichau, the well-known Danish sculptor, died in Copenhagen on Wednesday at the age of sixty-five.

It was reported from Monterey on Friday that the Spanish Minister to Mexico had been recalled on account of Mexico's repudiation of her Spanish debts. The report has not been confirmed.

The centennial anniversary of the birth of Simon Bolivar was celebrated at Panama, Guayaquil, Ecuador, and other South American States on July 24 with great enthusiasm.

The Chilian General Lynch published on Wednesday a decree calling upon all the officers and chiefs in Lima, Peru, who were with Caceres, to present themselves within five days at the Cuartel, on pain of being treated as spies.

Great excitement reigns throughout the interior of the United States of Colombia on account of the coming elections, and fears are entertained that a revolution may at any moment break out.

Cetewayo, the famous Zulu chief, was reported killed on Wednesday. He was the son of Panda, and the nephew of Chaka, who in 1812 reorganized the Zulu nation. Cetewayo succeeded his father in 1872. He ruled with vigor and independence. He was finally driven into war with the British, which resulted disastrously in his capture in August, 1879. For several years he was kept in captivity, but was at length restored to his throne in September, 1882, after a visit to England, where he was much lionized. Within the past few months he has been involved in war with powerful South African chieftains. The insurgents also killed all his wives and many of his chiefs.

THE TELEGRAPH AND THE POST-OFFICE.

THE greatest objection to the assumption of the telegraphic business by the Government was the condition of the civil service before the passage of the reform act. It was felt that to increase by many thousands the force of officials employed, promoted, and dismissed under the spoils system, would be simply increasing the means of corruption at the disposal of politicians, and increasing the encroachments of the system on the time and attention of the President and members of the Cabinet. It was bad enough to have an army of Treasury, and Post-office, and Custom-house clerks holding office by favor; it would have been still worse to have them reinforced by an army of telegraph operators, who would, owing to the fact that telegrams are open letters, have been still more useful as "henchmen" than any other body of public servants.

Now that this difficulty has been removed, the probabilities are that the public attention will be seriously and increasingly directed to the desirableness of imposing on the Government the duty of transmitting all telegraphic messages as well as letters. There is really no argument in favor of a Government post-office which is not just as applicable to a Government telegraph, except the fact that the Government is already in possession of a monopoly of the one, while the other is already carried on after a fashion by commercial companies. The strongest arguments in favor of a Government post-office are that the people have some control over its management, and that the first consideration of its managers is the public convenience. Another and hardly less powerful one is that its arrangements can at any time be changed by legislation without coming into collision with private rights, or giving anybody a claim to compensation. These are all stronger, too, in America than in any other country in the world. Probably nothing has been more effective as a civilizing and consolidating agency than the way in which the American post-office has followed the settlers into the Western wilderness, and kept every backwoodsman and squatter within easy reach of the world he had left behind him. No other post-office has played the same part for the community which it served. This has all along been so conspicuous a merit that it is not wonderful that the Star-route knaves should have sought to make money by abusing it. The wonder is that they did not try it sooner.

The telegraph has now come to play the part as a political and commercial agency which the post-office played at the beginning of the century. Business and politics are both managed on a telegraphic, and no longer on an epistolary basis. Nearly everything in life which is done in consequence of news from other places—a phrase which covers a large proportion of our industrial and political activity—is done in consequence of telegraphic news. Letters amplify and explain, but the determining and essential facts which govern a large part of the trade, commerce, and industry of the world come over the wires, and not through the post-office. Consequently it has now become all but a necessity that the telegraph should go where it will serve the popular convenience, and not simply where it will pay expenses or make profits, and thither no commercial company will ever carry it, or can be expected to carry it. Every commercial company is bound, in order to avoid defrauding its stockholders and creditors, to avoid doing business at a loss, or at all events to avoid doing a losing business very long and without reasonable hope of its speedy conversion into a profitable one.

Of course, whenever a Government telegraph is spoken of, the question comes up, How is it to come into existence? Should it buy out the existing companies at an appraisement, as the British Government did, or make a telegraph of its own? The difficulties of the first of these plans are obvious. It would probably be very hard to find out what the properties are worth, owing to the enormous influence, both legitimate and illegitimate, which would be exerted in favor of overvaluation. The work of wholly new construction would be very slow, but it is probably the more feasible and healthy of the two. It might be carried out gradually by the introduction of the telegraph into the post-office between leading points, and its subsequent extension year by year to minor places, until a full and efficient service was organized at every post-office in the country. The probabilities are, too, that before the work was half way through, the existing companies would be glad to sell out their lines at a very moderate rate. They have no claim on the Government for any kind of consideration. They owe it nothing; it owes them nothing. The franchise they enjoy is simply what every joint-stock company enjoys—the privilege of carrying on their business as a body corporate through trustees. This accounts for the futility of all schemes for forcing them to yield to their striking operators through legal process. The theory which calls for their being compelled to carry on their business by mandamus is too absurd for serious discussion. The franchise of no commercial company defines how much business it shall do, or how many offices it shall keep open, or how many men it shall employ. The citizens' only remedy, in case of inefficient service from a telegraph company, is to go to a rival or resort to the mails. And even if anything short of a total cessation of business would justify the revocation of its charter, it is clear that a rule which made the company's service compulsory must in practice cover its employees also. No rational community would go on long obliging corporations to do certain work, under pains and penalties, without delay, and at the same time permitting its officers to strike when they thought its needs most pressing. In fact, any one who wants to convince himself of the futility of supposing that a community like this can remain long dependent on commercial companies for the supply of its most important channel of communication, has only to read the threats directed against the Western Union in the pending agitation. They are now gradually dwindling down into the one it fears least—the threat of more competition.

DELUSIONS AS TO JURY TRIAL.

THE verdict of the jury in the Polk case is a fair offset to those in the two Star-route trials and the Dukes case in Pennsylvania, yet will not do much to rehabilitate jury trial in popular estimation, for a variety of reasons. If we assume that the second Star-route verdict was as absurd as the first, we have in these recent state trials three verdicts out of four grossly and palpably wrong. Even if we admit that the acquittal of Brady and Dorsey was right, only two out of four are sensible, and it must be remembered that the decision of cases by tossing up a penny—the old trial by lot—would result in the long run in half the verdicts being correct.

In reply to this it will, of course, be said that we have no business to take these four conspicuous trials, and overlook the countless other cases which juries do decide properly. But the reason why we do so is simply that conspicuous state trials are those which furnish the test of our administration of justice, and particularly of jury trial. They do so now in a different way from that in which they did it a hundred years ago. Then conspicuous state trials were jealously watched to see whether the accused was fairly tried, and juries were looked to to protect him against the tyranny and ill-will of the Government. The panegyrics of jury trial which were then common were in great measure founded on the same jealousy of the powers of the executive which, in another field, led to the great enlargement of legislative authority and constitutional limitations of the other branch. The state of society and law in which we live is so utterly different from that of the last century that now the main complaint made against jury trial is that juries do not convict; that it is a piece of machinery which only aids offenders to escape the clutches of the law. The impression that this is so is not derived from statistics, but from the conspicuous cases which now, just as in the time of Lord Mansfield, determine the repute in which the jury is generally held.

The difficulty of reaching any conclusion as to what ought to be done with jury trial comes in great measure from the delusion that it has, in our system of law, a sacred position as a method of deciding all questions of fact. We constantly, in discussions of the subject, come across such statements as the following: "There would be no difficulty in naming numerous lawyers and judges of distinction who regard the system of trial by jury, when properly administered, as the best practical plan ever devised for the determination of litigated questions of fact in a free community." If this is so, these jurists ought to come forward at once and do what they can to foster jury trial, and check the causes which, whatever view we may take of the theory of the matter, have practically been driving jury trial into the background in England and America for three hundred years. We have to go back at least for this period to reach a time when the lawyers and legislators of our race acted consistently upon the idea that jury trial was superior to other modes of determining litigated questions of fact. When the chancellors began to introduce

"equity" into England, they struck the first serious blow at jury trial, and they were stoutly fought by the old common-lawyers. But nowadays law and equity constitute one system, and according as a question takes one or another form, it will be tried with or without a jury. The question of damages for breach of contract goes to a jury; the question of ordering the performance of a contract goes to a judge. A trespass to land goes to a jury; an injunction against a trespass comes from a judge. The sanity of the maker of a will is decided by a surrogate; the same will may be brought before a jury if the question arises over the title to land. All these things can be explained historically: they come by that infusion of the civil into the common law which has been going on for so many centuries. But they certainly show that we have now, side by side with jury trial, another form—that of trial by a judge—which in a vast amount of litigation takes the place of jury trial without objection from anybody. Moreover, the legislation of every State continually tends to reduce the field covered by jury trial, first by permitting resort to a judge or referee, and finally, as the law stands in Massachusetts to-day, by abolishing it altogether in civil cases unless it is insisted on by one party or the other.

No sound reason can be assigned why jury trial in itself is a good method of determining questions of fact; and the real reason why it is preserved at all with us, and why it has been introduced in Europe while it is falling into decadence with us, is the necessity of having a popular tribunal for the trial of criminal cases. It is often said that a jury trial is necessary where corporations are parties, or where very rich men are pitted against very poor ones; and this would be a very good argument if it were based on fact, but it is not. Whether a suit between Jay Gould and the least of his conductors, or between the New York Central and the humblest citizen, shall be tried by a jury or a judge depends on the accident of the nature of the action. If it is an application for an injunction, for instance, it goes to a judge. This argument in favor of jury trial it will be time enough to consider when a law is brought forward providing that the form of trial shall be determined by the relative wealth of the parties.

The improvement of jury trial depends, we believe, a great deal upon the general recognition of the fact that it is not in itself a good method of determining facts at all; that, far from being a common right in civil cases, it is unobtainable in numerous classes of them; that in ordinary cases between man and man it is no longer regarded even by the Legislature as a precious institution; that its chief value consists in its furnishing a popular tribunal in proceedings to which the Government is a party. This once admitted, we shall be in a position to inquire what steps should be taken to make the jury, as a popular tribunal, once more good for something.

THE ELECTIONS IN HOLLAND.

THE general election which has just taken place in Holland, though hardly noticed in this country, is in fact an event of great interest to all students of political history. The questions which were at issue there may, within a short period, be of practical and vital importance to us.

After the adoption of the Constitution of 1848, there existed in Holland unlimited freedom of religious worship, so far as individuals were concerned. The state, however, had a certain control over the churches as corporations, and especially the Catholic Church was limited in its organization: no hierarchy existed, and no document could be promulgated without the sanction of the King. Thorbecke, the father of the Constitution, following the traditions of his party, did away with all these restrictions in the year 1853. An outbreak of Protestant spirit, as violent as it was unexpected, ensued, and the Liberal party was hurled from power. It was, nevertheless, impossible to undo their work, and when the burst of excitement was over, the new Ministry adhered substantially to the policy of its predecessors. The religious factor which for a moment had been introduced into politics was eliminated, and party lines were again drawn on purely political questions, such as administration of the finances and of the colonies. The system of public non-sectarian schools, which had existed since 1806, was extended by the law of 1857, and this law was adopted without opposition from the Catholic members; it was opposed only by the zealots of the ultra-Protestant party.

In fact, during the whole of this period, the Catholics were the warmest friends of the Liberals. They did not form a political party, and posed as the friends of liberty and religious freedom. The bishops, however, who were nominated by the Pope after 1853, proved to be powerful organizers, and the lower clergy were excellent electoral agents. Their programme was simple: political questions were to them of secondary importance; their object was to secure the supremacy of the Church over the State, and, as a first step, to abolish state interference in educational matters and repeal the law of 1857. Within a short time they formed a powerful party, and in their struggle against liberalism gained the support of the ultra-Protestants. The "ante-revolutionists," as they are called, get their recruits partly from the aristocracy, but mainly from the uneducated rural classes. These, though they hate a Catholic, hate an unbeliever even more. Their strict ideas about religion, however, have not much practical influence on their lives and morals, for drunkenness and immorality of the grossest sort are prevalent among them. The only class which is, perhaps, still more "religious" in the sense above indicated is the roughs of the larger cities. When, in Rotterdam, a few years ago, popular lectures were announced of a very mild Ingersoll type, the audience not only would not allow the orator to proceed, but actually pelted his carriage with stones, and but for a strong police escort the man would not have escaped with his life.

In nearly all the larger cities the pastors of the Dutch Reformed Church are appointed by a body elected by universal suffrage. The Liberal party did not see the importance of preventing the powerful machinery of the Church from being used against them, and took less and less part in the elections. The result is, that the tide has been running so strongly in favor of rigid orthodoxy during the last ten or fifteen years that no man with even moderately liberal views can attend church with any feeling of satisfaction. Among the younger generation there exists, therefore, in the more cultivated classes, a general indifference to church matters such as is perhaps found nowhere else. Independent churches have tried to some extent to supply the spiritual want, but, as far as political influence is concerned, the national Dutch Church, the only one which has a hold upon the people, is a determined, powerful, and at present strongly organized foe to liberalism. To secure a supply of ministers in the future, it has organized a school of strictly orthodox theology, and the lecture-rooms of men like Kuenen and Scholten are deserted. The result of this alliance between the two clerical parties was soon felt, not only in the loss of seats suffered by the Liberals, but also in the fact that in many of the districts which they still kept under control their majorities grew smaller and smaller. The party names changed, the old "Conservative" party disappeared, the religious factor once more became prominent.

The success of the Clericals was favored by the blunders and want of political tact of their opponents. With a majority in Parliament, with the support of the more intelligent classes of the community, they might have defied even the strongly organized Clerical parties if they had understood the position and subordinated minor questions to the great principles at stake. But they governed in such a way that a feeling of lassitude came over their stanchest supporters, and to many any change would have been welcome which should deliver them from the petty personal squabbles, and the utter want of organization or programme, which have disgraced the Parliamentary history of the last ten years. A few weeks ago the Belgian Liberals gave a great proof of statesmanship by rejecting a proposal to revise the Constitution, because it would split the party and weaken it in its fight against clericalism. No such proof of self-control and discipline was given in Holland when the great question of the extension of suffrage came up for discussion. It was brought forward by the Clericals, who knew that the nearer the approach made to universal suffrage the greater their power would be. The majority of the Liberals, recognizing the necessity of extension, were willing to admit those who by their education or profession offered the necessary guarantees for an intelligent exercise of the franchise, yet were excluded by the law as it stood, which required in all cases the payment of a certain sum in direct taxation. They were, however, opposed to a sweeping reduction of the "census," and the creation of a class of voters utterly ignorant of the first principles of the science of government, blind followers of the priest and pastor and (in certain cases) of some socialistic leader. In this they went counter to the wishes of the radical wing, and the dissensions fomented and embittered by the common enemy

resulted in the fall of the "ministère d'affaires" which for three years had occupied the ministerial bench. A ministry was formed with decided clerical tendencies, under the leadership of Mr. Heemskerk, an able man, whose policy and principles consist in hating the Liberal party, which at an earlier and better period of its existence foiled his attempts to encroach on the rights of the Chamber in favor of the Crown.

Shortly afterward the elections were held, and though the results were not so decisive as was expected, the hands of the Ministry were strengthened, and it will be able to pass a law reducing the "census." Ere long, too, we may expect to see for the first time in Dutch Parliamentary history a strong Clerical majority. It will be composed of two heterogeneous elements, which some day will surely fight bitterly for supremacy. But, united by a common hatred of free thought, they will be a serious danger to the principles whose maintenance for centuries has been the boast of Holland.

MR. IRVING'S VISIT.

THE banquet given to Mr. Irving on the Fourth of July, in London, full accounts of which are furnished by the English newspapers, was one of the most striking events in the annals of the English stage, and is a fitting climax to the favor—his detractors call it worship—which he has for a long time received from the public. No English actor has ever been paid so great a compliment as was implied by the presence of such a remarkable gathering of distinguished persons, and Mr. Irving did not trespass very far into the domain of polite exaggeration when he said that he could not conceive of a greater honor entering into the life of any man than that which was thus paid him.

As Mr. Irving is about to play in this country, the present occasion is a fitting opportunity for an account of the steps by which he has attained his remarkable popularity. English opinion is divided upon his merits as an actor, although universal and hearty praise is accorded to him for his efforts to elevate the stage and to make his profession one worthy of all support and social recognition. He will be heard here by audiences which have not been influenced in any way, and which will judge him entirely on his own merits. Whatever the critical verdict may be upon the technical presentation of the varied rôles he will fill, these merits will be found sufficient to secure for him a most cordial and honorable reception.

John Henry Brodribb Irving—for that is his full name—was born in Somersetshire on February 6, 1838. As a boy, he was remarkable for his fondness for acting and his success in declamation, which procured for him the friendly advice of Creswick. At the age of fourteen he was placed in the office of an East India merchant, in London; but his passion for the stage soon caused him to adopt it as his profession. He was offered an engagement in London by Phelps, but with singular discretion he declined it, preferring to receive the training which the "provinces" then afforded before appearing before a London audience. His first appearance was at the Lyceum Theatre, in Sunderland, in 1856, playing the parts of *Orleans* in "Richelieu," and *Cleomenes* in the "Winter's Tale." He was far from being successful, however, and it is said that, after one or two performances at Edinburgh in these early days, he was informed that, as the manager was averse to dismissing a member of the company at the beginning of the season, he might retain his position if he would accept a reduction of five shillings a week in his salary. On one occasion, according to Mr. Lewis, he was struck with stage-fright and was unable to recall a word of his part. Suddenly remembering, however, an utterly irrelevant line from some other play, to the extreme astonishment and disgust of the person with whom he was acting, he blurted out the words, "Come on to the market-place and I'll tell thee further," and fled from the scene, followed by the roars of laughter of the audience and the curses of the stage-manager. He played at the Theatre Royal, Edinburgh, from 1857 to 1859, and it was there that he first began to attract attention. There, also, he met Toole, his afterwards intimate friend, who procured him an engagement.

Irving next signed a three years' contract with Augustus Harris—at present producing gorgeous spectacular melodrama at Drury Lane—to play at the Princess's Theatre, in London. When he found, however, that by thus engaging to play subordinate parts he was condemning himself to remain in mediocrity, this contract was rescinded. He played in comedy in Manchester for some time with much approval, and on the last night of his engagement there, in 1865, he played *Hamlet* for the first time, astonishing his friends—who regarded the performance as a huge joke—by winning a complete and serious success. His next engagement was in a company managed by Dion Boucicault. At last the time came when he could appear in London under circumstances favorable to his future career, and the object of his early ambition was thus attained. His first London part was that of *Doricourt*, in the "Belle's Stratagem," at the St. James's Theatre. He was very successful with this, and next played *Rawdon Scudamore*, in Boucicault's "Hunted Down." His delineations of the baser side of human nature showed so much perception and power that for a long time he figured only in characters of this kind, among others playing the part of *Bill Sykes* with great success. One of the critics wrote of Irving at this time that he had a "monopoly of stage villains." His career as a thoroughly successful actor dates from these performances at the St. James's Theatre, and it may best be described as a progression through three different branches of the actor's art—comedy, melodrama, and tragedy. By constant study and persistent efforts, Mr. Irving has attained to great success in each of these, and it is to this varied training that he owes that versatility which is one of the most prominent features of his genius. In whichever of these branches of his art he is playing, he is able to discover and present the points which belong to the other two—he fills a tragic rôle with the lightness and ease of comedy, and, when necessary, can invest his comedy with a tragic dignity. In this first period of his successful career—what we may call the comedy period—he played, after *Doricourt*, such parts as *Petruchio*, *Charles Surface*, *Captain Absolute*, and *Mr. Chevenix*, in Byron's "Uncle Dick's Darling. The culmination of the "light-character-eccentric-comedian" period was reached by his impersonation of *Digby Grant* in James Albery's "Two Roses." This was performed 200 nights in London and 100 times during a provincial tour, and with it Mr. Irving's career as a comedian alone came to an end. One of his biographers tells us that he took advantage of his benefit night at the Vaudeville Theatre to make upon the public an experiment to prove his power in melodrama, by reciting Hood's "Dream of Eugene Aram," and with immense success. An engagement at the Lyceum Theatre and an English adaptation of "Le Juif Polonais" of Erckmann-Chatrian, entitled "The Bells," were offered to him at the same time, and both were accepted. "The Bells" was produced on November 25, 1871, and Mr. Irving's impersonation of *Matthias* showed him to possess most remarkable powers of psychological analysis and tragic delineation. In intellectual subtlety he was quite equal to the discrimination of the difficulties presented by such weird and horrible subjects as a murder narrated in a dream, the haunting fear of mesmerism, and death from terror, and the strength of his presentation of them was such as to curdle the blood of his hearers. In several respects his *Matthias* is a unique performance, and in all respects it is most remarkable; many of his later plays have afforded opportunity for a much greater exercise of his critical faculties, but in "The Bells" his psychical powers are exhibited in the highest degree, and many of his critics place it very near the top of the list in their estimate of his characters.

Through the period devoted to tragedy, beginning with "Richelieu" and culminating in his great Shaksperian revivals, it is not necessary to go in detail, because it is so much better known and understood than the early part of his career. During this period it may be truly said that he has had nothing but success, in spite of the fact that his acting has been subjected to the severest criticism. So far as England and his profession are concerned, he has attained the summit of human fame and approval—there is no one who can be compared with him, any more than there was with Garrick in his day. This is what makes his American tour so interesting an experiment. American opinion must either confirm or enormously modify that of his own country; it must have a momentous effect in some way upon his fame. After the heated atmosphere of homage to which he has long been accustomed, and which has been created, as we must not forget, by his own talents and industry, it will be the best thing that his friends could wish for him to breathe for a while the healthy and bracing air of new and unbiassed criticism. Something is known here of elocution as an art, and there are some accepted principles of dramatic criticism—matters in which England is still curiously deficient.

AN UNALTERED SWISS COLONY.

MADISON, Wis., July 16, 1883.

NEW GLARUS is a unique Swiss settlement in Wisconsin. It lies in Green, one of the southernmost tier of counties, and about midway between Lake Michigan and the Mississippi. It was founded in 1845 by 108 persons. This handful, with compatriots who have joined them and their posterity, at the end of thirty-eight years, by evolution and natural selection, number 4,000. Few colonies among us have held fast their integrity, in race, language, and customs, so largely and so long. Fewer bid fair to hold their own still longer. Not many have so well fulfilled the hopes of their projectors.

Swiss Glarus, the mother canton, is of scanty resources. It lies out of the beat of tourists. The arable land, which is all annually divided, amounts at most to no more than one-eighth of an acre for each family. In 1844, owing to several poor crops as well as the small demand either for manufacturing operatives at home, or for soldiers abroad, it became clear to thoughtful Glarners that many a family must either expatriate themselves, or become a public charge. Thanks to this conviction, the magistrates decided to despatch two agents to America and procure land for a change of base. These land-hunters were instructed to explore the Northwest of the United States, and first Ohio, Indiana, Illinois, and Missouri. In fact, however, they were personally conducted otherwise by trustworthy Swiss, first to St. Louis, and thence up the Mississippi to Galena and southern Wisconsin. There, in the first days of August, 1845, they selected the site of the future colony, at a point thirty-two miles east of the land-office in Mineral Point.

Their purchase consisted of only two sections, but two square miles were in Glarner eyes a vast expanse. The surface was broken, the soil thin and light, for their orders were to buy all the acres in one body, and in the choicest tracts some fraction had already been taken up by a Yankee squatter. Their choice, however, a hill-girdled basin, seemed to them not unlike certain Swiss scenery when mists hung low on the mountains.

At the outset notice had been given from Glarus pulpits, that every man who would make his way to the projected colony should have a farm of twenty-two acres rent free for ten years, and then absolute ownership at ten shillings an acre. The offer was tempting, and 200 persons wanting seven soon volunteered. On April 10, 1845, these adventurers all left Glarus on a barge which bore them to Basel. Transferred to another, they were conveyed to Rotterdam, and by a sailing vessel to Baltimore. Thence they proceeded on cars (their only railroading) fifty miles to the Pennsylvania canal, then to the Ohio, and by steamboat to St. Louis. They were here disheartened by a rumor that their land-hunters had died in the far North. They at once sent two of their number on the track of those pioneers, and, unable to endure the heated term in St. Louis, the whole band soon went on board an upward-bound steamer and landed in Galena, uncertain what had become of their pioneers. In the meantime one of the land-buyers had been discovered by those in search for them alive and at work on the colony land, and the other had already reached Galena on his way to bring up the main body from St. Louis. There he came near passing them unawares, and only by a fortunate accident ascertained their whereabouts. It was toward evening when he fell in with them, but eighteen of the men, overjoyed that land had been secured, and that only sixty-two miles away, started at once and walked all night on the way thither. Wagons were hired for some of the women and weaklings, and on August 15, after a four months and five days' journey, the pilgrims gathered in their new home. Their number was 108, as three had died, and more than four score, having found work or friends on the route, did not rejoin their fellows till the next year.

The nearest base of supplies was Mineral Point, at a distance of thirty-two miles, and most of their necessaries must be brought twice as far. The first house was a *dug-out*—the earth in a side-hill being so cut away as to form half the sides and all the rear. Logs and a few boards sufficed for the rest of the shelter. Half-a-dozen other huts, altogether of logs, were hurried up. Into each of them well-nigh a score of people crowded when the cold became too severe for camping out. What hope was there for these exiles?

1. Both men and women were able to work. One lead mine was within eight miles. Laundry-workers and mechanics were also in demand. The minimum of wages was greater than the maximum at home.

2. Their leader had a thousand dollars from the old Glarus authorities to be used in pressing emergencies. Food was coarse and scanty, but sure.

3. The next spring drovers from Ohio glutted the mines with cattle, selling at $12 a head. Here was the opportunity of the Swiss. Knowledge is power, and, as hereditary herders, they could pick out the best creature in a drove better than its owners. Good cattle were secured, and never afterward was there a lack of milk or meat.

4. Their upland pastures, meadows, brooks, and springs led to dairies and stock-raising, and in these industries, which Yankees later learned to be most lucrative, the Swiss became forerunners and preëminent. Their cheese product last year exceeded three million pounds, much of it Limburger and largely exported.

The persistence and growth of the original core of the Glarners may be easily traced. A minister was early sent them from the old home. After two years his salary was paid by the colonists. Traders, teachers, doctors followed in due time, but no lawyer, no editor has ever settled in their borders. The sixty twenty-acre tracts allotted to the first comers held them together like a swarm of bees. No one left his grant, no one failed to pay for it at the end of ten years. Better than this. Most of them had already made money, which they invested, not in savings banks or speculations, but in neighboring acres. They, their children, and other well-to-do Swiss immigrants have so invested every year since. No Yankee now lives within a ring of six miles round the first built dug-out. Families are patriarchal; more than one shows fourteen children. In another I have seen triplets—three girls born at one birth, now all robust and ten years old. Moreover, beyond the cordon which hems in the Swiss district the Glarners have bought the best farms here and there on every side. Still others have gone to live in large towns, in Nebraska, and on the Pacific slope. Those who have adventured so far away were the class least clannish and most prone to Americanization. Orthodox Glarners say: "They went out from us, but they were not of us; for, if they had been of us, they would no doubt have continued with us." In truth their new departure was the sloughing off of those elements which might have marred the original type.

The first buildings were alongside an affluent of Rock River in a valley overlooked by hills half covered with oaks. The first huts, like those of Continental peasants, were huddled together and had no front-yards. It was some years before each man built on his own farm. The church bell now rings at eleven in the forenoon. The custom is said to have arisen when farmers labored so far from their homes that they needed an hour's notice of their noon-tide meal. But spade tillage was given up for ploughs at once, and agricultural machines soon superseded sickles and scythes. In the main, however, the Helvetian offshoot, planted three years before Wisconsin became a State, is now as it was in the beginning. The aim of its founders was to "establish a community similar to that of the Canton of Glarus," and their success was exceptional. The Swiss clan has held its own the more firmly because it is distant from railroads—fifteen miles from the nearest station and twenty from that to which it is chiefly tributary. Its wants are few. It grows its own fuel; it raises its own wheat, flours it at home; for sixteen years it has brewed its own beer; its stock and dairy products are bought within its own limits by rival dealers from abroad. A stone quarry crops out of a height above the village in layers just thick enough to suit a mason. Few settlements are so isolated and so self-sufficing.

Among the strongest conservative forces in the Wisconsin Switzerland is the church. It is Reformed Lutheran, or Zwinglian. The motto on the wall is, "God's word and Zwingli's doctrine." Preachers, Bibles, hymn-books, catechisms, and liturgies are all imported from the Alps. The services are altogether in the language and style of Old Glarus. The central church (40 by 36 feet) has walls nearly three feet thick, with a tower eighty-five feet high and no less than fifteen feet square. Its two bells have each special functions too various to be described. When worship is over, the males, who all sit on the left of the minister, rise and stand in their places till all females have left the house. This precedence is an honor done to Glarner women ever since 1388, when they were heroines in shaking off the Austrian yoke. Every man, rich or poor, is assessed at the same sum for church expenses, as each communicant is presumed to feed on an equal quantity of church manna. Such are a few of the survivals from antique usages. Some years ago a few malcontents seceded from the mother church, which is independent, and adopted Methodist discipline. But even these dissenters have no English preaching. They dared not build within three miles of the old church, though they have recently been permitted to yoke up their oxen and draw their wooden chapel into its vicinity. It seems odd to an outsider that, while the churches agree in doctrine, they are divided even in death, as each buries in its own separate cemetery.

The ideal of the Glarners was not high, but few associations have more fully realized their ideals. None of their children have been sent from home for higher education, but none of them are unable to read. Thirty-eight years ago not a man of them had any money; several are now worth a hundred thousand dollars apiece. When the chief town in Swiss Glarus was burnt in 1861, the colony remitted to its mother more dollars than she had expended for her children who had sought a new and transatlantic home. In our civil war ninety-eight Glarners fought for the Union. In all the history of New Glarus no pauper is remembered save two or three idiotic persons. Two aged people, likely to become a public charge, who wished to return to the old home, where they were entitled to maintenance in an Old Folks' House, were enabled by a subscription to voyage thither last season. All hail, such assisted emigrants! The only insane person you can hear of in New Glarus is a woman whose husband was killed by lightning. As no building has ever been burnt there, insurance ought to be low. The only crime within

memory is that of a woman who last year attempted to poison her husband, and, failing, persuaded her paramour to shoot him. Only three suicides can be found in the graveyards. The minister's service has lasted one-quarter of a century, and may outlast another. The longevity of teacher and doctor is well-nigh as great.

Some American fashions are creeping in. The young people are bilingual, speaking English as well as Swiss; both tongues are taught in the schools. But conservatism is here of perdurable toughness, and Glarner idiosyncrasies will die hard. A looker-on in this Alpine glen transported unaltered to the Mississippi Valley, is reminded of the bowlder sent in all its natural roughness from his native canton, as the most fitting tombstone of Agassiz in Mount Auburn. On the whole, we are all ready to say:

> "Glarus is like a circle in the water
> Which never ceaseth to enlarge itself."

But no man living will be able to add:

> "Till by broad spreading it disperse to nought."

J. D. B.

THE HOUSE OF LORDS AND ENGLISH OPINION.

LONDON, July 17.

THOSE who watch English affairs from a distance are often surprised at the amount of attention given to the question of marriage with a deceased wife's sister, at the warm discussions it causes, and the difficulty found in coming to a settlement. They do not understand either why a change in the present law should be persistently pressed, or why it should be so vehemently resisted. As your readers are perfectly aware, such a marriage is in England not a legal union, and the children born in it are illegitimate. Formerly it was not void, but merely voidable—that is to say, it was a good marriage until an ecclesiastical court, which in those days had jurisdiction in matrimonial causes, should, upon the institution of a suit, have pronounced it void. The custom therefore was for a man who had made such a marriage, if he wanted to be quite secure, to institute a suit himself to upset his own marriage, but, instead of prosecuting it to judgment, to keep it pending, and thereby prevent any other suit being brought for the same purpose. Under this odd arrangement such marriages used to be contracted, though they were not very common. However, in time an act was passed in which Lord Lyndhurst, at the instigation, it was said, of Dr. Samuel Wilberforce, then Bishop of Oxford, inserted a provision declaring any marriage with a deceased wife's sister null and void for the future, while giving full legality to all such as had been already contracted. This act attracted little notice at the time, but before long persons who subsequently to it desired to marry or had married the sisters of their deceased wives, began an agitation to have it repealed. For some time they made little progress, but their tenacity was at last rewarded by success in the House of Commons. Then the House of Lords held out for some sessions. Then the methods of obstruction in the House of Commons began to be more studied and employed, and were applied so skilfully to this bill that it could never be got through the House of Commons. Its advocates, in despair, betook themselves to the House of Lords, and during the last two or three sessions have introduced it there. It would have had small chance of passing but for the zeal with which the Prince of Wales and his three brothers, all of whom sit in the Upper House, have supported it, not so much by speaking as by privately canvassing their friends on its behalf. It was defeated by a small majority last year. This year, after unexampled efforts on the part both of opponents and of friends, it was carried by a small majority in the largest House which has been got together by the peers for a good while. Its triumph was then thought certain. But there were difficulties to be dealt with in the details of the bill, whose treatment in committee displeased many people. The opponents made a final rally, and the measure was thrown out on its third reading, not perhaps because people had changed their minds, but because those languid supporters who had with difficulty been whipped up to vote for the second reading could not be induced to come up a second time from the country, while the more zealous party of resistance brought almost its whole force into action. Thus the bill is lost once more, and the agitation may perhaps go on without any result till the engines of obstruction have been removed from the House of Commons, and the House of Lords begins to fear to differ from its sister House even in minor questions—two changes which seem still remote.

"But which way," some one may ask, "does the opinion of the country incline? and if it does decidedly incline either way, why has not the matter been settled before now according to the view of the majority?" The answer to the first question cannot be doubtful: the opinion of the country is decidedly in favor of legalizing these marriages. And the answer to the second question is that although such is the view of the large majority, that majority doesn't much care about the matter, while the minority, which dislikes the change, though numerically weak, is keen and resolute in its resistance. A few people in earnest are able to baffle many more who are lukewarm. The lukewarmness of the many is intelligible. There is a very small percentage of persons who have married or wish to marry the sister of the wife they have lost; and these are pretty nearly the only persons who have any active interest in promoting the change. Others, though they may approve it, cannot be very eager; and the great mass care only so much that when asked their opinion, they answer, "Why not? If a man wishes to do so, is there any sufficient ground for preventing him?"

It is quite otherwise with the opponents. They have not indeed a personal interest in forbidding such marriages, but they have a theological interest which is an equally effective and far more widely operative motive. They conceive, on grounds whose validity it would take too long to examine, that these marriages are prohibited by the Mosaic law, and profess to base their opposition thereon. This view acts on the Low Church party in the Church of England, who hold fast by the Old Testament in other matters also, as, for instance, in Sabbath observance. But the High Churchmen, while also appealing to the Pentateuch, are in fact more influenced by the sacramental view which they take of marriage. To them it is primarily a very solemn religious rite, and they press the words of Scripture, "they twain shall be one flesh," so far as to hold that a wife's sister is really a sister, and that marriage with her is therefore incest, no less shocking to the well-constituted mind than marriage with a person born from the same parent. They insist that the removal of this restriction would involve the removal of many others which forbid marriage between near relatives, such as uncle and niece, and profess to be the champions of marriage in general, the upholders of its sanctity and purity.

These doctrines, like many other of the positions of English High Church Episcopalians, savor of the theology of Rome, but in this particular case Anglicans are less indulgent than Rome, for she grants dispensations from her rules with a pretty liberal hand, whereas in England we have, of course, no spiritual authority which can dispense with the letter of the statute law. Now, although this view is not widely held, it is held with great sincerity and warmth of conviction, and that too by persons, such as the High Church clergy and such ecclesiastically minded laymen as the members for the Universities of Oxford and Cambridge, who are able to exert a good deal of social influence. It therefore tells powerfully on such a body as the House of Lords, nearly all of whose members belong to the Anglican Establishment, and many of whom, through both family and social ties, are in sympathy with ecclesiastics. The argument is of course freely used that if marriage were permissible between a man and his sister-in-law, the peace of his wife's mind would be troubled, and jealousy be so apt to arise that she would not wish her sister to visit the house, nor a pure-minded sister seek to do so. Such suggestions, however, have little weight with our people, who think them far-fetched and dishonoring to most husbands and wives and sisters; but the other argument, that after the death of a wife leaving children her unmarried sister would, at any rate if still young, be unwilling to come to her brother-in-law's house to look after the children—a practice now common and generally beneficial—does no doubt affect opinion, and especially the opinion of women. One meets many ladies who, when asked why they desire the existing prohibition to be maintained, give this reason. Still I repeat that the basis of the hostility, the source of the remarkable earnestness shown in opposing the bill, is to be sought in ecclesiastical beliefs. Without this potent source of strength, the voice of the numerical majority, backed by the exertion on the peers of the immense social influence of the royal family, would have prevailed.

You must not, however, suppose that the success of the ecclesiastical party is a proof of the strength of the Established Church in England. She would tell for very little in a division in the House of Commons. Even in the House of Lords, it was curious to notice that the peers who crowded the benches in rarely equalled numbers did not, on either side, really care about the matter. They had been beaten up by a few zealous partisans, but were anxious only to give their vote and get away as soon as possible. Among the bishops, who mustered strong and all voted against the bill, there was more zeal. Yet some even of the bishops were heard in private to confess that although they felt bound to support the view which the majority of the clergy take, they doubted in their hearts whether the predicted evils would come to pass if the bill were carried. The friends of the bill have raised an outcry against the bishops, and demanded once more that they should be removed from the Upper House. This is a sentiment which always finds applause in popular audiences; but the mass of the people care too little about the matter to be seriously angry with the episcopate for voting on a matter which touches their special field. Far more displeasure is excited when the bishops give political votes, and especially when they support, as they mostly did under Lord Beaconsfield's government, a warlike foreign policy.

Although a second-reading vote is usually decisive in the House of Lords, it would not do to assume in this case that the same vote could be secured another year. So many of those who came up to vote came under great urgency from friends that any slighter urgency next year might fail to move them. It is quite possible that the bill will not be carried until the procedure of the House of Commons is so changed that the bill can be passed through that house by a substantial majority, pretty early in the session. It will

then have a somewhat stronger claim on the Lords, who may very likely pass it.

The present prohibition, as you are probably aware, does not altogether prevent such marriages. Persons who contract them usually go to Switzerland or some other foreign country in which they are legal and get married there. Although this makes no difference to the invalidity of the marriage in England, it soothes the feelings of the parties, and especially of the wife's relatives. Those who, in the richer classes, have made such marriages are little, if at all, condemned by the opinion of the world. People mention the fact half under their breath, as a fact unpleasant for the children, but it is only strong Anglicans who would decline the acquaintance of a lady who had so married. Among the poor such unions are very common, there being often no one but the deceased wife's sister who can be got to look after young children, and the relations between her and the widower becoming those of a married pair, although no legal marriage is possible. This tendency, which the existing law has failed to check, is the argument which chiefly seems to influence disinterested persons in favor of legalizing the marriage. Y.

THE PREVALENCE OF LAWLESSNESS IN ENGLAND.

LONDON, July 20, 1883.

FEW phenomena are more noteworthy than the prevalence throughout English society of "lawlessness," by which term I mean the feeling or opinion that the law has little or no moral claim to obedience, and that no one is bound to obey the law of his country simply because it is the law, and because submission to it is (as a rule) the part of a good citizen. "Lawlessness" in this sense of the word exerts a great and growing influence upon the action both of Radicals and of Tories.

If any one doubts that even men who are not extreme Liberals are unconsciously infected with a singular lack of reverence for the law, let him observe the amount of sympathy which has been expressed by writers in the Liberal press with the sufferings of Louise Michel under severe but, as far as the English public can judge, perfectly warrantable punishment. She has been convicted by a French court of acts which in any civilized country would entail heavy penalties, but which in France are in the very highest degree dangerous to society. To accompany with a black flag rioters engaged in the plunder of bakers' shops is an act which would assuredly not be left unpunished by the courts either of England or of the United States. But in London or in New York men can afford to look leniently on riot, because it is certain that demonstrations of popular discontent will rarely lead to bloodshed and will never lead to revolution. Leniency is the prerogative of strength. Firmly established governments can venture to temper justice with mercy. In France, incitements to riot are more harmful to the state, and therefore open to severer moral condemnation, than any other crime of a public nature. The streets of Paris still bear witness to the vandalism of the Commune. Not thirteen years have passed since the murder of the hostages. Every grown man throughout France can recollect that the desperadoes or fanatics of the capital aroused civil war under the very eyes of foreign invaders. Every man of sense in France knows, further, that under the present constitution the country is for the first time, for nearly a century, really trying the experiment of self-government; and every human being who is capable of reflection, feels that the one peril to the liberties of France lies in outbreaks of popular violence which give occasion for reaction. Louise Michel may be (though no Englishman knows that she is) a sincere and disinterested enthusiast; but the crimes of women like Louise Michel are certain, if unpunished, to involve the ruin of French freedom. One would therefore have expected that English Liberals, who sympathize with the attempt of the genuine Republicans to found a free commonwealth in France, would at least judge leniently of the endeavor to check by legal punishments, however severe, the violence of fanatics who (unconsciously, no doubt) are playing into the hands of reactionists. When we see the readiness with which Radicals who are not themselves persons of very extreme views, assume that Louise Michel has been punished with extravagant severity, it is surely fair to infer that there exists in certain sections of English society an inadequate sense of the sanctity of the law.

Popular judgments about foreign affairs are good criteria of the bent of public sentiment. But there is no need to look solely to such judgments for proof of the slight reverence felt for law. There was a good deal to be said in point of expediency against the prosecution of Most. His incitements to assassination were in England so little read as to gain an unnatural notoriety from the punishment of their author. But there existed, on the other hand, grave reasons of policy for exerting the law against men who used England as a refuge from whence to pour forth instigations to assassination. If England is to continue the protector of exiles, she cannot afford to be a sanctuary for ruffians. But whatever may be thought of the pretty equally balanced arguments against or in favor of bringing the law to bear against the *Freiheit*, it might have been supposed that every man who valued the cause of rational freedom and peaceful progress would have felt that Most had no claim whatever to public tolerance or sympathy. Yet whoever noted the tone of the papers which are supposed to express Liberal opinion, must have seen that any kind of press prosecution was in many quarters looked upon with extreme jealousy, and that the supposed evils of curtailing any form, however noxious, of the freedom of discussion outweighed in the judgment of many Liberals the evils of tolerating crimes which turned liberty of discussion into the right to incite fanatics to murder foreign and friendly sovereigns.

But here, as in the case of Louise Michel, it may be supposed that popular feeling was biased by the traditional belief (which was, be it remarked, until within the last twenty years, and even later, well justified by fact), that the governments of continental Europe were despotisms supported by armed force against the will of their subjects. Let me, then, note a few remarkable instances of public opinion with regard to matters of a purely domestic character. Nothing can to ordinary apprehension be a more noxious form of error than the anti-vaccination craze. Yet it is plain that men as respectable and well-meaning as Mr. Peter Taylor and Mr. Hopwood hold that persons who refuse obedience to a law which the mass of the nation, and the experts most capable of forming a sound judgment, hold essential to the preservation of the public health, are to be considered martyrs. The curious proposal to relax the penalties by which vaccination is enforced is, from my point of view, even more significant than efforts to repeal the acts making vaccination compulsory. How a man of Mr. Peter Taylor's education and intelligence has brought himself to believe that vaccination is an evil, is a puzzle to which I do not possess the answer. But having adopted this belief, he is of course logically justified in wishing to repeal any law which enforces or encourages vaccination. The position, however, of a man who thinks that the prevalence of vaccination is a benefit to the nation, but yet feels so much sympathy with the minority of parents who refuse to vaccinate their children as to wish the law not to be enforced against them, is very perplexing. The only valid argument which I know of in favor of such a position is, that to enforce the law will make the law unpopular and ultimately check the spread of vaccination. This argument is a fair one, but no one who attends to the tone rather than to the actual expressions of the speakers who attack the existing law, can doubt that the idea which mainly weighs with them is that it is an intolerable hardship for a well-meaning man to submit his acts to the will of the nation; or, in other words, that the law as such has no moral claim on the obedience of any person who conscientiously thinks its provisions unwise.

It would be well if the lawlessness which considers disobedience to law as morally blameless, displayed itself only in attempts to repeal laws to which any considerable class of the community entertained an objection. Recent examples show that the House of Commons at least are prepared to interfere with the execution of laws which till repealed have a claim on the loyal obedience of all England. The effect of the resolution condemning the policy of the Contagious Diseases Acts is one of the most formidable signs of the times. A resolution of the House of Commons is of no more legal effect than a command of the Queen; and the acts I have referred to, whatever be their merits or demerits, are still as much part of the law of the land as the statutes forbidding forgery, theft, or murder. Yet every one knows that the resolution of the House has been sufficient to deprive these statutes of half their force. The Government and a majority of the House of Commons, that is to say, have nullified the law. For a reason to which I will call attention before I have ended this letter, Conservatives are estopped from taking exception to the monstrous deference paid to a resolution of the House; but observers who like myself stand outside politics, may note and call upon others to note the inroads made by the House and the Executive on the supremacy of the law. Let no one suppose that a low estimate of the respect due to the law of the realm is in any way confined to Radicals. The bill for legalizing marriage with a deceased wife's sister commands the assent not only of most Whigs, but, to judge by the votes of the House of Lords, of many, from the Prince of Wales downward, whom no one has ever dreamt of counting among the Liberal party. Against the proposed reform of the marriage law I have not a word to say. What I have, however, to note is, as I have already pointed out to the readers of the *Nation*, that the measure introduced by Lord Dalhousie proposes to condone the deliberate breach of the law by men who, under the guise of reformers, are attempting to carry through Parliament one of the worst pieces of retrospective legislation. What is very noticeable, the opponents of the bill, who are shocked at the alleged violation of the law of the Jews, are little moved by the attempt to weaken the moral force of the law of England.

We can, however, hardly expect that the representatives of the clergy should value highly the law of the land. The clerics who are most violent in their denunciation of a reform which rightly approves itself to the country, have already announced that should Parliament (or in other words the nation) see fit to amend the marriage law, the clergy of the national Church are prepared to defy and thwart the legally expressed commands of the nation. Many of the clergy will be as good as their word. The whole policy of the Ritualists rests on the avow-

ed conviction that priests owe no respect to the courts; and, oddly enough, persons whom no one would call Ritualists share a conviction which, were it entertained by the nation, would in the end reintroduce the worst notions of the middle ages. The Bishop of Manchester holds, acting under the advice of very prudent lawyers, that it is his duty not to induct to a benefice a clergyman who (as the Bishop has every reason to suppose) will disobey the law under which he will hold the living. The Bishop may be mistaken in his view of his legal position; on this I pronounce no opinion whatever. But no one supposes that Bishop Fraser has any wish whatever except to act in accordance with law—that is to say, in accordance with his duty as Bishop; and every one knows that if the Bishop's view of his rights is wrong, the courts will set him right. The oddity, however, of the thing is that the bare attempt on the Bishop of Manchester's part to assert what he honestly conceives to be his legal rights, and thus to perform his legal obligations, has excited, as far as I have seen, nothing but censure. He has, to judge from the journals which represent the Church of England, in some way which I do not profess to understand, offended the consciences of good men; he has "broken"—I have seen somewhere asserted—"the truce" between the different parties in the Church. His real offence is, not that he has meant to act unjustly, not that he has displayed partisanship, not that he has unwittingly mistaken his legal rights, but that he has, as a public official of a public body, tried to remind the other officials of the State Church that they, like other men, owe obedience to the law of the land.

There is something, it may be said with truth, in the education and position of the clergy which fosters the idea that priests ought to be subject only to the law of the Church—which means in effect only to rules approved of by clerical opinion. But if one keeps one's eyes and ears open, one can soon see that so-called Conservatives are fully as prone to lawlessness as are either Radicals or Ritualists. The whole conduct of the Conservative party in reference to Mr. Bradlaugh has been "lawless" from beginning to end, and what makes this of the more consequence is the fact, which I do not for a moment want to blink or deny, that the political Conservatives represent in this matter that national conservatism which extends far beyond the limits of the Conservative party, and is a far more important thing than any mere party organization. Now, about Mr. Bradlaugh himself and his policy there is a great deal to be said by way of blame, and very little to be said by way of eulogy. He has matched every blunder of his opponents by some grosser blunder of his own, and, by his absurd pretence of appeals to force, has all but sacrificed the legal strength of his own position. But the noteworthy fact is, that with Mr. Bradlaugh's legal or constitutional rights the Conservative leaders and their followers have never concerned themselves. I doubt whether any man who has ever studied constitutional history doubts that Mr. Bradlaugh's exclusion from the House of Commons is at least as gross a violation of constitutional principle as the attempt to incapacitate John Wilkes. The real answer to all constitutional arguments is that the majority of the House of Commons have the power to exclude him, and that this power they are determined to use. The majority have, in short, established that a resolution of the House of Commons may override the law of the land. Many of those who object to see the Contagious Diseases Acts nullified if not repealed by the vote of one branch of the legislature, must have felt that they were morally estopped from objecting that a resolution of the House is not equivalent to an Act of Parliament. Some few may perhaps have reflected that the Bradlaugh case has set a precedent which is hardly at bottom of a conservative tendency. Yet those, if any, who thought thus were probably few indeed. I have noticed that even the supporters of Mr. Bradlaugh's claims really care far more about the intolerance (which is really a very trifling matter) than about the injustice of the House of Commons, though this injustice or lawlessness is the most serious matter in the whole of a miserable imbroglio.

A party which does not respect legality in England is not likely to pay any reference to it in Ireland, and nothing better marks the temper of modern Tories than the constant suggestion that martial law is the cure for Irish discontent. The notion that a court of say five ignorant young officers could, by inspiration of heaven or the devil, administer with success some unknown system of ready-made equity far superior to the justice to be obtained from a trained body of judges, is in itself one of the most curious of popular delusions, and has, one may hope, been to a certain extent dispelled by the experience of the last six months. The noticeable fact, however, is, for my purpose, not the imbecility of mind, but the utter lawlessness of spirit, displayed by men who often assert that martial law is—to use a horrible expression I have seen in a Conservative print—"the one thing needful" for Ireland. Martial law is merely a decent name for the temporary abrogation of all real law throughout the length and breadth of Ireland. It is, to use a foreign expression, "the proclamation of a state of siege." The men who desire it really wish for a proclamation that unrestrained force of the sword has for a time taken the place of the restrained and just force of law.

Let me give one further sample of the spirit of the time. The whole agitation against Mr. Ilbert's bill is as worth attention as anything which has taken place in England for the last twenty years. It is not a mere protest against the details of a given piece of legislation; it is admittedly a protest against the idea that all classes of British subjects ought so far as possible to be insured equal rights before the law. It is impossible not to see that something far more is at stake than the question whether one or two native magistrates shall have jurisdiction over Europeans. The true point at issue is, whether our government of India shall or shall not be carried on upon the principle that a native of Bengal is as truly a British subject as a native of Middlesex, and that the aim of our English rule should be ultimately to place all subjects of the Queen in a position of legal equality. Whenever this is accomplished the rule of law will prevail throughout the whole British Empire. Meanwhile, the Conservatives of to-day boldly assert not only that our rule in India does rest, but that it ought avowedly to be made to rest, upon force, upon privilege, upon that kind of permanent inequality of classes which is absolutely opposed to the true supremacy of legality, which is but another name for systematic justice.

Much might be said as to the causes of the condition of opinion described in this letter. The subject is one to which I may recur. For the present my whole object is to call the attention of your readers to the prevalence of the feeling which I have termed lawlessness. A. V. D.

Correspondence.

MEADE BEFORE GETTYSBURG.

To the Editor of The Nation:

Sir: Permit me to make a small contribution to an understanding, if not a solution, of the question, whether General Meade did or did not purpose to fight General Lee at Gettysburg.

By a chance, which need not be related here, I was present at an interview between Generals Meade and Reynolds the day before the latter was killed. At that interview the whole situation was gone over between the two officers, and, when they were parting, General Meade (as if summarizing the results of the conversation) said, as nearly as I can recall his words: "Well, when you get to Gettysburg, look over the ground carefully, and if you think well of it, I will bring up the rest of the army, and we will fight there. I leave it entirely to you. Examine the ground well yourself, and send me word as soon as you can. I shall keep my headquarters here [*i. e.*, at Taneytown] till I hear from you, and get the troops together, ready to push on and join you if you say so."

A further brief conversation followed, which I cannot venture to repeat *verbatim* as to General Meade's part, but the purport of it was that the examination of the ground should extend to the matter of a "safe line of retreat" to a new position. The impression formed on my mind by such parts of the conversation as I heard was, that up to that moment General Meade was uncertain as to the best position for him to take up; that he had no thought of concealing his anxiety from General Reynolds; and that, whatever might be the position eventually taken up, he was resolved upon having another one in reserve in case of disaster, and (to use his own words) "a safe line of retreat" to it.

Accompanying this is my name and address, should anybody interested in the matter desire to have privately a fuller account. ***

Washington, July 27, 1883.

NEW ENGLAND FAMILY GATHERINGS.

To the Editor of The Nation:

Sir: Will you allow me to dissent from a part of your interpretation of these gatherings? It is clear, as you say, that their size carries them beyond the limit of real family affection, but it also carries them beyond all design of family aggrandizement, since the poorer and humbler members must always predominate, and must rather lower than elevate the prestige of the more successful. I should say that they originate in a vague form of clanship, which may be called family curiosity—a good-natured desire to know as much as possible about one's blood-relations, without any ulterior motive. It is a feeling which may be carried to a petty or foolish extreme; but it is in itself innocent, and is indeed a good corrective for the coldness and reserve which used to be imputed to New England people. It has also the merit of giving a wide and impartial range to genealogical inquiry, which is too apt, in England, to be concentrated on the elder branches of a family and on the male line. T. W. H.

Cambridge, Mass.

THE GERMAN PROFESSOR AND HIS PAY.

To the Editor of The Nation:

Sir: The salaries given by your correspondent "L. N." are misleading, as they apply only to rare cases. In the report of M. Edm. Dreyfus-Brisac to the French Education Society, and republished by the Bureau of Education at Washington, the salaries of the professors in nine Prussian universities are given from official records. Berlin pays the highest, or from 12,000 to 9,000 marks; Marburg the lowest, or from 5,400 to 6,000 marks. This is, of course, exclusive of lecture fees, which to a few men are very large—doubtless quite up to your correspondent's figures—but in a much larger number of

instances very small. If the professor's branch is an unpopular one, he will not have many hearers, no matter how great his reputation. In South Germany the pay is generally less than in Prussia. PROFESSOR.

ATHENS, O., June 28, 1883.

A TRIBUNAL FOR STRIKES.

TO THE EDITOR OF THE NATION:

SIR:

"There ought to be a tribunal for the decision of such controversies which seriously touch the public interest and convenience, and, the decision once rendered, general strikes in defiance or evasion of it should be punishable in some manner."

Thus the *Nation* in No. 943.

It is very hard to think of a way to make strikes punishable, unless at a cost to the principle of personal liberty against which even public convenience and interest would count for nothing; but there might be a way to put on strikes and strikers a moral responsibility they would not be able to resist. Let me risk a suggestion. Suppose the future enactment for the regulation and control of corporations acting as common carriers, under valuable franchises, to contain a clause establishing a tribunal for the decision of such controversies, as between the corporation *and the public*. Give the tribunal the power to decide, after hearing all sides, what terms the corporation ought to offer to its employees, and make the decision binding upon the corporation. Then, if the employees refuse to accept such terms, let the strike be classed as one of those cases of overwhelming necessity otherwise called "the act of God," and the corporation be freed from its obligation to the public.

The responsibility for the loss, inconvenience, and annoyance caused by the strike would then fall upon the strikers, their strongest weapon be taken from them, and their chances of success against the corporation's capital and the public's indignation combined be so small that self-interest could be safely relied on to make them speedily give up a hopeless battle.

Respectfully, M. G. ROSENTHAL.

PITTSFIELD, MASS., July 29, 1883.

THE BOARDER AND THE COTTAGER.

TO THE EDITOR OF THE NATION:

SIR: It seems to me that your argument in the *Nation* of July 19, on the "Evolution of the Summer Boarder," proceeds upon a fallacy. The egress of large numbers from the city every year is the remarkable fact actually underlying the displacement of the pioneer invader of rural scenes, who poses picturesquely before the readers of the *Nation* in the person of the injured boarder. The evolution of certain perfidious boarders into the baleful cottager is merely a phase of the phenomenon of this annual migration. The evolution of the summer resort is not necessarily toward cottage life. Saratoga is, quite as logically as Newport, the outcome of this evolution. Does the writer of your article consider those vast caravansaries of the former—where hundreds of families herd and indulge in a spurious sort of coöperative luxury—a sweeter, more wholesome, or truly American growth than the cottages of the latter, with their tennis courts, their well-trimmed lawns, and gay parterres? If the cottager is to be contrasted with the boarder, the contrast must be made as between the simplest seaside cottage and the primitive farm-house, or as between the villa and the caravansary. However black may be the heart of the cottager, he has one redeeming quality: his most reprehensible love for reclusion is fostering the life of the family.

Is it not, moreover, a gratuitous assumption on your part that the injured boarder is of necessity a worthier man than the baleful cottager? I have observed that the first cottager clings to primitive modes of life quite as tenaciously as the first boarder, and protests quite as ineffectually against the invasion of his solitude by newcomers. I have had certain advantages for observation in this matter, as I pass my summers at a resort which is in process of evolution; and now, O censor of the *Nation*, I can no longer defer my confession. A guilty conscience cries out, *Mea culpa, mea culpa*, and, at the risk of drawing down the phials of your wrath upon my head, compels me to the ignominious admission that I was the first cottager in this once peaceful resort. To be sure, the cottage was a modest little place, sought with the object of securing quiet and home comfort for an invalid; but, alas, alas! like the first mosquito and the first army-worm, I was the precursor of other cottagers who have fallen upon this once happy spot. It is a comfort to be able to report that the cottages are mostly simple affairs, but the wicked Mammon has here and there seized upon a beautiful bit of coast or slope of hillside, and built himself a full-blown cottage, stable, tennis court, and all the other diabolical inventions of an effete aristocracy that the rich man buys with his ill-gotten gains. Instead of following the heroic example of the boarder, who flies before the invader to discover and develop new resorts, I linger in my little cottage, and—must I make the confession?—accept the invitations of these enemies of republican simplicity to their guilty orgies when they ask me to them; when they don't, I strive to console myself with the comfortable philosophy of the *Nation*, that I am worthier than they.

Let us examine, however, this claim to superior merit which the *Nation* puts forth in behalf of boarders. The dwellers in cottages here are clergymen, lawyers, professors, authors, physicians, one or two dignitaries of Congress and the army; two, at least, public benefactors who have the direction of important boards, and who give their brains and their time without money and without price to the communities in which they live. Can the inhabitants of the farm-house or the caravansary give a better account of themselves?

The real tragedy of the boarder—namely, the wiping out of his simple and primitive life—overtakes the cottager as well. The tragedy, the phenomenal fact, is the influx of large numbers into all the secluded summer nooks, and the consequent destruction of their rural picturesque aspects. Whether it is practicable, and if practicable, advisable, to dam this vast migratory body within city limits, for the advantage of the early cottager or even the injured boarder, is at least worthy of consideration. C. P.

JULY 22, 1883.

AN ANTIQUARIAN DODGE.

TO THE EDITOR OF THE NATION:

SIR: The story from "Parnassus," in your number of June 28, about a bronze statue discovered by the sponge fishers near Delos, only shows that Mr. Meletopoulos, though a Greek, is as simple-minded as his compatriot fishermen are cunning. That same foot of a horse has been going the rounds of Athens for more than a year. It was brought to me with the same story last year, but, on examination, proved to have been severed from the body on which it had hung centuries, possibly, ago, and the coral insects and other workers of the sea had covered the fracture as well as the original surface with their certificates of antiquity. The foot was clearly *found* detached, and used as a lure to drag some unsophisticated amateur into a speculation of the subaqueous kind, which should employ the sponge fishers in question when the sponges were scarce. But the locality of the discovery varied in the different stories told about it. It is an illustration of the difficulties that menace amateur antiquity-hunting in Greece.—Yours truly, W. J. S.

FLORENCE, July 14, 1883.

Notes.

ESTES & LAURIAT, Boston, announce several important new publications: 'Ornithology of the World,' a popular treatise by Dr. Elliott Coues, fully illustrated; the same author's 'Key to North American Birds,' revised to date and entirely rewritten, with the incorporation of a practical manual of field ornithology; 'The Natural History of Man,' a popular work based on Hellwald's 'Naturgeschichte des Menschen,' which has been translated by Mr. J. S. Kingsley, and edited by him in conjunction with Messrs. W. H. Dall, F. W. Putnam, and Stephen Salisbury, jr.; 'Travels in Mexico,' by Fred. A. Ober, well equipped with drawings from the author's photographs and with maps; the first complete American edition of Carlyle's works (*de luxe*), limited to 350 copies, and illustrated with etchings, etc.; a complete edition of George Eliot's miscellaneous works, in two volumes, with introductory chapters by Matthew Browne and Mrs. S. B. Herrick; Rosenthal's Spanish (Meisterschaft) System; a new copyright library edition of Lingard's 'History of England'; and Victor Duruy's 'History of Rome and of the Roman People,' translated by M. M. Ripley and W. J. Clarke, and edited by Professor Mahaffy. This last will be issued as a subscription work, in six or seven imperial octavo volumes.

By arrangement with the London firm of Bickers & Son, Houghton, Mifflin & Co. will publish in this country an edition of 250 copies of the large-paper issue of Swift's works in nineteen volumes octavo.

Roorbach & Co., 9 Murray Street, have published in a neat pamphlet 'Talma on the Actor's Art,' with a preface by Henry Irving.

'On a Mexican Mustang' (Hartford: S. S. Scranton & Co.) is a very fair account of Texas, past and present, in the guise of an extravaganza after the model of the 'Innocents Abroad.' The editors of *Texas Siftings*, which has a fame and a style of its own, have described, in the character of travelling strangers, a journey from Galveston to Austin by way of the Rio Grande, introducing types of men and affairs the most of which are peculiar to that region. The volume is of Texas Texan, of great size, and with the flavor of the soil, but the really valuable history that it contains is decorated or disguised with the exaggeration that is best known in literature through Mark Twain's earlier writings. The course of the story is punctuated with sketches, of which some are new and comical, and others merely coarse or horrible, while too many are marked with a realistic but unattractive profanity. Nevertheless, many of the ultimate facts, for those who can eliminate the fictions, are interesting and instructive.

As the next step of the National Civil-Service Reform League is to repeal the law limiting the terms of certain officers to four years, a general interest will be felt in the pamphlet on this subject prepared by Mr. F. W. Whitridge at the League's request. It is called 'The Four Years' Term; or, Rotation in Office.'

Circular of Information No. 2, of the Bureau of Education, discusses co education in the public schools of the United States, with the aid of

special statistics collected by the Bureau. The weight of opinion and of practice is so much in favor of co-education that this circular might almost be called a tract on that side.

We have received a number of scientific pamphlets—viz., 'List of Palæozoic Insects of the United States and Canada,' by R. D. Lacoe (Publication No. 5 of the Wyoming, Pa., Historical and Geological Society); Bulletin No. 3 of the E. M. Museum of Geology and Archæology of Princeton College, with monographs on the skull of the eocene rhinoceros, etc., on achænodon, on the brain casts of tertiary mammals, on desmatotherium and dilophodon, by Messrs. W. B. Scott, Henry F. Osborn, and Adam T. Bruce, illustrated with lithographic plates; the Bulletin of the American Museum of Natural History in Central Park for May 1, devoted to the Atlantic right whales, with an historical résumé, by Joseph Bassett Holder; a lecture on the Geology of Philadelphia, delivered last January before the Franklin Institute by Prof. H. Carvill Lewis; and Prof. Arnold Guyot's 'Memoir of Louis Agassiz,' read five years ago before the National Academy, and now published by permission.

Readers of the *Portfolio* for June and July have enjoyed Mr. Hamerton's discourse about the Louvre and the Hôtel de Ville, the latter article particularly having the interest of describing the new structure that has risen from the ashes of the ruin made by the Commune. Its freshness and purity of material, the fact that it was executed as a whole at one time, and the improvements made upon the original design while substantially reproducing it, make the new city hall, Mr. Hamerton declares, "the fairest palace ever erected in the world." He remarks upon the ease of such an achievement by the present municipality, as compared with the difficulties experienced by the royal builders of the Tuileries, the Louvre, and the first Hôtel de Ville in completing their undertakings; an ease, he might have added, due to that very progress in good government which the Commune sought violently to interrupt.

The destruction of "the Big Tree, the largest in the Centennial State" (Colorado), by order of the mayor and seven aldermen of South Pueblo, against the wishes of the citizens expressed in public meeting, and apparently by a trick, has enriched literature with a pamphlet on this act of vandalism. The whole history of the affair is given in a speech made after the event by the Hon. Thos. D. Worrall, its most strenuous opponent. If it is some satisfaction to find so many outlandish names among the destroyers—Klaas Wildeboor (suggestive, truly!) Slitt, De Groft, Kelker, etc.—we are grieved to find one Stimpson, the postmaster, denounced as the prime author of the outrage, whom the Government is urged to remove as "unworthy the confidence of the people."

In 'Voices for the Speechless—Selections for Schools and Private Reading' (Boston: Houghton, Mifflin & Co.), Mr. Abraham Firth, Secretary of the American Humane Association, has made a useful contribution to early education away from thoughtless or wilful cruelty. The book would have been slenderer if the compiler had strictly adhered to his plan of making selections "in which the duty of kindness to animals should be *distinctly* taught." This is not the case with Clough's "Say not the struggle naught availeth," or with Faber's "Oh! it is hard to work for God," or with the famous stanza from Tennyson's 'In Memoriam' concerning "the moth with vain desire," or with many another extract in prose and verse, though the collection is the more valuable for having them. The Scripture texts on cruelty to animals may seem to a child rather meagre for so vast a field of being, and even here Mr. Firth quotes the parable of the ewe-lamb as if the rich man's offence were not in taking it but in killing it to serve his guest. "And because HE HAD NO PITY" has no reference whatever to the lamb's sufferings, or to the question of the right to take the life of animals for what we deem necessary purposes—the "guiltless feast" of Goldsmith's Hermit.

The anti-vaccination craze has produced in Switzerland a pamphlet directed against "a despotism bordering on barbarity." On the front cover is depicted enforced vaccination by a cheerful skeleton, assisted by a policeman who restrains the mother's arm, uplifted to protect her infant in defiance of "Section 21: 2,000 francs fine, one year's imprisonment." Beneath, we see on a larger scale the hapless child aged six, shockingly reduced by ulcers. On the back cover in large letters: "Tu l'as voulu, Georges Dandin!" All rights are expressly waived in favor of any one who wants to reproduce this pleasantry.

The books that are advertised as published in France in certain libraries for amateurs and bibliophiles—which we will not more particularly name—often raise the question whether there is any supervision of the press in that country in the interest of public morality. In Germany the censorship is awake. It has lately confiscated at Berlin an edition of the 'Decameron' in the "Biblioteca dei Classici italiani e stranieri" published by Hofmann.

The duel, it is to be hoped, is going out of use. Why could not our hot-blooded Southern friends adopt, *mutatis mutandis*, the method used by two Hungarian girls in Debreczin? The duel was to be "in the American fashion"; but instead of the one to whom the black ball fell having to receive the fire of her opponent, she was, within a given time, to shear off her love-locks, known to unsentimental persons as bangs. How much better it would have been if Elam had had, say, to shave off his moustache, if he has one, or his beard, or to grow one, if he has none, than to pass a weary summer month with a ball in his thigh.

—Table XLII. of the Compendium of the Tenth Census affords a curious illustration of the workings of the human mind. This table shows the ages of the population by States and by single years of age. The population is classified, also, as aggregates, and by sex, nativity, and race. It will be noticed that in each of these classes, though in some more markedly than in others, the numbers of persons of the ages represented by even tens are apparently greatly in excess. Also in excess, though in less degree, are the ages represented by fives, while everywhere, unless affected by the fives or tens, the even numbers are in excess of the odd numbers. Thus, in the column of aggregates for the United States, there were apparently no fewer than 1,094,824 persons 30 years of age, while there were but 621,852 persons of 29 years, and 492,530 of 31 years. Similarly, at 39, 40, and 41 years the numbers of persons are respectively 458,052, 922,610, and 323,608. The apparent increase on the fives is not as great, but sufficiently so to be easily noted, thus:

Ages.	*Persons.*	*Ages.*	*Persons.*
44	379,385	64	160,033
45	645,292	65	233,231
46	374,441	66	136,543

The difference between the even and odd years, although quite constant, is less noticeable. It is, however, as remarked above, modified by the fives and tens—both by the increase in these years and by the consequent diminution in the adjoining years. The same column of aggregates for the United States furnishes the following illustrations, selected so as to be as free as possible from the effect of the fives and tens:

Ages.	*Persons.*	*Ages.*	*Persons.*
42	458,049	52	342,841
43	384,259	53	286,179
47	349,512	57	207,921
48	400,549	58	233,003

—The reason of this is of course apparent. A certain proportion of the people do not know their ages, and, necessarily, were obliged to guess at them. In such a case a multiple of ten was that most likely to be assumed; next to that a multiple of five, while, aside from the latter, even numbers were more likely to be given than odd numbers. Under this explanation of the phenomenon, it would naturally be expected that the most ignorant classes of the population would show the greatest variation in this respect, and also, naturally, those States containing the greatest proportion of these classes. The most extreme cases are to be found in the column of colored females in such a State as Mississippi, and here, too, is found the strongest possible confirmation of the correctness of the above explanation. The following figures, taken from the column of colored females in Mississippi, illustrate this idiosyncrasy in a very marked manner, and also show to how great an extent the value of the table, as a comparison of single ages, is vitiated by it:

Ages.	*Persons.*	*Ages.*	*Persons.*
29	2,353	36	2,272
30	10,619	37	1,869
31	1,236	38	2,763
32	2,380	39	1,473
33	1,805	40	9,015
34	1,806	41	703
35	7,201		

This table was probably presented in the Compendium not with the idea that it was of value with regard to single years of age, but with the intention of placing the material before the public in such shape that it could be combined in any form desired. For such a purpose these abnormal variations do not invalidate it, inasmuch as their effects extend over only two or three years, and almost any combination of the years would make them disappear.

—The *Atlantic* for August contains an interesting article by the Rev. Brooke Herford on the trustworthiness of tradition as compared with historical records. The argument in brief is as follows. The great historians who, like Grote, repudiate early oral tradition as something altogether beyond the pale of history, make the mistake of imagining the tradition of primitive times to be what it becomes after writing is invented. In the modern world tradition is regarded as untrustworthy, because everything that is considered worth remembering is written down and thus preserved, and nothing is committed to tradition except idle rumor, gossip, or scandal—and remarkably little, a cynic might add, even of this. In primitive times, however, before the invention of writing, or permanent records of any kind, the agent used by mankind to preserve facts is the memory. The trained human memory, transmitting all important facts from generation to generation, must be relied upon, or else all those matters, like dynasties, genealogies, conquests, boundaries, to which primitive man attaches so much consequence, would be involved in inextricable confusion. Among primitive people we know that this is done at the present day; the Vedic books in India, for instance, being transmitted from one generation of priests to another, solely by means of the most carefully trained memory. The Homeric poems were preserved, of course, in the same way. As civilization advances, and writing is introduced, memory is used less and less for the purpose of preserving tradition, and finally falls into great disrepute, as with us, who have an absolute distrust of it, and hesitate to rely on it even for ordinary purposes of quotation. Of course Mr. Herford's argument all

points in one direction, that the narrative of the Old Testament may be relied on with much greater safety than has been generally supposed by sceptical scholars. Probably Grote, were he alive, would admit that there is a good deal of truth in all this; but he might say, How are we to distinguish in early tradition between what is mythical and what is historical? What shall we say actually took place and what probably took place, and what probably never took place at all? After all, the modern historian has done no more than insist that true history shall be confined to what we know to have happened; and Mr Herford himself would hardly venture to call the 'Iliad' or 'Odyssey' history. The discoveries of Schliemann have, as he says, done very much to rehabilitate the Homeric poems, and to give them the air of veracious chronicles which they once had in the country of their origin; but the doings of Agamemnon and Achilles and Paris and Hector are so confused with the doings of imaginary persons who we know did not exist at all, that it would be a very bold step to call the expedition against Troy history in the ordinary sense of the word. It must be remembered that the excavations of Schliemann bring to light true historical records, precisely like the early inscriptions of the Olympiads, and we have through them a means of verifying the Homeric account which did not in Grote's day exist. He would never have dreamed of denying that anything in Homer which could be verified by such records, might be set down as history.

—The *Century* contains the first instalment of a new American novel called "The Breadwinners," by an anonymous writer, which is sure to attract a good deal of attention. The note of the opening chapters is vulgarity, and vulgarity of a description undeniably American. Vulgar types abound in the novels of both branches of our great race, which has done more than all the Latin, Germanic, or Slav races put together to give vulgarity a good standing in literature; but the American differs from the English variety in being more conscious. Vulgar characters in English fiction, at any rate, generally seem more simply amusing; the American type is apt to make us shrink a little. Perhaps, however, this may be because we are still as to literature in the patriotic stage, and cannot help hoping that each new attempt to portray the features of American life will result in a pleasing and attractive picture. The Matchin family in "The Breadwinners" is supposed to represent a class numerous in large American towns. The father is a carpenter, a good workman, sober, industrious, and socially unambitious. He has English blood in his veins, and would have been perfectly satisfied if he could have felt sure that his children would be as well off in the world as himself. The boys he would like to have succeed him in his shop; the daughters might go out to service in respectable families. The Matchin children had other dreams. One of the boys ran away from home, shipped as a cabin boy on a lake steamer, and was drowned in a storm. Another did enter the shop, but after attaining some proficiency in the craft, became in the local dialect "trifling," or, in other words, more and more unpunctual, worse and worse workman, and at length ruffianly, consorting with doubtful characters and getting an evil name. Finally, after a burglary committed by two of his friends, he disappeared, never to return. With the daughters the case was not much better. The elder married poorly at fifteen. The younger, a leading character in "The Breadwinners," was christened Matilda, but changed her name on her own account to Maud. She played about with the boys as a little girl, then was led into the cultivation of sentimentality by a playmate of her own sex, rejoicing in the name of Azalea Windom, and together this promising pair pursued the study of life as it is represented in the weekly storypapers and the "society column" of the New York newspapers. Finally, Maud becomes intoxicated with the dream of marriage; but it is not what would ordinarily be considered a romantic dream. What she longs for is to be married by a man of great wealth, who will take her away from her common family, and introduce her into that great world of which she has got her ideas from her reading. Such is the type of heroine to which this new anonymous novelist introduces us. She is taken from life—there is no doubt about that; she is at times, too, wonderfully lifelike, and the causes which lead to her existence are analyzed or suggested with considerable cleverness; but she is not likely to be a popular heroine, even with her own class of readers.

—In *Harper's* "Easy Chair" Mr. Curtis discusses a subject to which we have devoted a good deal of space, the extraordinary development of "society news." Jenkins he still likes to call the person who gives the world at large its information as to the doings of society; though our old friend Jenkins has really been supplanted by a many-headed beast who resembles him only slightly. Jenkins was a snob, but he really made an honest effort to discriminate between what was and what was not properly public matter. His successor's greatest art consists in making that public which ought to be private, in invading the homes of rich and poor, in revealing whatever those whom it primarily concerns most wish concealed, and so on. This, at least, is the charge against him. People used to deride Jenkins, and to protest against his use of adjectives; but he was always a good-natured creature, and had a profound respect for the society which he described. But his successor quite as often as not seems to have a profound contempt for society—the feeling for it which a Communist has for wealthy and prosperous people. Mr. Curtis himself perceives this, for he suggests that Jenkins is a satirist. Nobody ever made this charge against the original Jenkins. The satire of the period to which he belonged was directed against him. But his successor does indeed "mix up" the news about those who really have some social standing with the news about those who have none in a way to make him suspected of something worse than a turn for satire. There is no doubt that "society news" is doing for society what Jenkins never did for it, in the way of bringing it into general contempt, for it is producing the impression that "society" consists simply of a number of people whose names get into the papers because they pay a good deal more money for their dinners and parties than others; whose only common claim to distinction is money, and among whom anybody may be enrolled who will pay for it. The old idea of privacy and exclusiveness has been completely driven out of society, not by Jenkins, who always pretended to have a certain awe for the mysterious corporation which inherited, preserved, and handed down the social tradition of the race, but by "Society News," a low fellow, who will publish a divorce scandal, or a club row involving the name of a lady, with just the same gusto that he will give the names of the distinguished guests present at a public banquet, or the dresses worn by the ladies at a ball. There is no doubt that he is a vulgar, depraved wretch, and the strangest thing about him is that there should be such a market for his disgusting wares.

—In a literary point of view, the latest publication of the English Dialect Society is among the best. The Rev. Alfred Easther's 'Glossary of the Dialect of Almondbury and Huddersfield,' Yorkshire (Trübner & Co.), is much more than a barren list of vocables, as some of the series have been. Its introduction and its illustrations and anecdotes combine to give the physiognomy of the district with an almost biographical distinctness. One character, indeed, Joseph o' Nuppits, has a chapter to himself, besides the frequent citations of him in the glossary proper. Thus he is one of the authorities for the pronunciation of the place first mentioned in the title. "*Almondbury*, called by the polite *Aumbury*, by the genuine Yorkshireman, *Aumbury*, or, better still, *Oämbury*. The well-known beggar, Joseph o' Nuppits, . . . when he was asked for what the different villages which he was accustomed to honor with his visits were specially noted, used to reply, 'Honley for brass, Fairnley for mail (meal), *Oämbury* for *nout*.' In justice to Almondbury, it should be said he lived here in the workhouse, and our townsmen no doubt had quite enough of him, and could not afford to be generous as well as just." A few curiosities of the glossary are worth noting: "To go *atatta* is to go a-walking: a word used to children, and no doubt derived from saying 'tatta' on departing. Grown young women will also use this expression to each other, instead of saying 'agate'ards.'" "When one has accepted an engagement, and wishes to withdraw from it, he 'sends *backword*.'" Under *hoo* (she) we read: "In families, parents will speak to their children, even when grown up, addressing them in the mass in the third singular, and then as it were tossing the remark to one. Thus, a father, instead of saying to his daughter, 'Mary, iron me another handkerchief,' would express himself thus: '*She* must iron me another handkerchief—Mary.' This certainly has the effect of keeping all attentive." Under *loise* (to lose, *e. g.*, a bonnet): "When a friend of mine, some thirty years ago, became incumbent of R., he noticed Sunday after Sunday a certain style of bonnet, which, on inquiry, he found to be the same bonnet lent about among the females of the congregation, that evidently being considered the only proper headdress in which to appear at church." *Reckon*, in the sense of *think*, or *believe*, is "common," and as good Yorkshire as it is Yankee. Three other publications are announced by the Society for the present year, the eleventh of its existence, and already it has a clear prospect of filling sixteen years of usefulness, or one more than the term originally estimated.

—One of the most interesting exhibitions ever attempted, and one of the most highly appreciated, has been that illustrative of Rousseau, in Paris. We are not aware that anything quite of its kind has ever been seen before. It embraced all the obtainable effigies of this writer in every medium and in every variety of design; all the engravings inspired by his works; the caricatures of him; his manuscripts, even to the "copy" for the first edition of 'Émile,' even to the music copied by him in his sturdy independence; the wretched furniture of Ermenonville, "which would not satisfy the lowest Bohemian of to-day," says M. J. Grand-Carteret (one of the projectors of the exhibition) in the *Revue Politique* for June 14. The article is well worth reading, and when read should be cut out and inserted in M. Bachelin's centennial 'Iconographie de J.-J. Rousseau' (Paris, 1878), whose value for the collector is capable of being greatly enhanced by it. M. Grand-Carteret declares that, when we seek an authentic likeness of Rousseau, the portraits by De la Tour and Ramsay, and the busts by Houdon, are the only historic documents. De la Tour he regards as a professional flatterer, say like the English Rich-

mond of our day, and he pronounces in favor of the Ramsay portrait—whether engraved by Martin or Cortutt—although Rousseau's antipathy to it is notorious. He well says that a man is not a good judge of pictures in his own case, though in justice some account should be made of Rousseau's circumstantial complaint of the trying pose he was forced to take. However, our critic finds decided points of resemblance between Ramsay's painting and Houdon's mask and bust, and these similarities of course must outweigh individual preferences. As for the designers for the works of Rousseau, M. Grand-Carteret says the exhibition showed Moreau and Le Barbier far at the front in point of artistic imagination: the extent to which their successors have copied them is a convincing proof of their recognized superiority. The reading of this article suggests the practicability and utility of similar exhibitions, in every country, of what M. Grand-Carteret hapoily calls the "human document." Washington, Franklin, Cooper, Poe, Longfellow, might, on different scales, be illustrated, say, in Washington, Philadelphia, New York, Baltimore, and Boston respectively. We cite purposely international names, as insuring iconographic variety.

—Further particulars of the Rousseau Exhibition will be found in *Le Livre* for July, which notices its bibliographical deficiency, but praises it as the sure forerunner of similar and even periodic exhibitions devoted to Frenchmen of greatest eminence in literature, science, and art. In this same number, by the way, Dr. Guido Biagi has in his turn some remarks to make about the "human document," prefatory to a very interesting series of Bonapartiana—manuscript letters preserved in the National Library at Florence, of which he is curator. One of these letters is given in facsimile, and published for the first time. Jérôme Bonaparte, ex-King of Westphalia, is writing on April 30, 1834, to his daughter Mathilde, afterward Countess Demidoff, and refers to the little Jérôme as "Plomplon"—proof positive, as Dr. Biagi observes, that the Crimean origin commonly ascribed to this sobriquet is pure fiction. M. Achille Duvau takes his revenge on the poet Racine and his son Louis for their conspiracy to destroy the evidence of the father's ante-nuptial gallantry, by printing a lately-discovered sympathetic antistrophe to a famous dirty ditty, written (the antistrophe) in the poet's hand, with the title, "Réponse à la chanson de Mde. de Longueval, par Mr. Racine." This, too, is reproduced exactly. To many English-speaking readers of *Le Livre*, the introductory article on the Index Society will convey novel information, for Mr. Ashbee enumerates the contents of the eleven volumes published by this Society since 1879. Among these we may usefully mention the indexes of portraits in the *European Magazine*, *London Magazine*, and *Register of the Times* (vol. iv.), and in the 'British Gallery of Portraits,' Jerdan's 'Portrait Gallery,' Knight's 'Gallery of Portraits,' and Lodge's 'Portraits' (vol. v.); and the new annual index of obituary notices in the press for the year preceding.

SHELLEY'S SELECT LETTERS.

Select Letters of Percy Bysshe Shelley. Edited, with an Introduction, by Richard Garnett. D. Appleton & Co. 1883.

THE prose work of Shelley has remained in the obscurity which it once shared with his poetry. The formal essays which concern the transitory affairs of the world or themes of thought remote through their generality, are valued, even by admirers of Shelley, mainly as *media* of his spirit; the familiar letters, scattered in old books, or collected only in a costly edition, and deprived of literary effectiveness because those of high and enduring interest have never been selected and massed as they now are in this volume, have escaped any wide public attention; even the translations have been neglected. All this really large body of prose, however exalted by its informing enthusiasm, however exquisite in language and melodious, lies outside the open pathways of literature. It is this fact which gave the element of surprise to what Mr. Arnold calls his doubt "whether Shelley's delightful Essays and Letters, which deserve to be far more read than they are now, will not resist the wear and tear of time better, and finally come to stand higher, than his poetry"—a dictum which well deserves Mr. Garnett's quiet rejoinder, in his preface, that "this deliverance will be weighed by those to whose lot it may fall to determine Mr. Arnold's own place as a critic." In this same admirable preface Mr. Garnett has embodied all that need be said of Shelley as a letter-writer, and concludes that, in an age when all letters approximate to the ideal set by men of business, Shelley's alone, among those of his time, rank with Gray's, Pope's, Cowper's, or Walpole's in possessing a certain classical impress similar to that of deliberate artistic work; and, secondly, that they exhibit the mind of the poet as clearly as Marlborough's do the mind of the general or Macaulay's the mind of the man of letters. Their two prime qualities are beauty of form and transparency.

The sense of form has usually been denied to Shelley, and if by it is meant the purely critical impulse to remodel, revise, and polish for the sake of that finish which the schools prize, Shelley neither possessed it nor sought for it with any strong desire, but rather rejected it as dangerously submitting the mind to system, against which he was prejudiced. But if by the sense of form is meant the instinct for proportion, for regulated combination, for natural development of sensation into idea, idea into passion, so that the poem issues in a single harmony in the mind and heart; if, in other words, by that loose phrase is meant, not the corrective power of the critical, but the shaping power of the creative faculty working out ideal beauty directly, then both in his brief and in much of his more extended poems Shelley was singularly distinguished by it. This spontaneous beauty of form, if we may so phrase it, is the only species that is found in these letters: fitness of words, sweetness of cadence, modulation of feeling in immediate response to thought and image, all conspiring to make up perfection of utterance, are continually present, but not through erasure and elaboration. Shelley's self-training in literature, almost unrivalled as an apprenticeship in its length and continuity, more comprehensive, profound, and ardent than Pope's, more vital than Milton's, had made such literary lucidity and grace the habit of his pen, and, as Mr. Garnett remarks, he was fortunate in employing his gift upon subjects intrinsically most interesting to cultivated men: upon the art and landscape of Italy, or his own always high human relations or his poetic moods.

In what he says of statues and paintings he shows but slight knowledge of art. The keenness of his perceptions and the warmth of his feelings made him particularly open to sensuous effects, so that in general he worships the later schools. In painting especially he can hardly be considered a safe guide for others, because his praise or censure is largely dependent on his temperament for its justification: a picture which is consonant with his own imagination, and stirs it, is thereby raised and glorified, but one whose theme would have been differently developed by himself is at once made pale by contrast with the quick visions of his own vividly pictorial mind. Here is a portion of his description of a Christ Beatified:

"The countenance is heavy, as it were, with the rapture of the spirit; the lips parted, but scarcely parted, with the breath of intense but regulated passion; the eyes are calm and benignant; the whole features harmonized in majesty and sweetness."

We cannot but feel that the face which Shelley thus summons up before us, bears the same relation to the original as what the dull-minded call his plagiarisms from Lodge do to that poet's lyrics. Shelley often paints the picture over upon the outlines of the old canvas; but this transforming or penetrating power, as it will be differently named just as one believes the given picture to lack or possess what Shelley saw in it, lends such passages not only surpassing beauty, but a real value as interpretations of art. Much as Ruskin would differ from Shelley's judgments, the two are essentially similar in their mode of treatment, and in their faculty of giving the equivalent of form and color in eloquence.

The description of landscape, which is another principal topic, possesses even more plainly that classic beauty by virtue of which, we are told, the letters have been admitted to this choice series. Whether Shelley writes of Nature in her wild and picturesque scenes, or where the presence of man has added pathos or dignity to her loveliness; whether he flashes the view upon us in one perfect line, or unfolds it slowly in unconfused detail, he displays the highest power in this field of literature. This view from the forum of Pompeii, which, instead of being robed with "the gray veil of his own words," seems filled with "the purple noon's transparent light," cannot be surpassed as speech at once familiar and noble:

"At the upper end, supported on an elevated platform, stands the temple of Jupiter. Under the colonnade of its portico we sate, and pulled out our oranges, and figs, and bread, and medlars—sorry fare, you will say—and rested to eat. Here was a magnificent spectacle. Above and between the multitudinous shafts of the sun-shining columns was seen the sea, reflecting the purple noon of heaven above it, and supporting as it were on its line the dark, lofty mountains of Sorrento, of a blue inexpressibly deep, and tinged toward their summits with streaks of new-fallen snow. Between was one small green island. To the right was Capreæ, Inarime, Prochyta, and Misenum. Behind was the single summit of Vesuvius, rolling forth volumes of thick white smoke, whose foam-like column was sometimes darted into the clear dark sky, and fell in little streaks along the wind. Between Vesuvius and the nearer mountains, as through a chasm, was seen the main line of the loftiest Apennines to the east. The day was radiant and warm. Every now and then we heard subterranean thunder of Vesuvius; its distant, deep peals seemed to shake the very air and light of day, which interpenetrated our frames with the sullen and tremendous sound."

Thus he wrote when merely passive to nature's influences; but when he begins to think he irradiates the scene; he lifts it with his aspiration and softens it with his regret; he brings it near by reminiscences of the English fields and cliffs and streams; he informs it with the large interests of the intellectual life; and not infrequently he concludes with a passage which, in the arrangement of its images, the sequence of its thought and feeling, the unity of its effect, in all except metrical structure, is a poem. Many paragraphs might be cited which show the character of his genius as directly as do his verses, and which justify the claim advanced for them as having the permanent interest of ideal beauty.

The principal charm of these letters, however, as Mr. Garnett says, is not artistic, but moral. We do not mean to refer by this term to the practical morality of Shelley's deeds, or to his

conscientiousness, humanity, self-sacrifice, or other such qualities as they are here displayed; of these there is no longer need to speak. Nor do we mean simply to express the gratification one feels at finding that Shelley, unlike many men of letters who disappoint us by being only common mortals in private life, never falls below our conception of him, indicative as it is of his purity that his "unpremeditated song" does not fail to reach the height of his great argument. What impresses the reader most is rather the character of the life itself, of the mind to which "trust in all things high came natural," that moved with equal ease among the things of beauty, on the heights of thought, or amid the common and trivial cares of household life and in the offices of friendship, and knew no difference in the level of his life, so single was his nature and so completely expressed in all he did. In the most ideal passages, in those most impersonal, one does not lose the sense of friendliness in them, of the sweet human relationship which underlies the telling of what he has to say, and keeps the letters in their appropriate sphere. They are not rhapsodies, or soliloquies, or disquisitions; in other words, the visitations of the spirit that came to Shelley and left record of themselves in this beauty and eloquence and imaginative passion did not isolate him even momentarily, and could not sever him from his friends. Who these were, we know well enough: Miss Hitchener, the blue-stocking; Hogg, the betrayer; the Williamses and Gisbornes, who seem to have belonged to the class of people known as satisfying; Peacock, who, with all his nympholepsy, was a born beef-eater; Smith, the obliging; Hunt, the "wren," and Byron, the "eagle," in Shelley's nomenclature—the too fortunate people who knew Shelley and whom he loved. They formed the *locale*, if one may so speak, which needs to be kept in mind by any who would estimate Shelley's moral power; amid them he lived his high life and made it theirs, in the case of the most, during their communion with him. In a vague analogical way he sometimes brings to mind the Greek gods, who, with all their divine attributes of beauty, power, dignity, were singular among deities for their companionableness; Shelley had that divine quality of being familiar and retaining his original brightness. Toward Byron alone does he show any repulsion; he recognized Byron's admirable qualities, but he was alienated by the latter's selfishness, worldliness, and earthliness, even while he kept terms of amity. Shelley's sentence on Byron is in our judgment the most serious evidence against him, and it is now supported by much that Shelley could not have known; but it need not be discussed here.

In these and other ways which we have not space to note, this small volume presents Shelley admirably. It is especially fortunate that the letters exhibit him after his boyhood, with its false starts, its follies and prejudices, its narrowness and confusion, was passed; of that time we get only a noble echo in his sad remembrance, amid his seeming failure, of the lofty purpose with which he had entered life, while we see the depth unconfused by the tumult of his soul. In these last years, it is true, the thwarting of his practical instinct was ending in hopelessness; but if the earthly paradise that was the faith of his youth was now fading away, he was lifting his eyes to the city in the heavens, and had acknowledged the vanity of seeking the ideal he knew, except in the eternal; he had worked out his salvation. Perhaps after all we do wrong to lament his death; with that tragedy, in which this book, like every thought of Shelley, concludes, his work as a quickener of the spirit was accomplished. More finished works of art he might have given to us; he could not have left a nobler or more enkindling memory. This last of Mr. Garnett's many services to Shelley's cause will help in the still necessary labor of clearing away the misconceptions concerning him. Even Mr. Arnold's left-handed praise will lead some to read these letters, and the exquisiteness of the book will attract others; but for those familiar with Shelley's writings the mere selection will be valuable, because they will see him here only in the quiet of his soul, and will come to a better knowledge and perhaps a higher truth concerning him than is possible by reading his so changeful poems alone.

THE COMTE DE PARIS'S HISTORY OF THE CIVIL WAR.—II.

History of the Civil War in America. By the Comte de Paris. Published by special arrangement with the author. Vol. iii. Philadelphia: Porter & Coates.

THE contents of this book as far as the close of the Mississippi operations have already been noticed in a previous article. Following these there is a long and interesting chapter, under the title of "Legislation," on the political and financial condition of the country in 1863, and then we come to the Gettysburg campaign, which occupies more than three hundred pages, or about one-third of the entire volume. We think this will be found altogether the most lucid and satisfactory account of Gettysburg that has ever been written. After the battle of Chancellorsville "public opinion in the South, excited almost to frenzy by success, demanded that the seat of war should be transferred to the soil of the free States."

"'If the General wants provisions, let him go and look for them in Pennsylvania,' the Chief of the Bureau of Subsistence is reported to have said, in reply to a demand for rations addressed to that department by General Lee. In a purely military point of view this step was perhaps imprudent; but in the situation of the two adversaries, policy, being for once in perfect accord with the popular sentiment, counselled the attempt. On the 3d of June, 1863, Lee put his army in motion. The future of America was about to be decided for ever."

As soon as Lee's movement was discovered, "Hooker, with that unerring judgment for which, unfortunately, he was more distinguished in the council than on the battle field, appreciated all the benefit that could be derived from the movement of his adversary. Why not march directly upon the capital of the enemy?" In such a counter-move the Comte de Paris thinks that all the advantages would have been on the side of the North, but the bare suggestion was enough to appall the authorities at Washington, and they gave Hooker the most positive orders to protect Washington by following Lee, "as if the movement against Hill [Lee's rear guard] was not the best way to strike at the weak point of this army and to thwart all the projects of its chief." Lee, on the other hand, "being under no obligation to discuss the plan of campaign with his Government, and exercising absolute authority over the various bodies of troops which had to coöperate in its execution, pursued it with his wonted zeal. The invasion of the Northern States being his object, he had selected from the very outset the way he intended to follow, from which he did not deviate until he had reached the banks of the Susquehanna."

The main features of this campaign are as familiar as household words, but the story is here unfolded with such remarkable clearness that the temptation is great to make extracts beyond all reasonable limits of space. Every one knows that Hooker formed an admirable plan of striking at Lee's rear just after he had crossed the Potomac, and that he asked to be relieved from the command when Halleck refused to give him control of the garrison of Harper's Ferry—although immediately afterward Halleck gave it to Meade without reserve. As soon as Meade was put in command on June 28, he immediately turned his columns northward, and, by a train of accidents, three days later the two armies came in contact at Gettysburg. General Buford, in command of a division of cavalry, had reached there on the evening of the 30th, and had a slight skirmish with the advance-guard of Hill's corps.

"The unfailing indications to an officer of so much experience revealed to Buford the approach of the enemy. Knowing that Reynolds was within supporting distance of him, he boldly resolved to risk everything in order to allow the latter time to reach Gettysburg in advance of the Confederate army. This first inspiration of a cavalry officer and a true soldier decided in every respect the fate of the campaign. It was Buford who selected the battle-field where the two armies were to measure their strength."

The battle of July 1 is here called "Oak Hill," which, like Dowdall's Tavern at Chancellorsville, is a change of name, not inaccurate, but conveying less meaning than the more generally accepted name of Seminary Ridge—if, indeed, it is necessary to change the name at all from the "first day of Gettysburg." The sanguinary struggle of that day, in which the First Corps lost nearly two-thirds of its force, the successive arrivals of Reynolds, Howard, and Hancock; the critical condition of affairs in the afternoon, when "the Eleventh Corps, already so unfortunate at Chancellorsville, was once more completely routed," and, with what was left of the First Corps, forced back to Cemetery Hill, and when the Confederates, for some unexplained reason, stopped their pursuit just as a decisive victory seemed to be within their reach—all the scenes of this exciting day are most vividly portrayed.

"Lee had not in the heart of Pennsylvania the same freedom of movement as in Virginia. He had to think of his communications and a possible retreat. . . . It has been said, and very justly, we think, that if Jackson had been alive and in command of his army corps on the 1st of July, he would not on that day have left Cemetery Hill in the hands of the Federals. . . . Ewell did not exercise the same influence over his lieutenants as Jackson did, and on this occasion was poorly served by some of them."

On the next day the Federal army was all in position. Lee discarded the plan of attempting to outflank Meade's left, and thus manœuvre him out of the position at Gettysburg, as Longstreet suggested—a dangerous plan, in the author's opinion—and decided to attack him where he was. Longstreet, on the right, was to make the main attack, which was to be seconded by Ewell on the left as soon as the latter heard the sound of the guns. But the fatality of ill-success which followed Lee throughout the battle at once made itself evident. Not only did Lee, "by a train of errors intimately connected with each other, deploy his army upon a more extended front than that of Meade, without concentrating anywhere the necessary force for breaking up the enemy's line," but Longstreet, who disapproved the plan of battle, was very tardy in executing his part of it, so that it was late in the afternoon before he began his onslaught upon Sickles's corps. Late as it was, however, there was yet time for a most sanguinary conflict, which seemed about to be fatal to Meade when Warren's prompt action saved Little Round Top. As night was putting an end to the battle on the Federal left, another most vigorous attack was made upon the extreme right, which Meade had stripped to reinforce his left, and this again was followed by a fresh assault on Cemetery Hill. "But again the Southern generals cannot execute their move-

ments with that collective energy indispensable to success." Both attacks failed. Lee had committed many errors: first—as here enumerated—in giving too great a development to his line; second, in delaying Longstreet's attack too long; third, in bringing less than half of his army into action. Yet, "if the Confederates have not penetrated into the really defensive positions of the enemy, they have been so near proving successful that Lee cannot be blamed for having assumed the offensive on that day. In fact, the situation of Meade at the close of the battle is alarming, in spite of the advantages he has obtained." During the night, therefore, Meade called a council of war, and propounded to his corps commanders the question of remaining in position or retreating. They were unanimously in favor of remaining to await another attack of the enemy rather than assume the offensive. Meade coincided with them.

In the opinion of the author, on the 3d of July Lee should have concentrated his whole army on the right for a decisive attack on Round Top.

"It appears that Lee had at first adopted this plan, but . . . he decided simply to resume the movement he had performed the day before. A fatal and inexplicable resolution! He thus persisted in adhering to the tactics of a double attack by way of two wings, without thinking that the more ground they gained the easier it would be for Meade to lead his forces from one wing to the other in order to repulse them successively. The instructions he gave to his lieutenants were, moreover, so vague that he seemed to leave to each commander the task of fighting a separate battle, according to his own fancy."

The result was a renewed assault on the Federal right during the morning, which was wholly unsuccessful, and then the artillery duel and final grand charge of the afternoon. Concerning this the author says that, as late as noon, Lee "does not appear to have come to any positive decision. . . . After having designated since morning Pickett and his gallant Virginians to sustain the principal charge, he has not yet selected the troops that are to support him, nor settled the order in which the rest of the army is to take part in the combat." In fact, throughout this battle Lee seems never to have had his men well in hand, or to have exercised a direct control over their actions. As it was the only offensive battle he ever fought after Jackson's death, there is reason to believe that Lee, in spite of his remarkable abilities, was lacking in some of the essential qualities of a great commander; for no one can lay claim to the highest order of generalship who succeeds only in defensive battles. At last everything is ready—though Longstreet still disapproves of the plan, and "is cruelly tried between his own convictions and the orders of his chief"—the immortal assault is made, and fails. High-water mark of the Rebellion is reached, and the wave recedes. Pickett's "division does not fall back; it is annihilated," and "the conflict is at an end." Of all the numberless accounts which have been written of this third day's battle, we believe that none can be found to surpass the one here given, either in brilliancy of picture or accuracy of statement.

After the repulse, the Confederates expected, it is stated, "to see the enemy advance with troops elated by victory." In the author's judgment, an assault across the same ground that Pickett had advanced over would have been disastrous, but if Meade had massed a large force on his extreme left in front of Round Top, and attacked vigorously with it, it would have been successful. But "nothing had been prearranged for the offensive," and both Meade and all his commanders were content to let well alone: "The invasion is repulsed; by attempting any further effort everything might be compromised." Lee, therefore, was allowed this night and all of the next day to make his arrangements for a retreat, and on the morning of the 5th his army had begun its homeward march. We have not the space to give the pathetic picture which the author draws of Lee's thoughts on the evening of the third day, nor to make more than a short reference to his excellent criticism on the battle. He shows that the principal causes of Lee's defeat were the absence of Stuart's cavalry, in consequence of which the battle was brought about by chance, in an unknown position; the too great extension of Lee's line, and the lack of control over his subordinates. On the other hand, the Army of the Potomac "conquered at Gettysburg because chance afforded it strong positions, which Buford and Reynolds preserved for it, and which Meade turned to excellent account. . . . He was not indebted for this victory either to the inspirations of his genius or to the possession of extraordinary qualities," but he made the most of his troops, and gained the devoted support of his subordinates. He should, however, have gone to Gettysburg himself the first day, instead of sending Hancock; he should have concentrated his army more speedily, given more specific orders to Sickles, not taken so many troops from his right on the 2d, made more ample preparation to receive Pickett, and finally made his victory decisive by a vigorous counter-attack against Lee's extreme right on the evening of the third day. It is probable that the calm judgment of history will sustain the author in all of these criticisms.

The book is concluded by the account of Lee's retreat from Gettysburg to the Rapidan, and the subsequent manœuvres of the autumn, first to Bristoe Station and afterward on Mine Run. The pursuit of Lee by Meade, after the battle of Gettysburg, is characterized as being extremely feeble, and, although General Humphreys has lately written in defence of his former chief on this question, the argument of the Comte de Paris is much the more full and conclusive. Everything showed that "Meade did not intend to have a new encounter with his adversary north of the Potomac. . . . Moreover, he had not that confidence in himself indispensable to a chief about to assume great responsibilities." Called to the command of a great army without warning, at the most critical point of its career, and forced to fight a decisive battle but a few days afterward, the impressions of those days must have been fixed indelibly upon Meade's mind; and the most forcible of them all was the observation that Lee made the assault and was repulsed. The following analysis is therefore doubtless very near to the truth:

"The recollection of the check experienced by the Confederates in their ineffectual assaults upon the Unionist positions will haunt the mind of Meade as long as he finds himself alone confronting Lee. He will think of nothing but obliging Lee to renew those assaults; he will constantly avoid assuming the offensive when he finds Lee posted in his front; and, as the Southern General is above all anxious to be sparing of his troops, battles will be followed by manœuvres. The Army of the Potomac, which, since its arrival at Fort Monroe, has fought eleven pitched battles in sixteen months, is now going to remain ten months without renewing those great contests."

It only remains to say, in conclusion, that the translation of this volume is excellent; it is very spirited, and, although sufficiently literal to show the French idiom at times, yet the sense is never obscure. The language is always fluent and at times eloquent and brilliant. It is in every respect a great improvement on the translations of the preceding volumes. It is also very well edited by Colonel John P. Nicholson, who has supplied several omissions and corrected not a few errors, one or two of which are of considerable importance.

JAMES CLERK MAXWELL.

The Life of James Clerk Maxwell, with a Selection from his Correspondence and Occasional Writings, and a Sketch of his Contributions to Science. By Lewis Campbell, M.A., LL.D., Professor of Greek in the University of St. Andrews, and William Garnett, M.A., late Fellow of St. John's College, Cambridge; Professor of Natural Philosophy in University College, Nottingham. With three steel portraits, colored plates, etc. London and New York: Macmillan & Co. 1882. 8vo, pp. xvi.–662.

James Clerk Maxwell was born in Edinburgh on the 13th of June, 1831, and died in Cambridge, England, on the 5th of November, 1879, while holding the chair of Experimental Physics and directing the magnificently equipped Cavendish Laboratory, founded by the Duke of Devonshire. This account of his life is divided into three parts. The first part (463 pp.), the biography in the strict sense, is by Professor Campbell, though, as he tells us in his preface, much from the pen of Professor Garnett is indistinguishably interwoven with his own composition. The second part (111 pp.), wholly by Professor Garnett, is a sketch of Maxwell's contributions to science. It is very able. The third part (75 pp.) is a selection of Maxwell's poems, or rather verses. He made no claim to poetical genius, but was a facile and generally correct versifier. A very good index completes the work, which has still one great defect that must not pass unnoticed: it should have contained a catalogue of all Maxwell's published writings. Most of these are mentioned incidentally, but such mention by no means supplies the place of a regular consecutive bibliography.

Maxwell's reputation in the scientific world rests chiefly upon his contributions to electrical science and his speculations in "Molecular Physics." Of the substance of his labors in these departments our limited space does not permit us to speak; but if we inquire what were the qualities of the man which enabled him to accomplish so much, we think the most important moment will be found in an almost unique union of certain mental and physical powers. It may afford some gratification to phrenologists to be informed that, as indicated by the portrait of him given in the work, the development of the organs to which they apply the names "form," "color," "weight," "size," etc., can hardly be characterized by any other epithet than "enormous." The physical organization through which these mental powers operated was wonderfully fine. Although Maxwell was somewhat short-sighted, yet this perhaps only increased his power of minute observation of objects when once brought within the range of his vision. He had a fine musical ear. His hands were models of symmetry and beauty, and, in his command over them, perhaps no man ever surpassed him.

Maxwell also presents one of the most remarkable examples on record of the influence of heredity. For more than 200 years nearly every generation of the Clerk family had had its representatives at the bar, on the bench, in the East India Company's service, in various high Government offices. Its members were even more remarkable for their excellence in what are usually regarded as accomplishments. Proficiency in music, in drawing, in painting, in works which require quickness of perception and delicacy of touch, seems to have passed down without a break from generation to generation. They were preëminently persons who could "do

things." This tendency to keep in constant relation with material things was most markedly developed in Maxwell's father. Although he had had a university education, and was a lawyer by profession, a machine was always more interesting to him than a brief, and the courts were far less attractive than the meetings of the Royal Society and the Society of Arts. By a rare coincidence, Maxwell's mother (*née* Frances Cay) belonged to a family of very similar characteristics. Many of the Cays, though not professional mathematicians, were remarkable for their expertness in calculation. Mrs. Cay, Maxwell's maternal grandmother, painted with a skill far beyond the average of amateurs. His mother was a woman of great executive ability, prompt, courageous, self-reliant. She played the organ well, and was noted for her skill in knitting, which, as then practised, was an elaborate and complicated art, and regarded as a great accomplishment. Both the Clerks and the Cays were orthodox, and somewhat strict in their religious views, and their moral character was unsullied.

With all these excellent qualities, Maxwell also inherited a fortune which, though not large, placed him above all the petty annoyances and anxieties of the man who is compelled to earn his bread, and all hindrances, arising from want of means, to his scientific development. Had his fortune been much smaller, that development would have been checked by the necessity of devoting a larger portion of his time to earning a living. Had it been much larger, the same effect would have been produced, perhaps, by the temptations, more probably by the responsibilities, of wealth.

The course of Maxwell's education was, on the whole, singularly fortunate. He was less than three years old when his father abandoned the law and removed from his Edinburgh residence to his estate of Middlebie. The estate had been much neglected, and there was no house upon it fit for the permanent residence of the laird. Mr. Maxwell and his family went into temporary quarters, and he immediately commenced laying out grounds and erecting a mansion and outbuildings according to plans made by himself. He was his own landscape gardener, architect, and builder. The construction of the "great house" was to James a source of continual delight. Not a lock was set, not a bell was hung, but he was ready with the importunate demand, "Show me how it does," or "What's 'the go' o' that?" No vague or general answer satisfied him; "but," he would persist, "what's the 'particular go' o' it?" Although he lost his mother in his ninth year, yet, so far as possible, this loss was made good. When, a little more than a year afterward, he entered the Edinburgh Academy, he went to reside with his paternal aunt, Mrs. Wedderburn, the widow of James Wedderburn, at one time Solicitor-General of Scotland. She was a woman of great beauty and accomplishments, and regarded as an ornament of Edinburgh society at a time when, in culture and refinement, it was not surpassed by the society of any capital in Europe. When not with Mrs. Wedderburn, he resided with his maternal aunt, Miss Jane Cay, also an accomplished lady especially in drawing and Berlin-wool work. Drawing patterns for his aunt, and assorting and matching colors for her work, cultivated that sense of form which made him the first geometrician of his class, and that fine appreciation of color which he afterward showed in his optical researches, particularly on the subject of "color-blindness." In the Academy his teachers were above the average; in the University of Edinburgh his teacher in logic and metaphysics was Sir William Hamilton. It was, no doubt, a fortunate circumstance that a mind so preëminently mathematical as Maxwell's was brought in daily contact with the mind of a man who showed such a cordial hatred and such a dense ignorance of all mathematical science. At Cambridge, Maxwell's tutor in mathematics was William Hopkins, a man who, as a teacher of mathematics, occupied much the same position that Karl Czerny did as a teacher of the pianoforte. For many years the number of his pupils was limited only by his powers of endurance and his unwavering determination to maintain his reputation as the greatest "coach" in England.

Not only in his teachers, but also in his friends, Maxwell was equally fortunate. Sir William Thomson, Tait, Tyndall, Faraday, and a host of other distinguished men, were ever ready to encourage and assist him, and his intercourse with them, either personal or by epistolary correspondence, was active and constant.

A noticeable trait was his sympathy with all living things. In his early childhood he had a "horror" for nothing that had life. When only three or four years old frogs were his especial favorites. He would take a young frog, put him in his mouth, and let him jump out again. No Buddhist ever refrained more carefully from harming anything living. This love of animals seemed to be reciprocated by them. His skill in training dogs was something marvellous. When he went to the Cavendish Laboratory, he was always accompanied by one, often by two or three, and they often afforded him substantial assistance in his electrical and optical researches. He was a bold and skilful horseman. His favorite saddle-horse was a high-spirited animal, which he himself had broken in after several others had pronounced him incorrigible. His wife was a fine rider, and her horse had also been broken in by Maxwell with a side-saddle and a piece of carpet to represent a lady's habit. Indeed, in almost every kind of exercise which requires perfect command of the limbs Maxwell excelled. He went through a Scotch reel with the skill of a dancing-master, and his expertness in swimming called forth the admiration of his fellow-students at the university. The most casual reader of his biography cannot fail to be impressed with the endless variety of his acquirements. It is doubtful whether any clergyman in Scotland could repeat so much of the Bible by heart, and few clergymen had so extensive an acquaintance with the works of the celebrated English divines. His knowledge of English literature, especially of English poetry, was very minute and very accurate. He read with ease many different languages, and was thus able, in his scientific researches, to go always to the fountain-head. With all these acquirements and accomplishments, Maxwell was singularly free from any tinge of self-conceit. In general society he was reserved, almost shy, but in a circle of friends he was the wittiest, the gayest, the most genial of companions.

Maxwell died of the same disease, and within a few months of the same age, as his mother. In the case of a man in whom hereditary tendencies were so strongly manifested, the obvious inference would be that, with so many excellences, he had also inherited the fatal drop which poisoned the whole cup. But, from a careful examination of the facts, we are satisfied this inference would be only partially true. It is quite probable that the particular form of disease in which the decay of his vitality manifested itself was determined by an hereditary tendency. But we think that, had he lived somewhat differently, he would have filled out his seventy years, and have accomplished far more than he actually did. The truth is, the man was worn out before his time. He was continually spurred on by the demon of restless, unceasing activity. His "particular go" was to go at the top of his speed. Had he gone slower, he would have gone further. Had he done less, he would have done more. There was little distinction between his work and his play. Whether investigating Saturn's rings or examining his dog's eyes, integrating functions or spinning tops, he did it as we are commanded to love the Lord: with all his heart, and soul, and strength, and mind. He always had a great number of irons in the fire. At Cambridge, at Aberdeen, in London, in addition to his college duties, he lectured regularly to workingmen. If the solution of a problem and a night's rest contended for the possession of the small hours of the morning, the problem was pretty sure to win. If a friend or one of his family was sick, he was always ready to watch by the bedside with all the skill and more than the faithfulness of a professional nurse. When we turn over the pages of his biography, and reflect on the extent and variety of his correspondence, on his labors as teacher, lecturer, examiner, contributor to scientific journals, experimenter, and his other multifarious occupations, and recollect that his constitution was naturally not strong, we wonder, not that he died at forty-eight, but that he lived beyond thirty-eight.

We would gladly have said something of Maxwell's domestic life, of his charming wife, of his religious opinions, and many other matters, for all which we must refer our readers to this most interesting book.

George Sand. By Bertha Thomas. [Famous Women Series.] Boston: Roberts Brothers.

MISS THOMAS has achieved a rare and positive success in carrying out the plan she proposed to herself, "a careful review of those facts in the life of George Sand which most justly represent her character as a whole, and which were the determining influences on her career and on her work." It is difficult to see how it could have been better done within the limits prescribed by this series. To a rapid and concise account of outward events and material circumstances are added clear and attractive sketches of the books which best lend themselves to such a résumé, and which are most important as illustrations. Some of these last are especially happy—the few lines devoted to 'Horace,' or the statement of the real substance of 'Elle et Lui,' so universally overlooked in the personal discussions about the book:

"A study of the attraction that so often leads two exceptional but hopelessly irreconcilable spirits to seek in each other a refuge from the isolation in which their superiority places them. . . . Thérèse is a faithful picture of a woman not quite up to the level of her own principles, which are so high that any lapse from them on her part brings down more disasters on herself and on others than the misdemeanors of avowedly unscrupulous persons."

Miss Thomas writes with a noble enthusiasm for her subject, but with a temperance and discrimination which enforce the justice of her views, and which would make even an opponent admit her statement as a fair one for her side of disputed questions. She is not blind to defects nor lenient to faults, but she is steady in the determination not to reopen scandals, not to revive gossip.

"Her moral worth so infinitely outweighed the alloy, as to leave but little call, or even warrant, for dwelling on the latter. . . . She was apt—she has herself thus expressed it—to see people through a prism of enthusiasm, and afterward to recover her lucidity of judgment. Great, no doubt, was her power of self-illusion; it betrayed her into errors that have been unsparingly judged. For her power of calm and complete disillusion, she was perhaps unique among women, and it is no wonder if mankind have found it hard to forgive."

It would be a fortunate thing if this book should serve as an introduction for the younger generation to treasures of imagination and feeling which have been obscured in the almost lurid light of later French fiction The author has well brought out the two predominant qualities of heart and mind which, all other things apart, may make Mme. Dudevant the great example to the members of her own sex, be they with genius or without: her unwavering affection for quiet home life and for her children, and her unfailing power for constant work. The 'Histoire de ma Vie' is beautifully sketched at length:

"There is no reader whose own recollections of childhood have not grown faint, but will feel the profound truth of the spirit of the narrative, which is of that kind that occasional exaggerations in the letter cannot depreciate in value as a psychological history."

"Her composition is like a gossamer-web, that must be shown in its entirety, as to slip it up is to destroy it."

"That incomparable style of hers is like some magic fairy-ring that bears the wearer, safe and victorious, through manifold perils—perils these of prolixity, exaggeration, and disdain of careful construction."

"Because these romances express and enforce with earnestness, sincerity, and fire the sentiments of a poetic soul, a generous heart, and an immense intelligence, on subjects of consequence to humanity, they have a higher value than can attach to skilful development of plot and intrigue, mere display of literary cleverness, or of the storings of minute observation."

The printing and the proof-reading of the b[illegible] have been most imperfect, with the effect, we are sorry to see, of some undeserved criticisms upon the author's style. The addition by the American publishers of an essay from the *Galaxy* by Justin McCarthy is an inexplicable mistake. It is in a totally different key, loud and harsh, a jarring discord in the grave, sweet tones of the rest of the book. Philosophic criticism Miss Thomas modestly did not attempt, but nothing of it is to be found in the contradictory extravagance, in praise and blame alike, of Mr. McCarthy. The judgment that can pronounce without qualification, "Life and society receive no impulse and no direction from the influences out of which the novels of Dickens, or even of Thackeray, are made up," is scarcely trustworthy upon any point. Had any further appreciation been necessary, it should have been taken from the pages of Sainte-Beuve or Scherer. There is a review of George Sand's life and works, written by Zola at the time of her death, which has not had the attention it deserves in this country, both as the verdict of a leader in the school so opposite to her own, and as a heartfelt tribute to a great intellect and a great heart. It is further remarkable for the likeness of the general impression it conveys to that given by so different a person as Matthew Arnold in his recollections of a visit to her at Nohant.

Outlines of the Constitutional History of the United States. By Luther Henry Porter. Henry Holt & Co. 1883. 12mo, pp. 311.

THE first part of Mr. Porter's 'Constitutional History' is so good that it is a real disappointment not to find the rest of the book equally good. Sixty-nine pages are devoted to the period before the formation of the Constitution, and in these pages we find no less than seven important documents given in full—the charters of Virginia, Maryland, and Connecticut (illustrating the three types of colonial government); the Declaration of Rights of 1775; the Declaration of Independence; the Articles of Confederation, and the Ordinance of 1787. This affords sufficient material for the study of institutions during this time, and material which is on the whole as well selected as could be desired. The remarks also which accompany them are good. After this date the documents cease, with the exception of the Constatution, the Kentucky and Virginia Resolutions, and those of the Hartford Convention, and the student is *told* things, instead of being led to study them at first hand. This is a pity, because a first glance at the book led us to expect something radically different from the old type of school book. However, even as it stands, a text-book that contains eleven of the most important and instructive documents in American constitutional history, deserves a hearty welcome.

Examining the details, we find that ample room could have been found for the desired material by a more judicious arrangement. The entire text of the Constitution is given twice—once as a whole and once by clauses; and in many cases the commentary which accompanies the several clauses hardly does more than repeat the substance of the clause in an amplified [illegible]. This is worse than useless for purposes of instruction. The pupil should be encouraged to make his own commentary from the personal study of the text, and the editor's work should have been to give such special interpretation, acts of legislation, and historical illustration, as cannot be deduced from the mere text. But we are not told, for example, of the rule prescribed by Congress for the election of Senators, nor (upon the article guaranteeing a republican form of government) of the important controversy in regard to the bearing of the article upon the question of reconstruction. Instead of such weighty matter as this, we have pages of rather thin commentary, and, for instance, on page 101, a tabulated statement of the number of members assigned provisionally to each State—information which has been given twice before.

As the book draws near its close, its inadequacy is more and more striking. There is no mention of the controversy upon the Missouri Compromise line in 1850, so that its repeal in 1854 is deprived of that justification which, in the eyes of its supporters, it certainly had. The questions of the war and reconstruction are hardly touched upon—perhaps on the ground that they are too near to be treated impartially; but the Northern sympathies are throughout so pronounced that this cannot be a valid reason. We find on page 276 the surprising statement: "The Democratic party has remained almost intact in name and form from 1789 to the present. It is the party of conservatism. The Federal, Whig, Abolition, or Republican party has continually changed in name and form. It is the party of liberalism, of ideas." In the useful table upon page 35 it is erroneously stated that the Governor of Massachusetts was elected by the people at the period before the Revolution. On page 97 it is said that in England representatives of the people "were first regularly assembled about the twelfth century." There is an index, and an appendix containing a good deal of useful statistical matter in a very convenient form.

Stories from English History. By Louise Creighton. Thomas Whittaker.

THIS little book is designed to enlarge the information given in child's histories. It consists of fifty four well-chosen episodes narrated in a generally interesting manner, and occasionally illustrated by woodcuts, as the "Family of Sir Thomas More," after Holbein, and various designs from old prints, frescoes, monuments, etc. Battles, sieges, political executions, and stirring adventures have been preferred to incidents in the progress of peaceful civilization; a solitary exception (if we omit the voyages of discovery) being the chapter devoted to the Stephensons. The Pilgrim Fathers and the Boston tea riots, which serve to define the limits of the American connection, are judged from the American point of view. India is the only other British possession which furnishes a topic; the book ends with the siege of Lucknow. Dates stand at the head of each story, and had the reigns and sovereigns in the intervals been added in a few lines, this collection would both have had a certain independence of the primary histories, and have been better calculated to make an orderly impression on the young reader's mind.

BOOKS OF THE WEEK.

Adams, C. F., jr. A College Fetich. Boston: Lee & Shepard.
Annuaire Diplomatique et Consulaire des Etats des Deux Mondes. 1883. Gotha: Justus Perthes; New York: B. Westermann & Co.
Ashley, W. J. James and Philip Van Artevelde. Macmillan & Co.
Auerbach, D. Master Bieland and his Workmen. Henry Holt & Co. $1.
Baxter, W. E. Winter in India. Funk & Wagnalls. 15 cents.
Bunce, O. B. Bachelor Bluff: His Opinions, Sentiments, and Disputations. New ed. D. Appleton & Co. 50 cts.
Burnett, Mrs. F. H. Vagabondia. Ganter, and Other Novelettes. Philadelphia: T. B. Peterson & Bros. 75 cents.
Chadwick, Rev. Geo. A. My Emotional Life. Cassell & Co. 40 cents.
Collections of the State Historical Society of Wisconsin. Vol. ix. Madison, Wis.
Dean, Prof. A. The British Constitution. Chicago: Townsend MacCoun & Co. $1.
De Foe, D. Robinson Crusoe, edited for school use by W. H. Lambert. Boston: Ginn, Heath & Co. 30 cents.
Dumanoir et Lafargue. Le Gentilhomme Pauvre. [Théâtre Contemporain.] William R. Jenkins. 25 cents.
Easther, Rev. A. Glossary of the Dialect of Almondbury and Huddersfield. London: Trübner & Co.
Engel, E. Geschichte der englischen Literatur. Part 1. Leipzig: W. Friedrich.
Fahlbeck, P. E. La Royauté et le Droit royal francs (486–614). Land: Librairie Universitaire.
Felroth and Ethrendermere: a Poem. G. P. Putnam's Sons. 25 cents.
Firth, A. Voices for the Speechless. Boston: Houghton, Mifflin & Co. 75 cents.
Geibel, E. Brunhild. 2d ed. Boston: Ginn, Heath & Co.
Halkett S., and Lang, Rev. J. Dictionary of the Anonymous and Pseudonymous Literature of Great Britain. 2 vols. Lockwood, Brooks & Co. $10 50 each.
Hale, H. The Iroquois Book of Rites. Philadelphia: D. G. Brinton.
Hunter, R. The Encyclopædic Dictionary. Vols. i.–iv.: A-Des. Cassell & Co. $3 each.
Jevons, W. S., and Hill, D. J. Elements of Logic. Sheldon & Co.
Jones, L. A. Law of Mortgages. 2d ed., revised. Boston: Houghton, Mifflin & Co. $6 50.
Lascarides, G. P. Phraseological English-Ancient and Modern Greek Lexicon. 2 vols. Trübner & Co.
Thomas, Bertha. George Sand. Boston: Roberts Bros.
Wallis, J. C. A Prodigious Fool: a Novel. Philadelphia: J. B. Lippincott & Co. 50 cents.
Warren, Rev. F. E. The Leofric Missal. Oxford: Clarendon Press.
Willis, C. J. In the Land of the Lion and Sun. Macmillan & Co. $4.

Richter's Invisible Lodge.
From the German of Jean Paul Friedrich Richter. By Charles T. Brooks. 16mo, Leisure Hour Series, $1; Leisure-Moment Series, 30 cents.
BY THE SAME AUTHOR.
16mo, Leisure-Hour Series, $1 per Volume.
TITAN, 2 vols.—FLOWER, FRUIT, AND THORN PIECES, 2 vols.—HESPERUS, 2 vols.—CAMPAUER THAL, 1 vol.
HENRY HOLT & CO., New York.

F. W. CHRISTERN,
37 West Twenty-third Street, New York,
Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

WE WILL FURNISH A SAMPLE Case (12 quart bottles, no two alike), pure California Wine, price $5. SONOMA WINE AND BRANDY CO., 30 Warren Street, New York.

Johns Hopkins University,
BALTIMORE, MARYLAND.
Collegiate and University Courses.
Announcements for 1883–84 will be sent on application.

GERMAN rapidly and conversationally taught in a few months. Send for circular. JULIUS, 27 Union Square, Room 13.

The Nation.

NEW YORK, THURSDAY, AUGUST 9, 1883.

The Week.

THE most prominent features of the industrial situation are still the same as they have been for several months, viz.: over-production and consequent declining prices, resulting in an increase of business failures. During the past week the failures have been in the leather trade, which had heretofore escaped the general liquidation and readjustment of credits which had already been experienced in the iron and cotton trades. The greatest, in fact the only great element of danger in the general commercial situation at any time, is the excessive expansion of credit, based upon the presumed value of commodities for which there is no market at the presumed price. The failures in the past year, but more particularly in the last month or two, have removed this element of danger from the general business situation, and have compelled a contraction of the lines of credit in nearly all businesses. The only element of disquietude remaining is the dissatisfaction of labor; but the general decline in the prices of all labor products will necessarily cause a proportionate reduction in wages. The money market continues overburdened with unemployed money, which is offered for loan on collateral security at rates extraordinarily low. The situation as regards capital is very much as it was a year after the panic of 1873, the result of which, at least, was a great advance in the prices of all undoubted securities. The apprehensions of interference with the general railroad traffic of the country as a result of the telegraphers' strike have had a depressing effect upon prices of stocks during the last week; the fall ranging from ½ to 4 per cent., the latter on Wabash. One of the prominent and abnormal features of the financial situation continues to be the higher rates of interest for money in London than in New York. The balance of trade is acknowledged to be largely in favor of the United States, and yet the difference in the rates for money prevents the movement of gold to this country, and sustains the rates for sterling exchange.

The first general election in Utah, under the new Edmunds law, was held on Monday, and the result is not encouraging. This will not be a surprise, as few persons who have studied the provisions of the law closely and have watched its preliminary working in the Territory, have had much faith in its efficacy as a destroyer of the Mormon system. The election of Monday was for members of the Legislature, Sheriffs, Probate Judge, and other local officers, who were to fill the places made vacant by the law. The provisions of the law deprive polygamists of both sexes of the right to vote or to hold office, but Mormons who are not polygamists are permitted to exercise both rights. A registration of voters in accordance with these provisions was made by the Commissioners, proceeding under the act, and candidates were nominated for the vacated offices. While the polygamists were thus deprived of actual participation in the election, it seems to be clear that they exercised supreme control over the nominations, and allowed no men to be selected who could not be depended upon to be completely subservient to the Mormon Church. Not only were mere "dummies" selected for the Legislature, but in many instances persons so notoriously incompetent were selected for the other offices that the obvious intent was that they should never enter upon their duties after election, but should allow the offices to revert to their present holders through the refusal of the officers-elect to qualify. So general was the belief among the Gentiles that the election of such candidates as these was a mere farce, that few of them took the trouble to go to the polls. The Mormons voted solidly for the new officials, and the result is therefore a complete Mormon triumph. The candidates all passed for approval before the authorities of the Mormon Church before they were allowed to stand. They owe their nomination, therefore, to the grace of the Church, and they owe their election entirely to Mormon votes. This makes their servitude complete, and the Church will rule Utah as despotically as it did before the law was passed. With the canvass of this year's election the powers of the Commission end. It can decide upon the certificates of the members of this Legislature, but when once they are admitted to their seats they become the lawmakers for the Territory.

The Minnesota Democrats decline to accept the view of their Pennsylvania and Ohio associates, that the tariff is a philanthropic agency for the amelioration of the woes of mankind, and put themselves on record as being still in favor of the old but distrusted plank of "tariff for revenue only." Next to the Iowa free-trade flyer, this is the boldest Democratic utterance of the season, and may be due partially to the fact that Minnesota, like Iowa, is a Republican State. There is slight disposition manifested in other States to adhere to the old formula in its pristine entirety, though individual efforts have been made to prune it into harmlessness. General Butler created a slight ripple of enthusiasm some time ago by discovering that "tariff only for revenue" was a much safer battle-cry than "tariff for revenue only"; but the enthusiasm subsided when some contemplative person begged leave to ask wherein the difference lay. A later emendation has been the striking out of the word "only," and there are several statesmen who think that this change is all that will be required to carry the party to victory next year. While the party is not harmonious, therefore, these profound and searching suggestions show that the subject is receiving the most thoughtful consideration.

The *Sun*, a day or two ago, by way of objection to the plan of a postal telegraph as a remedy for telegraphers' strikes, asked what was to prevent Government telegraphers from striking, any more than Western Union telegraphers. There is nothing to make such a strike impossible, but there are several things which would make it very unlikely. One is the passion for the Government service which pervades a large part of the salaried class throughout the country—in fact, one may say, all that part of it which does not expect to get out of the salaried state. This class was very eager to get into the Government service when it was most precarious. Now that there is likely to be a fair degree of security in it against arbitrary dismissal, they will probably be more eager than ever, and will avoid, when in, doing anything to put their places in peril. Another is that there would be no use in striking for an increase of wages in the Government service, because wages in that service are fixed, not by a board of directors or a superintendent, but by law. The chief officer of a postal telegraph, therefore, could not raise wages. He would be tied down either by a fixed schedule or by the amount of his appropriation. Employees who wanted their salaries raised would, accordingly, have to proceed, not by strikes and general public disturbance, but by agitation, by appeals to public opinion and petitions to Congress, which could hardly, if reasonable, fail of success, because the United States Treasury, unlike that of corporations, is not bound to provide dividends for stockholders, and is always full to overflowing. In fact, a strike against the United States would be so ridiculous that no "Brotherhood" would ever attempt it.

The gradual change for the better in Southern sentiment toward the negro was demonstrated in a notable manner by the action of a recent Episcopal Convention at Sewanee, Tenn. Delegates were present from thirteen Southern States, comprising bishops, ministers, and laymen. It was resolved, apparently without opposition, to memorialize the General Convention of the Church, which meets in the fall, in favor of establishing schools for the education of colored men who desire to enter the ministry, and of granting to all colored ministers of the church equal rights and powers in all church councils. Only about a year ago the mere proposal to send a fraternal message of greeting from the Methodist Church South, assembled in Convention at Atlanta, to the Methodist Church North, also in convention in a Northern city, excited in the former body a discussion which continued for several days, and in which violent opposition was developed on the ground that such a message would be a confession that the Southern Church had been wrong in upholding slavery and supporting secession. The proposal was finally carried and the message was sent. That victory was regarded as an important advance. The Episcopal Church is on the way to a still greater advance, the ultimate effect of which cannot fail to be an important improvement in the position of the colored race.

The moral of the Boston shoe and leather failures is that they furnish a second and striking illustration, on a great scale, of the effect of too much tariff. The iron trade has been dosed nearly to death with tariff, and is now reduced almost to chronic depression, with occasional intervals of convalescence. The shoe and leather business has at last shared the same fate. The men who start the new factories have their heads so filled with the idea that they must look to Congress, and not to consumers, to find out how much leather they can sell, that they have lost the habit of carefully examining their market, and have no longer the kind of judgment that is needed to do so with efficiency. They always flatter themselves that if sales grow difficult and stocks accumulate on their hands, all they have to do is to go to Washington, declaim about the pauper labor of Europe, and get the tariff put up a peg or two. They overlook the fact that even if the tariff were prohibitory, as long as their only market is the home market, nothing but a fall of prices would stimulate consumption, and in articles like shoes even that not very much, because but few people buy shoes for display and none for accumulation.

The Boston *Advertiser* says "the real significance and real effects of the Boston failures remain to be recounted." Time is running by rapidly, and there is great uncertainty about the future among business men, so that the *Advertiser* should not delay its elucidation another day. If it is not the tariff or over-competition which has done the mischief, it must be something else easily described, at least in outline, and the surviving members of the trade ought to have it at once. A correspondent in the trade writes to us that the "failure of Shaw Brothers was due simply to reckless and imprudent management, and the extension of their operations far beyond their capital and ability properly to superintend"; and the moral he draws is, that "a prudent and conservative business policy does not rely too much on credit, but restricts its operations within controllable limits." This is, however, the moral of all panics and of most failures, and unhappily does not do away with the necessity for going further back, and explaining why people get reckless and imprudent, and extend their credit beyond their capital, or, in other words, why the business judgment of large numbers of persons becomes periodically unsound.

Mr. Thomas Hamilton, "one of the most prominent negro politicians in South Carolina," has published a letter advising the colored men to abandon the Republican party and vote henceforth with the Democrats. He says that "all the negroes get for their fealty to the Republican party is a few minor appointments." In all South Carolina only one negro has a good position, the post-office at Columbia, and he is held in it by Senator Hampton, who is a Democrat. When the Republicans controlled the State, teachers' certificates were worth only forty cents on the dollar, while under Democratic rule they are worth one hundred cents. The difference was due to the fact that the "Republicans deliberately stole the money intended for education and applied it to fast horses, gold watches, and diamond pins," and Mr. Hamilton thinks they would do so again if the Government were to trust them with the funds for educating the negro. He says the Democrats have done more toward educating the negro youth in two years than the Republicans did in ten, and it is time the negroes showed some recognition of Democratic services. The Republicans give the best offices to the white men and the leavings to the negroes. Mr. Hamilton asks if the Democrats could do worse than that, and says the negro has only two questions to consider: "First, What is best for the negro? second, What is best for the country?" As a final argument against its being "best for the negro" to stay in the Republican party, he cites the fact that there are "about 150 white Republicans in the State, and 130 of them hold Government offices." It is not strange that Mr. Hamilton should place the welfare of the negro before that of the country, and should look upon a political party merely as an office-distributing agency. He and his race have been taught that view by the noble army of Republican patriots who went South after the war to teach the freedman the duties and privileges of citizenship.

Secretary Chandler comes before the public in a new light. His merits as a politician have long been known. He adds to them now the attributes of a humorist and philosopher. He and the caucus system which he represents having been disastrously defeated in New Hampshire, he hails the result as "patience's perfect work," and assures the President that the "Republican party in New Hampshire is reunited, courageous, and invincible." If cheerfulness in the presence of adversity be a sign of greatness, Mr. Chandler is a great man The Senatorial contest which ended last week has been from beginning to end a rebuke to him and his school of politics. Any one who has followed it closely is aware of this. The full power of the party machinery had been devoted to the election of a Legislature which would reelect Mr. Rollins to the Senate. When he was chosen in 1876 the caucus system was so powerful that the mere issuing of orders for his election was sufficient to secure it. The same order was repeated when the Legislature came together two months ago, but it was not obeyed. Many of the Republican members refused to attend the caucus or to be bound by its choice. Although Mr. Rollins was able to secure a nomination from a majority of those who did attend, he was never able to command the votes of more than 127 of the 195 Republican members. His vote dropped steadily each day until he withdrew his name. As soon as the hopelessness of his case was apparent Secretary Chandler appeared upon the scene, "clothed," as one of our contemporaries eloquently remarked, "in the robes of a Cabinet officer," and offered himself as a candidate. His reception was more discouraging than that which had been given to Mr. Rollins. His highest vote at any time was only seventy-seven, and it dwindled steadily to only one on the final ballot. Mr. Pike's election would have been effected sooner had he not been hampered with a suspicion, aroused chiefly by Mr. Chandler's professions of friendship, that he was not entirely free from Machine control. When this suspicion was dispelled Mr. Pike was elected.

This blow to the caucus system is an important addition to a series which has swelled to encouraging length during the past two years. It began with the election of Senator Mitchell in Pennsylvania in the spring of 1881, when the Cameron machine received its first shock. Next came the famous contest in this State which ended in the retirement of Messrs. Conkling and Platt. In Minnesota, early in the present year, Mr. Windom received the regular caucus nomination, but could not command the votes of a majority of the Republican members, and was defeated. When the State Convention met subsequently, an effort was made to have a vote of censure passed upon the members who had defied the caucus, but the motion was defeated by a vote of 148 to 92, showing that the temper of the party was opposed to caucus dictation. In Michigan, also, Senator Ferry was defeated under precisely the same conditions, although it required eighty-one ballots to convince the caucus adherents that the independent element was too determined to be either driven into subjection or tired out. Taken together, these successful attempts to assert the right of independent judgment in party affairs are most encouraging. Their influence will be felt in many ways. They will make future revolts easier by showing the well-disposed but more timid members of the party that caucus dictation can be defied without injury to party standing. The men who revolted in New Hampshire, Michigan, Minnesota, Pennsylvania, and New York will not be "read out" of the party. That threat, which was the most powerful weapon of the bosses a few years ago, has been shorn of its terror and is not even used any longer. Secretary Chandler shows his philosophic penetration by recognizing this fact and hastening to claim that the party in New Hampshire has been "reunited" and made "invincible" by tactics which he and his school have regarded for years with feelings akin to horror. It has been suggested that these several revolts portend an abandonment of the caucus system in the choice of United States Senators, and this may prove to be the case. Whether there is a formal abandonment or not will not matter much, for the precedent is pretty well established of disregarding the caucus when it makes an objectionable choice. A caucus which is only obeyed when its work is worthy of approval is an entirely harmless institution.

The end of the pauper immigration "scare" has probably been reached. The official report of the Commissioners to the Treasury Department, instead of proving any baleful intent on the part of the British Government to unload their paupers upon our shores, shows that extraordinary care had been taken to have only those persons sent here who would be certain not to become a public burden. Out of the

hundreds and even thousands who have come, only a few families were returned as paupers, and the British officials had no reason to suspect that the promises of homes for these, which had been sent in letters from this side, were less genuine than in other cases. The wonder is that so few mistakes were made.

General Crook's report, in directness and absence of pretence, in practical wisdom and certainty of judgment based upon mastery of all the facts, resembles the now famous campaign which it describes. The difficulties of the recent operations hardly appear through the veil of General Crook's modest restraint, and his account of them must be read with some imagination. Probably it will even then be impossible for most readers to realize the nature of the country described as "the roughest imaginable," "very precipitous," or "extremely rugged." All physical difficulties, however, appear slight in comparison with General Crook's initial feat of courage and resolution in risking his reputation and life and the lives of his handful of troops upon his judgment of the fidelity of the Apache scouts.

The Scott liquor law in Ohio appears to be working satisfactorily both as a source of revenue and as a restriction upon the traffic. Returns from seventy of the eighty-eight counties in the State show that 8,412 saloons have paid taxes aggregating $1,494,200, and that 1,019 saloons have been closed through an inability to pay the taxes. In Cincinnati the proportion of saloons closed is 12 per cent., and the income from the others is so large that a reduction in the rate of taxation is considered to be possible.

The inconvenience of the telegraphic strike to the public has not been nearly so great as was expected. The Western Union is, in fact, greatly aided in meeting the demands upon it by the great diminution in these demands. If telegrams came in on it in the old way, the outcry against it would, doubtless, be very great, but they are not coming in in the old way, or anything like it. The consequence is that it is not only making a good show of being able to keep up with its business, but it is getting time to break in its new men to their work. The falling off in the number of messages offered, in consequence of the uncertainty as to speedy delivery, shows, among other things, how largely the telegraph has come to be used as a luxury. Fifteen or twenty years ago a telegram was to most people not only an expensive but an alarming thing. It was apt to throw a quiet family into consternation, and was opened too often with trembling fingers as the probable herald of death or misfortune. It has since become not only comparatively cheap, but, to people who are not compelled to count their cents, a favorite mode of communicating with their friends about all sorts of trifling matters. Many who dislike letter-writing make it do all the work of letter-writing, and more. They telegraph what they would like for dinner, what train they are coming on, a welcome or good-by to dear Hattie or Harry, or congratulations on a horse-race or a big fish. A large part of the summer telegraphing is of this description. Probably a third of the messages which fly about the country between June 1 and October 1 are mere luxuries. If they cannot be sent, it does nobody any particular harm, and can be dropped by most people as simply little episodes in idle holiday life. This the strikers probably did not foresee, and are likely to suffer for not foreseeing it.

No duellist or apologist of duelling has yet explained what was settled by the Elam-Beirne duel. That a duel is not a simple fight like fisticuffs, but a determination of controversy, its friends always assure us. When the late Elam-Beirne duel was proposed we therefore took it for granted that it was to decide whether Beirne was a liar and pretender, which Elam alleged, or Elam was a low fellow and a friend of mixed schools and marriages, which Beirne alleged. These gentlemen felt uncomfortable, each under one of these accusations, and the duel, we thought, was to relieve the innocent one and consign the other to infamy. From this point of view, the extraordinary efforts they made to get at each other, by travelling night and day in buggies through the mountains and forests, were quite comprehensible and even meritorious. The result was that Elam had a bullet lodged in his hinder parts, while Beirne went unscathed. We concluded, of course, that this convicted Elam of Beirne's charges. It was a very odd mode of proof, to be sure, but that was not our affair. It now looks, however, as if this was all a mistake; for Elam is back in Richmond, nearly cured of his wound, and has been received by his friends, and he himself has been talking as if the duel was not meant to decide anything at all, and was apparently fought in resisting an attempt of Beirne to convert him to Funder principles. He says, referring to it in a speech made in his office, that he "did not see why a man should not lay down his life for a political conviction as readily as for a religious belief." All those who have laid down their lives for a religious conviction died because they refused to change or repudiate their creed. In this controversy, however, there was not the slightest intimation from Beirne that he would shoot Elam in the hip if he did not become a Funder. So that the object of the duel is involved in more mystery than ever.

The demand of the Irish landlords for compensation in the shape of state loans for their losses through the Land Act comes almost simultaneously with the Tory proposal, last formulated by Lord George Hamilton, for the purchase of the soil of Ireland from the landlords, to be rented on long credits to the tenants. In either case nothing short of an advance of from $1,000,000,000 to $1,500,000,000 from the British Treasury would do any good, and the English taxpayer naturally stands aghast at this new phase of the Irish question. As recipients of state bounty the landlords are probably more meritorious, in the financial sense, than the tenantry, as they would probably repay their loans, or could be made to repay. Very few, however, are prepared to maintain that a general loan to all the Irish farmers would ever be repaid. An agitation in favor of repudiation would soon spring up, and, when once begun, would carry everything before it, and the Government would be powerless. It could not offer the island for sale, under the sheriff's hammer, and if it did would get no bids. The landlords have, however, a good claim on the English people, for nothing is more certain than that, if they had not had England at their back, to support them in their peculiar mode of managing their property, they would ages ago have come to terms with their tenantry, and the land question would never have been heard of. The Irish land system is really the creation of English law, and if it has not turned out well, the English people are fairly bound to pay some of the loss on it to their protégés.

The Bradlaugh affair continues to furnish food for popular excitement in England. He announced some time ago to the Speaker his intention of again trying to take his seat, and about the same time began an action against the Sergeant-at-Arms, to which the House has ordered the Sergeant-at-Arms to plead. Sir Stafford Northcote thereupon moved and carried a resolution providing for Mr. Bradlaugh's further removal from the House in case he should attempt to carry out his threat, Mr. Gladstone refusing to take any charge of the matter. Bradlaugh, however, is evidently not a man to be put down, and the popular temper, at least in the towns, seems to be rising behind him. An enormous meeting — estimated, doubtless wildly, at 30,000—was held in London on Monday, at which he was encouraged to engage in another trial of physical strength with the Sergeant-at-Arms and the policemen. Bradlaugh is not a very admirable person, but neither was Wilkes; but he bids fair, like Wilkes, to go down to history as the champion of popular rights, not against the Crown or the aristocracy, but against the House of Commons. What adds to the interest of the struggle is the fact that the line of demarcation in English politics has lately become more than ever before a social line, and the Bradlaugh contest is taking on more and more the character of a fight between the non-church-going working class and the well-to-do church-going middle class represented in the House of Commons.

The famous trial of the Jews at Nyiregyhaza, Hungary, for "ritual murder" of a Christian girl for the purpose of using her blood in the Passover ceremonies, has ended in a verdict of not guilty, and the discharge of the ten accused persons, the state being ordered to pay the costs of the trial. The latter provision is not less just than the verdict of acquittal, since the case is amply proved to be pure persecution for religion's sake, and it may possibly have the effect to stimulate those proceedings against the devisers of the savage and horrible invention which the Hungarian Government must find itself compelled by the public opinion of the world to undertake.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 1, to TUESDAY, August 7, 1883, inclusive.]

DOMESTIC.

THE striking telegraphers received their first payment from the striking fund on Wednesday, each being given enough to provide for present necessities. The Signal Service has been seriously interfered with by the strike, the midnight despatches from which morning "Indications" are usually made up having almost entirely failed. A storm prevailed east of the Mississippi and north of the Ohio on Thursday, still further interrupting telegraphic communication. On Saturday a bill of grievances, as if on behalf of the telegraph operators employed by the Delaware, Lackawanna and Western Railroad Company, was presented to its officers. The chief cause of complaint was that the operators were compelled to transact commercial business usually handled by the Western Union Telegraph Company. On Monday President Sloan replied, declining to accede to the requests. It was believed that the railroad operators would be ordered to quit work and that the strike would begin at noon, but the men, with few exceptions, continued at their keys throughout the day. On Monday night about sixty of the direct wires of the Western Union between New York and Boston were interrupted. The strikers denied that it had been done by their authority. On Tuesday the Western Union offered $1,000 reward for the conviction of each and every person interfering with their wires. A strike was expected during the day, on the Wabash system, of railroad operators, but the men continued at work. About two o'clock one-third of the railroad operators working on the Pittsburgh division of the Baltimore and Ohio quit work.

The cigarmakers' lockout was ended in this city on Thursday, by mutual concessions. Ten thousand five hundred men were out of work.

The failure was announced on Monday of Mr. Bradley Barlow, of St. Albans, Vt. The St. Albans Trust Company and the Vermont National Bank were obliged to suspend in consequence.

Charles H. Ward & Co., boot and shoe manufacturers, of Boston and Brockton, Mass., failed on Wednesday. Their liabilities are about $750,000. Charles W. Clement's shoe factory at Dover, N. H., was attached on Saturday. The liabilities are about $500,000.

The Lancaster (Pa.) Watch Company suspended on Wednesday, throwing 250 hands out of employment.

The total number of claims for rebate of tobacco taxes received at the United States Treasury Department to August 4 is about 35,000, aggregating $3,000,000. Ten of the smaller districts are still to be heard from. Their claims will, it is estimated, swell the total to $3,500,000.

During the month of July the decrease of the United States public debt was $7,900,590.

It is asserted that the Confederate bond movement in England is founded on the belief that $11,000,000 in European banks to the credit of the late Confederate Government, which was deposited for the payment of the coupons of July, 1865, can be collected on the presentation of those coupons.

The Hill Investigating Committee held its last session in Washington on Friday, prior to the preparation of a report which will probably not be ready until September 1.

For some time Mr. D. L. James, one of the heaviest Star-route contractors in the South, has been under suspicion. Charges were made that the names signed to his bonds were of persons unknown to the locality in which they were alleged to live. The matter was put in the hands of Detective Booth, of the Post-office force, and he soon obtained evidence that warranted him in charging James with the wholesale forgery of names and certificates to his bids and contracts, the sums running up into very high figures. Booth has placed the suspected man under arrest. James has contracts for $200,000 a year.

President Arthur formally opened the Louisville (Ky.) Exhibition on Wednesday. He made a short speech, and was received with cordiality, but not enthusiasm. He is now on his way to the Yellowstone Park.

The annual Convention of the Civil-Service Reform Association in session at the Channing Memorial Church, Newport, on Wednesday, listened to an address by Mr. George William Curtis. He gave a general review of the successes of civil-service reform during the last year, and, speaking of the attitude of President Arthur to the reform movement, said that "it will not be denied by fair men of every party that a President whose accession by means of a most tragical event was generally regarded as a serious misfortune, if not calamity, has not only allayed all apprehension of a gross misuse of the patronage of the Government, but by his pacific and temperate administration has gained the general approval of the country."

In the New Hampshire Senatorial contest on Wednesday Mr. Chandler received only 12 votes and Mr. Austin F. Pike 89. On Thursday Mr. Pike gained 8 votes and Mr. Chandler lost 6, on the first ballot of the day. On the third ballot of the day there was a bolt for Mr. Pike, and he received 181 of the 203 Republican votes cast. The Democratic candidate, Mr. H. Bingham, received 112 votes. Forty-three ballots were taken during the long contest. Mr. Pike is sixty-four years of age, and has been active in State politics. He was a member of the Forty-third Congress. His election pleases all Republican factions in the State.

The State Convention of Pennsylvania Democrats was held at Harrisburg on Wednesday. Robert Taggart was nominated for Auditor-General and Joseph Powell for State Treasurer. The platform favors a civil-service reform which will "redeem and purge the departments of the general Government from that corruption and fraud with which they have been permeated under Republican rule"; the tariff question is dodged in the same manner as in the Ohio resolution; the administration of Governor Pattison is unqualifiedly approved; the abolition of the entire internal-revenue system is advocated, and the Wharton Barker scheme for the distribution of a surplus revenue is denounced. The nominees of the Convention are considered to be strong men, and they were not dictated by any machine. The Convention, however, was in the hands of the friends of Governor Pattison, Mr. Randall manifesting his influence only in the tariff plank of the platform.

The Minnesota Democrats on Thursday nominated M. W. McNair for Governor. The platform denounces excessive revenue, declares for a tariff for revenue only, against sumptuary legislation and the submission of a prohibition amendment; favors river-improvement appropriations, with a provision giving the President power to veto items of bills; demands a revision of the patent laws, and denounces the Republican party. Mr. McNair, on Monday, refused the nomination, and another candidate will be chosen by the State Committee.

The Kentucky election on Monday resulted in the choice of Proctor Knott (Dem.) for Governor by a majority of about 30,000. The complexion of the Legislature is not changed. The popular vote was in favor of calling a State Constitutional Convention.

Thomas Hamilton, one of the most prominent negro politicians in South Carolina, has written a letter to the Charleston *News* roundly denouncing the Republican party, and insisting that the negro has rights which must be respected.

In Utah, the election on Monday resulted in a victory for the Mormons in each district of the Territory, with one exception. The majority of the Gentiles refrained from voting.

The Cincinnati *Commercial Gazette* has printed a table, giving returns from seventy of the eighty-eight counties in Ohio, showing the effect of the Scott law. One thousand and nineteen recognized drinking saloons in those counties have been closed; 6,530 paid the $200 tax, and 1,882 the $100 tax. The aggregate amount realized from this tax is $1,494,200. In Cincinnati it has made a reduction of taxation possible. The proportion of saloons which have been closed by the law is 12 per cent.

Further alleged Kuklux outrages are reported from Georgia. The stories tell of negroes terribly whipped, and in one case of great indignities to which a woman was subjected.

Eighteen of the trustees of Union College met in Schenectady on Thursday, and passed a resolution by a vote of 9 to 8 requesting the immediate resignation of President Potter. That gentleman was present, but his vote, which would have made a tie, was ruled out, because he was on trial and his salary was at stake. None of the ex-officio trustees who are State officers were present.

Mayor Edson, of this city, on Friday appointed S. Hastings Grant, his private secretary, to be Comptroller of the city, to succeed Allan Campbell, resigned. Mr. Grant is a skilled accountant, and is about fifty-five years of age. He was for many years Librarian of the Mercantile Library, and for nine years was Superintendent of the Produce Exchange. Mr. John Kelly expressed himself as satisfied with the appointment. On Saturday Mr. Grant took the oath of office and entered upon its duties.

FOREIGN.

It was announced in Paris on Friday that Tuduc, the King of Anam, died on July 20 and was succeeded by Phudac. A French council of war was held on July 27, and a river attack on Sontay was planned. The London *Times's* correspondent at Hong Kong says the negotiations between France and China in regard to Tonquin are at a standstill. The general opinion is that the aggressive policy assumed by M. Challemel-Lacour and the appointment of M. Tricou as French Minister to China were unfortunate circumstances, and that a peaceful solution of the difficulty is impossible. The Chinese consider that the French are determined upon the annexation of Anam, and that they desire to quarrel with China. On Saturday it was announced from Paris that M. Challemel-Lacour, French Minister of Foreign Affairs, had had an interview with the Marquis Tseng, the Chinese Ambassador, and that the former demanded the withdrawal of the Chinese troops from the Tonquin frontier.

The French have issued a proclamation to the Tonquinese promising to punish their oppressors and to destroy the city of Huê if necessary. A reconnoissance shows that Sontay is strongly fortified, guns commanding the river. A probably decisive blow will soon be struck, the troops attempting to capture the entire land force of Black Flags while the fleet attacks Huê.

An extra budget for 1884 was submitted on Wednesday to the French Chamber of Deputies by the Government. It provides for a loan at 3 per cent. interest of 300,000,000 francs, of which 121,000,000 francs are to be devoted to military and naval purposes.

The relations between England and France have been much modified in a pacific direction. M. Waddington has informed Lord Granville that the French advices from Tamatave state that Admiral Pierre had had no

such differences with Consul Pakenham as had been represented. The French Admiral, he said, did not interfere with the English Consulate. The relations between Commodore Johnstone and the French commander have always been courteous. If this statement of the case proves to be true, France will probably ask for some sort of an apology from England for the charges made against Admiral Pierre.

It is believed that M. de Lesseps has expressed his readiness to reopen negotiations with England in regard to the Suez Canal scheme, and that he is disposed to agree to more liberal terms. M. de Lesseps, however, denies that he is willing to make concessions.

The answer of President Grévy, of France, to the Pope's recent letter concerning religious affairs in France, has been received in Rome. The letter has resulted in accord on the principal question at issue. Instructions in accordance with the arrangement have been sent to the Papal Nuncio at Paris. The letter justifies the position taken by the French Government against the attacks of the clergy, and says that France has no intention of making war upon the Church.

The Comte de Chambord is convalescent.

It was rumored in Paris on Friday that a plot to restore the monarchy had been discovered. The newspaper *France* professed to give the details of the plot. It said that 25,000 muskets for a popular rising had been ordered, and that attempts had been made to tamper with the army. It also asserted that three conspirators had been arrested. These proved to be servants and small tradesmen, and the whole affair to be of little importance.

Pierre Auguste Cot, the French painter, died on Saturday. One of his most popular pictures, "Spring-Time," was exhibited at the French Salon in 1873.

King Alfonso and Queen Christina, of Spain, arrived at the royal palace of San Ildefonso, La Granja, on July 31. The King went to the frontier to meet his spouse. This fact is against the theory that the two had quarrelled.

A military rising took place at 1 o'clock Sunday morning in the Spanish province of Badajoz, on the Portuguese frontier. It was in the Republican interest. The garrison of the town, numbering 700 men, pronounced for a republic, the Constitution of 1869, and Ruiz Zorilla for President. Several regiments of Spanish soldiers were despatched on Monday to Badajoz to suppress the rising. Four hundred citizens joined the soldiery. It is believed that Zorilla planned the rising. General Blanco started from Madrid on Monday with a strong force. At seven o'clock on Monday evening it was officially announced in Madrid that the revolt was at an end. The insurgents fled to Portugal in a very undignified manner. It is said in some quarters that the outbreak was only a part of the programme of a gigantic stock-jobbing operation, conducted by a certain clique which has for a long time been making extraordinary efforts to destroy the improving credit of Spain.

The examination of O'Donnell for the murder of James Carey was resumed at Port Elizabeth, Africa, on Wednesday. The eldest son of Carey deposed that his father and O'Donnell had been on friendly terms throughout the voyage, and that they had often played cards. He also said that he found a check for £100 in his father's pocket after the shooting. Mrs. Carey deposed that she was in an adjoining room when her husband was shot, and that he ran toward her, saying, "Maggie, I am shot; O'Donnell has shot me." It was then that O'Donnell, replying to her question, said he had been sent to do it. On Friday O'Donnell was committed for trial on the charge of wilful murder. He will probably be tried at the Port Elizabeth Assizes in October. Irishmen in Kansas City, Mo., believe that O'Donnell is Capt. Thomas Phelan, once a resident of that city. A despatch from Cork asserts that Phelan is in that city. On the other hand, a Cornelius O'Donnell, of Chicago, claims to be a brother of the assassin.

The steamer *Pathan* has arrived at Melbourne, Australia, from Adelaide. Kavanagh, Joseph Hanlon, and Joseph Smith, informers in the trials of the Phœnix Park murderers, who were on board, were identified and prohibited from landing. Seven other persons on the *Pathan* were suspected of having been witnesses for the Government in those trials, but were not identified. It is asserted in Dublin that the informers were prevented from landing because a plot to murder them had been discovered. Earl Spencer, Lord-Lieutenant of Ireland, is much annoyed by the murder of Carey, and the prevention of Kavanagh from landing. He has, it is said, had angry correspondence with prominent officials on the subject.

The trial of O'Herlihy, Featherstone, Deasy, Flannigan, and Dalton, who are charged with having in their possession explosives for the destruction of buildings and lives, was begun in Liverpool on Tuesday. All the prisoners pleaded not guilty to the charge.

James McDermott was arrested in Liverpool on Monday on his arrival from America, and was remanded to jail on a charge of being engaged in a conspiracy to murder public officials. A warrant for his arrest was issued in Cork, where he had been seen in company with O'Herlihy. Some correspondence with O'Donovan Rossa and James Stephens was found upon the prisoner, who said he was an American citizen, and would call upon the American Government to protect him. It is supposed in this country that McDermott is the man who was shot in this city on July 21, for supposed treachery to the Invincibles.

A box of dynamite to which a lighted fuse was attached was discovered on Friday in a large linen factory at Cupar-Fife, Scotland. The fuse was extinguished before it reached the explosive. The attempt to blow up the factory is attributed to Fenianism.

A statement signed by Lords Dunraven, Gough, and other landlords in Ireland has been sent to Mr. Gladstone, pointing out the losses of rent and the depreciation in the value of land that have taken place in consequence of the passage of the Land Act, and suggesting state aid in the shape of a loan for the relief of landowners.

Mr. Parnell submitted to his Parliamentary colleagues for their judgment a pressing invitation which he had received from America to visit that country. His colleagues generally are of the opinion that he will be urgently needed in Ireland. He has accordingly telegraphed that he cannot come until after the general elections in Great Britain and Ireland.

The Irish National League has decided to call a series of conventions in all the counties of Ireland, with a view to choosing a Central Executive Council. Arrangements are being made to resume the propaganda for securing an Irish Parliament, a peasant proprietary, and the adoption of other measures desired by the Irish.

Motions were defeated in the House of Commons on Monday night directed against Mr. Gladstone's policy in the Transvaal and Zululand.

The Australian Agents-General in London have presented a long statement to Lord Derby, Minister of the Colonies, relative to the reasons of the Australians for desiring the annexation of, or the establishment of a protectorate over, the Western Pacific islands and a portion of New Guinea. They point out the anarchy existing there and the danger of the establishment of French penal settlements. The Agents-General give direct assurance that the colonies will recognize the necessity of contributing to the cost of the policy they ask England to pursue.

Earl Granville, British Secretary of State for Foreign Affairs, has instructed the British Minister to Morocco to make an earnest appeal to the Sultan of Morocco to consider whether it is not time to place his empire on a level with other civilized Powers by abolishing slavery.

In the House of Commons on Thursday afternoon, Mr. Evelyn Ashley, Under Colonial Secretary, said that the papers relative to the indemnity for the violence done to American fishermen at Fortune Bay were being prepared. The Government had received no answer from the United States concerning the proposition for joint measures to prevent a recurrence of similar troubles. Mr. Gladstone said he hoped the session of Parliament would be brought to a close by August 23.

The Agricultural Holdings Bill passed its third reading in the House of Commons on Wednesday.

A great demonstration took place on Monday in Trafalgar Square, London, the object of which was to protest against the exclusion of Mr. Bradlaugh from the House of Commons. 30,000 people were present. The meeting passed a resolution favoring resistance by Mr. Bradlaugh of the mandate of the House of Commons.

A movement is on foot in London for the erection of a memorial to, and the raising of a fund for the assistance of the family of, Captain Webb, who lost his life while endeavoring to swim the rapids below Niagara Falls.

Another severe shock of earthquake was felt on the island of Ischia on Wednesday evening, which put a stop to the work of searching the ruins for victims. King Humbert of Italy visited the scene of the earthquake on Wednesday, and directed the distribution of money and provisions to those in need.

Emperor William has directed that the 400th birthday of Martin Luther be observed by all the Protestant schools of Germany. The students of the universities will celebrate at Erfurt, on August 8, the entry of Luther into that town.

The condition of Prince Bismarck's health requires his complete repose.

The officials of the German universities are preparing severe measures against duelling.

The total number of deaths from cholera in Egypt up to August 1 were, according to the London *Daily News*, 16,000. There were seven deaths in Alexandria on Monday. Orders have been issued to thoroughly disinfect cargoes of rags arriving at British ports from Egypt.

An alleged Moabite manuscript of Deuteronomy on leather leaves, copied 700 years B. C., has turned up, and is said to have satisfied eminent Hebraist experts. The owner, Shapira, a dealer of Jerusalem, notorious some years ago in connection with forged potteries, asks the British Museum $5,000,000 for the manuscript.

The trial of the ten Jews at Nyiregyhaza, Hungary, who were charged with murdering Esther Solymosi, a Christian girl, in the synagogue at Tisza Eslar, in order to procure her blood to mix in the Passover bread, was concluded on Friday. A verdict of not guilty was returned. Great excitement ensued in Hungary over the result. A mob of anti-Semites gathered at Pressburg, and were so hostile against the Jews that the military were ordered out to disperse them.

The Jewish residents of Ekaterinoslav, Russia, were attacked by a mob on August 2. The soldiery had to be called out to disperse the rioters, about 100 of whom were killed or wounded. The trouble was caused by a Jew insulting a peasant woman. The Town Council of Ekaterinoslav has resolved to give the Jews 5,000 rubles to compensate them for their losses, and to provide shelter for those who were rendered homeless.

THE LAST STAGE IN THE TELEGRAPHIC STRIKE.

THE telegraphers' strike has apparently entered on its last stage. The call for aid from the railroad operators is, even if responded to, a confession of failure. The railroad operators are not employees of the telegraph companies. They help the Western Union or other companies to transact their business, it is true, but so do the employees of the wire manufacturers and of the acid manufacturers, and so, for that matter, do the tailors, butchers, and grocers who supply the wants of the superintendents and directors. Once the strikers begin to seek aid outside their own body, they not only admit that the Company is too strong for them, but they enter on a path in which there is no natural stopping-place short of calling on the whole community to boycott everybody connected with the telegraphic corporations. Moreover, there is not the least likelihood that even if the railroad operators strike, it will produce any effect beyond some temporary inconvenience to railroad managers, and the loss of their places by a number of deluded young men. The trains will be run under the rules, which on every line provide, among the other contingencies, for the suspension of telegraphic communication between the stations. This may mean slower time or fewer trains, but it will probably mean simply greater caution, until the places of the strikers can be filled. Even those journals which did most to encourage the strikers by predictions of success, and by thoroughgoing justification of their course, are now beginning to tell them that the attack on the railroads is a mistake and can do them no good. As this attack is, however, their last card, this is simply a warning that the game is up.

It apparently never had any chance of success, first and foremost because the telegraphic art is not such a mystery as the operators, with not unnatural pride in their calling, seem to have thought it. Their own experience ought to have taught them better. They are largely young fellows who began as boys in telegraph offices and learned to use the instruments without any special or laborious training. In fact, it appears that anybody can become an expert telegrapher with from two to three months' practice, and can learn to telegraph slowly in a shorter period. A trade so easily acquired is a very dangerous trade to strike in, particularly when the greater proportion of the strikers must go without the stimulus of numbers. It is only in the large cities that the telegraphic strikers enjoy the company and support of a crowd of their fellows. The majority of them probably have to strike alone, or in twos or threes, and solitary strikers are not apt to have much heart or hope.

The principal reliance of the strikers, clearly, was on the sympathy of the public and the unpopularity of the Company. From the combination of these two influences they doubtless expected an outpouring of indignation, and probably numerous suits, with accompanying mandamuses and the like, before which the directors would have to cower. We have already explained why these hopes were futile. No suits could be brought to bear on the Company in time to affect the existing dispute, nor would any court decide how many offices the Company should keep open. It probably might content itself with one in each large town, for anything the judges would have to say in the matter. And then popular sympathy is a dreadfully poor reliance for a man who wants money by a certain day. What the public has done in the present case is simply to cut down its telegraphing in a way which has greatly helped the companies in meeting the crisis. The strikers were probably deceived on this point by the newspaper fire against Jay Gould, Cyrus W. Field, and the other "monopolists."

There is one other point on which the strikers have undoubtedly been led astray. They have been mistaken in supposing that the business men of the country were really on their side. No disgust with corporate mismanagement has ever, or probably will ever, bring the business community to believe that strikes of the employees, ordered or superintended by trades unions, are a proper cure for it. Bad as our corporations may be, no substitute for them in conducting our great railroad and telegraphic interests has yet been discovered. We are and must remain dependent on them for an indefinite period for the means of carrying on most of our trade and commerce and manufactures. Nearly all the trained talent of the country in the field of transportation is in their service. Their defects must therefore be amended by law, after careful investigation. Very few responsible people in any part of the country think they can be amended by promoting strikes among their employees. Moreover, there is among business men a vast amount of secret but thoroughgoing sympathy with the refusal of the Western Union to treat with "the Brotherhood," for the simple reason that they feel that no employer can manage an army of officials such as our corporations employ, if they have two masters to serve, or if they can be withdrawn from duty any day by blowing a whistle on the order of a committee of outsiders. Discipline is the life of all large organizations, and divided authority is fatal to discipline. The strike, under such promptings, of masses of men such as the railroads and telegraph companies employ is a tremendous affair, as that of 1877 showed. It almost amounts to a social convulsion, and everybody who buys and sells, gives and takes credit, and has money sunk in goods or buildings, shrinks from everything likely either to bring such disturbances about or to foster a state of preparation for them. In saying all this we are not discussing what should be done to protect the employees of corporations against maltreatment. We are simply explaining why strikes against corporations do not succeed.

HONOR IN THE ARMY.

THE army officers have not been cutting a very good figure of late. Nearly every week brings news of a fraud or defalcation among them. After having for a century stood exceptionally high in character, they have apparently begun to embezzle and cheat and lie just like any other class in the community. Drunkenness used to be their special vice, which people were inclined to excuse in consideration of the vacuity of their lives. They were supposed to drink because they had so little else to do. Now they are adding to it the vices of our busiest men. The last case, that of a Lieutenant Robertson, who has been travelling about the country getting duplicate pay accounts cashed by persons who retained the old-fashioned confidence in an army officer's veracity and honesty, is peculiarly painful. He has fallen, it appears, from a greater height than most of the others, because he was recently detailed to examine the workings of the French Artillery School, and in his report made a comparison between the *morale* of the French officers and that of his own comrades which was very unflattering to the latter. His fall, consequently, is the fall of a preacher, which is always more impressive than that of an ordinary sinner. It seems, it is now said, as if, when he was speaking of the moral defects of the American army, he was speaking from self-knowledge.

There is, we fear, little doubt that the moral decline of the army will be welcome news to a certain kind of politicians. The class in which Brady and Dorsey got their training has long been wearied and disgusted by the arguments in favor of civil-service reform drawn from the high character of the officers of the military service. They were fairly sick of hearing them cited as examples of what fixity of tenure will do in raising the tone and maintaining the integrity of public servants. They are consequently secretly rejoiced to find that military men swindle and peculate as freely as anybody. We fear, too, a great many people who do not belong to the Dorsey and Brady class will begin to conclude that there was some mistake about the nature of military honor, and about the value of the example which officers of the regular army used to be thought to show to the youth of the country in their relations both to the Government and to their fellow-citizens, and to doubt whether military training and discipline are not snares rather than helps to morality.

There is, however, a lesson of considerable importance in these scandals both for civil-service reformers and every other kind of reformers, which they will do well to take to heart. The good character of army officers, either in our service or in any other, is not due to any peculiar excellence in the men themselves. They are not selected for the service on account of their moral tone. Youths do not seek the service because their consciences are unusually tender, or their moral perceptions unusually keen. Our soldiers, like those of other nations, represent the ordinary citizen in his ordinary mood. Whatever moral elevation the officer receives in the army comes from the fact, not that more is expected from him than from the civilian, but that if he fails to come up to the moral standard of the community in which he lives, the punishment is quick and remorseless. Every man of decent education is *expected* to behave like "an officer and a gentleman," but when he disappoints people he either does not suffer for it at all, or suffers but slightly.

His default is not investigated, and even if his guilt be established, the worst he has to fear is getting the cold shoulder from a few of his more rigid acquaintances.

In the army, on the other hand, a man who does not behave like an officer and gentleman is tried for it, and if convicted, is publicly stigmatized or ruined by being driven out of his profession. It is this quick and remorseless operation of condemning opinion which has made the military sense of honor so nice, and which everywhere gives military men whatever extraordinary confidence they enjoy, and not any natural superiority. It is not the uniform or the character of their calling (which is in many ways full of great moral temptation), it is the discipline—the steady and unfaltering enforcement of certain rules of conduct by punishment of tremendous severity. Without this an army—a collection of men kept trained in readiness to kill people—would be an unmitigated curse to any community.

Now, the honest truth is, that we have apparently been for some time past trying to maintain such an army here. "Influence" has now been at work for some years at Washington to procure not only the remission of the severer penalties, but full restoration to the service of officers convicted of all sorts of disgraceful offences. There are now in the army, bearing United States commissions, through the scandalous if not wicked leniency of the Executive, worked on by "influence," men convicted of all sorts of crimes, from habitual drunkenness up to fraud and embezzlement. Pardons are granted for disgraceful conduct with a frequency which must make discipline almost impossible; and to judge of their power of mischief we must remember that there is no service in the world in which the character of the officers is of more importance than in ours, owing to the large number of small and remote commands into which the army is broken up, and the isolated and monotonous life led by most of these detachments, and the powerful temptations to social and moral downfall with which such a life abounds.

Apart altogether from the effect on the army, however, this laxity deserves attention as an illustration of the dangers which still beset civil-service reform. The provisions made by law for the discipline of the army could hardly be improved as regards completeness and efficacy. But the discretion allowed to the administrative power in regard to their execution is so much abused that they have all the consequences of very bad legislation. The civil service is now, and probably will continue to be for some time, in much the same position. The reformatory legislation is, as far as it goes, excellent, but the amount of good it will do depends largely on the use which the executive authority makes of the discretion which it necessarily retains in putting this legislation in force. This use, therefore, will need for a long while to be zealously watched.

BOARDERS' RIGHTS ON THE SEASHORE.

We print elsewhere a letter which gives in strong terms an illustration of the conflict between the Boarder and the Cottager at our leading summer resorts, and especially those of the seaside. What our correspondent says confirms very fully the accounts we have given twice already in these columns of the steady progress made by the Cottager in driving the Boarder away from some of the most attractive places, both in the hills and on the seaboard. Among these Bar Harbor occupies a leading position. It was for fully fifteen years after its discovery frequented exclusively by a very high order of Boarders, and probably has been the scene of more plain living and high thinking than any other summer spot on the seacoast. It was, in fact, remarkable at one time for an almost unhealthy intellectual stimulation through an exclusively fish diet. But the purity of the air and the grandeur of the scenery brought a yearly increasing tide of visitors from about 1860 onward. These visitors were, until about five years ago, almost exclusively Boarders, and the development of the place as a summer resort was prodigious. The little houses of the original half farmers, half fishermen, who welcomed, or rather did not welcome, the first explorers, grew rapidly into little boarding-houses, then into big boarding-houses, then into hotels with registers. Then the hotels grew larger and larger, and the callings of the steamer more frequent, until the place became famous and crowded.

All this while, however, the hold of the Boarder on it remained unshaken. He was monarch of all he surveyed. No one on the island, except the landlords, held his head higher. There was one distinction between Boarders, but it was not one to wound any body's self-love: some were "Mealers," or persons eating in the hotel where they lodged; and others were "Haul Mealers," or persons who were collected and brought to their food in wagons. But this classification produced no heart-burning. The Mealer loved and respected the Haul Mealer, or wished him in Jericho, and the Haul Mealer in like manner the Mealer, on general grounds, like other persons with whom he came in contact, without any reference to his place of abode. All were covered by the grand old name of Boarder, and that was enough. A happier, easier, freer, and more curiously dressed summer community than Bar Harbor in those early days was not to be found on our coast.

We do not know exactly when the Cottager first made his appearance on those rugged shores, but it is certain that his approaches were more insidious than they have ever been anywhere. He did not proclaim himself all at once. The first cottages were very plain structures, which he cunningly spoke of as "shanties" or "log huts," in which he simply lodged, and went to the hotels or neighboring farm-houses for his food in the simple and unpretending character of a Haul Mealer. For a good while, therefore, he excited neither suspicion nor alarm, and the hotel-keepers welcomed him heartily, and all went on smoothly. Gradually, however, he threw off all disguise, bought land at high prices, and began unblushingly to erect "marine villas" on it, with everything that the name implies. He has now got possession of all the desirable sites from the Ovens down to Great Head, and has surrounded himself with all the luxuries, just as at Newport. The consequence is, as our correspondent points out, although the sea and sky, and the mountains and the rocks retain all their charm, the Boarder is no longer happy. He finds himself relegated to a secondary position. He is abashed when on foot or in his humble buckboard he meets the haughty Cottager in his dog-cart or victoria. He has neither dog nor horse, while the Cottager has both. He was once proud of staying at Rodick's or Lynam's; now he begins to be ashamed of it. He finds that the Cottagers, who are the permanent residents, have a society of their own, in which he is either not welcome or is a mere outsider. He finds that the very name of Boarder, which he once wore like a lily, has become a term of inferiority. Worse than all, he finds himself confounded with a still lower class, known at Bar Harbor as "the Tourist"—elsewhere called the Excursionist—who comes by the hundred on the steamers in linen dusters, and is compelled by force of circumstances to "do" Mount Desert in twenty-four hours. He therefore enters on his task without shame or scruple, roams over the Cottager's lawn, stares into his windows, breaks his fences, and sometimes asks him for a free lunch. The Boarder, of course, looks down on this man, but when both are on the road or on the piazza of the hotel, how are they to be distinguished? They are not, and cannot be.

The worst of it all is, however, that the Boarder finds that the Cottager has enclosed some of his favorite walks. He can no longer get to them without trespassing or intruding. He can only look wistfully from the dusty highroad at the spots on which he probably once "rocked" with the girl who is now his wife, or chopped logic with professional or clerical friends, whom "the growth of the place" has long ago driven to fresh fields and pastures new. There is something very interesting and touching about these old Mount Deserters of the first period, between 1860 and 1870, who fled even before the enlargement of the hotels, and to whom cottages at Bar Harbor are almost unthinkable. One finds them in undeveloped summer resorts in out-of-the-way places along the American coast, often on the Alps or in Norway, or on the Scotch lakes, still tender, and simple, and unassuming, and cheery, older of course and generally stouter, but with the memories of the mountains, and the rocks, and the islands, of the poor food, "which made no difference, because the air was fine," still as fresh as ever, but without a particle of bitterness. They wander much, but wander as they may they find no summer resorts which can have for them the charm of Frenchman's Bay or Newport Mountain, and no vehicle which touches so many chords in their hearts as the primeval buckboard, in the days when it could only be hired as a great favor, and the driver was unwilling to wait for you if you fell off.

It is not wonderful that under these circumstances the Boarders at Mount Desert should be diminishing in numbers, as our correspondent says they are, and that the hotel-keepers should be becoming seriously alarmed, and should be regretting that they sold so much land to the Cottagers. We presume there can be little doubt that Bar Harbor and every other

place of the kind are going the way of Newport. There the Boarder was once preëminent and happy; now the hotels find it difficult to pay expenses, so completely has what is called "cottage life" taken possession of the place. The future at all such places, in truth, belongs to the Cottager, and it is really useless to resist him. His march along the American coast is nearly as resistless as that of the hordes who issued from the plains of Scythia to overthrow the Roman Empire. He moves on all the "choice sites" without haste, without rest, with the calm and remorselessness of the man who knows that the morrow belongs to him. He has two tremendous forces at his back, against which no Boarder can stand up. One is the growing passion, or fashion, if any one likes to call it so, of Americans to live in their own houses both summer and winter. This is rapidly taking possession of all classes, from the New England mechanic, who puts up his shanty or tent on the seashore, to the millionaire who builds his hundred-thousand-dollar villa on his thirty-thousand-dollar lot. Everybody who can seeks to be at home all the year round, let the home be never so small or humble, and the life in it never so rough. This is a change in the national manners which nobody can regret, but it is a change from which the Boarder must suffer, and which must cost him much wandering and many tears. The other is the spread of the love of the seashore among the vast population of the Mississippi Valley, whose wealth is becoming great, and for whom long railroad journeys have no terrors, and who are likely now to send their thousands every year to compete with the "money kings" of the East for the best villa sites along the coast. And be it remembered that although our population doubles every twenty-five years, our rocky Atlantic shore, which is what all most love and seek—the sand is tame and dreary in comparison—remains a fixed quantity. It only extends from New York to Eastport, Me., and it only contains a limited number of building lots. These are now being rapidly bought up and built on, or held on speculation, and in some places, where land only brought ten dollars an acre fifteen years ago, are held at monstrous prices.

To fight against these tendencies is useless. The wise Boarder will not do so, nor waste his time in bewailing his fate. It is absurd for him to expect that long stretches of delightful shore will be left wild and uninhabited and unimproved, for him to walk over for three or four weeks every summer. Not even the Henry George régime would oust the Cottager, for under it he would simply rent what he now owns; a Cottager he would still remain. The best solution of the Boarder's trouble about the seashore, to which we believe he has a common-law right of access, has been found at Newport, where the resident proprietors have provided a pretty and commodious walk along the cliffs. This will doubtless have to be done at Bar Harbor, but this is probably all that can be done. Finally, the Boarder must remember that though the Cottager, like woman, when he is bad is very bad, when he is good is delightful. Nothing the American summer has to show can surpass a good Cottager, and we rejoice to know that the number of good Cottagers every year grows larger and larger. At his best, though he may be stern in the assertion of his rights of property, there is no simpler, sweeter, honester gentleman than he, and the moral earnestness with the want of which the more austere Boarder has been apt to reproach him, grows very rapidly after he gets his lawn made and his place in order.

A FRENCHMAN ON OUR ENGLISH DRAMA.

WHOEVER has looked over the volumes of plays published formerly by Lacy and now by French (the series is called "The Acting Edition") may well doubt if there is any modern English drama. M. Léo Quesnel, writing in the *Revue Critique*, is more hopeful. He does, indeed, utterly and most justly reject the claims of Burnand and Byron and their like to any standing among dramatic authors. To begin with, their pieces are all borrowed. It may be worth while to reproduce here the list of imitations which he gives, though it could be enlarged tenfold:

"Reade copies, under the title of 'Drink,' Zola's 'L'Assommoir'; Sydney Grundy gives, in 'Mammon,' 'The Snowball,' and 'In Honor Bound,' imitations of 'Montjoye,' 'Oscar,' and 'Une Chaîne'; Merivale takes Ponsard's 'Lion Amoureux' and calls it 'A Son of the Soil'; of the 'Voyage de M. Perrichon' he makes 'Peacock's Holiday'; Labiche's 'Moi' becomes simply 'Us' under the pen of Burnand; Albery, the great adapter, uses 'Les Dominos Roses' under the same name, 'Pink Dominos,' and a dozen others with a change of title. 'Les Bourgeois de Pont-d'Arcy' and 'Les Fourchambault' are called now 'Crisis' and 'Duty.' As to Sims and Burnand, their tone, manner, everything, is drawn from our minor stage, and, except that the words are English instead of French, one might believe one's self at the Palais-Royal."

But this is not all; they not merely borrow, they spoil. French dramatic writers have a moral end always in view—they try to resolve some social problem. (Have we not read Dumas's prefaces?) Even Zola has his moral thesis. The English seek only to amuse. They have partly found and partly made a public that does not want to think—that wants little more than to digest its dinner comfortably. To satisfy this public they serve French plots, reduced to English standards of decency, and garnished with a profusion of puns. There are farces in both capitals, but what earns success in Paris before the best audiences is a real comedy, full of true humor and refined wit; in London the reward of long runs and seats crowded with rich people is given to compounds of cheap sentiment and verbal wit, destitute of any serious aim, and not even refined in style. Fortunately, Messrs. Byron and Burnand are not the only playwrights. Theyre Smith, Sydney Grundy, Merivale, and Gilbert receive more praise from M. Quesnel. Of the first he names only "My Uncle's Will"; the second he calls a true *littérateur;* but Merivale, though he has made a concession to the ruling taste of the public in adaptations from Labiche, is credited with real literary merit in such character pieces as "Alone," "The White Pilgrim," "All for Her," "Forget Me Not," "The Cynic" (of which the leading idea comes from Goethe's 'Faust'). Merivale has lyric moments, a touch of irony; he is not afraid of passion; he is, apparently, in M. Quesnel's opinion, a writer of greater power than the much more popular Gilbert. Yet M. Quesnel does not decry Gilbert, though it is noteworthy that his acquaintance with him is not through the stage. He does not allude to those of Gilbert's texts by which he is best known in this country—"Engaged," "The Sorcerer," "Pinafore," "The Pirates of Penzance," "Patience," and "Iolanthe"—but comments only on those which are contained in the first-published volume, "Pygmalion and Galatea," "The Palace of Truth," "The Princess." His merit he recognizes, yet thinks that both in psychology and style there is a lack of depth. M. Quesnel points out, very justly, that in "Galatea" Gilbert fails in tracing the gradual development of human intelligence disengaging itself from the trammels of matter.

The truth is, however, that Gilbert had to deal there with an almost insuperable psychological difficulty. A human soul can be imagined to be created in an instant with all the instincts of a person born of parents, and all the knowledge which would belong to a woman who had naturally grown up to that age; or it can be supposed to come into existence a mere tablet, with capacities only, and with neither knowledge nor any of the results of heredity. Either of these imaginings is a marvel, the first far the greater miracle; but neither is suited for a play. With the first there would be no development—the statue warmed to life would have no greater interest than any ordinary person. The dramatist was between a Scylla of improbability and a Charybdis of dramatic impossibilities. His heroine must know something in order to understand anything that was said to her; and if she spoke at all, every word implied a knowledge which she in the marble never could have acquired. Gilbert was, therefore, driven to adopt an entirely illogical middle course. He gave his statue some feminine instincts that could only have been inherited from a long line of mothers, and a great deal of knowledge that could only have come to her from living; and yet, to produce that incongruity which is the soul of humor, he represents her as ignorant of the commonest things. The result is charming when one first sees the play, but on reflection the inconsistency appears; one asks why, if she knew so much, she should not know more. *Miranda*, carefully brought up on a desert island, is delightful in her naïveté, and yet natural; but why should a piece of marble turn into a *Miranda* more than into an *Aspasia?* M. Quesnel reproaches Gilbert with not properly tracing *Galatea's* mental growth; he does not see the enormous difficulty of compressing the work of centuries into an hour or two.

A third class of dramatists is recognized by M. Quesnel—those whose works are not suited to and often are not written for the stage—Tennyson, Browning, Swinburne; and the greatest of these is Swinburne. His "Chastelard," "Bothwell," and "Mary Stuart" "form a trilogy of which the nineteenth century may well be proud"—a series of three plays published at long intervals, in which the age of the hero and the character of the feelings depicted correspond with the respective ages of the author, beginning with the stormy passions of youth, following with the calm and sustained force of the mature man, and ending with the deep passions which survive the experience of life. But even this magnificent work and the closet plays of his two compeers will not make a national drama, such as England had in the Elizabethan age. France alone in our day can boast a national stage.

THE SUEZ CANAL QUESTION.

THE ENGLISH VIEW.

LONDON, July 21, 1883.

THE negotiations of the Ministry with M. de Lesseps for the construction of a second Suez Canal are still uppermost in the public mind. The newspapers contain every morning reports of meetings of chambers of commerce, at which

the terms of the provisional agreement are discussed, and every evening Government is assailed by a storm of questions in Parliament, most of which are, of course, not so much requests for information as controversial strokes, intended to hit some weak point in the Ministerial armor. Public sentiment has already passed through two or three phases, and may have others still to pass through before one can say where it will seem to rest. Meantime several points have come out pretty clearly, and the discussion, which was at first vague and random, now turns not so much on the details of the agreement as on the legal and political situation, the claims of the Suez Canal Company, and the possibility of inducing or forcing them into stipulations more favorable to the interests of England.

It is generally admitted, even by the political adherents of the Government, that it has made some mistakes in its conduct of the affair. In the first place, there was a want of judgment in the suddenness with which the provisional agreement was sprung upon Parliament and the country. Public opinion, except in shipping circles, had not been greatly occupied with the question, and few people had examined it sufficiently to understand what were the difficulties in the way of a new arrangement. The strength, whether apparent or real, of the position of the company had not been realized, and men, therefore, did not suspect that M. de Lesseps was holding so firm an attitude and cared so little to make concessions to us. If the Ministry, when they stated the terms of the agreement, had also stated something of the position, explained their view of the situation and the reasons which had induced them to believe that the arrangements they propose were as good as any that could be got, and on the whole a great gain to British commerce, these arrangements would have been more favorably considered. By laying them nakedly and without any recommendatory words before Parliament, they allowed hostile criticism to have the first word, and when they made their defence two days later, through the mouth of Mr. Childers, a strong prepossession had already been created against the scheme. It is urged on their behalf that they did not foresee, and could not have foreseen, the disappointment of the public, but to this it is answered that they ought to have privately consulted persons who could represent or gauge the ideas of the mercantile community, and who would probably have warned them that defence and explanation were needed.

Then, besides, they are understood not to have even apprised their friends in the press of the nature of the scheme, and indicated to them what line ought to be taken in recommending its acceptance. It often makes a great difference who has the first word. If the organs of Liberal opinion had received hints as to the considerations which had determined the British negotiations, and which ought therefore to tell upon the public, they might have come out next morning with telling arguments in its favor, and prevented hostile critics from seeming to have it all their own way for three days. These are, however, minor matters. The heavier charge which is laid at the door of the Government is, that it ought not to have so directly and completely admitted the legal impregnability of the company's position. When in the course of the discussions it yielded to their claim to have an exclusive right to canal communication across the Isthmus, and still more when in publicly defending its action it announced that the law officers had given their opinion in favor of the company's exclusive right, and that it had proceeded upon the view that this right was unquestionable, it surrendered itself into the company's hands and enabled them to exact any terms they chose. It virtually, so its enemies insist, put itself and England out of court, creating insuperable difficulties in the way of such future negotiations as we may desire to take if these fall through.

By answering that it was bound in honor to proceed on what it believed to be the true legal view of the case, and that it was bound by constitutional usage to adopt and rely on the opinions of its law officers, the Government has raised the further question whether the law officers were right. Their opinion, backed as it is by the authority of so eminent a lawyer as the present Lord Chancellor (better known to American lawyers as Sir Roundell Palmer), is no doubt entitled to much respect. However, two other opinions of eminent lawyers have been obtained and published: those of Sir Hardinge Giffard, Solicitor-General under Lord Beaconsfield, and of Mr. Horace Davey, Q. C., now the most conspicuous practitioner at the Equity bar. These two high authorities, while not agreeing altogether with one another, differ from the law officers; and although the first impression of the case may be that the words "pouvoir exclusif" in the Khedive's concession, on which the company rely, do in fact give it a monopoly (if one may use that term) of water communication across the Isthmus of Suez, still there are other provisions in the documents founding the company, and other facts affecting the whole transaction, which make it very doubtful whether such a monopoly as the company claim would be recognized by the courts of most European countries as legally vested in them. This is no place for discussing the question. It is enough to remark that professional opinion in England is on the whole opposed to the law officers, though of course something may be set down to national feeling, and to the fact that the English bar is mostly Conservative in its politics.

Admitting, however, that much may be said to impugn the company's claim to a monopoly, people are beginning to feel that the matter has a moral and political as well as a purely legal side. Even if there were a court which had authority to decide the question, and that court were to pronounce against M. de Lesseps, it might not be fair or prudent to disregard him and set to work to construct, upon a new Egyptian concession, a rival canal. He has conferred immense benefits on the world by his energy and perseverance. His company has grown up in the expectation of exclusive possession of the Isthmus traffic, and has only lately entered into the large profits which that traffic now yields. If it be found that the company's pretensions cannot be reconciled with the commercial necessities of the world, ought not the company at least to receive ample compensation for the loss of its monopoly? The legal question is at any rate sufficiently doubtful to give it a fair claim to compensation, even if a judicial decision were to be given against it. The awkwardness and even danger of the situation lies in this, that the Egyptian Government, by whom both the legal question and the further question of compensation ought to be settled, is in the eyes of Europe merely the creature of England. Although we may try to leave it to itself and profess to respect its independence, it is virtually at our mercy; and whatever it does will be ascribed to our pressure. Especially will this be the view taken by the French, who are passionately jealous and suspicious with regard to Egypt, from which they think we have ousted them. Although France as a state has nothing to do with M. de Lesseps and his company, except in so far as a government is entitled to demand that high-handed injustice shall not be inflicted on its subjects, still French opinion identifies the company with the nation, and would complain of any measure, however just and even liberal to private pecuniary claims, which would remove the Isthmus trade from the control of a company domiciled in France. Hence, whatever the Egyptian Government might do would be charged on us, and we should be accused of acting through it as judges in our own cause.

It cannot be denied that much of the heated language which English speakers and writers have been using in condemning the provisional agreement springs from the notion that Egypt is now our property. People say that we have conquered it, that we have set up the Khedive, that our troops hold the country, and ask whether we have done all that only to see ourselves flouted by a French company and our shipowners fleeced by exorbitant tolls and dues. They forget that we went to and still remain in Egypt on totally different grounds, and hint that it is only the timidity of the Government which prevents our practical control from being openly asserted as equivalent to sovereignty. This unwise talk, and the tone of Chauvinism, or "Jingoism," as it used to be called, which pervades many of the assaults on the Government proposal, have provoked a reaction in favor of the Government and the more conscientious views they put forward.

The same result is following from the hastiness of the Tory leaders in seizing on the affair as a means of damaging, or upsetting, the Ministry. They have been pressing Mr. Gladstone to fix an early day for the discussion of the scheme, in order, it would seem, that they may draw him into a pitched battle before the effervescence of mercantile feeling against the agreement shall have abated. This obvious intention to gain a political advantage is telling on the Liberal party in the great towns, who are rallying to the Government irrespective of their judgment on the agreement itself. However, it is hardly to be expected that this reaction in the Government's favor will go so far as to enable them to obtain the assent of the House of Commons to that loan of eight millions which is the basis of the whole arrangement. They would have to face, not only the hostility of the whole Tory party, and of the Parnellites (who would welcome any opportunity of injuring the Government), but also the disaffection of a considerable number of their own supporters. Some few are normally disaffected, and enjoy injuring Mr. Gladstone; others, especially among the commercial men, dislike the agreement, and would rather defeat the Government than let it go through. The opinion now prevails that the scheme will be somehow shelved; that if not definitively dropped it will be postponed or referred to a committee, or that fresh negotiations will be opened. However, as Mr. Gladstone has promised a statement on the subject on Monday next, you will know the course he contemplates before these lines reach you.

Y.

THE FRENCH VIEW.

PARIS, July 19, 1883.

THERE is a curious kind of vacillation in the French Foreign Office. After the unfortunate war of 1870, the *mot d'ordre* was an absolute policy of non-intervention. Everybody spoke of the Mexican war as one of the causes of the downfall of the Empire. France, it was said, must not look beyond her frontiers; she must concentrate her forces and prepare only for defensive wars. It is difficult to say how, in a few years, this feeling gave place to a new policy, but it is obvious that Gambetta was the chief

instrument of the change. His ardent nature did not like rest, and he imagined that France, while preserving a very quiet position in Europe and in European affairs, must have an active colonial policy. He was the first inspirer of the Tunisian expedition, and the present expeditions to Tonquin and Madagascar may be considered his legacy. Gambetta was even ready in the last years of his life to engage in some common action in Europe with England. He had a very high idea of the importance of Great Britain, and thought that he could safely embark with her in some great enterprise. He tried to take England to Greece, and afterward he tried to go with her to Egypt. Public opinion in France did not follow him. At the first intimation of a possible Greek expedition, there was a general outcry against it, and Gambetta was too cautious and too fond of popularity to attempt a vain struggle against this instinctive feeling of the French masses. The Egyptian expedition was abandoned in its turn. In vain did Gambetta enlist in his cause some of the most active Republicans, some of the most influential newspapers. It seemed tempting to go hand in hand with England to Egypt, to continue with her the *condominium*, to achieve with her a certain triumph over Arabi and his followers, to show to the East the tricolor flag beside the English flag, as in the days of the Crimean war. An invincible repugnance hindered France at the last moment from uniting herself completely with England. The Tunisian expedition seemed at the time an act of great imprudence; and in order to be reconciled to it, France had to be assured that Prince Bismarck had almost forced us into it—that he favored the extension of France in Africa, and that we had absolutely nothing to fear from Germany. Tunis was on our frontier in Africa, and we drifted into the Tunisian expedition without too much difficulty. A war in Egypt was quite another affair, and nobody would hear of it. Public opinion received, however, a sort of shock when it became apparent that an expedition to Egypt would not have been a very serious matter. The victory of England was a very easy one; and while it is admitted by everybody that the military arrangements of England were excellent, that the campaign was conducted with skill and with an admirable mixture of prudence and of dash, it became clear to everybody that a European army could not in our time find any dangerous resistance in the valley of the Nile. There was, perhaps, some regret felt that we had not joined England in her fortunate campaign.

A sort of consolation was found in Tonquin. Before the defeat and death of Rivière, it was said that the conquest of Tonquin was the easiest thing in the world—it was an Oriental dream: the population were opening their arms to us, and asking to be protected by us against bands of Chinese marauders; France had within her grasp immense provinces, a new Asiatic Empire, full of unbounded wealth. Things are not quite so pleasant: we have found out, to our cost, that war is war even in Tonquin; we have had unexpected difficulties with the Chinese Government, and there is every probability that the conquest of Tonquin will be a serious, if not a difficult, affair. At the same moment, France is making an expedition to Madagascar; and though this expedition presents no difficulties in a military sense, the incidents of our occupation have already caused some uneasiness in England and in France. I was speaking, a few days ago, to a Republican Deputy, of the English missionaries in Madagascar, of the ambassadors of the Hovas, and of their visit to London, and I expressed some fear lest we should have trouble with the English in Madagascar (this was before the communication made by Mr. Gladstone to the House of Commons on the subject of Admiral Pierre and his rumored treatment of the English consular authorities), and the Republican Deputy replied: "England ought to be aware that we shall have no Pritchard affair; we shall deal with the Pritchards in another way from what Louis Philippe did." It is certain that some astonishment was felt in France when England appeared to resent the new colonial policy of the Republic, and that this astonishment has been followed by anger. The French Republicans were innocently persuaded that England would show sympathy for all their undertakings. They have lost their illusions, and are beginning to understand that this sympathy is limited by many interests, by many jealousies, even by many instincts.

The most difficult question which has arisen of late is the question of the Suez Canal. The history of the canal is well known: the opposition of England and of Lord Palmerston, the difficulties thrown in the way of M. de Lesseps, are facts familiar to everybody. England might, if she had chosen, have built the canal herself. She would not do it; her engineers, her merchants wanted faith in it. They contended that the route by the Cape of Good Hope would continue to be the great commercial thoroughfare of the world; and perhaps they would have been right if navigation by steam had not completely superseded navigation by sail. The canal had difficult beginnings—it was not immediately adopted by trade; but now the Isthmus of Suez has become the highroad of the commerce of the East, and it can be prophesied with safety that the basin of the Mediterranean will become again what it was in antiquity. All the great ports of the Mediterranean will become again what they were under the domination of Greece and Rome. It must be remembered, in fact, that there are in Asia about 400,000,000 of men, who work for the smallest imaginable wages, and who are capable of the most skilled work. If England had developed the system of Indian railways more rapidly, there would be already an immense amount of Indian flour in the markets of Europe; if ever railways are built in China (and the time will probably come when the opposition of the Chinese Government to railways will be conquered), there will be an unbounded field of exportation to China: all the goods of India, of Japan, of China will find their way to Europe through the Suez Canal. It is therefore not surprising that the question of the Isthmus of Suez should have assumed an extraordinary importance. The question at the present moment stands thus: It is universally admitted that, even with the actual ratio of increase of trade via Suez, the canal is no longer sufficient. The company has been obliged to establish stations in it, so that two ships cannot obstruct each other; ships are sometimes thrown out of their narrow way and are stranded; delays are consequently frequent, and there is only a choice between widening the canal and cutting a new one parallel to the first and connected with it by sidings. For technical reasons which it is not necessary to enumerate here, the cutting of a second canal would be the cheapest and the best solution. It would be next to impossible to widen the present canal without interrupting the navigation, and navigation cannot be interrupted.

But who is to cut this second canal? M. de Lesseps very naturally maintains that he alone has a right to do it, and he offers to do it. He needs, however, in order to do so, more land than he has obtained from the Khedive; and thus it is that he comes in contact with the English Government, as the Khedive is now in reality England. There is no doubt that if the concessions of land to the present company allowed it to cut the second canal, M. de Lesseps would simply issue new shares or make a new loan; he would easily find 200 or 300 millions of francs in France. He would cut his second canal on his own granted lands, and it is difficult to imagine how anybody could make any opposition to his schemes. But being under the necessity of having new concessions of land made to him, and being at the same time desirous to give new facilities to the trade of the world, and especially to English trade (as out of ninety tons which go through the canal, eighty tons are English), M. de Lesseps has entered into a negotiation with the English Government. The result of this negotiation has been an arrangement which is now submitted to the English Parliament. Strangely enough, the press in France at first looked on this arrangement as an abandonment of French rights, a diminution of French influence in Egypt. In England, on the contrary, there has been a terrible outburst of anger against the Government; Mr. Gladstone and Lord Granville have been almost branded as traitors. The British merchants have expressed sentiments which, if they are not always very equitable, are always very clear: what they want in reality is to be masters of the canal, to be masters of its tariffs, masters of all its regulations. They have come to look upon the canal as a piece of the open sea; they must have it; the fate of British commerce, and therefore of the British Islands, seems to depend on freedom of passage between the Red Sea and the Mediterranean. From a commercial point of view, there is much to be said on that side; it is clear that the Isthmus is and must remain the highroad of British and European commerce. The question is not wholly between a financial corporation and a state; it is really a question between limited interests and unlimited interests. But among what I call the unlimited interests I place also the interests of justice. The company which has cut the Isthmus ought not to be punished for having cut it; it may be dispossessed by Europe, by England, by the Egyptian Government, but it has rights which must be respected. How will the French Government act in this difficult question? Will it back M. de Lesseps, or leave him to struggle alone? Thus far our Foreign Office has been in the background, and awaits the result of the discussion which is soon to take place in the British Parliament.

IRISH POLITICAL CYCLES.

DUBLIN, July 23, 1883.

ANY one who has at all studied Irish politics and who can look back for forty years, must be struck with the recurrent circle in which public feeling here moves—now violently and passionately agitated, and again relapsing into long periods of calm. It has been so more or less since the Union, but I can only speak with certainty of the period referred to. Each generation appears driven on to assert itself, wisely or unwisely, against the dead pressure of its surroundings. It is beaten down, discouraged, or bought off. Somewhat is gained—seldom exactly in the direction of the sentiments which ostensibly inspired the agitation—but in the main, with almost startling rapidity, the movement which seems to have been carrying all before it subsides. On the one hand the feeling is, "All is lost," and on the other, "The contest of 700 years is at length ended."

So we had the Repeal agitation, culminating in the Young Ireland movement of 1848. The impassioned eloquence, the high hopes, the vows of eternal persistence, appeared to vanish like smoke after the State Trials and the banishment

of the chief leaders in the cause. The Queen came over in 1849, and was received with almost slavish loyalty; and within a few years matters had so quieted down that free pardons were nearly forced upon such men as Smith O'Brien and John Martin. Well do I remember an article upon Ireland in the *Times* of that period, in which, congratulating himself upon the heartfelt nature of the conquest, the writer supposed there were scarcely six persons of intelligence to be found in Ireland who then really desired Repeal. But as a younger generation grew up, inspired with hopes which had died down in older breasts, popular national feeling again began to assert itself, and after the premonitory mutterings of the Phœnix conspiracy we had the miserable Fenian years of 1865, '66, and '67. The milder Home-Rule development of nationalism followed, as the acute Young Irelandism followed O'Connell's Repeal movement. (Young Irelandism had been to a considerable extent developed through a consideration of the miseries of the famine and a conviction that O'Connell's moral-suasion sentiments had only brought contempt and disaster upon the country. Home Rule, in so far as it was not the outcome of Protestant exasperation after Disestablishment, had its rise in convictions, forced on by the devotion and honesty of the Fenian leaders, that some form of nationality was necessary for Ireland.) A very few years saw the cycle again complete, and Home Rule as an effective force as apparently dead as Repeal had once seemed. How long this grievance would have continued it is difficult to say, but for the bad harvests which followed 1877. The Land League agitation sprang into being, and we had the usual and ever recurrent phenomenon of Irish agitation—unguarded language, passions aroused, the military occupation of the country, the suspension of the Constitution, violence on both sides, arrests, trials, and imprisonments, with or without trial, of political leaders, murder and personal outrage, and the calling over of the executioner.

There is one fact that must be apparent—that these succeeding convictions primarily and mainly arise not from the passions or ambition of individuals, but from forces and necessities, however diversely and unwisely or wickedly expressed, inherent in the Irish body politic. Each political generation is, as I have said, bought off, or discouraged, or broken down. A few years pass over, a fresh set of leaders is thrown forward, and the struggle is renewed under a different name or in a different form. The continuity of leadership has been almost uniformly broken. The wish of men possessing statesman-like abilities and brilliant talents to exercise those talents is so great, that opportunity has almost always been found to attach them to the cause of the Empire at home or abroad; and once thus attached, the ties of society and position and surroundings are so strong that such men have never returned to active political life, unless under the banner of one or the other of the recognized and respectable political parties. It is true that men like the late Sir John Gray have carried their national sympathies on through life in efforts for the good of their fellow-citizens, judiciously availing themselves of, without committing themselves to, each successive wave of popular feeling. John Martin was a notable exception; but he was not a practical politician in the ordinary sense, and his convictions regarding the wants and necessities of Ireland lay too deep, and his life was too entirely apart from "society," to make it possible that he should not sympathize to some degree with each recurring development of Irish ideas. Looking among some papers lately, I was supported in my opinions regarding the hitherto ever-changing character of the *personnel* of Irish politics. I came upon the ballot list of persons proposed for the council or governing body of the Home Government Association in 1870—presumably a list of those men most prominent in Irish national politics. There were some sixty-three names, and of those but two can be said to be actively engaged at present. Many had died, others had become Conservatives or Government supporters; the majority had fallen back into that quiescence which years are so likely to bring, more especially to those attached to a cause in which there is nothing to be hoped for in the way of personal advancement.

In Sainte-Beuve's 'Causeries' there is a suggestive essay, *Les Regrets*, in which he points out the tendency of older French politicians to condemn and withhold sympathy from the younger generation that takes up the prominent or popular position once held by themselves. Perhaps it is much the same in all countries the basis of whose content is as yet unsettled, as was the portion of France when the great essayist wrote. The essay is certainly most applicable to Ireland. The bitterness of the rival writers for the favor of the country is as nothing to the bitterness of those who have been broken down or worsted in former contests. I can remember some of the survivors from "Ninety-eight," and how they despised and scorned O'Connell. It was so for the most part between the Old and Young Irelanders, the Young Irelanders and the Fenians, and later between the Fenians and the Land Leaguers. I have never heard severer condemnation of Mr. Parnell and his party than from men who were themselves Nationalists and had been bitter opponents of the Government in every form a few years ago. Perhaps it is not so with Irish Nationalists resident abroad, who appreciate the difficulties less, and are willing to side with whatever party in the present represents their hates and aspirations; but certainly it is the case in Ireland. Is this want of progressive sympathy—this antagonism to men who succeed us in public sympathy—common to the rest of the world, or is it peculiar in the Celtic nations (if it is correct to call Ireland a Celtic nation); is it, I say, a characteristic which will prevent our ever settling down in that confidence and trust which characterizes the Germanic and Anglo-Saxon nations?

I have spoken in the past tense of the phenomena which have attended the subsidence of successive political convulsions in Ireland. At present, so far as I can judge, for the first time since the Union, an Irish political party has survived the catastrophe which it brought about, and the granting of those measures of relief which it was believed would disintegrate it. Some members, like John Dillon, have broken down in health, and have for the present retired from political life; others have withdrawn from principle, unequal to those sacrifices of feeling and perhaps conscience which Mr. Parnell's Parliamentary adherents at times may have to submit to. Some have found intolerable the position of a Parnellite member in London, on very narrow means, unsustained by that consideration and respect which are accorded to other members of Parliament. There have been numerous defections for various reasons; but in the main Mr. Parnell's Parliamentary position is stronger than it was three years ago. His ablest lieutenants have gathered strength and form and experience. Their strategy may be less daring and striking, it is certainly more gentlemanly and dignified, and therefore all the more effective and formidable. This state of things is no doubt largely due to Mr. Parnell's force of character, and to the exasperating and solidifying effects of Mr. Forster's government of Ireland.

It is a matter of surprise to me how so many of these young men, with their own bread to earn and their own way to make in the world, have been able so unreservedly to give themselves to the service of their country. They have made nothing directly from the movement. At most they have been recouped for "cash out of pocket." I speak of the prominent leaders—men like Mr. Healy and Mr. Sexton. No doubt crowds of "organizers," and "agents," and underlings of the Land League were largely attracted by the open-handed expenditure of funds. Indirectly all have, of course, gained in consideration and in having what is so naturally dear to most clever men—an opportunity for the display of abilities and talents. Doubtless many have been brought forward and have secured engagements, as correspondents or otherwise, which would never have fallen to them but for their prominence as politicians. But if there were not some conviction behind they would never have continued to serve as they have done. That conviction must have its origin in most of them having so directly and immediately sprung from the people, whose spirits and wants and aspirations they represent. The places of those who have fallen away have been filled with tolerable facility. Many of these new recruits are raw and inexperienced material enough. But Mr. Parnell has the Napoleonic faculty of knowing his men, and his party has in the past developed so much unexpected ability from unknown material that we must be careful how we judge as to its future.

As for Mr. Parnell himself, I doubt whether his prestige ever stood higher than it now does. The Parnell tribute, which to-day touches £20,000, subscribed in the United Kingdom, and in the face of unlooked-for discouragement by the Church, is a surprising and solid proof of the people's faith in him and their gratitude for the devotion with which they believe he has served them. Until we know how he decides to apply this large sum, it would be idle for us to speculate as to the effects its collection may have upon his future prestige and conduct.

The Government has then for the first time, as I have said, to deal with an Irish National party which has survived the storm that swept them into power and influence—a party sobered by experience, and, it is reasonable to suppose, conservatized by years. Will this party take up and maintain such a position as will oblige and render it wise for the Government to treat with them for some permanent settlement of the Irish question, or will that party, so far as the main question of nationality is concerned, also be added to the list of Irish failures? Is it possible to hope for a settlement in our time, or will the next generation of British statesmen have to renew the conflict with untried and inexperienced men? D. B.

THE PRUSSIAN CAPITULATION.

BERLIN, July, 1883.

THE King having signed the Church Bill on the 11th instant, it has now been published in the *Reichsanzeiger* as the law of the land. It will take effect on August 1, instead of November 10 (the four-hundredth anniversary of Luther's birth), as Deputy Dove, of Göttingen, sneeringly proposed in the first Chamber. Thus the triumph of Rome has been gloriously achieved and the defeat of Prussia ignominiously consummated. I do not blame the Ultramontanes for crying and shouting victory; they know that they have never humiliated Prussia more. She has not laid down her arms on the fencing-ground, as Bismarck said some months ago, but despairingly thrown them away. It is

the greatest success which Rome has won in this century. The pusillanimous policy of Frederick William III. toward the Archbishop of Cologne, and the vacillating conduct of Frederick William IV. in all his dealings with the Church, appear firm and manly in the light of to-day's experience.

It is quite a new sort of compromise at which the Chancellor has arrived: he grants everything and obtains nothing. While Prussia has unconditionally surrendered her former proud position, Rome has obtained everything, even more than she had demanded. To keep up appearances, she complained in a diplomatic note that the Prussian Government had settled all these intricate questions with its legislature without first consulting and negotiating with her; but at the same time she is hardly able to conceal her satisfaction and heart's content, for practically the Falk laws have been abolished. Some minor items, which do not trouble much for the present, will soon follow suit; their revocation is only a question of a few months. The Pope and his cardinals, of course, praise the great diplomatic skill of Bismarck, and smilingly accept his advances, but they openly declare that they require more, and do not doubt that they will obtain further concessions.

What I blame Bismarck for most severely is, that he renewed Rome's lease on the superstition of men for several generations, by dealing with the Pope as a political power and as the compeer of a great empire. Leo XIII. is only a deposed worldly ruler, and at present nothing more than the first bishop and high-priest of those who believe in him. He has, however, never resigned his claims as a political potentate, and still expects to be reinstated. His diplomatic agents for years have worked in this direction. The so called *Kulturkampf*, as you will remember, would never have broken out if the Prussian King, in 1871, had been willing to restore the Pope as a sovereign. As the Polish Cardinal, Ledochowski, was at that time the chief promoter of this plan, so now the Polish nobility agitates the cause of the Pope at all European courts. Formerly, the aristocratic Poles dealt in revolutionary plots and outbreaks; to-day, out of spite against Germany and Prussia, they are the pivots of the Catholic Church, and, by their intimate connections with some ruling dynasties, they are at least able to cause much mischief and trouble. The Radziwills, for instance, are cousins of the Hohenzollerns; the Czartoryskis and Branickis have family connections with the Bourbons; and the Papal Nuncio in Paris, whose German ancestor's name was that of the celebrated Ulrich von Hutten, is one of the ablest Catholic intriguers: he inspired the Pope's late offensive note to Bismarck. These political adventurers are eager for a war between Russia and Germany, and make themselves useful to the courts in order to get their reward at the final settlement in the reconstruction of Poland. I do not think that they will succeed, but in the meantime they can and will do much harm.

Thus Bismarck, by losing his whole moral and political prestige, has all over Europe effected a coalition of the elements which are hostile to Prussia, to Germany, and to the whole Protestant world. We already see the effects of this retrograde movement in our immediate neighborhood. To please the Polish clergy, the Prussian Government in May last consented that the German should not form the chief language in the intermediate schools in the province of Posen. The priests now, of course, want to have it abolished altogether, and continue the contest which the Government thought ended when it yielded to Rome. On the eve of the celebration of the four-hundredth anniversary of Luther's birthday, Catholic writers publish the obscenest pamphlets against the great reformer, attributing the whole movement to Luther's voluptuousness in wanting to get married, etc. No honest man will exact admiration for Luther from Catholic priests or writers, but at least they should show a common respect for decency and a better appreciation of the historical development of mankind. A gentleman by the name of Joh. Jansen, "a Catholic professor of history" at the gymnasium of Frankfort, is publishing a history of the German people, three great volumes of which, out of six, have already appeared. He begins with the close of the fifteenth century, and tries, with an appearance of impartiality, to prove that Germany never made greater political and economical progress than at that period, while students of history know that there was hardly a corrupter time or a greater degeneration of the Church, as was afterward proved by the success of the Reformation, which, so far from being a misfortune, was a necessity and a real blessing.

The German people has itself to blame for the present unsatisfactory state of its public affairs. They will mend with a better political training. To show you our shortcomings in one word, Hamburg, a city of 400,000 inhabitants and our largest seaport, at the beginning of this month elected a Social-Democrat, Mr. Bebel, as deputy to the Reichstag. His party was in a minority, and if all the Liberals and Conservatives had stood together, Bebel's success would have been quite impossible; but there was so much petty jealousy, so much injudicious exasperation and bitter denunciation, that on election-day about a thousand Conservatives remained at home and turned the scales in favor of the Social-Democrat. A change for the better will not take place as long as the middle classes remain divided. The reactionary parties know better; they rule by dividing the people. There is a brotherly union between the old Prussian Conservatives and the Ultramontanes; in doubtful districts they even help the Social-Democrats, or are assisted by them for their common benefit. Bismarck's baneful influence on the whole country has been to decompose the social fabric, to incite one interest against another, and to loosen everything. † † †

Correspondence.

THE PRESERVATION OF MT. DESERT.

To the Editor of The Nation:

Sir: Returning to Bar Harbor after an absence of four years (I have known the place for twenty), I have found myself among Californians and Westerners, with a large representation from New York, Philadelphia, and Baltimore. Boston and New England make the minority. I am greatly pleased to hear all these people express for the scenery an enthusiastic admiration which, if anything, surpasses what we used to hear long ago on the first discovery of this island as a watering place. It is true they see more than we did, thanks to the new roads and the abundant supply of horses; but the variety and beauty of the landscape deserve all that can be said by way of praise. There is, besides, as a paramount attraction, the coolness of the climate, which the place shares with all the Maine coast. It far more than counterbalances the fog, and people better and better understand the value of it as a factor in the summer rest. The anxious mother, with her group of energetic boys and girls; the tired clergyman, the harassed man of business, all know that their holiday will be worth infinitely more if spent where it is cool.

It is, then, a matter of great importance to the whole country that such a place should be known and enjoyed by the greatest possible number of people. It is beyond the reach of the vulgar and noisy crowd to be found near great cities, and it should be the resort of thousands of persons of moderate means. Mount Desert Island is large enough for 10,000 people in it, to choose the way of life each likes: the gayety of the hotel, or the quiet of the many comfortable boarding-houses along the forty miles of shore. Bar Harbor is, of course, the centre not only for amusement but for obtaining the appliances of cultivated life—from the skilful physician and druggist to the Jacqueminot rose—so that the future of the Island depends greatly upon the future of Bar Harbor. The large hotels are in the hands of the same families who inhabited the houses of the little hamlet twenty years ago. Little by little they have improved and added to their resources, so that now the hotels are more than fairly good, some of them quite good enough. To have done this is, it seems to me, an emphatic testimony to the teachableness and the adaptability of New England character.

But, alas! at the very moment when they might have expected assured success to reward them, they find the number of visitors is at a standstill, if it is not lessening. They are ready to sit down in dust and ashes and repent their own short-sightedness in giving up their land. To borrow your own figure, the red squirrel has gained a footing and has begun his fatal work. The cottagers do not like, and do not mean to have, if they can help it, "transient people." The land that was once dear at $50 an acre is not to be had for $1,500. For five miles each way there is no enjoyment of the shore except on sufferance more or less polite. A or B, from some distant city, builds his cottage and bars his gate entirely. Consequently the native at Otter Cliffs, whose wild land never bore so much as a blueberry, thinks himself magnanimous to allow the buckboards to enter at twenty cents apiece.

This shore was the precious birthright of the people of Maine, and they have sold it for worse than a mess of pottage, for chains in which they themselves are to be bound hard and fast. "What!" said an indignant New Yorker yesterday, "shut up this place to fifty families, as against the whole American people!" But this, I fear, must happen unless some most strenuous efforts are made. It is a question of the same kind as that at Niagara, and the scale is not so very much less, since this is "the only neighborhood of mountain and sea on all our Atlantic coast."

Morally and æsthetically, it concerns the thousands of families of moderate means to whom this island may be a summer resort. Shall the few very rich refuse to share it with them? If Bar Harbor is shut up, it will put back for twenty years the development of the coast. Practically, it is of the utmost consequence, in the first instance to the merchants of Portland, and next, to all New England, that the thousands of dollars which would be brought to the coast by Californians and Westerners shall not be lost to their trade. The islanders are divided among themselves now. They know that danger is ahead, but each is so busy frying his own little fish that he does not see that the fire on which all depend is already going out. United effort on their part, led by the hotel-keepers and backed by the steamboat and railroad corporations, may avail something yet. But it must be done quickly.

As to the cottagers, they ought to see that it is to no effort of theirs, but to the patronage of the transient company they dislike, that they owe the steamboats, railroads, stages, telegraphs, telephones, and the thousand and one comforts now gathered at Bar Harbor. Some concessions

from them would be prudent as well as graceful. Moreover, there is a certain fine and delicate consideration by which legal rights might be enjoyed without awakening an irritating sense of usurpation. A. R.

BAR HARBOR, July 25, 1883.

LAW OF OUR AGRICULTURAL POPULATION.

TO THE EDITOR OF THE NATION:

SIR: In the description of "An Unaltered Swiss Colony," in the *Nation* of August 2, "J. D. B." states that the handful of 108 persons who founded the colony of New Glarus in 1845, by its increase numbers 4,000. I wish he had stated how many remain a part of the colony, or how many of them are in adjacent towns. As a radius of six miles is afterward named as a population without Yankees, there is evidently an overflow into adjacent towns; but it is not easy, without just the information "J. D. B." probably could have given us, to know how many of the 4,000 have entirely left the colony.

New Glarus is by no means a densely-settled town. Under a mistaken impression from the description, that a dense population was spoken of, I had peculiar reasons for a little examination of other information regarding that remarkable community. The towns here referred to are townships six miles square, or containing 23,040 acres each. The numerals in the diagram below represent the relative position of New Glarus and all the towns which touch it. The central town (5) is New Glarus. The upper tier of towns is in Dane County, and the rest are in Greene County, Wis. They are all rural towns, no railroad passing within, say, six miles of any of them. The following table presents their population for a series of decades, beginning with 1850. In 1840 there were not 1,300 people in the forty-three townships now forming Dane and Greene Counties. The numbers used for the towns correspond to the positions indicated for each on the diagram above.

1	2	3
4	5	6
7	8	9

No.	Town.	1850.	1860.	1870.	1880.
1	Perry	638	837	1,051	924
2	Primrose	334	889	1,015	888
3	Montrose	372	1,184	1,287	1,108
4	York	191	904	1,088	1,049
5	New Glarus	511	960	958	1,060
6	Exeter	459	1,040	949	893
7	Adams	275	840	1,007	930
8	Washington	307	838	901	882
9	Mt. Pleasant	579	1,240	1,164	1,086

This table is strongly illustrative of a general law of the tendency of the agricultural population of the United States, to the effect that, when a farming town is so occupied that its land is all brought into use, the population is at its maximum. Special reasons will modify this truth, as fruit-farms or market gardens, but as a general rule it will show in the experience of the country, from Maine to the older towns west of the Mississippi. The first settlers have about them increasing families, relatively large, till the older children start out for themselves. On migration, a disproportionate number of old people and childless families remain, shown often in the decrease of the number of children of school age. There is also a disposition of the elderly people to retire from farming to a village or other compact community. Many counties of States west of the lakes lost population between 1870 and 1880, and in many counties the gain shown was through the growth of their included cities, while their agricultural districts had lost inhabitants.

In large portions of the country the census of 1850 showed the population that was beginning to occupy the new land. There was a general, considerable increase to 1860 in these localities. Where that increase brought all the land into proprietary use, emigration began, seeking relief by taking new land rather than in subdivision and closer cultivation. In the little table of nine towns herewith, it will be seen that New Glarus and Exeter each lost in the decade from 1860 to 1870, when presumably all the land of these towns was brought under personal control. In the decade from 1870 to 1880, every one of the nine towns, except New Glarus, lost population, and New Glarus only gained enough to make an increase of 100 in twenty years. Four of the towns lost enough in the last decade to make a loss from their population of 1860.

The experience of New Glarus in this regard is the more notable, as the settlers began with small farms and high tillage. They now occupy land enough to give almost every person, infants included, a farm of twenty-two acres, such as they worked in the beginning. They seem to have grown to the American style of occupancy and of emigration for more opportunity.

These towns form a body of land extending into the county containing the capital of the State and a part of the beautiful and fertile Rock River Valley, whose advantages have not prevented even a higher rate of migration from it in this present decade, as definite statistics of the recent movement to Dakota would probably tend to show if they were available.

Yours truly, JAS. H. BLODGETT.

WASHINGTON, D. C., August 3, 1883.

TEACHING AND SECTARIANISM.

TO THE EDITOR OF THE NATION:

SIR: The hope expressed by "Professor," in the *Nation* of July 26, that our "State colleges" may cure the evil of selecting professors for their religious preferences mainly, and their scientific value secondarily, will, I fear, hardly succeed if we are to judge by the practice of city boards of education in the Western States. From some years of experience and observation, I can speak with confidence on this point. I know of many towns in which an incompetent superintendent of schools has been retained for years simply by religious or church influences, and of instances in which very able men have lost their places, or failed in getting them, for the reason that they were no-church members.

Now, our public schools are removed as far as possible, in theory, from religious influence, being supported by general taxation. Yet in most towns you will find some one church strong enough to make its leanings felt and obeyed in selecting a superintendent. The case of Superintendent Kiddle, of New York, a few years ago, is in point. In fact, I believe that even our denominational colleges are freer from this fault than many of our towns and cities.

SUPERINTENDENT.

NEW CASTLE, IND., July 30, 1883.

HONORARY DEGREES.

TO THE EDITOR OF THE NATION:

SIR: Your editorial of July 5, in favor of the abolition of honorary degrees, was read by myself, and, I doubt not, by many others, with great interest. I can mention at least one college which has never given, and, let us hope, will never give, an honorary degree. I refer to the University of Virginia. It were a "consummation devoutly to be wished" if every other college in the country would follow the example.

Respectfully, R. H. DABNEY.

MUNICH, July 19, 1883.

CONVICT INDEXING.

TO THE EDITOR OF THE NATION:

SIR: I find a sad case of "convict indexing" in the catalogue of the Boston Public Library. Under "Mathematics" there appears the following entry:

"FRANCE. *Ministry of Public Instruction.* Œuvres de Lagrange, publiés par les soins de J. A. Serret. . . ."

The absurdity of this entry would remain even if we found the title repeated when we came to Lagrange, which, however, is not the case under "Mathematics," though some other editions of a few of his works are there given. X.

Notes.

SHAKESPEARIANA will be the title of a new monthly magazine, to appear in November under the auspices of the Leonard Scott Publishing Company, 41 Barclay Street. As the name implies, its aim will be exclusive. Its several departments will be a Society Column (not to be confounded with the common feature of certain journals, and more properly to be designated Societies Column), a Dramatic Column, a Notes and Queries Column, and a Review Column. The editorial direction is as yet anonymous.

Nearly two years ago we commented on the report of the Philosophical Faculty of the University of Berlin, concerning the effect of admitting graduates of the real (practically non-classical) schools to the universities, and the comparative value of classical and non-classical training for the higher education as deducible therefrom. Perhaps in consequence of Mr. C. F. Adams, jr.'s late onslaught upon the Greek, a translation of this report is now about ready to be issued by Ginn, Heath & Co., in connection with the inaugural address of Dr. A. W. Hofmann on the cognate theme of a division of the philosophical faculty, delivered in 1880, and likewise noticed by us.

The Rev. J. I. Mombert, of Paterson, N. J., proposes to reprint with critical collations the little-known first edition of Tyndale's version of the Pentateuch, made directly from the Hebrew. To do this a long residence abroad will be necessary, and the enterprise depends upon the obtaining of subscribers to 1,000 copies at $5 each. The sum thus realized will cover first expenses, and the book will then be given to the trade at double the price just named. Subscriptions may be sent as above, but the privilege will cease on October 1, 1883.

Charles Scribner's Sons will publish 'Recollections of a Naval Officer,' by Captain William H. Parker, who began midshipman U. S. N., in 1841, and twenty years later resigned his commission to enter the Confederate service. They have also in preparation a complete and uniform edition of the works of Donald G. Mitchell, in ten volumes, of which three will contain much new matter. 'The Reveries of a Bachelor' will introduce the series.

A 'Handbook of the Earth; or, Natural Methods in Geography,' by Louisa Parsons Hopkins, is announced by Lee & Shepard.

Mr. W. M. Griswold's thirteenth index is to "articles relating to History, Biography, Literature, Society, and Travel, contained in collections of essays, etc." (Bangor: Q. P. Index). It fills but forty-six pages, yet it refers to no less than 799 volumes enumerated in the key. The reference is by the conventional number, since in the nature of the case the page is not available. We should add that the works indexed are in English, French, and German, and that the key is so arranged as to show the authors of es-

says in collections like Mr. Griswold's own *Monograph*. This tireless worker announces as in press an index to the *Revue des Deux Mondes*, beginning with September, 1870. Should it meet with a favorable reception, the volumes for 1848–70 will subsequently be treated in the same way, as will also the *Revue Germanique* and *Revue Contemporaine*.

Drs. Gray and Trumbull conclude their review of De Candolle's 'Origin of Cultivated Plants' in the current number of the *American Journal of Science*.

With its twenty-fifth issue *Science* presents an index to vol. i. (February–June, 1883), which is thorough in a degree not common with periodicals. The typography of this paper has of late been much improved in the direction of greater openness and attractiveness.

In the August number of the *Magazine of American History* Capt. Reuben M. Potter concludes his highly readable series of papers on the history of the revolt, independence, and annexation of Texas, which he relates with much humor and insight. Mr. B. F. De Costa makes an interesting rejoinder to Mr. George Bancroft, in defence of a former criticism of this writer's latest edition of his 'History of the United States.'

Editions of Shakspere, Early Social Life in New England, and Madison's Administrations, are the topics of the double July-August number of the *Monthly Reference List* (F. Leypoldt).

The enduring value of literature as such is nowhere better illustrated than in the vitality of certain historical works which, though followed by generations of more accurate books by better informed writers, never lose their popularity or the glory of constant new editions. Perhaps there is no better instance of this than Voltaire's 'Charles XII.,' which has just reappeared in Roberts Brothers' very neat and attractive "Classic Series." Like Herodotus, Voltaire, as an historian, has been, the last thirty years, appreciating in value. It has been shown that he did not rely upon his imagination for any of his facts, employing that faculty only in trimming and dressing his anecdotes. But while criticism has proved him to have been industrious and painstaking, it has not acquitted him of carelessness, and his description of Catherine I. contains one of the most amusing blunders in historical literature. While an editor may properly feel bound to make no change in his author's text, he should not repeat, without a hint of its incorrectness, so obvious an error as the following. Voltaire wrote: "Sa mère était une malheureuse paysanne nommée Erb-Magden," his authority for the fact being an anonymous work, published in 1727, which reported that "ein solches Erb-Mädchen [or Erb-Magd] nun war auch die leibliche Mutter der Czaarin."

The 'Tourist's Guide Book to the United States and Canada,' which bears both a London imprint and that of G. P. Putnam's Sons, is obviously a foreign production, as a single line from the "introductory information" will show: "The express system [for railway baggage delivery] is *to a certain extent* a convenience." In general, the editing is trustworthy, even if one meets with such unaccountable omissions as that of Long Beach among New York seaside resorts, and of the new Old South among the notable churches in Boston. We can commend this work also for its literary quality, which is above the average, and the print and binding, which are in excellent taste. An elaborate section is devoted to the shooting and fishing resorts of North America. There are numerous maps and some illustrations—the latter not remarkable.

Col. T. W. Knox reappears as the traveller's friend in his new 'Pocket Guide around the World,' uniform with his 'Pocket Guide for Europe' (Boston: Lee & Shepard). The first chapter will reconcile the purchaser to the whole cost of the book. The author's racy humor makes the reading a pastime. Thus, "in travelling in the interior of Japan or China," he says, "as well as in other countries, the passport is often of decided advantage. A man who can't read the document will often respect it more than one who can. . . . A theatre handbill or an advertising placard has been known to serve the purposes of a passport." An ingenious improvement in this guide book consists in putting the names of hotels in the index only (annexed to the name of their respective places), so that changes can be made without disturbing the stereotyped pages of the text.

The first volume of Prof. Henry Morley's new "Universal Library" (Routledge) contains Sheridan's plays, with a perfunctory four-page biographical and critical sketch of the dramatist by the editor. The second volume is more original and curious; it is called 'Plays from Molière by English Dramatists,' and contains Dryden's "Sir Martin Marall" ("L'Étourdi"); Vanbrugh's "Mistake" ("Le Dépit Amoureux"); Wycherley's "Plain Dealer" ("Le Misanthrope"); Fielding's "Mock Doctor" and "Miser" ("Le Médecin malgré lui" and "L'Avare"); and Colley Cibber's "Non-Juror" ("Tartuffe"). All students of Molière will be glad to have these six adaptations in a single handy volume, while well aware that the plays of Vanbrugh, Wycherley, or Cibber are not in any way representative of Molière. They are strong and interesting, but, in spite of free borrowing, they are not Molière's. Prof. Morley's introductory note reveals no special study of the French dramatist.

The Chicago method of establishing relations between the public schools and the public library is related in Mr. Poole's eleventh annual report. At his suggestion, a class at a time from the high schools or upper forms of the grammar schools was brought to the Public Library on Saturday forenoon, to be initiated into the mode of research in studying a particular subject. The proper books were laid out in advance, and the teacher delivered a little lecture. The books were then examined, and afterward a glimpse was given of the library's contents and management. The result has been very gratifying.

M. Alfred Bougeault has published (Paris: Plon) a study of the mental condition of Rousseau and his death at Ermenonville, concluding, in accordance with the general opinion, that he became a monomaniac and committed suicide. But *Le Livre*, speaking of Houdon's death-mask in the late Paris exhibition, which shows the wound in the head, says that it does not discredit M. Castellant's theory that Rousseau was murdered by Thérèse Le Vasseur—a theory not new, of course, but based in this case upon long study.

The music of a Japanese sailor's song and of a nursery air is given on the last page of the *Chrysanthemum* (Yokohama.)

—We remarked, a few months ago, in reviewing the 'Imperial Dictionary,' on the cyclopædic tendency of what used to be called the common dictionary. Webster's departure from the standard has been greatly surpassed in the 'Imperial,' and now we have the frankly designated 'Encyclopædic Dictionary,' edited by Robert Hunter, M.A., and published by Cassell & Co. (2 vols. in four separately bound parts—A–Destructionist). Without being either a gazetteer or a biographical or historical dictionary, it will make, we estimate, not less than eight volumes, or two for one of the 'Imperial.' Comparing the two works still further, we find the later somewhat less attractive typographically, and its arrangement of definitions, though logical, sometimes rather too formal for clearness and ready reference; its vocabulary is not everywhere more inclusive, nor the articles always longer. On the other hand, the execution of the 'Encyclopædic Dictionary' strikes us as praiseworthy both for freshness and for accuracy; the numerous woodcuts, if not the finest, are always pertinent; and in several particulars it may claim both distinction and superiority. Some of the peculiarities are the large proportion of Scotch words and of obsolete words; the subjoining of obsolete spellings to the present form of words (*e. g.*, assail, assaile, assayle, asaile, asayle, asayli); the placing of compounds under the leading root, with an arbitrary hyphenizing which leads to such vain repetitions as cube, . . . cube-numbers, cube numbers, . . . cube-ore, cube ore, . . . cube-spar, cube spar, etc.; the secondary qualifying of a substantive as an adjective when used in compounds (*e. g.*, bilge, *s.* . . . *adj.* . . . bilge-board, bilge-water, etc.)—a needless refinement, and not consistently observed (for example, no adjective sense is noted under bill and brine for their compounds). The definitions are generally good, and we can cite a perfect one in a crucial Americanism—carpet-bagger: "An American slang term for those petty politicians who, after the civil war, migrated into the Southern States for temporary residence and personal advantage." And while America is in question, let us remark that the editor, under beaver, refers for the whole subject to Mr. L. H. Morgan's monograph. The scientific definitions seem to us cautious and trustworthy. In some instances the definer's "personal equation" amuses, as in the sentence (of the banana): "It and its congener, the plantain, are, *in the writer's opinion*, the finest of all tropical fruits." Of the same character is the interjected phrase, "as if the captain had been a beleaguered British camp in Afghanistan or Zululand," when telling, under boycott, of the relief expedition. The same precision which leads to a very frequent giving of chapter and verse for the illustrative passages cited, insures our learning that the Irishman Burke who added a verb transitive to the language, "was executed in Edinburgh on January 28, 1829." The definition of closure is a good specimen of late and full information as to the origin of a neologism. We need say no more of the present instalment of a dictionary not much more costly than works of the same class, and pretty certain to meet with popular favor.

—Mr. Henry J. Morgan's 'Dominion Annual Register and Review' for 1882 (Toronto: Hunter, Rose & Co.), is the best executed and most interesting of a series which has been highly praiseworthy from the start. We have before commended it to the attention of political thinkers on this side the border. Nearly all our "questions" arise also in the Dominion. Thus, in 1882, that country anticipated us in reforming its civil service, as the result of a Government commission of inquiry. The abuse was not in the tenure of office, but in the appointments, which were the prerogative of the Administration, and hence became prostituted to party ends. The act passed on May 11 established a board and all the other machinery of competitive examinations, and, while permitting the officers known as deputy heads of departments to be removed by the Governor-in-Council, compelled the reasons therefor to be reported to Parliament—a valuable safeguard. The Canadian Pacific Railway Royal Commissioners reported in April that the construction had been unnecessarily costly, slow, and imperfect by reason of political appointees "selected on party grounds, irrespective of the question whether their engagement would be ad-

vantageous to the public interests." In other respects the railway seems to be giving no concern, the payments to the syndicate being offset by the sale of land-grant bonds. The Intercolonial Railway, too, is at last making both ends meet, and an act passed last year authorizes a subsidy to be paid on the completion and satisfactory working of a ship-railway between the Gulf of St. Lawrence and the Bay of Fundy—from Tignish on Baie Verte, to the mouth of the River La Planche. Subsidies have also been promised to certain steamship lines, and the Dominion is pressing the mother country for a reciprocity treaty with the Sandwich Islands, while stiffly maintaining its new policy of protection. To this policy the electors committed themselves afresh on the dissolution of Parliament, and though the large Government majority was slightly reduced, the Opposition met with the great misfortune of having their weightiest leaders shelved. There was a new apportionment of representatives, in consequence of the census of 1881, not without charges by the Opposition of gerrymandering; and by one of the clauses of the act each candidate is obliged to deposit $200, to be returned in case his vote is at least half that of his successful rival. The immigration during the year amounted to 113,000. An alarm was raised about the influx of Chinese on the west coast, but was stilled when the Government protested that the Pacific Railway could not be finished without them.

—The relations of the Dominion to the mother country have been significantly affected during the year. The deceased wife's sister bill, recovering from its defeat the year before, was handsomely carried in both houses, and is now law. What Mr. Goldwin Smith called a bid by both parties for the Irish vote—the Parliamentary memorial to the Queen on the beauties of Home Rule as exemplified in the Dominion—should at least not have displeased this critic as a sign of national independence. To this was added an attempt to get permission to negotiate commercial treaties directly, instead of through the Imperial Foreign Office. On the other hand, the Imperial Privy Council sustained the Government in passing laws to regulate the liquor traffic, in contravention of provincial statutes, on the ground that the temperance act in question (local option) was for the maintenance of "the peace, order, and good government of Canada." The Federal relations have been ruffled by the unsettled dispute over the northern and western boundaries of Ontario, the present Government repudiating the arbitration authorized by its predecessor, and demanding a settlement by the Supreme Court or in England. The executive veto of local legislation has also caused much feeling, and appears to be a somewhat vague power. The right to take certain members of the Cabinet from the Senate has been challenged as an encroachment on the province of the House. Mr. Morgan makes his customary review of the progress in education, literature, science, and the arts. Parliament has abolished the postage on newspapers and periodicals mailed from the office of publication. A Royal Society of Canada has been formed, amid some jealousies, seeing that the first members were not strictly those "who had published original works or memoirs of merit, or had otherwise rendered eminent services to literature or science." An Iroquois Lexicon, by the Abbé Cuoq, is perhaps the most noteworthy work published during the year. In the Obituary occur the names of two brothers, the last of the Loyalist family of Ryerson. One of these, the Rev. A. E. Ryerson, was the author of a recent work on the Loyalists, of some magnitude and importance.

—In the preface to his 'Essais de littérature anglais,' M. James Darmesteter (it is to be noted how often Frenchmen who have any acquaintance with English literature have English names) strongly recommends the study of the English language. For the scientific man, he would prefer German, of course; but for commerce, German will give him access to only 80,000,000 buyers, English to 300,000,000, and Spanish to the rest of the world. In literature, France has already learnt more, and has hereafter more to learn, from England than from Germany. The German spirit is too far removed from the French; it must be filtered through the English before it can have any effect. And, finally, England is the only country in Europe from which France can draw political lessons, the only country that can teach her respect for the individual and his rights—respect for the law, not as an abstract theory, but as a living fact; and, finally, that progress must start from the actual present, and not from an imaginary state of things, and that society may be transformed, but cannot be created. It is curious to find M. Darmesteter declaring that America is becoming Germanized; that more gratitude is felt toward the one German volunteer in the Revolutionary war than for the army and the fleet that France sent; that because Bancroft declares that German sympathy sustained us then more than French, in a century American school-histories will teach that La Fayette was a German.

—The English Conservatives complain of the Americanization of English politics, manners, food, and magazines. American humorists laugh at the English airs put on by a small number of our own countrymen. Japan is fast losing all its charm in its imitation of Occidental ways and costume. A French grumbler sings the same pæan. It is not merely that people take leave *à l'anglaise*—that is, without a word to the hostess—or that young ladies conduct themselves *à l'américaine*—that is, as if they were already married—and that the *rastaquouères* (the foreign element at Paris) crowd the theatres and give a hundred nights' run to dull plays, flock to the exhibitions though they cannot distinguish a Delacroix from a photograph "thrown up" if the Delacroix is not signed, substitute paste for diamond, make all sorts of stupid things successful, swallow the fashion whole, exaggerate the eccentricity of costumes, applaud any notoriety—all this is not enough, but the French, it is complained, prefer everything exotic. Their tailors are English, so are their hats; their tapestry is Chinese; their jewelry is made in America; their leather-work comes from Vienna; their table linen is Russian; their furniture is Anamite, with incrustations, or Chinese, of teak; their chandeliers Flemish; their prima-donnas American; their wines Spanish; their very cookery—the famous French cookery—is taking on foreign ways. Even Faure sings in Italian, and only Judic, who has gone to London, and Bernhardt and Théo, who have just returned from America, keep up the old French traditions. Such is the lament. Is it not wonderful that, with such a mixture of the fluids in this great vessel of the world, there is any national flavor left?

—The death is announced, in recent English journals, of Mr. Edward B. Eastwick, an English Orientalist, whose name is attached, as that of editor, translator, or author, to a goodly array of volumes. Among the various ventures which Mr. Eastwick essayed in literature, his translation of the first edition of Bopp's 'Comparative Grammar' unquestionably ranks foremost in merit. His English versions of Persian, Hindustani, and Hindi works are deservedly held in no special estimation. Nor is his 'Hindustani Grammar' an advance, in any one point, on its numerous predecessors, though it was executed at a time when they might all have been easily thrown into the shade. To say truth, the quality of the books which he produced is noticeably out of proportion to their quantity; and the latest of them is almost as faulty as the earliest. Far short, consequently, of a place in the first class is that which he achieved as a scholar. Mr. Eastwick, who died at Ventnor on the 16th of July, was in his seventieth year.

—The annual reports of the officers in charge of two of the chief observatories of foreign governments include some points worthy of special note. The Astronomer Royal, W. H. M. Christie, F.R.S., records the gift by the Misses Lassell to the Greenwich Observatory of the great two-foot reflecting telescope, constructed by their father, with which he discovered the Saturnian satellite Hyperion in 1848. This instrument has two specula, and will be brought into active use at once by the Greenwich observers. The regular subjects of observation with the meridian circle continue to be the sun, the moon, the planets, and fundamental stars. A new working-list of 2,600 stars, comprising all those down to the sixth magnitude, inclusive, which have not been observed since 1860, has been prepared, and was brought into use in March last. An unusual number of meridian observations of comets have been made during the year. The observations of the moon with the altitude-and-azimuth instrument, which have heretofore consumed so large a part of the attention of the observers and computers, are now restricted to the first and the last quarters of each lunation, the intermediate semi-lunation being sufficiently provided for by the meridian observations. There results from this arrangement a great economy of the working force of the establishment, and its consequent availability for other research of greater interest and importance. More than one hundred and fifty measures of the displacement of lines in stellar spectra have been made for determining the motions of stars in the line of sight. The observations of the spectrum of Sirius during the past winter tend on the whole to confirm the impression that the rate of recession of this star has diminished progressively since 1877, and that the motion is now on the point of being converted into one of approach. The brilliant aurora of last November was spectroscopically observed, and the spectrum of comet *a* 1882 showed the remarkable yellow sodium lines with great brilliancy just before perihelion passage. Photographs of the sun were taken on two hundred days, on seven of which the disc was observed to be free from spots. The magnetic and meteorological observations have gone on as in former years, substantially unchanged. Not only are the numerical reductions of all the observations reported in an extraordinary state of forwardness, but their value is greatly enhanced by the promptness with which they are put in print, the volume of 'Greenwich Observations for 1880' having been distributed in July of last year, and the volume for 1881 having been passed for the press early in the present year.

—The report of Admiral Mouchez, the director of the Paris Observatory, places on record signal improvements in the Observatory itself—the extension of its grounds, the installation of a new form of instrument styled "équatorial coudé," and the construction of subterranean chambers for the study of terrestrial physics. The revision of Lalande's star catalogue has been carried so far that the printing of the 'Catalogue général de l'Observatoire de Paris' is already commenced. This catalogue will contain more than forty thousand stars, and will be

completed in eight volumes. In connection with this work, 110,000 observations have been made during the past four years. The special meteorological service has been separated from the Observatory, and only such meteorological observations are now made as will serve the purpose of determining the proper corrections for astronomical observations. The Paris Observatory is the first to employ the captive balloon in the study of the state of the atmosphere at a considerable elevation above the Observatory. The construction of the great telescope, some sixteen metres in length, is progressing. The dome covering it will be about twenty metres in diameter—the largest in existence—and will be mounted in an entirely novel manner, being floated by an annular caisson plunged in a receptacle of similar shape, and filled with some liquid not liable to freeze. The brothers Henry, who went up the Pic du Midi to an altitude of nearly eight thousand feet to observe the transit of Venus last December, reported on their return so extraordinary an atmosphere that Admiral Mouchez has taken immediate steps toward the erection of an observatory there. During the intervals of unfavorable weather at Paris, it is proposed to send two or three astronomers up to this auxiliary observatory to make use of the brilliant sky of the Pic du Midi.

—Since writing our review of Professor Vámbéry's 'Origin of the Magyars' (*Nation*, No. 936), in which we exhibited the looseness and intrinsic weakness of his speculations on the original affinity of his nation to the Turkic tribes, in antagonism to the better supported and almost generally accepted Finnic theory of Paul Hunfalvy, Budenz, and others (see *Nation*, No. 889), we have received a pamphlet from the pen of Hunfalvy devoted to a thorough criticism of that work ('Vámbéry's Ursprung der Magyaren besprochen . . .'; Vienna and Teschen, 1883). It is intended to counteract the impression which Vámbéry's German publication (his work appeared both in that language and in Hungarian) might produce on the learned public outside of Hungary, to which the best writings of the leading Pesth philologists and ethnologists are sealed books. That it could not have been a hard task for Hunfalvy to expose the hollowness of many of his opponent's assertions and argumentations, and the levity with which he proceeds in his archæological researches generally, we need not state after what we said and pointed out in the review above referred to. The pamphlet seems to us, however, to contain too much Magyar philological matter to be sufficiently intelligible and palatable to scholars unfamiliar with that language and the controversy about its affinities, and, on the other hand, not sufficiently exhaustive and convincing on many points learnedly touched upon. The tone in which Hunfalvy replies to Vámbéry's attacks on the results and products of so many years of his literary labor, is neither one of supercilious superiority nor of indignation roused by flimsy opposition, but of politeness, more or less sincerely assumed at the beginning, gradually exhausted, and finally yielding to contempt. He begins by designating Vámbéry as his "famous countryman," then mildly blames his want of perspective and similar deficiencies, and subsequently points out the inadequacy of his knowledge of his native tongue, and finally impugns his veracity by alluding to the deceptions once practised by him, as false dervish, on the credulity of ignorant Turkomans—deceptions spoken of with much self-complacency in the book of travels in Central Asia which, twenty years ago, procured him his world-wide renown. That this recital of travels has also been—as even recently in our columns by a correspondent in Vienna—assailed as based on borrowed knowledge and on personal experiences mainly invented, Hunfalvy nowhere hints at, either from a total disbelief in the accusation or from regard for the honor of a writer and scholar whom Hungary has distinguished, and Europe acknowledged, as one of her celebrities.

RECENT NOVELS.

Arden By A. Mary F. Robinson. Harper's Franklin Square Library.

Tiger Lily, and Other Stories. By Julia Schayer. Charles Scribner's Sons.

For the Major. By Constance Fenimore Woolson. Harper & Bros.

The Ladies Lindores. By Mrs. Oliphant. Harper's Franklin Square Library.

Master Bieland and his Workmen. By Berthold Auerbach. Translated by E. Hancock. [Leisure-Hour Series.] Henry Holt & Co.

Princess Amélie. [No-Name Series.] Boston: Roberts Bros.

A Foolish Virgin. By Ella Weed. Harper's Franklin Square Library.

Aut Cæsar aut Nihil. By the Countess M. von Bothmer. Harper's Franklin Square Library.

The Senior Songman. By the author of 'St. Olave's.' Harper's Franklin Square Library.

Noris: Mœurs du Jour. Par Jules Claretie. Paris: Dentu; New York: F. W. Christern.

Le Collier d'Acier. Par Fortuné de Boisgobey. Paris: Plon; New York: F. W. Christern.

THREE reflections will be made upon 'Arden' by the discriminating reader: First, it contains many exquisite little pictures of English landscape; second, lovely as is the heroine, and worthy as are most of the characters, there is no coherency, no reality in the story; third, the American youth, as portrayed at second-hand from Mr. James's pages, is an even more provoking figure in its misconceptions than the American girl as just now rendered in English fiction. The author should, however, have the credit of some quite good imitations of fashionable art-talk.

'Tiger Lily' is the first of five short stories written with a vigor and a brightness that will win a reading for them. At the same time, it is evident that the writer starts with preconceived and not very original notions about the ordering of human affairs, which are only a hindrance to her in the understanding of the real life which she could describe so well if she but saw it.

Miss Woolson has made 'For the Major' a very fresh and original story, though using what belongs to the most common of stock materials: a doting old man, a young and pretty second wife, a stepdaughter, beautiful, proud, and ready for any jealousy, and a fine young clergyman. The reader will find none of the old combinations, but a story of sweet and devoted self-sacrifice. It turns upon a disguise successful for its intended purpose, and so well described that most readers will believe in it. Cleverly as it is imagined, a doubt will arise whether, easily as the world might be deceived, it could be maintained in the innermost privacy without presupposing a senility which is not at all the author's intention. The villain of the piece is nothing worse than a ne'er-do-weel, and there is no humiliating discovery, but only Mme. Carroll's own accusations of herself. The impressions from the story would be more harmonious if the change after her confession had not been so great. The disillusion is made too complete. A woman scarcely fifty could still be beautiful, even though she owned to all her years. It would be a nice question in casuistry, how far it is right to avail one's self of an illusion not of one's own creating. Is it strictly honorable? Since the gentle little lady had only good motives, and used her advantage only for the happiness of those she deceived, we willingly lend ourselves to the belief that her design might have succeeded, when, if evil had been meant, every reader would have protested against its probability.

It was skilful art to put the young lovers a little out of the centre of the picture, to keep them back from the foreground; but the closing chapter is a mistake. The repetition of the marriage ceremony with an uncomprehending old man is a theatrical incident out of keeping in a story otherwise so well balanced. If it were actually necessary, then it upsets the whole plot, for no law recognizes the deed of an imbecile. It is made out as a satisfaction to Mme. Carroll's own feeling, but that does not help the matter. A woman might have her fancies, but the rector should have been able to convince her, on the one side, that, sincerely believing herself a widow, she had been purely and truly married in the sight of God; and, on the other, that no law of man would be satisfied by a clergyman's blessing given in a bed-chamber without certificate and without witnesses. Better to have left her, as the world believed her, a true and faithful wife.

The little neighborhood about Dalruzlian and Lindores has in it a less attractive group of people than those we are used to expect from Mrs. Oliphant, but she could not tell a dull story. It is a tale of suffering scarcely compensated by a late-come happiness, "a wistful pale sky, clear-shining after the rain." The tragic part of the story is well contrived, and illustrates, though perhaps unintentionally, the truth that is little realized (because, fortunately, the circumstances seldom occur), that confession is not always a duty. The reader feels that moral justice is done, though legal acumen is entirely at fault. The two or three delightful old servants are worth knowing. Miss Barbara's two women, "who made her comfort and credit the occupation of their lives," are well matched by Rolls, the butler, who, in fact, is nothing less than the *deus ex machinâ*. Agnes, the housekeeper, lamenting the death of the old laird, says,

"with a sort of admiring wonder, 'Eh, to think when ye have a man, that ye shouldna be able to take care of him!' She had never attained that dignity herself. Janet, who was a widow, gave a glance upward at the pensive old maiden of mingled condescension and contempt.

"'And if ye had a man, ye would be muckle made up wi' him,' she said. 'It's grand to be an auld maid, for that—that ye aye keep your faith in the men.'"

Rolls, besides all the rest he has to do, enlightens us, like a Greek chorus, with sage moral reflections upon the play the novelist presents to us, summing up at last: "Marriages, in my opinion, is what most shakes your faith in Providence." There is an amusing variant upon what, since Mrs. Oliphant has taken it up, will soon be called the *usual* American episode. There is a Nellie, a rare and charming damsel. "Lady Reseda thought her very like Daisy Miller." Yet it is not upon her that the Marquis of Millefleurs bestows his expectations of a dukedom, but upon her plain faced, plain-spoken maiden aunt.

The date of 'Master Bieland' is fixed by the Philadelphia Exposition, which figures in its pages, but in it Auerbach returned to the same theme which was long ago the *motif* of 'Edelweiss'—coöperation in handicraft. Then it was the clockmakers', here it is the shoemakers'. There is in it that same comprehension of the significance of all the littleness of the life of a small community which was the success of his first stories, though there is less of picturesque

detail such as made us intimate with the Black Forest. But there is a new force to be reckoned with in the workshop and the tavern; and in such a character as Rabenalt, Auerbach shows how it creeps, hardly suspected, into every place. In the end the cheat, the hypocrisy of the Socialist emissary is punished, but it is evident that the old peace of those little towns and villages has been once for all broken. The translation is an easier English than usually comes out of the cumbrous German, but in some places equivalents rather than literal renderings seem to be needed. The man who is called the "bank-attorney" is obviously a much more important personage than those words imply to English ears.

'The Princess Amélie' gives us, in what might be called a Franco-German dress of the eighteenth century, the old story of an early betrothal or marriage, a long separation, and then a falling in love as between strangers. It is very ingeniously contrived to bring upon the scene, not unnaturally, many persons notable or famous in history just before the outbreak of the Revolution. A more intimate acquaintance with English society a hundred years ago would, however, have prevented the introduction of the Duchess of Kingston. Whoever begins the book will doubtless care to finish it, for it has an easy, rapid movement.

'A Foolish Virgin' is a young lady just out of college, "with a liberal education on her hands," and ready to devote herself to "frills," as her schoolgirl vocabulary designates polite accomplishments. She takes to china-painting, since "in Cincinnati one must do something." The story is only what the author herself would call a "skit"; and as to plot, nothing but a pretty vivacity makes it worth a half-hour's reading. The Cincinnati setting is a novelty. It is drolly given, with a good deal of *vraisemblance*—a sort of mean proportional between ancient Boston and the true West, wherever that may be. There is seldom found in the class to which the book belongs a better bit of delicate satire than the account of the Boston lady's art-lecture and the audience thereat.

'Aut Cæsar aut Nihil' has material enough in it for fifty such books as the two preceding, too much for successful handling by less than genius. As the title suggests, much of the scene is laid in Russia. Only the stereotyped history or myth about the Nihilists is given, but for the first time in fiction not Turgeneff's, that we remember, a distinct place is given to the moderate Liberals. "They wait and they hope." The theory of the character of the late Czar is quite the author's own, which she herself contradicts directly at the last. The book will remind those familiar with the French versions of the novels of the Hungarian Jokai, of 'Le Tapis Vert' and 'Le Mariage de Pouchkine.' With less power and beauty of imagination, it attempts to describe Russian society in the seventh decade of the century as they do in the second and third. The striking figure to English readers will be Bianca, a girl of mixed blood, but of English training. Her character is well developed from the wayward, headstrong child to the grave, saddened woman. It may be thought unnatural, but study will show it rather to be exceptional.

Whoever has known the brooding sunshine, the creeping shadows, the delicious quiet which make the charm of an English cathedral close, will recognize the scenes of the story of 'The Senior Songman.' The title is but one of the old names which are now merged in the far less expressive term, chorister. "He was buried by the singing-men of Salisbury," wrote a contemporary of George Herbert, of his funeral. The romance of the book is a double, if not a treble, one, the first interweaving with the placid monotony of the Close and a drowsy English town the passionate hopes that waken under an Italian sky. The second blooms and fades, or reopens to glad fruition in the very home of the songman as he goes in and out, ever graver and sadder with the pain of memory and the keen disappointment of present loss. There are two heroines. No two could be more different in their nature or their fate, but to each of them came the truest peace that each of them could have asked, "the peace of living up to the best they knew." The chords are minor chords, but patience, endurance, forgiveness, and faith make the music a tender harmony. The Senior Songman will be remembered as a gentle and modest companion in the little group of which the Warden of Hiram's Hospital is first.

There are living French novelists of greater renown and ability than M. Jules Claretie, yet we doubt if any living French novelist has written a more truly typical French novel than 'Noris,' which is M. Claretie's latest story, and in many respects his best. There is a dramatic vigor and directness in the handling of the chief situations which foretells the future appearance of 'Noris' on the Parisian stage, where 'M. le Ministre' has already been received with honor; and if the story is not one for young men and maids, as it must be frankly confessed it is not, the tone of the book is healthy. 'Noris' is as moral a book as 'Criquette,' and not altogether unlike it, for in both tales the heroine, having fallen in love with an unworthy object, and having fallen through that love, holds herself unworthy of the honest man whom she loves later when a fuller understanding of life has come to her. Noris and Criquette both see their duty plainly, and do it simply. Criquette dies, and Noris lives—and in this M. Claretie's story is stronger and truer than M. Halévy's: death cuts the Gordian knot a little too conveniently sometimes. The living of Noris is a truer expiation of the primary fault than the dying of Criquette. Next in importance to Noris herself is the Prince de Chantenay, the model of all fast and fashionable young Parisians, always correct, the leader in style—*Fleur de Chic*, as they call him—and as corrupt and contemptible a little fellow as the Duke of Septmonts in the 'Étrangère' of M. Dumas *fils*. Admirable is the gradual revelation of the Prince's character to the reader and to the heroine, from whose eyes the scales fall one by one until she sees that the prince of her fairy tale is made of very ordinary clay.

If 'Noris' is M. Claretie's best novel, the 'Collier d'Acier' is not one of M. Boisgobey's best. Like all his others, it is the story of a crime and of the hunting down of the mysterious perpetrator. In other words, it is a variation on Poe's immortal 'Murder in the Rue Morgue.' Poe, being translated into French by Baudelaire, was imitated by the late Gaboriau; and M. Boisgobey's friends declare that a major portion of the late Gaboriau's mantle is now on M. Boisgobey's shoulders. But the man in France now who has the secret of Poe in his keeping is surely M. Jean Richepin, the author of the astounding series of short stories called 'Les Morts Bizarres,' and fully justifying that defiant title. Gaboriau at least played the game fairly, while M. Boisgobey has a marked pack, and now and again deals from the bottom. In this very 'Collier d'Acier,' for example, the perpetrator of the crime, whom he punishes at the end of the book, has been presented to us by the author during three hundred pages, at least, as an eminently respectable person. Even in the lower grades of detective-story writing there is art and there are laws. Yet the story is interesting, as it is in duty bound to be, and it opens with a delightfully exciting situation. A wedding party is banqueting, and as the bridegroom stands, glass in hand, a shot through a window in front of him kills him instantly. Who fired the shot? And why was it fired? And who will be punished for it?

ATLANTIC COAST OPERATIONS.

The Atlantic Coast. By Daniel Ammen. [The Navy in the Civil War.] Charles Scribner's Sons. 1883.

In the three volumes on "The Navy in the Civil War" the division of the subject is not clearly defined. 'The Blockade' was on the "Atlantic Coast" and also on the "Gulf" and the "Inland Waters" connected with the sea on both sides of the Florida Keys. This ambiguity leads to repetition, and the same events sometimes appear in two of the volumes. Apart from the blockade, the work of the Atlantic squadrons was largely in getting control of the line of sounds or inland seas which skirt the coast south of the Capes; in occupying the important rivers, harbors, and towns along them; and in simplifying the blockade by substituting for it, when possible, a military occupation. This involved many ventures, planned with care and carried out with vigor and daring. These were usually on a moderate scale and for comparatively trifling ends. Many were very similar in detail, and more useful than brilliant. Some of them, however, were of exceptional daring. Such were the famous exploits of Lieutenant Wm. B. Cushing, then a tall, slender youth of twenty-one, which are also recounted in the first volume of this series. His adventures were remarkable for their boldness of plan, skill in conduct, and heroic bravery in action. He finally blew up with a torpedo, with his own hand, the Confederate ram *Albemarle*, and in about twenty-four hours, all alone and half-drowned, succeeded in reaching the *Valley City* at the mouth of the river. All the rest of his party of fifteen were lost or captured. Another notable attempt against the same vessel had been made by a coxswain, two firemen, and three coalheavers, who volunteered for the service from the *Wyalusing*. They went up the Middle River in a boat, taking two torpedoes with them. These they carried across the swamp to the Roanoke River on a stretcher. Two of the men swam the river with a line, and pulled the torpedoes over to the Plymouth side. The plan was to guide them down across the bows of the *Albemarle*, and for a man on the opposite shore to explode them at a signal. When within a few yards of the ram, the line fouled on a schooner, one of the men was seen and fired on, and the scheme was foiled. All the six men got safely back to the fleet, though some of them were several days in the swamp. All these disconnected expeditions, large and small, are given conscientiously in this book. They were attended with steady success, and in a short time the national flag was flying over all its old coast defences, except at Mobile, Savannah, Charleston, and Wilmington.

In spite of its want of workshops and mechanical skill, the South from the first showed great enterprise and perseverance in adopting the new modes of naval warfare. Its attempts were generally better in design than in execution. There was more activity of this sort at Charleston and Wilmington than anywhere else. Torpedoes of many patterns, floating and sunken, torpedo-boats and ironclad rams were frequently tried, with varying success. All but the last were treacherous servants. The torpedoes were dangerous to place, and the torpedo-boats more than once drowned their crews. But it is clear that they caused no little perplexity and dread to our navy. There was no estab-

lished system for coping with them, and an officer once attacked had to rely on untried theories or trust to the inspiration of danger. It is hardly to be wondered at that sometimes a vessel like the *Miami*, for example, found safety in a retreat, or at least sought time to think of some means of offence other than those which she had tried in vain. The general inefficiency of these novel engines was no doubt partly due to their inherent defects, but at the same time it must be allowed to speak loudly in praise of the watchfulness and steady courage maintained by our navy.

The three principal operations on the Atlantic Coast were the attacks on Port Royal, Charleston, and Wilmington. The last, as is well known, was taken at the second attack. There is a question whether it might have been taken by assault after the first bombardment. Admiral Ammen intimates that it should have been. It seems to us, however, clear from the reports of the eminent army engineer officers who advised against it, and from the testimony of the Confederate General Whiting, that the fort was practically unharmed for defence, that General Butler decided wisely. The second bombardment had very different effects from the first, and the defences were in a very different condition at the time of the second assault. Connected with the first attack was the curious and original delusion of the powder-boat. A suggestion was made to demolish the fort by the explosion of a quantity of powder in a vessel afloat near it. The idea was pooh-poohed by the army engineers, and cannot have seemed promising to any one who had considered the effects of explosions of mines, powder-houses, magazines, or men-of-war. Moreover, the parapets and traverses of the fort were simply flat hillocks of beach-sand—perhaps the most uncompromising material in existence for violent measures. How the suggestion originated is doubtful. Perhaps some drowsy worshipper in the blockade saw a practical bearing in the text, "The little hills shall skip like lambs," or, listening to the reading of the destruction of Jericho, may have dreamed that if its walls could be so shaken by the blowing of rams' horns as to fall flat at the shouting of the people, much more might Fort Fisher be so shaken by the guns of the fleet as to fall flat at the greater noise of an explosion, so that the people should go up to the fort "every man straight before him." The measure was resolved upon, and an old steamer, the *Louisiana*, loaded with 400 tons of powder, was towed near the fort and anchored. The fuses were set for an hour and a half, but the explosion did not occur for nearly two hours. As soon as the fuses were lighted, her convoy started at full speed to secure a safe offing, and was already hove-to, at a distance of twelve miles, when the boat blew up. The fleet was anchored for safety twenty-five miles off. The explosion was seen as a faint flash of lightning on the horizon. A fair wind enabled a faint sound to be heard, and, two hours after, a smoke drifted through the fleet. The next morning, early, the fleet stood in and began its first attack on the fort, which, it is hardly necessary to say, was none the worse for the sacrifice of the powder.

At both Fort Sumter and Fort Fisher, assaults on land were made by sailors from the fleet. At Fort Sumter, by chance, Admiral Dahlgren and General Gillmore had hit on the same night for the same scheme. They were generally at variance, and any concert of action between them was difficult. In general, it might be hard to say whether the prospect were worse for soldiers acting in boats or sailors who acted on shore. On this occasion the soldiers had the advantage. Low water detained them at their rendezvous till the naval attack had failed, and then their own was abandoned. The preparations for the naval attack were made in full sight of the fort, and put it on its guard. It was made by five divisions of boats commanded by Captain T. H. Stevens, and numbered, including marines, about 400. Nearly 120 effected a landing, all of whom were killed or taken prisoners. The total loss was 3 killed, and 10 officers and 104 men captured. Those who landed were, "in fact, entirely helpless, and, when they agreed to surrender, were taken around to another face, and helped to get within the fort."

The fate of the storming party at Fort Fisher was still more disastrous. 1,600 sailors and 400 marines were detailed for the assault. The order to commanders of vessels "directs that the sailors shall be armed with cutlasses, well sharpened, and with revolvers. . . . When the signal is made to assault, the boats will pull around the stern of the monitors and land right abreast of them, and board the fort on the run in a seamanlike way. The marines will form in the rear and cover the sailors. While the soldiers are going over the parapets in front, the sailors will take the sea-face of Fort Fisher." These were the provisions for assaulting a formidable flanked earthwork defended by artillery and rifles, and approached along an exposed sea-beach. They were not strictly followed. The sailors were landed in the forenoon. Lieutenant Preston, a promising officer, who had been in the boat attack on Fort Sumter, set the example of protecting his men by throwing up sand, and this was imitated by the others. It was not even generally understood on shore who was to have command of the united detachments from the different vessels. Finally, Lieutenant-Commander Breese, a gallant and accomplished officer, accompanied by a sailor bearing the Admiral's flag, showed his senior, Captain Parker, a letter from the Admiral, appointing him, Breese, to the command as the Admiral's representative. Captain Parker, with praiseworthy zeal, in deference to the Admiral's flag, served under his junior in command of one of the four columns. At 3 P. M. the increase of artillery fire and the blowing of all the steam-whistles notified the garrison in their bomb-proofs that the time for action had come. The army had worked up, under cover, near the west flank of the land front. The navy, on the other hand, had nearly half a mile of beach to advance over, with occasional cover from sand-hills. They were by the flank in four columns, which gradually converged and formed one compact mass. They broke, and were rallied three times, and a few succeeded in reaching the palisades at the angle of the fort, and some got within fifty yards of the parapet. But at this distance sharpened cutlasses, and even revolvers, are no match for rifles. The action was short, but decisive. In fifteen minutes the casualties were 300, or 15 per cent., and the flight of the survivors was final. Lieutenant Preston was among the killed. The intrepid Lieutenant Cushing was wounded, and, with characteristic promptness, organized the fugitives to man a line of breastworks in the rear against Hoke's relieving force, and thus released additional troops to join those within the fort. The army, in its close fighting for seven hours, lost 8 per cent.

Throughout the book, Union and Confederate reports of the same occurrences are joined to support or check each other. The work indicates laborious research and straightforward honesty. The tone is fair and manly, and the author's mention of his own service is in excellent taste. In fact, the reader needs to bear his name and former rank well in mind to detect his appearance among his associates. The style is enlivened by an occasional pun or humorous allusion, and is evidently that of a hand more familiar with the sword than the pen. Altogether, the book is a pleasant and instructive one for landsmen, and will be of great value and interest to the navy, both for those who shared in the stirring service it describes and to the younger officers, who may be glad to have a standard with which to compare the reminiscences of their seniors.

UNDERGROUND RUSSIA.

Underground Russia: Revolutionary Profiles and Sketches from Life. By Stepniak, formerly Editor of *Zemlia i Volia* (*Land and Liberty*). With a Preface by Peter Lavroff. Translated from the Italian. Charles Scribner's Sons. 1883.

WHO is Stepniak? Lavroff's Preface tells us that this name is the pseudonym of a prominent conspirator. But who is Lavroff? A "distinguished philosopher and writer," "Stepniak's" pages tell us; "editor of a review, the *Vperiod* (*Onward*), written, for the most part, by himself" in exile; a revolutionary socialist "rather inclined toward the more moderate party," whose guiding influence, coming from abroad, has been equally important with that of "the great Michael Bacunin, the genius of destruction, the principal founder of the anarchical or federalistic 'Internationale.'" "Stepniak," too, is an editor and writer—though not a philosopher—but chiefly a man of action. Lavroff remembers "with what enthusiasm the young men in the office of the *Onward* in London heard some pages of his youthful writings read. Others would relate various episodes of his Odyssey as a propagandist among the peasants." He was one of the principal founders of the secret revolutionary press established in the very capital of the Czar. "Among the names of the most energetic actors in the principal phases which the Russian movement passed through, the Revolutionists always mention the name of him who appears before the European public under the pseudonym of Stepniak." The author of the Preface, who expresses a great deal of contempt for the writings of foreigners on what is generally termed Nihilism, is greatly pleased that "the European public will at last have a faithful and animated picture of that movement."

The reader who peruses "Stepniak's" book without partisan bias is often tempted to doubt the faithfulness of the picture, and to smile at the animation which colors many parts of it. Take his "Revolutionary Profiles," for instance. He contrasts the propagandism of one of his heroes, Demetrius Klemens, with that of a young man who died in prison at the age of nineteen, which was "Socratic and searching"; and with that of a lady, which was "passionate and prophetic." Klemens is fascinating; "he has a heart as boundless as the ocean; . . . his moral gifts are such that even the smallest which he bestows are treasures." Vera Zasulitch—we use our own transliterations, instead of the Italian, preposterously preserved in the translation—a lady who became famous by her attempt on the life of General Trepoff in 1878, shows an indifference to glory "unique, perhaps, in the history of the human heart; . . . her character . . . is entirely self-sustained, and neither needs nor is able to derive any inspiration or impulse from external sources." Sophia Perovskaya, the associate of Hartmann in the Moscow mine plot, and leader, on March 13, 1881, in the fatal attack on Alexander II., is depicted as an angelic figure, in the formation of which beauty and generosity, modesty and energy, love and earnestness had equal shares. The story of one of her flights, "among the terrible adventures of her life, . . . is like a

rhododendron blossoming among the wild precipices of the Swiss Diablerets." Valerian Osinski, who, like her, died on the gallows—though for crimes of less historical importance, in 1879—was as generous as she, "as beautiful as the sun," and with his last breath scornfully repelled all suggestions of a petition for pardon; but "by a refinement of cruelty, his eyes were not bandaged, and he was compelled to look upon the agonizing writhings of his companions." "At this horrible sight his physical nature . . . gave way, and the head of Valerian became, in five minutes, as white as that of an old man."

No doubt there is exaggeration and legendary embellishment in all this, and in much similar talk in this book, but, we believe, nothing that is much worse. The history of Russian revolutionism is mainly a martyrology, and martyrologies will always abound in saintly features, in miraculous traits, in legendary ingredients. The Russian Nihilists, as a rule, are pagans in belief—worshippers of the fetish called *muzhik*, or, collectively, people—materialistic, realistic, spurners of everything ideal; but they are passionately devoted to their novel creed, fanatical from constant contention and peril, always prepared for the gibbet or for Siberia, and as ready to die as to slay. Heroism among them is frequently coupled (or in juxtaposition) with intense hatred, the martyr's self-abnegation with the pride of the innovator, the sternest feeling of duty with the conceit of unbelief, tenderness for fellow-sufferers with contempt for life. Sympathetic belief in the cause easily weaves a halo round the brow of such champions of it; fidelity to the cause becomes the only test of purity, and the martyr's death effaces every blot on his life. Besides, believers are not critical, and the Nihilist's moral code is exceedingly lax.

Our author is a strong believer in Socialism, revolutionary propaganda, the justice of the Russian conspirator's cause, the need of extreme measures against Czarism, and in Terror as a legitimate warfare; and he views and judges his fellow-agitators in the light of his faith. We must do him the justice to declare that, with all his one-sidedness, he impresses us as a writer who means to present a "faithful picture," and whose animation is, at least, not merely for effect. He is a sectarian, an advocate, a combatant, but evidently not an intentional deceiver of the public, not a writer of political or historical fiction. He presents, as an undisguised partisan, the bright side of Russian militant Socialism, and the reader who knows enough of the other side—or is, at least, strong enough to resist the beguiling power of enthusiastic and at the same time entertaining narratives—will find not only a great deal that is interesting in the 'Revolutionary Profiles' and 'Revolutionary Sketches,' but also a very important piece of pragmatic history in the author's Introduction, treating of the "Propaganda" and "Terrorism," and much that is worth pondering in the Conclusion, which speaks of the future. Without evincing any great power of diction or argument, our anonymous author will probably succeed in winning much sympathy for his party by his lively narratives and warm pleadings, and chiefly by unsensational and yet harrowing pictures of the Czarish persecution and repression, through spy and gendarme, censor and executioner—though here and there, and especially in the Conclusion, he betrays all the crudity and fierceness of the Nihilistic creed.

In the name of his party, "Stepniak" still adheres to the solemn declaration addressed by the Revolutionary Executive Committee to the present Czar, ten days after the assassination of his father, offering unconditional submission to the will of a national assembly spontaneously convoked by the monarch and freely elected on the basis of universal suffrage, under the guarantees of a free press and free speech. The Terrorists, he says, will be the first to throw down their deadly weapons; they will be forced to do so, for they could not exist for a single day if they opposed their will and work to the determinations of the enfranchised nation. But will the Government, he asks, "have sufficient intelligence and moral courage to adopt this course?" The coronation at Moscow has given us the answer. "If it does not, what will happen? It is difficult to foresee, for the . . . Russian Revolution is a strangely fantastic monster. . . . Something assuredly will happen if the Revolution loses patience, or the hope of succeeding by the less ferocious means which it has at its disposal—the present political Terror." This terror, then, is to be followed by something more ferocious. "Urged by a purely humane sentiment," his "object simply being to enlighten public opinion," and prevent, if possible, the apprehended evils from being realized, our author proceeds "to point out some of the eventualities which present themselves . . . as probable." The coolness with which he does this, after pages abounding in genuine delineations of womanly gentleness and tenderness—as in the sketch of the Jewess, Yessi Helfman, the meekest and most self-sacrificing of regicides—would be surprising, had we not yet learned that Nihilism, though atheistic and grossly materialistic in its confessions, is yet an intensely religious movement, dogmatic, uncompromising, never doubting its own justness, nor the legitimacy of any means leading to victory.

The first eventuality is what may be termed "administrative Terror, directed against the whole body of Government officials." The party has made a trial of this, but only a partial and tentative one. It was too weak for the attempt in 1878, it could try it now. "All Russia would then be strewn with dead bodies, for the governors, the gendarmes, the procurators, the judges, could not all have their Gatchina. It would be a terrible, a grievous thing; but it has already been talked about." Another and more terrible eventuality is agrarian Terror. The peasant class of the subjects of the Czar is so wretched, so full of hatred against the ruling and wealthier classes, so desperate, "that it only needs a spark to make its hatred burst into an immense flame which would destroy the entire edifice of the state and modern economical order, and with it, also, everything bearing the impress of civilization." Even this, "Stepniak" thinks with his party, would be "preferable to lingering death under the heels of despotism." A third eventuality is palace plots and *coups d'etat* of military commanders, revolts of prætorians, not directly connected with the Terrorism, but the natural consequence of it—sanguinary convulsions of which it is impossible to foretell the kind or character. "Who knows whether they will not resemble Oriental rather than European convulsions?"

"Such is the sad future which the Emperor Alexander III., with his insensate obstinacy, is preparing for Russia"—Alexander III., let us add, whom the "Stepniaks" and their followers have placed upon the throne, by assassinating the Czar Emancipator, after driving the latter, by attempts like Karakozoff's in 1866, from the path of reform into reaction and repression, and turning a daily expanding liberalism into a radicalism boundless in its presumption but narrow in extent, and wildly engaged in a deadly grapple of uncertain issue.

THE WAR IN THE TRANSVAAL.

A Narrative of the Boer War: Its Causes and Results. By Thomas Fortescue Carter. London: Remington & Co. 1883.

MR. FORTESCUE CARTER'S 'Narrative of the Boer War' should be carefully studied by any one who is disposed to envy Great Britain her possession of a colonial empire. The grievous embarrassments, the heavy expenditure in blood and money, the too frequent occasions for national shame and humiliation which are inseparable from the existence of these distant dependencies, were, perhaps, never more strikingly illustrated than in the recent history of the Boers of the Transvaal and their relations with the people of Great Britain.

A few years ago the Earl of Carnarvon was Secretary of State for the Colonies, and it occurred to him that he would immortalize himself if he could bring about a confederation of all the South African colonies similar to that which, in North America, had called into existence the Canadian Dominion. The scheme was altogether impracticable, and had eventually to be abandoned, because Cape Colony, the largest and most important of the South African colonies, refused to participate in it. Now, Lord Carnarvon knew that the Cape Colonists disliked the project, but he convinced himself that their objections would be overcome if the military power of the Zulus was broken up, and the Transvaal converted into a dependency of the British Crown. The Transvaal, accordingly, was annexed by proclamation; and the conscience of the English nation was lulled to sleep by a liberal administration of the usual anodynes. Firstly, the Boers were harsh and cruel in their treatment of the natives; secondly, their Government had fallen into disorder, and the public treasury was empty: thirdly, the Boers were, almost without exception, longing to get quit of an independence which they felt that they were not fit to possess. It was in vain that the Boers protested, that they declared again and again that, unless their freedom was restored to them, they would fight to recover it; the Colonial Office poob-poohed all such manifestations of feelings, and manufactured for the delectation of the British people a something which they designated "the loyal Boer," and which, they solemnly affirmed, existed in large quantities in the Transvaal. "The loyal Boer" did not cry or lift up his voice in the streets, but, in his own silent fashion, he was constantly exhibiting his thankfulness for the act of annexation. After a time, however, it became impossible to keep up this fiction of a "loyal Boer," who never manifested his existence by speech or act; and a new device was started. The Boer, it was admitted, was "disloyal"; he was an ill-conditioned, uncivilized creature, and the higher civilization which came in with British rule was naturally distasteful to his untutored mind. Accordingly, he grumbled, but he might securely be counted upon to do nothing beyond grumbling; he was an arrant coward, and would never bite, however freely he might show his teeth. Meanwhile it was a duty that the British nation owed to humanity to persist in the course they had entered upon, and civilize the Boer in his own despite.

Thus were the English conducted blindfold into a war which was an outrage upon all the national traditions, and which inflicted a series of severe shocks upon the national self-esteem. It was the first time since the Crimean War that English soldiers had had to contend with a European enemy. They were commanded by a trained scientific officer, the favorite lieutenant, in fact, of Lord Wolseley of Cairo, and were opposed by Dutch farmers armed only with

rifles; and yet, on three separate occasions, they found themselves out-generalled and defeated by these (seemingly) contemptible opponents.

Concerning Sir George Colley's brief but disastrous campaign against the Boers, Mr. Fortescue writes with the fulness of knowledge appertaining to an eye-witness. He was not present at the battle of Laing's Nek, the scene of Sir G. Colley's first defeat, but he took part in the still more disastrous affairs at the Imgogo River and on the Majuba Hill; and his descriptions of them are full, vivid, and interesting. The book throughout is eminently readable, but, in our judgment, its most instructive quality is the forcible manner in which it shows how the obstinate prepossessions of the English character incapacitate it for doing justice to, or even understanding the aspirations and the sensibilities of, weaker races which have the bad luck to stand in its way. The English are not more grossly selfish in their national policy than other nations, but they have a practice, peculiar to themselves, of varnishing this selfishness by a thin veneer of Pecksniffian morality; and this it is, more perhaps than anything else, which awakens so profound an antipathy in the minds of those who are conquered or exploited by them. "How can you say," asked General Joubert of Mr. Fortescue, "England wants truth? England doesn't want the truth from us! They want their own truth—the truth which will suit the schemes of their own Ministers. That is truth for them; and whatever we say, that is not truth." General Joubert here hits the nail very exactly on the head. Truth was the very last thing which England wanted from the Boers; and not until her crack Highland soldiers had been driven helter-skelter from the summit of the Majuba Hill could she be persuaded that the defenders of Laing's Nek, and not the Colonial Office's *boojum* of a "loyal Boer," represented the actual state of feeling in the Transvaal.

So far as her colonies are governed by Great Britain at all, they are governed by the permanent officials of the Colonial Office, who are at once secret and omnipotent, and irresponsible alike to the nation at home and the settlers abroad. According to Mr. Fortescue, the English residents in South Africa are becoming alive to the intolerable character of this anomaly, and a feeling is spreading among them which will lead, at no distant date, to the disseverance of the connection. He writes as follows:

"That the colonial possessions of England have outgrown in extent the limit which the mind of statesmen at home can comprehensively grasp and beneficially control, is the cause, undoubtedly, of the growth of a republican spirit in the colonies, which has as yet found only a limited expression in the public press, but which exists to an extent probably not contemplated by people in England; and that republican spirit, the outcome of dissatisfaction with the controlling power of the mother country, will assuredly prove, before many years have passed, as fatal to the controlling power, if Imperial policy toward Crown or semi-Crown colonies is not speedily remodelled, as the growth of republicanism in the United States proved fatal to the jurisdiction of England in that quarter of the globe. The circumstance of an Englishman being elbowed out of the land of his birth, and having to gain a livelihood in one of the colonies, does not in the remotest degree stifle in him the aspiration for 'popular' government which is inborn in every Briton. The settler in any one of our colonies seldom dwells in the country of his choice more than four or five years without discovering . . . that while there are certain advantages gained by the intimacy of the connection with the mother country, those advantages are more than counterbalanced in the long run by the absence of practical knowledge of the necessities of the colony on the part of those who endeavor, however honestly, to govern it from a distance. The colonist not unfrequently finds that he is the sport of parties at home, either Conservative or Liberal, as party exigencies serve; and though he may have left England the most ardent Conservative or Liberal, he is soon convinced that neither the principles of Liberalism nor Conservatism are of any practical value to the land of his adoption. He discovers that it is as much the custom of a Conservative Ministry as it is of a Liberal Ministry to ignore the wants and frustrate the schemes of progress which form the subject of the colonist's appeal to the Home Government; that wilful blindness and wilful deafness, wilful misconstruction and wilful misunderstanding, on the part of the Government seem to be the leading lines of colonial policy; and that in the Crown there is no court of appeal, no avenue toward redress, no prospect of a reversal of the inferior authority, no attentive ear for grievances so palpable that they should not require stating. The colonist, therefore, whose destinies are ruled, and whose life and good government depend upon that distant authority known as the Crown and the Cabinet, becomes imbued with a republican spirit; for it is not in the nature of man that he can identify himself with parties which are of no practical benefit to him in his sphere of labor."

Specimens of French Literature from Villon to Hugo, selected and edited by George Saintsbury. Oxford: Clarendon Press Series; New York: Macmillan & Co.

THIS is not, like most of the books of selections or *chrestomathies françaises*, a compilation, more or less tasteful, from a limited number of standard authors, long known to the reading public. Mr. Saintsbury's purpose has been to "make a sufficient tableau of the various achievements of French literature from the literary point of view," and this he has done in a very satisfactory manner. The selections have been taken, in great part, from rare old books and manuscripts that are beyond the reach of the American student, and for which he would search in vain our best public libraries.

The volume begins with several pieces by the scapegrace poet, Villon—whose life and works Théophile Gautier revealed to the admiration of modern readers in his charming book 'Les Grotesques'—and unrolls before our eyes a panoramic view of the progress, halts, and retrograde movements of French literature from the 15th century to our day, as represented by 192 writers in prose and poetry. The reader makes the acquaintance of such poets as Coquillart, Baude, D'Auvergne, Chastelain, contemporaries of Villon, while some graphic pages from Philippe de Comines give him a fair specimen of the terse, clear style of the prose-writer of the 15th century. At that period the French language, so long in forming, has reached its maturity; it will strengthen itself and receive a definite grammatical form in the first part of the 16th century, to be invaded, in the latter part, by numerous words and turns brought back from Italy by the French armies or made fashionable by Catherine de Médicis and her Italian followers during the reigns of Francis I. and Henry II. Then will come the mania for the ancient languages. Among the selections we find the manifesto of Joachim du Bellay in favor of the Greeks and Romans. There, also, we find several light pieces by Du Bellay's friend and admirer, Pierre de Ronsard, he who so dolefully exclaimed:

"Ah! que je suis marri que la langue françoise
Ne puisse s'exprimer comme faict la grégeoise!"

The eye may follow the modifications of style, both in prose and poetry, brought about by Ronsard's followers, by Malherbe's strong common sense, by the pomposity and redundancy introduced by Henry IV.'s courtiers after the long wars with Spain, by the victorious struggle made against this by the literati of the Hôtel de Rambouillet and the grammarians—a struggle to return to the native simplicity of the French language. The fight is won, and numerous selections from the great writers of Louis XIV's time show us French literature at the acme of its glory. Besides the familiar names of Corneille, Racine, Molière, Mme. de Sévigné, we are pleased to find those of Scarron, Mézeray, Sarrasin, Cardinal de Retz, St.-Simon, St.-Évremond, Tallemant des Réaux, and a host of others. So with the school of philosophers who made the 18th century illustrious and prepared the way for the Revolution. The 19th century is very fully represented, although no living author, save Victor Hugo, is mentioned. The exception is natural. Hugo was the founder of the Romantic school, which, in its fight against the Classics, begun in 1824, broke the fetters of French poetry. Less successful with prose, it nevertheless gave it a richer coloring and a wealth of realistic descriptions under which some of the fiction writers of our day but too often conceal a lack of invention.

The order of the selections, however, is not chronological, but that in which the writers are mentioned in the author's 'Short History of French Literature,' to which this volume is intended to form a companion. Mr. Saintsbury, in his preface, tells us that "care has been taken to select extracts which add to their own literary interest that of supplying the key of the origin of other interesting literature." It is a pity that he should have given but one selection from St. Amant, a second rate poet of the early part of the 17th century, much abused by Boileau and other critics, but who, nevertheless, has "inspired" some of our modern poets, more than once, to wit: the great Hugo in one of his prettiest "Orientales," Alfred de Vigny, in one of his most poetic figures, and Charles Nodier, in his weird 'Smarra.' So with Cyrano de Bergerac, the contemporary of Molière, from whose "Pédant joué" the latter borrowed, almost *verbatim et literatim*, the comic scene in the "Fourberies de Scapin," the refrain of which, "Que diable allait-il faire dans cette galère!" is quoted every day by people who never heard of Bergerac. His 'Voyage to the Moon' and his 'Comic History of the Empire States of the Sun' have suggested more than one fanciful story.

Among the selections from old poets but little known are several pretty ballads of the 15th century, some admirable lines "To his Infant Son," by Charles Fontaine, and remarkable quatrains on "Man," by Gui du Faur de Pibrac. Among the selections from the old prose-writers, the reader will enjoy "Ghost-Catching," a pretty story by Queen Marguerite de Navarre, "Troubles of an Inventor," by Bernard de Palissy, Marguerite de Valois's account of St. Bartholomew's Day, extracts from the famous 'Satyre Ménippée,' and that curious conceit, 'La Carte du Tendre,' by Mlle. de Scudéry.

Sandringham, Past and Present. With some historic memorials of the Norfolk Coast. By Mrs. Herbert Jones. London: Sampson Low.

THE author of this book has anticipated any criticism upon the miscellaneousness of her collections of facts and anecdotes. "A given locality furnishes but the point round which gathers a web of varied human interest—the thread on which the distinct beads are strung." Sandringham, the country home of the Prince of Wales, seems not so very remote from us, or at least from New England. The church at the park gates is the parish church of West Newton; the village of Appleton is hard by; Lynn is the next large town, and northward, across the Wash, on a clear day, the lofty tower of Boston church is plainly visible. Its his-

tory begins with Felix, the Apostle of the East Angles (A. D. 630), who preached upon the spot where Babingley church now stands within the grounds, vacant but reverently cared for. The tradition of his coming has been faithfully kept in the name of "the Christian Hills," a low range close by. A thousand years later the estate was sequestrated, after the siege of Lynn, and its Roman Catholic owner, Colonel Cobbe, actually suffered from poverty. Of his four sons two were priests, and of the five daughters four took the veil in foreign convents. After them came the Hostes, among whose chief treasures was the portrait of a young lady of the family who was "burned as a Protestant" in the Duke of Alva's time. There are Pastons all through the story, building grand houses and befriending the monks at Bromholm Priory. Their women are old friends, from John's wife Margaret, in her scarlet gown, to Bridget, the beautiful wife of the great Sir Edward Coke.

But the most picturesque figure in all the long train of owners is Anthony Woodville, the "gentle Rivers," to whom it came by his marriage to the only daughter of the Lord Scales, the Seneschal of Normandy under Henry V. An interesting portrait of him, from an illuminated manuscript at Lambeth, is given. It was a curious chance that made a French Huguenot, John Motteux, the successor of the Low Country Protestant Hostes. Without children or near heirs, he left it to the son of Lady Palmerston, and so it fell out that the last mistress of Sandringham before the Princess of Wales was the beautiful Lady Harriet Cowper, the only daughter of the Earl of Blessington, and the girl-wife of the Comte d'Orsay.

The second half of the book affords tantalizing glimpses of notable persons and places in Norfolk. We could wish it twice as long, except that even then there is no end. Off Hunstanton lies the submerged forest that can be seen at "dead neaps." A clergyman, one of the few who have reached it *on foot*, writes:

"About two miles north of the cliff, and a mile and a half from high-water mark, we arrived at the prostrate forest, consisting of numberless large timber-trees, trunks, and branches, many of them decomposed, and so soft that they might easily be penetrated by a spade. Many of the trees, however, are quite sound, and still fit for domestic purposes, and indeed are sometimes used by the proprietors of the neighboring lands for posts and rails."

About Yarmouth cluster the traditions of Cromwell's near friends and relatives. There lived his granddaughter, Mrs. Bridget Bendish, holding him

"not only the first general on earth, but after the twelve apostles the first saint in heaven. . . . Loquacious, eloquent, and enthusiastic, she would frequent the drawing-rooms and assembly-rooms of Yarmouth in the first quarter of the eighteenth century, as a leading and distinguished guest, dressed in the richest silks, and with a small black hood on her head, arriving after a day spent in hard manual labor with her workmen over the saltpans of her salt manufactory on Cobbolme Island. The evening over, she remounted her mare to return to Southtown, about half a mile distant, and, perched on her old-fashioned saddle, would trot home at one o'clock in the morning, piercing the night air with the loud jubilant psalms in which she shrilly declared her election to the kingdom of heaven. But she never forgot the traditions of her childhood and their legacy of personal dignity. When, as Mr. Dawson Turner used to tell, his grandfather asked her one day whether she had ever been at court, she replied, 'I have never been at court since I was waited upon on the knee.'"

The small village of Cockthorpe was the birthplace of Sir Cloudesley Shovel. It lies scattered over an elevated plateau of land, commanding a sight of the sea full and wide, and close by is the imposing church of Blakeney, "with a tall lantern-turret at its eastern end, built to warn the nightly wanderer at sea." The rectory at Burnham Thorpe, where Nelson was born, is gone, but they still show the stream across which Nelson, when a captain in the navy, was carried on the back of a laborer on the occasion of a party going round to "beat the bounds" of the parish. "I reckon I've done about the right thing," said the sturdy St. Christopher, as he deposited his burden on the further side. "No, you should have dropped me," said Nelson, "and then every one would have remembered the occurrence."

In the library at Holkham are many of the law books belonging to Sir Edward Coke, "full of notes in the handwriting of the Lord Chief Justice, among them a report of the judgment and part of the argument in 'Shelley's Case,' at the end of which are some written remarks by him.

"The title-page of the first edition of the 'Novum Organum,' published in 1620, bears the design of a ship passing through the Pillars of Hercules into an undulating sea. The Holkham copy is adorned by the inscription, 'Ex dono authoris,' and immediately under this are these bitter lines, in the handwriting of Sir Edward Coke:

'Instaurare paras veterum documenta sophorum,
Instaura leges, justitiamque prius.'

Above the ship, also in the handwriting of Coke, is the couplet:

'It deserveth not to be read in schools,
But to be fraughted in the ship of fooles.'"

A touching letter from Roger Williams to Mrs. Sadler, the daughter of the Chief Justice, is copied from the original at Cambridge. Sir Edward had seen the young Welshman reporting the speeches in the Star Chamber, and had protected and educated him:

"For my much honoured kind Friend Mistres Sadler, at Stondon, neere Puckridge, these.

"My much honoured friend, That Man of Honour & Wisedome & pietie your deare Father, was often pleased to call me his Son & truely it was as bitter as Death to me (when Bp. Laud pursued me out of this Land & my Conscience was pswaded agst. ye Nationall Church & Ceremonies & Bps. beyond ye Conscience of ye deare Father) I say it was as bitter as Death to me when I rode Windsor way to take ship at Bristow, & saw Stoke Howse where yt blessed man was & I then durst not acquaint him with my Conscience and my Flight: But how many thousand times since have I had honourable & precious remembrance of his Person & ye Life ye writings ye speeches & Examples of yt Glorious Light. And I may truely say yt. beside my Naturall Inclination to studie & Activitie his Example Instruction and Incowragemt. haue spurd me on to a more than Ordinarie industrious & patient course in my whole course hitherto."

In the concluding chapter, to which, as appears from a prefatory note, Mr. Henry Stevens, of Vermont, has contributed some suggestions, is the story of the Norfolk boy who came to Virginia: "And Pocahontas saved a boy, one Henry Spilman, who lived many years by her means among the Patowmacks." But that is by no means the only link connecting the daughter of Powhatan with Norfolk. Her husband's family, the Rolfes, had lived for centuries in the county. To descendants of the Tuttington branch belong some precious relics of Pocahontas. She died, it will be remembered, on board a ship just setting sail for Virginia, and was buried in a church at Gravesend which was burned a hundred years later. There is the "Pocahontas" vase of pale brown earthenware, with a silver rim at the top, and the earrings of Pocahontas, each a double shell—the rare white mussel-shell found on the eastern shore of Behring's Straits. But of far greater importance is a portrait of her now known to be in existence in Norfolk. Its authenticity seems to be undoubted, and it supplies a new element in the discussion of her story. It is the original of the well-known quarto engraving made by Simon de Passe.

"The dimensions of the picture are two feet six inches and a half by two feet one inch. A painted oval encloses the portrait. The painting of the face, and of the details of the dress, is clear and finished, and shows great delicacy and beauty of execution. The whole effect of the coloring is rich, mellow, and deep-toned, with the indescribable quality shed over it which time alone can give. The portrait is slightly smaller than life, the face stamped unmistakably with the Indian type, and denoting intelligence and thoughtfulness, with much dignity both in its expression and in the carriage of the head. She looks at once royal in birth and in nature. The features are handsome and well formed, the lips bright red, the skin dark, smooth, and vellum-like, with a suspicion of a copper tint. The eyes are remarkable; prolonged at the corners, more meditative than brilliant, like still pools rather than flashing water. Their color is a rich, decided, undeniable brown, with very blue tints on the white eyeballs. The eyebrows are straight and black, the short hair by the ear throws out a glistening pearl earring. The deep lace ruff, rising behind, defines sharply the shape of the face, which shows the high cheekbones, and the outline narrowing abruptly below them, so characteristic of her race. The hat she wears on her head, and which in the print has a grotesque appearance, sinks unnoticed into the scarcely less dark background, while the richly-chased broad golden band round it gives the effect of a coronet, and is in happy combination with the coloring of the face. She wears a mantle of red brocaded velvet, much ornamented with gold; the under dress dark, buttoned with gold buttons. A small, taper hand holds a fan of three white ostrich feathers. Around the portrait are the words, 'Matoaka Rebecka filia potentiss Princ: Powhatani Imp. Virginiæ.' On a space beneath: 'Matoaks als Rebecka, daughter to the mighty prince Powhatani Emperour of Attanoughkomouck als Virginia, converted and baptized in the Christian faith, and wife to the worshll Mr. Thos. Rolff." Close under the figure, within the oval, is written, 'Ætatis suæ 21. A° 1616.'"

Biographical Sketches. By C. Kegan Paul. London: Kegan Paul, Trench & Co. 1883.

THESE essays, with the exception of the one upon George Eliot, which is mainly literary, appeal to lovers of the religious mind, whether they take an intellectual interest in the permutations and combinations of theology, or a spiritual interest in pietistic character. The author writes of Edward Irving, Keble, the Hares, Rowland Williams, Kingsley, George Eliot, and Cardinal Newman, and in each case he has something fresh and acceptable to say. For, if he is not elaborately critical, nor profoundly thoughtful, nor furnished with new facts even, he states the varying tenets of belief clearly and easily, his characterization has, in the case of several, that grace of perfect keeping which comes from personal friendship with them, and especially he displays a freedom of mind rare in a writer on such topics, a power to appreciate religious emotion without becoming a conductor of it, and to perceive the value of dogmas without abating one jot or tittle of dissent from them. The list of names which has been given above involves an account of English religious life in this century of the most striking nature. What a list it is, what a variety of culture, aspiration, rest, failure it embraces! Irving, the stray lamb of the Roman fold, if ever any was, snared and abandoned among the pitiful delusions, the "tongues," "gifts," and "orders" of the early Corinthian Church; Keble, the love-sick youth who medicined his disappointed heart by the successive solaces of writing poetry "specially designed to 'exhibit the soothing tendency of the Prayer-Book,'" of taking a wife and of enjoying a comfortable country-living; Augustus Hare, fearing disease on his death-bed as the attack of the devil, and Maria, his wife, feeling the cathedral music more touching and solemn because "day by day these most harmonious and beautiful songs of praise are resounding in the ear of God alone"; the brave and scholarly Rowland Wil-

liams, condemned to an obscure and solitary living because he wrote the books most creditable to Anglican theology in his time, and had not the fear of his Bishop before his eyes; Kingsley, whose thoroughly secular mind was distinguished by a negative conception of Christianity as something not interfering with civic virtue or manly sports; George Eliot, whom many will not yet believe to have been a real infidel; and Cardinal Newman, whom likewise the true Briton cannot believe to be a real Catholic—such, in briefest strokes, are the illustrations this volume affords of religion in the country of the Established Church.

It is no part of our purpose now to discuss the general question suggested; but, it should be remarked, the author, without ever explicitly starting the question, never loses the sense of its presence. His remarks on the epicurean fortune of the country clergy, in his essay on Keble, are not less effective because they are not denunciatory, but good-natured and unobtrusive. His allusion to Archbishop Tait, in which he incidentally says, "but we suppose that many, even of those who have the interest of the Church of England at heart, would think it, on the whole, well that her chief representative should be commonplace," is not so careless as it seems. There is a sly effectiveness in the criticism of Dean Stanley: "Great as was his tolerance when he looked at anything from the side of his affections, he was yet in some somewhat intolerant; with all his courtesy and tolerance there was ever mingled a something of scorn for that which he did not wholly understand." There is a searching truth in the characterization of Kingsley as the Creole nature whose radicalism was accidental, though such a description of him is incomplete. But it is curious to notice that with such cautious distrust of the clerical mind as our author shows, he reserves the heart of his admiration for the man who went out into the communion of Rome; in other words (for we do not believe that he is exceptional in this veneration), of the various ideals worked out by religion into concrete life among us, the one which most powerfully affects the liberal layman is that of Cardinal Newman, the sane-minded, pure-hearted man, who, well furnished with learning, logical faculty, eloquent speech, and unfaltering in intellectual integrity, left the dignities and splendid worldliness of the Established Church to enter the obscure brotherhood of the Oratory. Some answer to the query why this is so, some light upon the state of the Church which Newman so mercilessly denounced, and in general upon the anomalous religious life of the most pious Protestant country during the first half of the century, any one may gain by reading these essays of Mr. Kegan Paul, and he will find it an agreeable and instructive occupation.

Ten Great Religions. Part 2. A Comparison of All Religions. By James Freeman Clarke. Boston: Houghton, Mifflin & Co. 1883.

DR. CLARKE, having already published an account of the "ten great religions" of the world, now proceeds to inquire what they all teach on the different points of human belief: "We consider what is the idea of God in all religions, and ask how it began and in what way it was developed. In the same way we seek to trace other phases of the religious life, from their simplest beginnings to their fullest outcome." In the prosecution of this inquiry he lays down as a law "that each religion has a type of its own to which it adheres during its growth and development," and this type he endeavors to trace and exhibit. For instance, in Brahmanism the essential idea is "the reality of spirit"; in the religion of ancient Egypt, "the idea of divine life in all natural existence"; in the religion of Zoroaster, "the idea of an eternal distinction between right and wrong"; in Islam, "the worship of one God as supreme will"; in Buddhism, "the deification of the human soul saved by a knowledge of the laws of Nature," etc. Having exhibited these types like so many facets of a gem, the gem being religion itself, the author draws his moral: "Every earnest seeker, every sincere thought, is a blessing to the world:

> "'All are needed by each one,
> Nothing is good or fair alone'" (p. 69).

This being the aim, and this the method, of the work, let us look into it a little closer. Chapter vi. relates to the soul and its transmigrations. Dr. Clarke thinks that "the evolution of soul" may be worked out as Darwin has worked out the evolution of our bodily organs; that our birth, in fact, is but "a sleep and a forgetting." "A new has been brought before us lately in Dr. Pfleiderer's 'Life of Giordano Bruno.' This writer says: "The day will come when this belief [viz., of the transmigration of souls] will seize with an elementary force the European members of Indo-Germanic humanity—of course in a form first to be purified by the Darwin of the psychology of the future." And no doubt many of the wisest and best of our race have accepted this as the solution of a question otherwise beset with countless difficulties. And in proportion as we lose "ourselves," and think more of the glory of the "Mighty Architect," we find ourselves (it may be tremblingly) admitting the thought, as at least a possible one, that we have been shaped in other moulds and tend to other destiny.

If it were only for the sake of this chapter, the work under review is worth studying. But there are other observations to be found in the book equally striking. With respect to Buddhism, for example, the author is opposed to the opinion "that a third of the human race could ever have longed for annihilation" (p. 332) he therefore repeats his belief that Nirvâna, among the Buddhists, means peace and rest. This opinion also is gaining ground among scholars, and it is only reasonable; for if the Buddhists allotted to the gods of the Brahmans a duration of existence almost incalculable, and yet demurred to make this the highest condition of being, because it must some day end, it seems absurd to suppose that they reverted from this to the idea of annihilation; surely the natural step in advance would be to "interminable being," *i. e.*, eternal existence, and not to "nothingness."

We are glad that Dr. Clarke takes this view of the question, but we are less able to follow him in his argument about the belief of the Buddhists in the existence of a "human soul." If by this we are to understand an "individuality" of soul, we think the Buddhists rejected this idea. They believed in a "monad," perhaps, which they called the "character" or "Karma" (*i. e.*, the maker of a future tenement); but there was no personality. In other words, they agreed with Aristotle (or he with them): "perpetuity for which all things long is attained, not by the individual, for that is impossible, but by the species"; and so they protested against the existence of "a person" that should or could survive the body.

BOOKS OF THE WEEK.

Adams, R. C. Evolution: a Summary of Evidence. G. P. Putnam's Sons.
Axon, W. E. A. Lancashire Gleanings. Manchester: Tubbs, Brook & Chrystal.
Bostwick, Mrs. Lucy W. Margery Daw in the Kitchen. 3d ed. Auburn, N. Y.: The author. 50 cents.
Curtis, G. T. Life of James Buchanan. Harper & Bros. 2 vols. $6.
Dahlgren, Madeleine V. A Washington Winter. Boston: J. R. Osgood & Co. $1 50.
Fallows, Rev. S. Handbook of Briticisms, Americanisms, etc. Chicago: The Standard Book Co.
Fallows, Rev. L. Complete Handbook of Synonyms and Antonyms. Chicago: Standard Book Co. $1.
Gehring, F. Mozart. Scribner & Welford. $1.
Hallock, C. The Sportsman's Gazetteer and General Guide. New York: Orange Judd Co. $3.
Hammond, Rev. E. P. Gathered Lambs. Funk & Wagnalls.
Hobart, Rev. W. K. The Medical Language of St. Luke. Dublin: Hodges, Figgis & Co.
Johnson, B. F. "The Old Swimmin'-Hole," and 'Leven More Poems. Indianapolis: Geo. C. Hitt & Co. 50 c.
Knox, T. W. Pocket-Guide around the World. Boston: Lee & Shepard. $1.
McDermott, H. F. The Blind Canary. Poems. G. P. Putnam's Sons.
Molloy, J. F. What Hast Thou Done? Harper's Franklin Square Library. 15 cents.
Morgan, H. J. Dominion Register and Review for 1882. Toronto: Hunter, Rose & Co.
Oliphant, Mrs. Sir Tom. Harper's Franklin Square Library. 20 cents.
Pereira, R. S. Les États-Unis de Colombie: Précis d'histoire. Paris: C. Marpon et E. Flammarion.
Reynolds, Rev. J. W. My Growth in Divine Life. Cassell & Co. 40 cents.
Richardson, E. The First Six Books of Virgil's Æneid, Metrically Translated. Woonsocket.
Richter, J. P. F. The Invisible Lodge. Henry Holt & Co. $1.
Ross, P. A Misguidit Lassie. Macmillan & Co. $1.
Ruskin, J. The Art of England. Lectures I., II. John Wiley & Sons. 50 cents.
Rydberg, V. The Last Athenian. Philadelphia: T. B. Peterson & Bros.
Scott, Sir W. Ivanhoe. Philadelphia: T. B. Peterson & Bros. 15 cents.
Shakspere's Henry V., Henry VI. Parts 1, 2; Part 3, Richard III., Henry VIII. 2 vols. [Parchment Library.] D. Appleton & Co. $1 25 each.
Sinnett, A. P. Esoteric Buddhism. Boston: Houghton, Mifflin & Co. $2 50.
Sarcey, F. The Miseries of Fo Hi, a Chinese Functionary. Chicago: Jansen, McClurg & Co. $1.
Sattler, Dr. E. History of Tuberculosis. Cincinnati: Robt. Clarke & Co. $1 25.
Strack, H. L. Hebräische Grammatik. B. Westermann & Co.
The Senior Songman: a Novel. Harper's Franklin Square Library. 20 cents.
Thompson, S. P. Dynamo-Electric Machinery. D. Van Nostrand.
Those Pretty St. George Girls: a Society Novel. Philadelphia: T. B. Peterson & Bros. $1 25.
Topelius, Z. Times of Battle and of Rest. Chicago: Jansen, McClurg & Co. $1 25.
Tourist's Guide-Book to the United States and Canada. G. P. Putnam's Sons. $2 50.
Waring, G. E., Jr. Vix: a Horse Story. Boston: J. R. Osgood & Co. 10 cents.
Wedmore, F. Four Masters in Etching. London: The Fine Art Society.
Weed, Ella. A Foolish Virgin. Harper's Franklin Square Library. 20 cents.
Weed, Harriet A. Autobiography of Thurlow Weed. Boston: Houghton, Mifflin & Co.
Williams, C. F. The Tariff Laws of the U. S. Boston: Soule & Bugbee.
Wright, May. Lethe: a Novel. Cincinnati: Robert Clarke & Co.
Zola, E. Her Two Husbands, and Other Novelettes. Philadelphia: T. B. Peterson & Bros. 75 cents.

Richter's Invisible Lodge.

From the German of Jean Paul Friedrich Richter. By Charles T. Brooks. 16mo, Leisure-Hour Series, $1; Leisure-Moment Series, 30 cents.

AUERBACH'S POSTHUMOUS NOVEL.

Master Bieland & his Workmen.

By Berthold Auerbach. Translated by E. Hancock. 16mo, Leisure-Hour Series, $1; Leisure-Moment Series, 20 cents.

HENRY HOLT & CO., New York.

Johns Hopkins University,

BALTIMORE, MARYLAND.

Collegiate and University Courses.

Announcements for 1883-84 will be sent on application.

GERMAN rapidly and conversationally taught in a few months. Send for circular. JULIUS, 27 Union Square, Room 13.

WE WILL FURNISH A SAMPLE Case (12 quart bottles, no two alike), pure California Wine, price $5. SONOMA WINE AND BRANDY CO., 30 Warren Street, New York.

The Nation.

NEW YORK, THURSDAY, AUGUST 16, 1883.

The Week.

At least five cases of embarrassment of banks in various parts of the country have occurred in the last week, and though not one of them can yet be pronounced to be positively a failure, they have, in connection with the additional mercantile failures, increased the general distrust that pervades the business atmosphere. There is every reason to believe that the banks of the country at large are in an unusually strong condition. This is indicated to some extent by the fact that the New York banks at their last weekly statement showed a surplus reserve of specie and legal-tender notes three times as large as at the corresponding time last year. Nevertheless, in view of the steadily declining prices of all sorts of merchandise and nearly all securities in the last six months (but more especially in the last month), the banks have been obliged to call as steadily for a greater margin of property on their loans, or, in other words, to base their loans on lower and lower prices for all kinds of collateral property. This has compelled the selling out of a great deal of such property and accelerated the decline of prices. In short, there has been and is yet in progress a great liquidation of indebtedness, which thus far has not run into anything like a panic in any of the great lines of business. The nearest approach to any such condition has been in the stock market in the last week, where the decline has been from 3 to 10 points in the prices of stocks. This is equivalent to a decline of probably 15 per cent. of the average market price of, say, 60 for the general list of stocks. At the West the decline in prices of grain and especially of provisions has caused the same necessity for liquidation of bank loans.

It is now nearly a month past the time in the season when the money markets usually become active, yet there is still an over-supply of money to loan on call on undoubted collateral security, at the lowest rates ever known in this country. This money, however, seeks rather safety in the investment than higher rates of interest. The fact that money continues so much lower in New York than in London keeps up the rate for sterling exchange and prevents the movement of specie this way, but the general opinion is that as the rate of interest advances here it will cause a movement of gold from Europe to the United States, and that such a movement would do more than almost any other one thing to restore confidence in the general financial and commercial situation.

The efforts of the telegraphic strikers to carry their point by persistent cutting of the wires will, of course, make it more imperative than ever for the Company to make no concessions to them. It would be a great wrong to the public, besides serious damage to its own business, to admit that it could be brought to terms of any sort by acts of violence and crime. It would, by doing so, place itself and the public convenience at the mercy of any little knot of conspirators among its employees who chose to be discontented, or who resented any of the rules and regulations under which they worked. As an illustration of the construction some of the strikers put on the phrase "freedom of contract," the wire-cutting has considerable value. Mr. Campbell, the leading manager of the strike, was examined on Monday before the Sub-Committee of the United States Senate on Labor and Education as to the causes of the outbreak. He said the object of the strike was to obtain an increase of wages and a decrease in the working hours. The wages of operators, he said, had been declining for ten years, which he ascribed wholly to the greed and unscrupulousness of the Company. The rest of the world will, however, be inclined to believe that the overcrowding of the occupation, owing to the increased ease with which the art of telegraphy can be acquired and the increasing love of American youth for clean, indoor work, have had much to do with it. Wages do not decline steadily through several years in any occupation, no matter how wicked the employer may be, unless the labor market is overstocked. This is the real reason, too, why the women telegraphers—or, as Mr. Campbell more elegantly calls them, "the lady operators"—receive less pay than the men. They would, in spite of all prejudice about sex, get just the same pay if there were not plenty of women eager to take the places on the terms offered.

As to legislative remedies, none of the witnesses had anything practical to offer. Mr. Campbell wanted to have stock-watering prohibited; but this would, of course, do the operators no good if the Company's profits remained the same, and, instead of being distributed yearly among the stockholders, were, like those of some of the banks, or those of the New Haven Railroad, rolled up into a surplus. Mr. McClellan, another witness, differed from Mr. Campbell in his account of the cause of the strike, which he said was directly due to the "insult" put upon the operators by the refusal of the Company to treat with the Brotherhood. He was a very despondent witness, for he said the capitalists and corporations in this country could never be induced to agree to arbitration as a means of adjusting labor disputes, and saw no hope from legislation, because "the capitalist can buy the legislators bodily." He further explained that his real cause of complaint was that while the products of the country were worth $6,000,000,000, the laborer got only $979,000,000. So that it would appear as if in order to settle this telegraphic dispute satisfactorily, we should have to adjust the relations of capital and labor throughout the whole country, and see that every man got his due share of the national wealth. Behind most great strikes there looms up a job of this kind, which, it must be admitted, is a large one. What the Railroad Commission or the Civil-Service Reform Commission have on hand is nothing to it.

The striking telegraphers continued their evidence before the Senate Committee on Tuesday, but it cannot be said to be very instructive. The sum and substance of it is that the operators are poorly paid, and that their wages are really lower in this country than in England, though nominally higher. They are mostly, it is said, young unmarried men, and live in comfortable boarding-houses, but can rarely save money. If the same story were told by the members of any other calling—by lawyers, doctors, or clerks, for instance—the advice which almost everybody would give, and does give, is to avoid the business or quit it. There appears, however, to be a peculiar notion abroad that a certain number of young men are bound or foreordained to get into the telegraphic business, and once in to stay in, cost what it may, even if they cannot get a decent living in it. There is, on their own showing, apparently only one remedy for the present state of things, and that is to reduce the number of operators. That is, in fact, the American remedy for bad times in every field of industry. The account given by Mr. Campbell and others of the business and profits of the Western Union was lamentably inaccurate, showing not only that they talk loosely about matters of fact, but do not know exactly what is the matter with them.

Archbishop Elder, of Cincinnati, has called a meeting of the clergy of his diocese to consider what action should be taken toward raising "at least some little percentage" on the debts of the late Archbishop Purcell, his predecessor. He says he does not yet see grounds for "pronouncing it an obligation of justice that the diocese should pay these debts, except for such loans as were made for purposes of religion, and such sums as were expended for works of the diocese." But the understanding has been hitherto that all the money due, except the arrears of interest, went in one or other of these ways. It has been suggested by nobody, we think, that the Archbishop and his brother spent it on themselves or used it for purely secular purposes, and they did not allege that they lost any of it in bad investments, for they made no investments. Therefore, we really do not see on what ground the Catholics of the diocese can escape the obligation of paying off the whole of the debt, except the back interest. This they may perhaps fairly refuse to consider a liability of theirs, as they got no benefit from it, and may set it down to the late Archbishop's carelessness or financial ignorance. To the secular eye, in short, it seems as if the new Archbishop could hardly do a better thing for religion and morality than open his administration by an announcement that the debt must be paid at whatever cost, even if it involves the suspension of a great deal of Church work. No church building erected with the misappropriated

savings of the poor can have any just claim to be considered "a sacred edifice" until the money is refunded.

Another plot to destroy the Welland Canal by dynamite has been discovered in advance. This time the startling revelation is made in Chicago, and there are no intimations that any of the Irish Nationalists who are suspected of being at the bottom of the plot, have been any nearer to Canada than New York is. The former plot, it will be remembered, was thwarted by having the canal picketed, and by having detectives follow the dozen dynamite operators who jumped off a train from Buffalo, each with a hand-bag full of dynamite. It has sometimes been charged that the dynamite patriots are a prudent set, who are careful to keep safely beyond the reach of their own explosives, but it has always seemed to us that the mere act of jumping from a railway train with a bag of dynamite bombs was a sufficient answer to this calumny. In the Chicago revelation nothing so tangible as a hand-bag appears. The revealers do not claim that the plot has advanced beyond the point of "premeditated design," but they have such positive evidence of its existence that they have requested the United States Government to assist in thwarting it. The funds in O'Donovan Rossa's treasury are evidently at a very low ebb.

The *Saturday Review* has an editorial account of Webb's death at Niagara, which in many respects surpasses the best efforts of our most imaginative reporters on this side of the water. It appears that Webb was not to blame at all for his death, but the mob, on the banks, "which was there to see him die; and there was not a man or woman of them all but felt a delightful thrill as he disappeared." This refusal to make even one exception in describing the inmost emotions of a large crowd is delightful for its sturdy simplicity. But the reason why Mr. Webb risked his life was, that "he was undoubtedly influenced by the American fondness for shows of a dangerous character in his choice of a place in which to try to renew his diminished reputation." The *Review* confesses, however, that it was in the eyes of Englishmen that he wished to renew his diminished reputation, and we are left to infer that he could not have done it in the way he had chosen—by the performance of a dangerous feat—in England. Englishmen, we suppose, if Webb had proposed to risk his life in a similar manner in England, would have absented themselves carefully from the scene of the exploit, with their well-known want of curiosity and dislike of large crowds, and shrinking from scenes of suffering or peril; and the poor man would have had to take his dive or his swim in solitude, or with nobody to look at him but the reporter of the *Daily Telegraph*. So, in order to secure a body of hard-hearted spectators, he came to America, and there he got just the kind of crowd he wanted, for it did not contain even one woman who did not feel a "delightful thrill" at the prospect of his death.

Whether the story of the huge offer made by the Canadian railroads to the British Government in the matter of assisting Irish emigration be true or not, it is certain that the Government is going to make further efforts to promote it. It is quite clear—in fact, the Home Rulers acknowledge it—that there are parts of Ireland in which no legislation can improve the condition of the farmer, simply because the climate is wretched and the soil worse. The Parnellites would meet the difficulty by moving these people on to land which is now pasture or reclaimable bog, and are not deterred by the expense of the process, because they think the money for it ought to come out of the British Treasury. The British taxpayer, however, not unnaturally prefers emigration, and there can be no question which is best for the poor people themselves. A large proportion of those who have passed their lives trying to get subsistence out of the soil of Connemara have doubtless too little heart or hope left for very successful contention with the difficulties of the Canadian wilderness; but the lot of their children will be very different in Canada from what it would be under any conceivable circumstances at home.

The Boston *Advertiser*, which was dissatisfied with our explanation of the shoe and leather failures, undertook, in compliance with our request, to give one itself at an early day. It now appears that we must not explain this trouble on "general principles," whatever that may mean. Nor must we say that "the trouble is local"; on the contrary, we must admit that it is general. We must, moreover, perceive that the trouble has lasted for some time, and does not mend, and that the strongest cities and strongest trades have suffered most, and that the wonder is that the "feebler lines of business have not been blotted out or broken." The writer, moreover, boldly asserts that "the failures have been due to a falling market," which is something we presume none but the most hardened and unscrupulous would deny. The article says, too, that the trouble is not due to the cost of labor. At last it reaches the kernel of the whole, which is that "falling prices, and possibly an illegitimate fall in prices, are responsible for the present embarrassment, and the remedy is either a turn in the market, or the general adaptation of the low averages which rule in all price lists." The writer further daringly asserts that "the issues of the day are not so much about wealth and merchandise as about prices and market quotations." We do not know exactly what all this means, but we presume that it contains a suggestion of great value. It looks as if we were to have another article of the same sort, in answer to the searching question "And what makes these?" (*i. e.*, prices and quotations). We cannot honestly say that we have learned yet what did cause the shoe and leather failures, in the last resort. We knew that they were caused proximately by a falling market, but this as an explanation seems to us like explaining a death by ascribing it to the cessation of the heart's action.

A statement by Dukes, written after his acquittal in his trial for the murder of Captain Nutt, has been published. He prepared it at the time when the state of feeling against him in Uniontown was most bitter, and when he was conscious that his life was in constant peril. He intended it as a vindication of his conduct to be published after his death. It is mainly an attempt to show that he shot Nutt in self-defence, drawing his pistol only when he saw that Nutt was trying to draw his. Accepting his statements as true, they only bring out in clearer light than ever the fact that if neither man had been armed there would have been no murder.

There has been a typical social homicide at Luling, Texas, from which it appears that the clergy are beginning to catch it from the manslayers. This, we trust, will lead to a more vigorous stand against murderers in the Southern pulpit. There is the usual somewhat comic side to this last tragedy, for it is said in the despatch that "no one blames Denman (the murderer), and yet the Rev. Mr. Sewell is regarded as the victim of a conspiracy, as he asserted in an ante-mortem statement." The reason why Denman is not considered blameworthy is probably that he acted under the belief that the minister had done him some domestic wrong. Indeed, in some parts of the South it seems to be assumed that a murdered man has no right to complain if his murderer believes, even mistakenly, that he merits death. In the Louisiana case, a clergyman was put to death by another clergyman and his brother in a most brutal manner because of some misunderstood gabble of a school-girl. In like manner Denman probably has misconstrued some other idle story and has slain Mr. Sewell without hearing him. Mr. Sewell was the local agent of the American Bible Society.

Not content with the very rough handling which the Rev. Cyrus Hamlin, President of Middlebury College, Vermont, has received through the press all over the country, for his utterly unwarranted assertions about the use of British gold for the promotion of the cause of free trade in this country, the reverend gentleman has again rushed into print—*Tribune*, August 5—in a very foolish manner. The proposition made by Mr. Thomas G. Shearman, that he would give $5,000 to Middlebury College if Mr. Hamlin would prove his assertions, the College faculty to act as jurors, is characterized as "indecent," of which, he says, "I shall not be expected to take any notice." Turkey is, however, again produced as a warning and example of the depths of misery and woe to which a country can fall which adopts free trade as its commercial policy. That Turkey, even to this day, has no roads, no government guaranteeing security to life and property, no courts of justice, no general system of education, no banks, no honest money, no improved tools and implements of agriculture or other production, while its religion sanctions polygamy, and fanatically preaches hostility to all non-believers in the Mohammedan faith, counts for nothing in view of the fact that a low duty has been for many years levied on imports into that country. Some time ago the Philadelphia *North American* asserted that the columns of the London *Times* would show that some $2,000,000 were subscribed in

England in 1844 for the publication and distribution of free-trade documents in this and other countries. We have called on the *North American* repeatedly to name the number and date of issue of the *Times* which contained this remarkable statement, but we have thus far called in vain. We are now informed privately, but we think on good authority, that the person who furnished the statement in question to the *North American* was Mr. Albert Bolles, Professor of Constitutional Law in the University of Pennsylvania; and we further note that Middlebury College, over which the Rev. Cyrus Hamlin presides, gave to Mr. Bolles, at its Commencement this summer, the honorary degree of Doctor of Philosophy.

Senator Mahone, who speaks with all the confidence of a successful leader, declares that there can be no doubt about Republican success in 1884, and unhesitatingly maps out a course which will lead to it. He says the party must stand firm for protection, must pay off the public debt, and must use what money there is left to build up our State and common schools, thus educating the people. Toward the South he intimates that the Republican policy which has made him a leader should be continued. He says that President Arthur, "by his appointments to office," has "done more to eliminate sectional prejudices than any other man since the war." The Mahone way to complete reconciliation would undoubtedly be to distribute all the Federal patronage in the South among the Mahones, and have the Southern Republican party adopt the Southern view of repudiation.

Twenty Iowa Republicans have united in a formal protest against the position of their party on the prohibition question. The situation is a very peculiar one. Last year the people of the State adopted, by a large majority, a constitutional amendment not only prohibiting the sale of intoxicating liquors of all kinds, but prohibiting their manufacture as well. The Supreme Court declared the amendment invalid on account of some irregularities in its passage through the Legislature. When the Republican Convention met this year, the leaders of the party decided that it would be fatal to go against the expressed will of the people in the matter, and induced the Convention to declare in favor of the necessary legislation to secure another vote by the people. The platform even went further, and described the issue as one of the "home against the saloon," taking the ground that every man who opposed absolute prohibition was a friend of the saloon and an enemy of the home. Against this attitude the twenty Republicans protest. They state unflinchingly that the "mass of the people are intelligent, moral beings," and object to legislation which "makes no distinction between the few who are the slaves of strong drink" and "the many whose noblest manhood is insulted by the imputation that legal enactments are necessary for their protection from the consequences of such a vice."

Besides the Suez Canal, nothing has been lately exciting more party feeling in England than what is known as the Ilbert Bill in India, which is a measure extending the criminal jurisdiction of native Hindoo judges of a certain rank to Europeans, who have hitherto only been triable before men of their own race In India it has encountered almost frantic opposition from the English, but the Government has held firm, and the Liberals in England are now getting up a counter-agitation in support of it. The Tories threatened to bring the question up in Parliament, but they forebore, and nobody has meddled with it there on that side but Mr. Ashmead Bartlett, who carries no weight. The bill is but a step, but a very important one, towards full recognition of the equality of the Hindoos with the whites before the law as British subjects. This equality has been often promised, but never completely granted. In fact, on this point there has been a certain likeness between the policy of the Porte toward the rayahs and that of the British Government toward the Hindoos. Great things have been done for them in the way of educating them and admitting them to office, but the white men have never been put on the same footing with them in the criminal courts, nor have they ever been allowed the same or nearly the same official salaries.

Mr. Gladstone has made one of those speeches at the Lord Mayor's dinner in the City at which Ministers are expected to tell so much and usually tell so little. He again promised that the troops should be withdrawn from Egypt, to which they had gone simply for the purpose of "accelerating reform," but he omitted to say when they would be withdrawn or how long the reform would take. His announcement, however, as it stands, will be very disappointing to the furious commercial Jingoes who held meetings the other day to denounce the Government for acknowledging M. de Lesseps's monopoly in the Suez Canal. One of them, Alderman Cotton, laid it down that "Egypt was our property," and that the Government could, therefore, do what it pleased about the canal, and need not pay any attention to the claims of M. de Lesseps, or to his rights under his concession. A franker expression of the brute-force theory, in fact, has not taken place in England for a long time, and it gives one a good idea of the difficulties which a Ministry that tries to be moral in its foreign policy has to contend with. Mr. Gladstone was very reassuring about the relations of the country with France, and was very jubilant and sanguine about the condition of Ireland, for the improvement in which he said "deep gratitude was due to the Almighty and secondarily to Earl Spencer." We think a good deal is due also to Carey, the informer, without whose aid Earl Spencer would not have accomplished much.

The position of the Suez Canal affair now is that M. de Lesseps has released Mr. Gladstone from his agreement, and Mr. Gladstone has suspended the execution of his scheme of having M. de Lesseps build the canal and lending him the money for the purpose, and the British Jingoes who were making such a hullabaloo about the affair three weeks ago have quieted down, and become a little ashamed of themselves. The Khedive's law officers have given an opinion in favor of M. de Lesseps's claim, and so have the Lord Chancellor and the Attorney-General, but other good lawyers have given an opinion the other way, and, in fact, it may fairly be said that competent opinions on the legal interpretation of the concession are about equally divided. But there is no difference of opinion between the parties to the contract. The Khedive thinks he or his father gave M. de Lesseps a monopoly, and M. de Lesseps thinks he got a monopoly, and if Great Britain overruled them both in her own interest, it would simply be a very gross abuse of power. She does not profess to have conquered Egypt, and even if she had, could hardly, under any system of jurisprudence, undertake to construe the Khedive's contracts against the opinions of his own lawyers.

There appears to be still more or less uneasiness in Spain. There have been other risings of small bodies of troops, which have, however, been put down thus far without difficulty. The Paris *Temps*, which is an exceptionally well-informed paper on Spanish matters, says that the Spanish Republicans consider the situation a grave one, as several superior officers of the army are in favor of a republic, and are supported by the population of the towns. Unfortunately, however, there is probably no form of government which has not supporters among the superior officers of the Spanish army. When the republic was in existence, plenty of them were so much in favor of a monarchy that they made the republic impossible. There may now be enough of them in favor of a republic to make monarchy impossible. If they were agreed on anything, they would give Spain a settled government. But when anything goes wrong with a Spanish military man he thinks of revolution as a remedy. If his life is dull; if his promotion is slow; if rivals or enemies are in favor at court, nothing short of a revolution and a new constitution seems to him an adequate remedy. At present the malcontents are aided by the efforts of the Ministry to restore the public credit. This means an increase of taxation and a revision of the tariff, which offends the manufacturing provinces, particularly Catalonia, which is formidable when discontented for the same reason that it is industrially successful.

The news from Lima indicates that Chili has finally gained complete ascendancy over Peru, and that all the elements of opposition to Chilian control have been overcome. A great battle was fought on July 10, when all the opposing forces under the leadership of Caceres were routed, and since that time the Peruvian leaders have hastened to declare their loyalty to President Iglesias. The towns are following this example, and a better feeling is reported all through Peru at the prospect of peace after the long warfare. It is thought that a Congress will soon be assembled at Lima, when the treaty will be ratified and Peru evacuated by Chilian troops within three months.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 8, to TUESDAY, August 14, 1883, inclusive.]

DOMESTIC.

THERE was great excitement in Wall Street on Monday and Tuesday owing to the rapid decline of stocks. One small failure was announced on Monday afternoon. On Tuesday morning the firm of G. W. Ballou & Co., brokers, of this city and Boston, suspended. It is believed that the losses of the firm are more than $500,000. They had 3,400 shares of Denver and Rio Grande. It was rumored that unfortunate investments in Mexican Central stock led to the failure. There was almost a panic on the London Stock Exchange on Tuesday in American railway securities.

During Thursday afternoon there was a large demand by depositors on the First National Bank and Indiana Banking Company, of Indianapolis, Ind., and large amounts were drawn from both these institutions. The banks remained closed throughout Friday, until about 3 o'clock, when the doors of the National Bank were opened, W. H. English and other capitalists having come to the rescue. On Saturday a scheme for reorganization was announced, involving the doubling of the capital stock.

In the early morning hours of Wednesday the telegraphic communication of the Western Union Company to and from New York was seriously interrupted by the cutting of eighty-two wires on the Eastern, Northern, and Southern circuits. The company believed that the damage had been done by striking linemen. The Brotherhood expressed disapprobation of the deed. There were rumors on Friday of a movement on the part of the strikers looking to a compromise. One hundred more wires were reported cut on Saturday. Several more expert operators returned to work at Rochester and Buffalo. On Saturday and Sunday nights the cutting of wires was continued, with annoying effect. A meeting of a number of trades unions was held in this city on Sunday. They resolved to give material aid to the strikers. On Monday morning there was more cutting of wires. On Tuesday 136 wires of the Gold and Stock Telegraph Company, which supplies brokers with stock quotations in this city, were cut. A committee of the U. S. Senate has been investigating the strike in this city.

The receipts from the taxes on tobacco, cigars, etc., for the fiscal year ending June 30 show a falling off of $5,287,739 as compared with last year. This is said to be due principally to the reduction in taxes which went into effect on May 1. The aggregate tobacco revenue for the year was $42,104,349.

The monthly cotton-crop reports of Texas show that the prospect has been seriously injured by the drought.

President Arthur and his party were at Fort Washakie, Wyoming, on Wednesday. They had driven more than 150 miles in spring-wagons, and had visited a mining camp and an Indian reservation. The President was reported as well and enjoying his vacation. On Thursday the party again started on their journey, this time on horseback. Daily reports of his progress have been received. The party was at Terry's Lake, Wyoming, on Tuesday.

It is reported on good authority that a commercial treaty has for some time existed between Germany and Mexico. The Second Secretary of the Mexican legation in Washington says that all stories to the effect that it contains an offensive and defensive clause are entirely without foundation. The treaty, he says, is substantially of the same character as that recently entered into between the United States and Mexico, and is designed solely to promote the commercial relations between the two countries.

Attorney-General Brewster has written an important opinion in reply to a question submitted by Secretary Folger regarding the payment of interest on money borrowed by the State of New York during the war of the rebellion for the enrolment, subsistence, and clothing of troops. Pennsylvania, Ohio, and several other Northern States have presented claims of a similar character, which involve hundreds of thousands of dollars in taxes. He decides, after a careful review of the act of July 27, 1861 (which provides for the payment by the Secretary of the Treasury, out of any money not otherwise appropriated, to the Governor or authorized agent of any State the costs properly incurred in raising its troops for the suppression of the rebellion), that the claim of New York does not come within the scope of the act.

A telegram was received at the Treasury Department in Washington on Wednesday from the Collector of Customs at Tacoma, Washington Territory, announcing that his officers, with the assistance of the revenue steamer *Walcott*, had captured a sloop engaged in running Chinese across the line from British Columbia. Two smugglers were arrested, but nine of the Chinese passengers escaped. The Collector also said that nearly 100 Chinamen had landed at various points on the northern frontier in boats and Indian canoes within the past few days, and that he is powerless to prevent their landing unless his force is largely increased.

Postmaster Pearson, of New York, has determined, on the authorization of Postmaster-General Gresham, to send the mails for Great Britain and Ireland, and the closed mails for the continent of Europe, which are forwarded by way of England and Belgium, by the steamers which, according to the record of previous voyages, will get them across at the earliest date. The practice heretofore has been to send these mails by the steamers which sailed first from New York.

The National party of New Jersey, after a turbulent meeting at Asbury Park on Thursday, nominated Benjamin Urner, of Union County, for Governor. A temperance plank in the proposed platform was dropped.

The Ohio Liquor-Dealers' Protective Association, at a meeting in Toledo on Thursday, passed resolutions condemning the Scott law, the proposed amendments to the Constitution, and the Republican party. It resolved to act with the Democrats in the coming campaign.

Twenty well-known Republicans, residents of Delaware County, Iowa, have signed a document protesting against the Iowa Republican State platform and pledging all honorable efforts to defeat it. They say: "We are not unmindful of the evils of intemperance, but we realize the truth that the mass of the people are intelligent, moral beings, and we deny the wisdom of any legislation on this subject which in its practical workings makes no distinction between the few who are slaves of strong drink, and therefore proper subjects of legislative care, and the many whose noblest manhood is insulted by the imputation that legal enactments are necessary for their protection from the consequences of such a vice."

The Maryland Republican State Convention has been called to meet in Baltimore on September 27, to nominate candidates for Governor, Comptroller, and Attorney-General.

The Grand Jury of Baltimore threw a bombshell into the Democratic camp on Monday by returning presentments as follows: An indictment against Wm. Pinkney Whyte, Mayor, and ex-officio President of the Fire Board; Thomas W. Campbell, Charles B. Slingluff, Samuel Hannah, and B. E. Smith, for malfeasance in office while acting as Board of Fire Commissioners, for knowingly permitting the sale to the city of material in violation of the Baltimore city code, and at prices so far in advance of the fair market value as to constitute a fraud on the city.

Governor Hamilton, of Maryland, has given to the press a five-column address to the people of the State, making several startling disclosures about the conduct of the last three Democratic Legislatures, and showing improper expenditures of State funds aggregating $500,000. After speaking in the most bitter manner of an oligarchy of bosses controlling the Maryland Democracy, meaning thereby United States Senator Arthur P. Gorman and his followers, the Governor says that since 1879, in several instances, the taxes and revenues of the State have not been paid over by the collection officers; that hundreds of thousands of dollars have been annually due from them for years, and that looseness, disorder, and confusion everywhere prevail. Instead of yielding a revenue, or even maintaining themselves, the oyster and the tobacco services are serious charges upon the Treasury. The delinquent officers, many of them well-known politicians, now owe the State $772,788 08.

The American Forestry Congress met at St. Paul, Minn., on Wednesday, Dr. Geo. B. Loring presiding. A report was adopted recommending to the members of the Congress from their respective States the importance of establishing experimental forestry stations; that the Congress memorialize Legislatures of the different States, urging upon them the practicability of establishing these stations, and that the Ohio plan of organizing such stations be recommended as best suited to the circumstances. The Congress closed its sessions on Friday.

The second annual National Education Assembly met at Ocean Grove, N. J., on Thursday. Two thousand persons were present. Addresses were made by Gen. John Eaton, United States Commissioner of Education, and J. P. Wickersham, of Pennsylvania. On Saturday the topic of Indian Education was discussed, and a long letter on the subject from Mr. Teller, Secretary of the Interior, was read.

Reports from Chicago were published on Friday that secret agents of the Canadian Government had been for some time in that city shadowing prominent Irish Nationalists, and that they had positive information of a design to destroy the Welland Canal by the use of explosives. It was further asserted that a request had been made to the United States Government to assist in thwarting the alleged conspiracy.

A letter written by Dukes, the Uniontown, Pa., murderer, when it seemed likely that his life would be taken, has just been printed. It defends his killing of Captain Nutt on the ground of self-defence, saying that he abstained from using his pistol when Nutt entered his room and attacked him, until Nutt called for help and he felt his own life to be in danger.

Hubert O. Thompson, Commissioner of Public Works, presented a report to the Croton Aqueduct Commission of this city on Wednesday. It estimated the cost of a dam and reservoir at Quaker Bridge at $4,000,000, the reservoir having an area of 3,635 acres, and a capacity of 32,000,000 gallons. The line of the proposed aqueduct from the dam is 31.89 miles long, and the total cost of dam, reservoir, and aqueduct is estimated at about $19,400,000. About three and one-half years would be required to make the aqueduct available. The report was ordered printed, and no further action was taken.

Gen. W. J. Palmer tendered his resignation as President of the Denver and Rio Grande Railroad to the Board of Directors, on Thursday, and it was accepted. It was due to other business interests which occupied his time.

Vineyard Haven, Mass., was almost destroyed by a fire which broke out on Saturday night, and was not checked until 3 o'clock on Sunday morning. All the stores in the place but one are burned, and a great many summer guests were turned out of doors. The territory burned over embraces about fifty acres of

the heart of the village, and the disaster leaves hundreds of people homeless, many of whom are thrown upon the charity of their neighbors.

The Kimball House at Atlanta, Ga., the largest hotel in the South, was burned on Sunday morning. The guests of the house all escaped. The loss is about $1,000,000.

FOREIGN.

There were fresh outbreaks in Spain on Wednesday. The Numancia cavalry regiment revolted at Santo Domingo, near Logroño, Spain. The rebels left the town and went in the direction of Najera. Several groups of workmen near Barcelona raised seditious cries, and then fled to the mountains. A hastily-summoned Cabinet Council, at Madrid, resolved to suspend constitutional guarantees and declare a state of siege throughout Spain. Military precautions were adopted in Madrid. There were fears of an outbreak in Republican interests at various of the principal towns. On Thursday the Spanish garrison at Seo de Urgel revolted. The rebels expelled the military Governor of the town. On Friday ten battalions of infantry and six batteries were sent to Seo de Urgel to suppress the outbreak. They restored order. Great agitation prevailed in Barcelona on that day, and the situation was serious. A slight revolt took place among the prisoners in the penitentiary in the city of Santander, capital of the province of that name, but it was promptly suppressed. On Friday afternoon the King and Queen arrived at Madrid and were received with enthusiasm. On Saturday complete tranquillity was announced throughout the peninsula. It was reported from Madrid that the outbreaks were a part of a scheme which Ruiz Zorilla had been planning for six years. Señor Castelar and his party condemn the uprising. It was rumored on Tuesday that the King had summoned Marshal Serrano to form a new Ministry, but it was not confirmed.

Mr. Gladstone, in a speech at the Lord Mayor's banquet in London on Wednesday night, said the Government had gone to Egypt in an unselfish spirit, and desired simply to accelerate reform there. It was felt that too much haste might spoil the work. When the views of the Government in this respect were accomplished, the British would disappear from the country. In regard to the Tamatave affair, Mr. Gladstone said the Government had received fuller advices from Madagascar, confirming the hope that no difficulty existed which could not be solved by generous and honorable dispositions, which should always exist, especially between France and England. Mr. Gladstone said he was thankful to be able to record the great change in the condition of affairs in Ireland. The authority of the law, he said, had been reasserted there, and peace and security prevailed. Deep gratitude was due to the Almighty, and, secondarily, to Earl Spencer, the Lord Lieutenant, and Mr. Trevelyan, the Chief Secretary.

There was a long debate, characterized by much obstruction on the part of the Irish members, in the House of Commons on Monday night, on a vote for the legal expenses incurred in the recent criminal prosecutions in Ireland. Mr. Harrington, member for Westmeath, alleged that Myles Joyce, who was found guilty and executed for participating in the murder of the Joyce family in County Galway, on September 18, 1882, was judicially murdered, despite the fact that evidence of his innocence was accessible to Earl Spencer, the Lord Lieutenant of Ireland. Mr. Parnell, as a protest against the conduct of the Government, moved that the amount of money provided for in the appropriation be reduced, but his motion was defeated by 24 yeas to 93 nays.

In the House of Commons on Tuesday night the Bankruptcy Bill and the National Debt Bill passed their third reading, and the Tramways (Ireland) Bill passed its second reading. The latter bill provides for a Government guarantee of £1,000,000 for opening up the western districts of Ireland by light steam tramways.

The bill prohibiting pigeon-shooting has passed its third reading in the British House of Commons. On Friday night the Corrupt Practices Bill passed its third reading.

A meeting in favor of state-aided emigration was held at the Mansion House, London, on Friday. The Earl of Shaftesbury presided. A resolution was adopted providing for the sending of 200,000 persons to Canada and other British colonies, and for procuring farms for them in their new homes, the money for the purchase of the land to be advanced by the state, which is to take mortgages on the farms as security for payment. It is proposed to send 10,000 families to Canada next spring.

Dr. Robert Moffat, the father-in-law of Livingstone, the explorer, and for half a century a celebrated missionary in Africa, died in England on Friday. He was more than eighty years of age.

In the trial of the Liverpool dynamite conspirators on Wednesday, the Judge ruled that there was no case against O'Herlihy on the main charge of treason-felony, and he was formally acquitted, but detained on minor counts. The other cases went to the jury. Featherstone, Deasy, Flannigan, and Dalton were found guilty and sentenced to penal servitude for life, on Thursday. O'Herlihy, on Friday, was charged with conspiracy to murder, but as the Crown presented no testimony against him he was released.

The Paris *Temps* asserts that Admiral Pierre, whose conduct at Tamatave toward the British Consul and others caused much feeling in England, has asked to be replaced forthwith, owing to the poor condition of his health. Rear-Admiral Galiber has been appointed to succeed him. Letters from Madagascar say that Mr. Shaw, the British missionary, was arrested for concealing two Hova spies. It is reported that 3,000 French reinforcements will be sent to Madagascar and 600 to Reunion. The London *Standard* on Tuesday asserted that recent despatches from Madagascar fully confirm the first accounts of the outrages. It calls for explanations from France.

It is reported in Paris that the attention of Mr. Morton, the United States Minister in France, has been called to the fact that America is furnishing China with arms and ammunition, which it is believed are destined for Tonquin.

The mandarins at Hué, the capital of Anam, have refused to recognize Phudac, who was nominated as successor to the throne of the late King Tuduc. They have, it was announced on Wednesday, proclaimed Vianlan King in his stead. He is the nominee of the war party.

Mr. Charles Brun, French Minister of Marine, tendered his resignation on Wednesday on account of ill-health. On Friday it was announced that he was succeeded by Vice-Admiral Peyron.

An election for members of the Councils-General was held throughout France on Sunday. It resulted in a Republican victory in seventy-nine of the ninety districts.

A meeting of the Board of Directors of the Suez Canal Company, at which the British members were present, was held in Paris on Wednesday. The Board unanimously approved the letter of M. de Lesseps of July 23 to Mr. Gladstone.

The Comte de Chambord is reported to be again in a critical condition.

At noon on Wednesday the Emperors of Germany and Austria arrived at Ischl. The former had been met at Ebensee by the latter, where cordial greetings were exchanged. The meeting was ended on Thursday.

It was reported from Berlin on Saturday that the Austrian, German, and Turkish Governments are engaged in negotiations for the complete annexation of Bosnia and Herzegovina by Austria.

It is announced that six persons, including four officials, will be prosecuted for the part they played in the Jewish trial at Nyiregyhaza, Hungary. Louis Kossuth has written a letter congratulating the counsel who defended the Jews. Riotous demonstrations against the house of one of the defendants in the trial were renewed on Wednesday. It was wrecked and a number of Jewish shops in the neighborhood were plundered. The rioting continued until Thursday morning, and thirty-two of the participators were arrested. Moritz Scharf, the boy who was the principal witness of the prosecution, and who swore that he saw the murder committed in the synagogue, has confessed that his testimony was false. The riots were renewed on Friday night.

Three hundred workmen attempted to make a demonstration before the office of the Director of Police, in Vienna, on Friday evening, because of the seizure of a workmen's newspaper. The mob was dispersed by a large body of police with drawn swords.

The festive celebration on Wednesday at Erfurt, Germany, of Martin Luther's entry into that town was a great success. An historical procession traversed the streets and excited much admiration.

The Senate of Bremen has concluded a convention with the German Government for the entry of that city into the Zollverein.

Prof. William Dindorf, the Leipsic critic and philologist, is dead at the age of seventy-nine.

The improvement in the cholera epidemic at Cairo continues. About five-sixths of the hospital patients now recover. A deplorable condition of affairs has, however, been discovered at the mad-house there, where thirty-two deaths occurred in four days among 270 inmates. A riot broke out in the Labat quarter of Alexandria on Friday night in consequence of a report that the English doctors were poisoning the natives. The mob attempted to destroy the ambulances, crying, "Death to the Christians." Troops quelled the outbreak. The death-rate at Alexandria is increasing. On Monday there were forty-four victims.

The river Nile is rising and has already damaged the crops in Egypt.

Within the last two years about fifty vessels have been stranded in the Straits of Kertch, Black Sea. It now appears that there has been collusion between the pilots and a band of pirates, who charged great sums for assisting vessels in distress.

The Czar's coronation decree, granting liberty of worship to dissenters, only affects 1,000,000 of so-called registered dissenters. There are 14,000,000 still unrelieved of their religious disabilities.

The trial at Tournay, Belgium, of Canon Bernard, on a charge of abstracting valuable papers and securities from the Episcopal Palace at Tournay, was concluded on Saturday morning. The Canon was found not guilty.

Cetewayo's brother asserts that the King took refuge in an isolated kraal after the late battle, and was not killed, as previously announced, but was severely wounded. The Governor of Natal has telegraphed a similar report to England. On Saturday it was telegraphed that he was on his way to Pietermaritzburg.

Mail advices from Port-au-Prince, Hayti, dated July 24, assert that the country is in a very agitated condition. The Government is penniless and business is at a complete standstill. The town of Jacmel has pronounced in favor of revolution. A great battle has been fought before Jeremie, in which the Government troops were defeated, and seven of their generals were taken and executed. The revolutionists are marching on Leogane.

WALL STREET.

If anybody should attempt to write a book on Wall Street in imitation of Mr. Bagehot's 'Lombard Street,' he would find the composition of a lucid work an exceedingly difficult task. "The Street" begins to play a larger and larger part in the financial world, owing to the enormous amounts of American capital it holds and of foreign capital it distributes. Since the subsidence, too, of war politics it occupies a larger and larger share of the attention of the American people.

Nothing is more curious about it than its effect on the imagination even of those who do not speculate in stocks at all. The great hotel-keepers in places like Saratoga rely on it with the utmost confidence as an indication of the kind of season they are likely to have. If stocks are high in Wall Street, they are certain their houses will be full; if low, that they will either lose money or fail to make any money, and this not because their customers are persons who are dependent for their luxuries on the result of speculative operations, but because when stocks are low, people who never go near Wall Street feel poor through the imagination. People who never speculate at all, whose investments are of the best class, who have nothing in their safes the dividends on which are likely to be in the least affected by any ups and downs on "the Street," feel, when they see the price of their securities falling, as if they must be prudent or economize. They not only deny themselves on their summer tours, but in all their luxuries. The contagion even reaches people who own no stocks at all. A falling market diffuses through the air the feeling that it is time to be thrifty and careful, and that there is no knowing what is going to happen; that even the man who has nothing to lose is somehow in danger of losing something.

In fact, the Wall Street stock quotations have on a large body of people at the North somewhat the effect of a thermometer on a hot day on the fancy of the wayfarer. It is a very common experience for a man who has felt quite comfortable with the thermometer at 95 degrees, to be made nervous, and even alarmed and incapacitated for all further exertion, by seeing the figures himself. He suddenly feels much hotter and more languid, and begins to be afraid to move about.

The exhilarating effect of high prices is, too, just as great as the depressing effect of low prices. There is hardly any one, whether he owns any stocks or is speculating in stocks or not, who is not cheered by a rising market in Wall Street. Everybody in New York, when it has lasted a week or two, from the millionaire to the hod-carrier, feels that good times have come, that his future is more assured, that he may indulge in more luxuries, although he may know perfectly well that the condition of the stock market has not, and cannot have, the smallest influence on his income. The brokers feel the genial glow first, and provide themselves with dog-carts and saddle-horses, and from them it diffuses itself rapidly through the community, till it is felt wherever the telegraph goes. It stimulates retail purchases of all kinds, from houses down to gloves. It increases in particular the consumption of champagne at the restaurants. Delmonico can always tell how the market is, without ever looking at the newspapers or "the ticker," by listening to the popping of his corks.

There is nothing quite like this in any country in the world. We do not propose to analyze its causes here. We merely wish to point out that the phenomenon probably has a good deal to do with the prevailing depression in business, of which so much complaint is made and for which it seems so difficult to account. For two years the conditions of business prosperity have all existed in abundance. There has been no great financial disturbance or political complication at home or abroad. The harvests have been abundant and immigration enormous, and everything dependent on abundant harvests—the railroad traffic, for instance—has been doing well. But stocks have been "dull" ever since Garfield's death, and have been growing duller, and it apparently makes no difference whether they pay dividends or not. The general tendency during all this period has been downward, although there is no proof that they are any less valuable now than they were in 1881. In fact, the probabilities are that they are much more valuable than they were two years ago. But it has, nevertheless, been impossible to get up a "boom" in them, and nothing could be more ludicrous than the failure of all prophecies of an approaching period of "better prices." We have been told for about a dozen times within the last two years that "the liquidation," whatever that is, was over; that the bottom had been reached; that "the weak holders," against whom "the raids" are always aimed, were "shaken out," and that now we were going to see signs of confidence—but all in vain. The market has been "dull," or "stagnant," or "feverish and declining," or "sagging," or "ragged," with dreary persistence.

That the effect of this has been to produce general business blueness or despondency we think there can be no question. Whether stocks are high or low in Wall Street cannot make any real difference to anybody but speculators as long as they are not gaining or losing in intrinsic value, and yet nearly everybody is affected by it. It restricts consumption in all but the necessaries. It makes capitalists timid and doubtful, and, by keeping a good deal of money lying idle, lowers the interest on all investments, and makes people of fixed incomes feel poor and economical. Altogether it may fairly be pronounced one of the strangest phenomena of modern times. Whether it will pass away—that is, whether the commercial imagination of the country will ever throw off the Wall Street influence—it is, of course, impossible to guess. It will certainly never do so as long as the habit of speculation lasts, and the habit of speculation will probably last as long as the country is growing so rapidly in wealth and population. As long as people see stocks which brought five dollars last year bringing eighty this year, speculation will be rife, and they will see this as long as the country progresses by "leaps and bounds." And it is the speculation which invites the raids and combinations on the part of the great operators, that, by frightening the outside public, produces these periods of depression. The professional operators could not possibly make anything off regular investors. They lie in wait for the people who take "turns" and "flyers" in the Street, just as lions and tigers wait at the pools and rivers for the cattle and sheep and deer to come down to drink in the evening. When they think there are enough of them collected to make a spring profitable, "the raid" is made. But the cattle and sheep and deer continue to come because each animal loves water, and thinks he will secure his drink and get away before the beast of prey notices him.

THE STRIKE AND THE MONOPOLY.

The controversy over the telegraphers' strike does not grow any clearer. The *Times* now says it has been all along in favor of freedom of contract. But freedom of contract covers both parties to the strike: it leaves the operators free to go, and the Company free to do without them. This, as we understand it, the *Times* has never allowed. It has held that the Company was under some sort of obligation to take the strikers back on their own terms, or something approaching their own terms, and has abused it for not fulfilling this obligation. We have endeavored to discover on what the obligation rested in the *Times*'s mind, and have been driven to the conclusion that it rests on the badness of the Western Union managers as speculators and stock-waterers. We have said that this notion probably originated in a nursery, because it would naturally occur to a child that a good way of punishing a wicked rich man was to make him pay high wages to his servants.

We, for our part, are also in favor of freedom of contract. We believe the strikers have a right to leave if the Company has the right to get along without them. But we hold that if one party is under an obligation to the public, or to anybody else, to keep on telegraphing, so is the other party. Both are bound by it, and therefore all attempts to harass the Company into surrender, either by legal process or objurgation, while leaving the strikers to do as they please, are an abandonment of the theory of freedom of contract, and a great absurdity into the bargain. On any theory, too, of the relation of the parties, it is in our mind preposterous to ask the Company to share with a committee of outsiders the control of the persons in its service.

The *Herald* makes confusion a little greater, we are sorry to say, by proposing a board of arbitration established by joint agreement, which should "take notice of the fact that the Western Union insists on earning a dividend on watered stock." This phrase, "earning a dividend on watered stock," in which so many newspapers delight, is simply a roundabout way of saying that its profits are large. "Watering stock" is usually resorted to either for the purpose of making the property more divisible for purposes of sale, or for concealing the real amount of the profits, or for both. It is only when done for the second of these objects that it is in the least reprehensible. Whether a Company pays 40 per cent. on 1,000 shares or 20 on 2,000 is in itself a question of no moment, so

that what the *Herald's* board would have "to take notice of" is simply the fact that the profits of the Western Union are large. The opinion that the profits of corporations serving the public ought to be cut down, by returning to the community everything over a good interest, either in taxation or a reduction of rates, is gaining ground both in England and France, as well as here. The last *Pall Mall Gazette* advocates it in a way which indicates that it will be, or is, a feature in the Radical programme in England. But we have not heard until now that anything over the maximum was to be legally devoted to raising wages, or, in other words, was to be bestowed on one class of the community only. Nor have we heard until now that a man or a company was bound to pay wages in proportion to his profits. How would the *Herald* like to have that rule applied to its own business? It is a large and prosperous concern of which the dividends are understood to be enormous. How would it like to have itself compelled by law to make the wages of its employees proportionate to the amount of its net earnings, or to have all its brethren begin abusing it because it did not admit a trade union to a share in the management of its office? There are, in fact, the seeds of great and far-reaching mischief in the way this affair has recently been treated by some of our contemporaries. If it turns out that they have raised the devil with their "sympathy," they will not suffer as other branches of trade and industry will, but we trust they will be sorry. We have no doubt the Western Union has been wanting in consideration for its employees; but the question involved in the strike is not whether the managers are kind or considerate employers, or good men, but whether they are paying the market rate of wages, and most of the talk expended on their moral qualities is therefore, to say the least, irrelevant.

On the other hand, the Western Union has now apparently got the better of the strikers, and can conduct its business once more in its own way. That it should have firmly and successfully resisted the strike is doubtless a sign of administrative ability on the part of its managers. But it will do well to remember that the non-occurrence of strikes among employees is a sign of good administration also. The captain of the ship who puts down a mutiny energetically is usually considered a good commander, but the captain who never has any mutiny to put down is considered a better one. Discontent among subordinates in a large concern always indicates something wrong, no matter how mistaken or foolish their way of expressing it may be. Probably no strike on a large scale has ever yet occurred in which the right was all on one side. Generally, as we remarked at the beginning of this Western Union trouble, the right is about equally divided between the parties to the controversy. The managers, therefore, will do well not to regard difference between them and their employees settled by the result of the strike. Even if it be impossible in the interest of discipline to hear or treat with the employees through the Brotherhood, the Company ought to provide or recognize some channel through which the complaints or remonstrances of the operators can be received and considered without prejudice to the persons from whom they emanate. We see that it is now said that the operators will be heard and dealt with individually, but they ought not to be asked to make their complaints individually. To stand forth alone as a malcontent is something which requires a good deal of courage, and it is a trial to which the timid and nervous should not be obliged to expose themselves. Employees ought to be allowed to present their grievances collectively, and through some sort of representative body. In fact, we do not see how a well-managed corporation, which employs large bodies of men, can avoid desiring the creation of some representation of its workpeople, through which it could be readily made acquainted with their feelings, and with which a discussion of their grievances could be readily carried on when necessary.

The Western Union will do well, moreover, to bear in mind that its responsibility is increased by the fact that it enjoys a virtual monopoly of the telegraphic business in the United States—a fact which enables it to fix the wages of operators in this country, and which from the first rendered the strike hopeless. The ordinary remedy of the dissatisfied laborer, therefore—seeking work elsewhere—is not open to the operator. If he cannot make terms with the Western Union, he has hardly any other resource. It is under no business obligation to give up this advantage, but it is bound to remember, in dealing with its laborers, that it possesses it. It is not bound, as has been maintained, to pay them well in consideration of the badness of its own managers, but it is bound by a due regard for its own interests to avoid these public fights with them, to keep them satisfied and faithful, not by surrendering to their threats, but by anticipating their discontent.

This last affair has undoubtedly had the effect of greatly stimulating the demand for Government competition. That this will come before long we have not the slightest doubt. A larger and larger number of people are beginning to see that Government competition is the only one which will ever prove effective against the Western Union, and the only remedy for whatever inconveniences arise from having the telegraphy of the country in the hands of one corporation. The Western Union has found so little difficulty for many years in destroying competition by buying out competitors, that the creation of rival companies for the express purpose of being sold out to it, after a period of fictitious activity and furious denunciation of monopolies, has long been a favorite device of tricky financiers. In fact, the corporation is largely made up of these purchased champions of popular rights. What we need now is a Government telegraph, in connection with the Post-office, to compete with the commercial corporations. All that denunciation of the greed and unscrupulousness of Jay Gould and Cyrus W. Field and others can do for us has been done. We hear nothing of any signs of wincing on their part under the terrible epithets of the Anti-Monopolists.

THE USE OF GOING TO COLLEGE.

The views propounded by Mr. C. F. Adams, jr., before the Phi Beta Kappa Society in Cambridge, in July, on college education, having been published in a pamphlet form, have been receiving renewed discussion from the press. His complaint is now pretty well known. It is that he spent a great deal of time at college learning Greek, without succeeding; that the notion that there is mental discipline in it is a delusion, and that modern languages ought to be substituted for the dead languages in the college course for all who prefer them, as furnishing a better equipment for the work of life, and just as good means of intellectual training. He does not, at the same time, underrate the advantages of a "classical education" for those who get it; the trouble is, he says, that the colleges profess to give it, and do not give it—at all events, have not given it to him, or any of his family or friends. He would, therefore, allow students, on coming up for entrance, to offer German, Spanish, French, or Italian as the equivalent of Hebrew, Greek, or Latin. His grievance, in the last analysis, is really an old one in a new form. It is that a college education does not prepare a young man more directly and appropriately for any of the callings in which college-bred men, except perhaps clergymen, are likely to engage. In other words, when they leave college their knowledge is either insufficient or is the wrong kind of knowledge.

He has unfortunately, in his address, however, overlooked or treated but very slightly what is, in our eyes, the main point in the discussion—namely, how far any curriculum which is not strictly professional or technical can be made a direct preparation for the work of life. An assumption runs through his argument which also runs through nine-tenths of the talk and writing of educational reformers, and that is, that if you get hold of the right kind of curriculum and of the right method of presenting it, you can teach young people anything you please. The fact is, however, that the great difficulty of colleges is not the difficulty of selecting the right kind of knowledge to offer, but the difficulty of getting the young men to acquire it. It cannot be driven into them by main force. Their minds have to be reached through their own industry, teachableness, and eagerness to learn. In the large colleges here in the East, as well as in the European colleges, the undergraduates may be divided into three classes. First, there are those who, either from natural love of learning or a desire to make a career which will better their condition, are determined to make any sacrifice to acquire all the knowledge the college offers. This is a small body of men, generally poor, who probably get out of the study of the classics all that it would be possible for them to get out of any study. The second is composed of those who simply want to get a degree, with a respectable standing in the class, without annoyance or disappointment to their parents, but are not specially zealous or industrious, and cannot by any art known to educators be pushed beyond a certain jog-trot. Last of all there are the regular idlers, and dunces, and scapegraces, who are the af-

fliction of families and the despair of professors and deans. We do not believe we exaggerate when we say that these last two classes make up seventy per cent. of the undergraduates of Yale and Harvard, and of every other large college, and that it makes very little difference with what species of knowledge you ply them, as far as preparation for the work of life is concerned. They will only take a certain amount of any kind of knowledge. Mr. Adams's notion that they would leave college proficient in French and German, if they got a chance at those languages instead of Greek and Latin, and would keep up their acquaintance with them in after life, we hold to be a chimera. When busy with callings in which French or German were not called for every day, they would forget them as they do Greek or Latin—not so completely, perhaps, but so far as to make knowledge of them a mere pretence.

The great mass of young men who go to college do not see in college a preparation for active life, and therefore do not take hold of its studies with real apprehensive power. Partly owing to their age, partly to the uncertainty as to what calling they will take up, in which most of them pass the years between sixteen and twenty-one, it is not possible to give college that sort of reality in their eyes which is necessary to make them really assimilate the knowledge it offers. Everything about it has to them an air of remoteness from the world—the subjects, the professors, the discipline, the rules and regulations. This is curiously illustrated by the change which comes over a great many of them when they enter the law or medical or other professional schools, after taking the academical degree, and realize that they are actually engaged in direct preparation for practice. Everything which these schools teach, whether it be languages or anything else, has the highest interest for them, and is not only rapidly appropriated, as far as each man's powers will permit, but is sedulously retained.

If it be asked what good a college education does under these circumstances, the answer, which Mr. Adams in one place almost gives, is, that it does nearly all the good an ordinary young man at that time of life is capable of receiving. It is difficult to do more for the typical young man than expose him to right influences, or, in other words, keep him, while he is getting into shape both physically and intellectually, in a society which is occupied with intellectual things, which is not trying to make money or get the better of anybody, which encourages reflection, respects acquisition, and occupies itself more or less with high ideals. To do much more than this, we should have not simply to improve or change the college curriculum, but take complete possession of a boy, in military fashion, as West Point or Annapolis does, and train him both physically and mentally in all his working hours; teach him to walk and run, and ride and row, to dress and to behave, while actually getting him ready for a profession. No college can, however, undertake anything of the kind, nor is it desirable that it should. Military schools do wonders with raw youths, but they are hardly better fitted to prepare them for the ordinary race of civil life than Harvard or Yale. Nor is a counting-house or store a much better preparation than a university. There is more waste of time in a boy's first years in business than in any period in a well-behaved man's life. A large part of them are passed in mere mechanical drudgery, over things which are readily learned in three months, and in company which does nothing to stimulate or elevate either intellectually or morally. The apprenticeship, in fact, is simply dreary waiting for the time when the lad can be trusted to do, or has the means to do, what he has been supposed to be getting ready for—namely, the purchase and sale of commodities. For this, or anything else, copying letters and running errands, which is what most mercantile training in the early stage now consists in, is but a poor preparation.

Mr. Adams, moreover, has taken no notice of the experience of the Berlin University in the ten years since the admission of the pupils of the *Real-schulen*, or technical schools, as well as the pupils of the gymnasia or classical and mathematical academies, to the University. From their published report on the subject, which we examined in these columns some two years ago, it appears that in all kinds of university work, including the higher mathematics, the pupils from the classical schools surpass the non-classical students. The Professor of Astronomy, in particular, says: "The students prepared at the real-schools show at first more knowledge and more skill than those prepared at the gymnasia, but their further development is slower, more superficial, and less independent, while they show still greater inferiority in point of ability to carry on the more difficult processes of independent research." The professors of chemistry tell the same story as the professors of mathematics and astronomy. The whole report is most interesting, and in spite of the sad experience of the Adams family, on which Mr. C. F. Adams, jr., relies so much, goes far to show that as a mental process even the unsuccessful study of Greek and Latin has a great deal more value than he is willing to admit.

BRITISH ENTERPRISE.

The files of the London papers for the first week in August are filled with enthusiastic accounts of the success of the new addition to the British mail service called the "Parcels Post." Column after column is devoted to minute accounts of its practical workings, and many more columns to profoundly speculative disquisitions on the effects which it will have upon the moral, social, and economic life of the great British public. In a few instances, guarded references are made to the fact that services of a similar kind have been in operation for some time in other parts of the world, but generally the subject is discussed with that curious unconsciousness of what the rest of the world is doing which is so striking a characteristic of the British mind. The new service is treated with great impressiveness as a purely original reform. The *Times* remarks, in its most ponderous manner, that the measure has been advocated for some years by the "Society of Arts, the Social Science Association, and such cool and independent thinkers as the late Professor Jevons," but that the most judicious advocates would have pleaded long in vain "if increased intimacy with Continental habits and institutions, and especially the union of the greater part of Europe into one district for postal purposes, had not forced the subject on public attention." That is the nearest approach made to an admission that in establishing its "Parcels Post" England is simply trying to push up abreast with the rest of the world.

There is absolutely nothing new in its new service. Similar services have been in successful operation in Germany, France, Belgium, Holland, and other countries for many years. There may be a few points of difference in minor details, but the general plan is the same in all. The British "innovation" simply enables the British public to send by mail any package under seven pounds in weight and not exceeding six feet in combined length and girth. There are five rates of postage. Parcels a pound in weight go for 3d.; three pounds for 6d.; five pounds for 9d.; and seven pounds for 1s. The rates are the same for all distances, and this is the main point of difference between the system and that of some other countries. In this country the same service is done to a limited extent by our "merchandise" or "fourth-class" mail, but mainly by our express companies. Mail matter here is limited to packages not exceeding four pounds, and the mail is only used in sending packages at all when the distance is so great as to make the rate of one cent an ounce cheaper than express rates. The express has been our main dependence for more than forty years, and has been doing, with great convenience to the public and with profit to itself, substantially the same business which the new post will do in England.

For some reason or other not altogether apparent, there are no expresses of this kind in England. One of the London papers, the *Daily News*, refers to them as an American institution by which may be transported "anything, from a bunch of bank notes to a genuine dome-back Saratoga trunk, which is something in appearance between Noah's ark and H. M. S. *Inflexible*." The *Times* trenches carefully upon the same fact by saying that "Englishmen travelling abroad have learned with surprise that their trunks and boxes could be sent about," and the "national pride in the perfection of our own arrangements has been somewhat shaken." The time which has been necessary to shake this pride even "somewhat" is best shown by the fact that express companies were established in the United States in 1839, and have been growing steadily in usefulness ever since. Ten years ago the capital employed in the business amounted to more than $25,000,000. The number of separate offices exceeded 8,000; more than 18,000 men and about 3,500 horses were employed, and the distance travelled on the various railways was estimated at 300,000 miles a day. Immense fortunes have been made in the business. But during all these years the enlightened English people have scrambled along

without any service at all, and thousands of them have examined the American system with no other result than having their pride in the "perfection of their own arrangements somewhat shaken."

After waiting so long before entering upon this field of reform, it is not at all strange that the British public should treat the experiment with great solemnity. The London reviews are moved to the most profound reflections. The *Spectator* declares boldly that it thinks the change "worked in the conditions of social life" will "benefit the nation as a whole." It is afraid the "shopkeepers of villages and small towns" are likely to lose custom, and enters into an abstruse calculation on the problem of whether it will be cheaper to buy seven pounds of sugar in London for two shillings and pay a shilling postage on it, or buy it in the country at a little higher price and save the postage. On the other hand, while the country storekeeper may lose in one way, he may gain in another; for he can have samples sent by mail from London, and by making his window "bright with a collection of specimen articles from large town houses" may lure the consumer, unaccustomed to magnificence in such a place, into overlooking the difference in price. The *Saturday Review*, aided doubtless by its habitual contempt for everything American, goes even further and deeper in its speculative researches, and foresees trouble for the Gladstone Ministry because "small tradesmen who discover that their most dangerous rivals have been practically brought next door, will not bless the Government which has made the fight for life still harder." A brief study of the working of the services in other countries would have shown all these able commentators that no marked changes will be made in the character or habits of the people; but that would not have been the English way of treating the subject. The "reform" has been established, and within the course of the next quarter of a century the British citizen may become weary of fighting for his luggage at railway stations, and may establish another "reform" and adopt a system of checks.

LAW AND ORDER IN IRELAND.

DUBLIN, July 28, 1883.

IT would be difficult fully to realize the differences between the relations of the people and the Government in the United States and in Ireland. With you the people are, and feel that they are, the Government; here the Government is a thing apart, whether for good or for evil. The relation varies, it is true, in different parts of the island. (The nearest approach to things as they are with you may be in Belfast, where, perhaps from very opposition to the rest of Ireland, and influenced to some extent by the general commercial prosperity, there is a greater consciousness of oneness with the Government and with the Empire at large even than in most towns across the Channel.) This was vividly brought home to us some time ago when we read an account of the burning of a penitentiary in one of your Southern cities, and how the Mayor distributed arms among the citizens and formed them in a cordon round the building to prevent the escape of prisoners, while the fire department set about saving life and property. Here the last thing the Government desires, or could attempt at present, would be to call upon the citizens in a like emergency. It is true that when our Metropolitan Police struck last summer, a limited number of special constables were enrolled, but they came forward from one class, and were carefully selected and supervised. This dependence of the civil population upon the police and military has its advantage, tending almost entirely to eliminate from the minds of quietly-disposed persons the thought of taking the law into their own hands or avenging their own injuries. But it is destructive of all idea of true citizenship, and has an eminently enfeebling effect. There is something almost ludicrous in the extent to which we think it necessary to abstain from individual responsibility or action and to call in the police. The evil-disposed are not without making their calculations in this respect. Even outside the circles which hate and are prepared to oppose or thwart the law, they can confidently rely upon the extent to which most men, suddenly brought face to face with violence or outrage, will be likely not to interfere in what does not personally and immediately concern them. The possibility that what might be a row or an outrage is a matter in which police in plain clothes are concerned, and the extreme danger of interfering with them, tend to encourage indifference. The impunity which these tendencies were likely to confer upon a body of men like the Invincibles was strikingly shown last year, when it appeared possible for a small number of ruffians to assassinate men in the Park in open daylight, or at their own doors in the heart of the city in the dusk, and to drive off with ease and safety. All they had to do was to see that no policeman was within sight—our ordinary detectives are almost as easily distinguished as their comrades in uniform—and the murderers might then calculate on having no trouble from the casual passers-by. The manner in which the Government attempted to solve, and in effect did solve the difficulty, was as original as it was unexpected. They imported some 300 royal marines from the reserves at the English naval ports, dressed them in plain clothes, located them in houses in different parts of the city, and set them to loiter and watch in the principal thoroughfares, ready at all times to assist the police, to guard prisoners, and to execute warrants. They were mostly lithe, able, pure-blooded looking young fellows. One could generally judge of their appearance; but they were turning up upon all occasions when least expected, and no bully or "Invincible" could ever count upon some of these detectives being far distant. Their disguises were varied, and often so complete that members of the corps have been upon occasions taken into custody by the police or their fellows as suspicious characters. There was nothing by sentry or otherwise to indicate their barracks. This force, it is satisfactory to relate as an augury of more peaceful times, has just been withdrawn. Their position and duties were of the most delicate character, and the manner in which they fulfilled them is greatly to their credit. This measure is an indication of the almost boundless resources and powers of the United Kingdom, at once so highly civilized in its way, so organized, so closely knitted together by modern civilization, having at its disposal such a force of reliable human material. It does not appear to me that even with these powers and resources it would be possible permanently to hold in a condition of dissatisfied union such a clearly-defined though small country as Ireland; but this power is thoroughly effective pending discussion—pending the efforts of statesmanship to maintain the Union upon present terms.

But if the Government, or, rather, the Lord Lieutenant, who is really an autocratic ruler under the Coercion Act, has been fortunate in the management of such an innovation as the marines in Dublin, such wisdom has not always been shown in the efforts to govern Ireland independently of the opinion of the mass of the Irish people. The imprisonment of the Harringtons may be taken as signal instances to the contrary. Under the present Crimes (or Coercion) Act, arbitrary powers are given to magistrates to try offences of utterance and press offences, and the punishments inflicted, instead of being, as heretofore, and as in England, of a comparatively light character, suitable for "first-class misdemeanants,' are now the same as for ordinary criminals. It must be also borne in mind that the magistrates before whom such cases are brought are not unpaid, honorary magistrates or justices; they are, like the County Court Judges, before whom the appeals are heard, and from whose decisions there is no further appeal, paid Government officers—dependent upon Government for their bread and advancement, like King Bomba's magistrates, the justice of whose decisions was for these very reasons so vigorously and eloquently called in question a generation ago by Mr. Gladstone.

Mr. Timothy and Mr. Edward Harrington are the owners and editors of the Kerry *Sentinel*, published in Tralee. I have never seen a copy of the paper, but presume it is a strenuous if not bitter opponent of the Government. Kerry has been one of the worst counties in the matter of outrages. The Executive maintain that this is largely due to the attitude and writings of men like the Harringtons and of papers like the Kerry *Sentinel*. The National party lay this to the conduct of the Kerry landlords and the manner in which the tenantry were rackrented. The Harringtons claim that they have set themselves against outrage, and that they have run considerable risks in their denunciation thereof, and, except under Mr. Forster's régime, when one if not both of them was among the 900 "suspects," they were neither of them brought within the meshes of the law until a few months ago. At a meeting in Mullingar last December Mr. Timothy Harrington delivered a speech, in which he said:

"I advise the tenant-farmers of this locality to come forward zealously and give a fair day's wages for a fair day's work. The agitation which has been carried on for the last four years will be turned against them if they do not come forward now and assist the laborers in their hour of need. I have learned since I came here that a great many of the farmers had got a reduction of from 10 to 25 per cent., and they should come forward now and assist the laborers in their hour of need."

This was construed into an attempt to terrorize the farmers of Westmeath; Mr. Harrington was sentenced by the magistrates to two months' imprisonment—sentence confirmed on appeal before the County Court Judge—and he served out his two months, sleeping on a plank bed, living on meagre prison fare, picking oakum, not allowed to communicate with the outside world, and having to carry his slop-bucket, with other prisoners, under the windows of the Governor's residence. Mr. Trevelyan defended his imprisonment substantially on the grounds that he was a "very formidable person." The farmers of Westmeath showed their appreciation of the action of the Government on their behalf by electing Mr. Harrington, during his imprisonment, to a vacancy which occurred in the Parliamentary representation of their county. Mr. Harrington is now more "formidable" than ever. He is in no degree subdued by what he underwent. He is the active Secretary of the National League, and one of the bitterest members of the Irish

Parliamentary party. He is a man about thirty years of age, of considerable force of character.

Some weeks ago the police, without warning, made a descent upon the office of the Kerry *Sentinel*, turned out the staff, and carried off all the type, presses, papers, and documents. A scandalous and bombastic printed notice had been posted in Tralee announcing the formation of a branch of the Invincibles in the town, stating where its meetings would be held, and soliciting public support. The notice was only a few inches square—"set up" in newspaper type and measure. The Government might well afford to pass the matter over, but they thought otherwise, and, believing that it was printed at the *Sentinel* office, took summary action accordingly. Mr. Harrington, M. P., and his brother denied all knowledge of the document, and in answer to the challenge of the former in the House of Commons, a magisterial inquiry took place, which resulted in two apprentices, on their own confession, being sent to prison for two months. Mr. Edward Harrington, the acting proprietor, was then proceeded against. There was nothing whatever to show that the document had been printed with his knowledge. The lads stated that they did it secretly, entirely on their own notion and of their own accord. He had commented upon its appearance in the *Sentinel*, and the magistrate strangely construed his comment to the effect that "it is in width the same as the columns of this paper" into *prima-facie* evidence that he must have known all about it; whereas every printer must be aware that any one connected with a printing office could at a glance estimate the measure and type of a printed notice casually seen. It was in truth Mrs. Harrington that saw the document and told her husband about it; but she, as his wife, could not be examined for the defence. To the general surprise Mr. Harrington was sentenced to six months' imprisonment. He appealed, with only the effect of adjourning the commencement of his incarceration. On the appeal the apprentices were brought up from the prison to give evidence. They reiterated that they were the only delinquents, and that Mr. Harrington knew nothing about the matter. To his trial and appeal, as those of his brother, Crown Counsel were specially sent down from Dublin to conduct the prosecution, and their influence was overwhelming against the prisoner.

Cases such as these of Mr. Harrington's cannot but aggravate public feeling in Ireland, and the aggravation will not be much lessened by Mr. Trevelyan's announcement in Parliament, on Thursday night, that some of the most oppressive prison regulations will in Mr. Harrington's case be somewhat modified. The public generally believe, and will continue to believe, that he is innocent, and that he is being sacrificed to the policy of the Executive here, never to retreat or acknowledge mistakes in its dealings with Ireland. By the "public" I mean the mass of the people—the people who turn the elections in all but a few northern counties. There is no sympathy for the Harringtons or for others of National proclivities in the minds of most Protestants or the upper "ten thousand," Catholic and Protestant. The country is at present hopelessly divided in this respect.

On the other hand, among the mass of the people there is no heartfelt sympathy in anything that befalls the landlord class through their position as landlords, or with any one who suffers for his adhesion to the Government. Mr. Field, the innocent juror, who was so basely assaulted by the Invincibles and who so narrowly escaped with his life, remains broken down in health, and is leaving the country. The couple of thousand pounds he will be able to realize of the levy made by Government on the city for his benefit will be a miserable return for what he has suffered. Sale bills are up on his premises. It is difficult to realize, but impossible to refuse credence to, the evidence in support of the assertions current as to the manner in which he and those in his employment are being insulted and terrorized. The set against them is as senseless as it is wicked, and is a weapon in the hands of those who declare that coercion is the only policy for Ireland. The efforts to raise a fund for him met with but poor support. Some said they were afraid to give, others that he had had enough already out of the pockets of the citizens, and I remarked the name of but one Nationalist among the subscribers.

The plant of the Kerry *Sentinel* was returned, without apology or indemnity of any kind, after some weeks' detention. Since this letter was written, I have seen a copy of the Kerry *Sentinel* for this week. Its language in denunciation of the imprisonment of its proprietor is not more severe than the facts warrant. The following is "displayed" in a prominent position in the paper:

"SACRED TO THE MEMORY OF FREEDOM OF THE PRESS.—Edward Harrington, editor of the Kerry *Sentinel*, imprisoned (July 23, 1883) for six calendar months for a foolish notice printed by two young boys in his office without his knowledge. The Liberal Government of England supplies him in gaol with the criminals' uniform branded, 'County Kerry Gaol,' and the following fare: Breakfast—Five ounces of brown bread and cocoa without milk or sugar. Dinner—Five ounces of brown bread and half a pint of soup. Supper—Five ounces of brown bread, and cocoa without milk or sugar. His bed is a deal plank, with no mattress, and scant covering. Occupation—Oakum picking. No books, no visits, no papers, no writing materials; but when he shall have completed his third month in prison the benign Liberal British Government will allow him to see one friend through the bars, and write one letter."

D. B.

REVOLUTION *VERSUS* REFORM.

LONDON, July 24, 1883.

TIME tries all. The anniversary of the taking of the Bastille comes round yearly as the feast-day of the French Republic, and naturally suggests one inquiry: How have the Revolution and its works stood the test of well-nigh a century? The question is well worth consideration, for it has a close bearing on some of the problems of modern politics.

The answer which would be given by the majority of educated Englishmen, as probably by the majority of educated Americans, is clear and simple. The Revolution, its heroes and their methods of government or of innovation, have been weighed and found wanting. The passionate invective of Burke, it will be admitted, overshot its mark. No one gifted with a tithe of Burke's genius would now write in his tone of the French aristocracy or of the French monarchy. He, assuredly, and the generation of Englishmen who virtually adopted his views, absurdly underrated the evils of the *ancien régime* and the difficulty of their cure. A condition of society which every Frenchman detested was, we may take it, detestable. But most Englishmen hold that if Burke fell into mistakes, his errors were far less fatal than the delusions of his opponents. The Revolutionists one and all, from the Constitutionalists down to the Jacobins, mistook the true path of progress. They one and all believed in revolution and disbelieved in reform; they all were, root and branch, innovators, and, like most theorists who have tried to renovate society from top to bottom, ended by overturning everything and founding nothing. True it is, that universal destruction inevitably destroyed some evils; but this advantage was gained at a portentous and needless price in the way of suffering and of demoralization. That thousands of innocent men should have died on the scaffold is bad enough; but, as far as France was concerned, it was even a worse evil that tens of thousands of Frenchmen should have witnessed with apathy, or have promoted with enthusiasm, deeds of sanguinary and reckless injustice. The cost of the Revolution would have been a terrible price to pay had it been the only price at which the freedom of France could have been secured; but the Reign of Terror destroyed instead of securing liberty. The Terrorists "were damned" and France was not freed.

Moreover, we now know that the advantages which France did gain from the Revolution might far more certainly have been obtained by means of progressive reform. The experiment has been tried. The Republic founded by men of English race and of English political habits has existed for more than a century, and stands as firm as any government in the civilized world. Revolutionary France has never yet succeeded in constructing a constitution which should last for a quarter of a century; and the average time during which any form of polity has stood unchanged on French soil is between six and seven years. Contrast the annals of England with those of her nearest Continental neighbor. Here everything has been changed, nothing has been destroyed. Progress has been slow, but it has been unintermitting. Fifty years of reform have removed every evil which the wildest innovator of (say) 1832 even fancied needed to be removed. Nor is this satisfaction with the pacific course of English progress, and disbelief in the efficacy of revolutionary violence, the mere result of insular prejudice. The best-known writers and thinkers of France have come round to the English way of looking at things. No better representative of sensible Frenchmen could be found than Taine, and Taine's successive volumes are a long and effective indictment against the principles, the practices, and the aims of revolutionary statesmanship, and also, as it seems at least to English readers, an elaborate justification or eulogy of all that is most peculiar in the constitutional habits and constitutional frame of mind which have for centuries marked the statesmanship of England. No wonder that the great body of Englishmen hold that the case of Revolution *v.* Reform, which has now occupied the tribunal of history for ninety-four years, has at last been fairly heard and decided, and that the only verdict which can be entered is a verdict entirely in favor of reform and in absolute condemnation of all revolutionary methods. That Englishmen should come to this conclusion is natural. Within certain limits the conclusion itself is sound; but to an impartial student of history it soon becomes apparent that there are cases—exceptional cases, it may be granted—in which revolution (by which I mean fundamental, rapid, complete change) has advantages over reform.

The policy of bit-by-bit reform has several inherent defects which occasionally make it as dangerous and ineffective a mode of attacking rooted evils as could be the rashest revolution. It is based on the assumption that at any given moment the existing state of society, though it needs amendment, yet in the main conciliates the good-will of the people, whereas this assumption, though often true, has been at some crises of the world's history the very reverse of the truth. In 1789 there was probably not one Frenchman in a hundred who wished the condition of his country to remain unchanged; the wild and unnecessary alteration of names and forms, such as the dissolution of the provinces into departments, which offended the politic sense and disgusted the historic imagination of Burke, were exactly the things which pleased

Frenchmen, who agreed in nothing but a dislike to the existing institutions of France, and which, monstrous as they appeared to Englishmen, have never been felt to be a grievance by even the conservatives or reactionists of France. The policy of gradual reform takes far too little account of time. There are hundreds of measures which can succeed only if they are carried through quickly and at once. Reformers of the English type are apt to be thirty, or it may be fifty, years behind their time. The policy of 1829 fails because it ought to have been the policy of 1800. The custom, further, of never carrying amendment a step beyond the point which is obviously required by the necessities of the time has this grave fault: that it almost invariably fails entirely to remove the grievances which it is meant to redress, and renders each concession to popular demands an incitement to further and often lasting agitation. Indeed, that strange and factitious kind of legalized revolution which is known as agitation, is the direct offspring of gradual reform. It is not without its advantages, but a condition of, so to speak, regulated discontent is not one in itself to be admired, and is certainly tolerable only among a people endowed with great calmness and not tormented by any keen sense of wrong.

Nor, lastly, is the practice, so dear to English statesmanship, of concealing fundamental changes in the substance of important institutions under scrupulous respect for names and forms, without its drawbacks. A device which minimizes the offence given to the sentiment of opponents also lessens the enthusiasm and satisfaction of the very classes whom reform is meant to satisfy, and it is often at least as important to make visible the extent and completeness of a change as to hide the fact that a fundamental change has been made. Yet this is just one of those considerations which are apt to be overlooked by the prudent common sense which is the predominating characteristic of English politics. That these theoretical objections to the unvarying adherence to the policy of gradual, and therefore slow and imperfect, improvement are not mere matters of speculation, is proved by every page of history. The tranquil course of our constitutional development, the singular good fortune which has on the whole attended the English nation, the various circumstances which have tended to assuage the bitterness of popular feeling even at periods of great excitement, have one and all given the policy of reform, as opposed to that of revolution, fairer chances in England than it has had in any other European country. Yet no impartial judge can assert that even in England the weaknesses, such as they are, of that policy have not produced results which are to a certain extent a set-off to its very marked success. Every Englishman has been trained from his youth up to admire the moderation displayed even in our revolutions. We have learned, even in the nursery, that the Revolution of 1689 was glorious because it was the least revolutionary of popular movements. We have perhaps not been quite accustomed enough to reflect on one or two other aspects presented by this triumph of orderly violence. The statesmen of 1689 were able to perform the part of reformers because their predecessors of 1640 had shown the daring of revolutionists. The moderation, moreover, of 1689 did not in reality repair all the ills which resulted from the slowness with which Englishmen allowed themselves to recognize the fact that the times required a fundamental change in the principles of government. The permanent division of the English people into Churchmen and Dissenters, the recognition by the state of the thoroughly base notion that a man's religious belief affects his political and his social status, has, in more respects than one, done an injury which the lapse of years has not really repaired to the moral, the social, and the religious life of the English people.

Nothing, again, is, on the whole, a more striking feat of English statesmanship than the reform of 1832. I have dwelt in your columns more than once on the extraordinary success which has attended this great application of Whig principles; yet even here the absence of what may be termed revolutionary thoroughness has led to some ill consequences. As one looks back on the course of half a century, it is difficult not to regret that Earl Grey and his colleagues did not dare to base the Constitution on some franchise such as household suffrage, which would have precluded, say for a century, all demands for further increase in the number of voters. It is no slight evil to fix the attention of the nation for years upon the advisability of fundamental political changes. It is a very considerable evil to introduce a state of things which encourages or necessitates the development of systematic agitation. There is no doubt much to be said against universal suffrage; but to a philosophic observer the gain of resting the institutions of a country upon a foundation which does not admit of being further enlarged must appear to be often at least equivalent to all that can be justly urged against a political arrangement which in France, in Switzerland, and in the United States puts one part of the political institutions of the country beyond the possibility of change. It must often have struck travellers in America that the citizens of the Union gain more than they themselves are aware of, from the fact that no demagogue can address himself to the hopes of an unenfranchised class. However this may be, it is quite certain that the partial character of English reforms has, even in England, done some evil. It is hardly an exaggeration to assert that in Ireland the persistent application of the policy of gradual change or improvement to a country which has stood, and perhaps still stands, in need of revolution, has been one of the causes of that failure of English statesmanship which is at least as conspicuous as the failure in France of revolutionary remedies. There is no thinker of any school who would not now admit that the most promising attempts to remedy the grievances of Ireland, and thereby terminate the secular misunderstanding between the two islands which make up the United Kingdom, have missed all chance of success by being carried out too late. The policy of Burke was carried into effect more than thirty years after Burke was in his grave, and thirty years after the circumstances had passed away which made it at least probable that the emancipation of the Catholics might turn the Catholics of Ireland into supporters of the connection with England. It needed forty years from the time of Catholic emancipation to bring the Parliament of the United Kingdom round to concessions which, if made at once in 1829, would have allowed O'Connell to be a loyal member of an English Cabinet. There are not wanting observers to assert that the Land Act of 1881 would have satisfied the tenants of Ireland if its provisions had constituted the Land Act of 1870; and there are critics who suggest (whether with truth or not, I am not able to assert) that the shape which the legislation of 1881 has taken has at once irritated the landlords without satisfying the tenants.

One point is certainly clear: the Land Act of 1881 makes a far greater change than was anticipated by its authors. It tends, apparently, to turn the tenants into real owners of the land without giving them the sense of proprietorship, and to leave to the landlords the nominal ownership of estates, of which they become in reality mere incumbrancers. One can easily see that a policy which combines substantial change with nominal conservatism may commend itself to statesmen trained in the habits of English constitutionalism. It is less easy to explain why such a policy should be expected to produce popular satisfaction. If French revolutionary legislation had established a system under which the men who are now the proprietors of the land of France should, while in reality possessing the soil, have continued to be nominally tenants owing rent to the representatives of the *seigneurs* of the *ancien régime*, it is quite possible that the country districts of France might now be inhabited by farmers as prosperous materially as the existing proprietors of small estates; but no one can believe that such farmers would be the most conservative class in the country. They would assuredly, under the influence of the very sentiments which now make the small landowners of France the foes of change, be constantly excited by the desire to get rid of the rent due to landlords who, from their very position, would incur all the odium almost connoted by the term incumbrancer. To have taken away the discontent which, in 1789, tormented the inhabitants of rural France is the one great success of the Revolution. The revolutionary statesmen did their work ill. Many of the evils affecting French society they did not touch. In everything which concerned religious reformation they showed themselves blunderers or impostors. They failed to see, with Mirabeau and Napoleon, that revolution did not necessarily involve anarchy and bloodshed; but the incompetence, the ignorance, or the wickedness of the Revolutionists did not entirely spoil the work of the Revolution. The roots of bitterness which spread hatred and discontent throughout the France of Louis XV. and Louis XVI. were, in the main, inequality of rights and privileges among the different classes of the nation, and the existence of a system of land tenure utterly unsuited to the requiremepts of the time and to the feelings of the people. These roots of bitterness the Revolution destroyed summarily, at once, and for ever. The heroic and dangerous remedies of revolution freed France within a few years from discontents which could hardly have been appeased by a century of slow reforms. The palliatives of bit-by-bit improvement have, in Ireland, kept alive chronic discontent by the constant suppression of impending revolution. These are facts which require to be noticed by any thinker who wishes to pronounce a fair judgment on the case of revolution against reform.

A. V. Dicey.

PRUSSIAN RAILWAY POLICY.

Berlin, July 23.

As in several of my former letters I have kept you posted about the designs and several steps of the Prussian Government in relation to the purchase of the private railways, I deem it my duty to report to you and dilate on the last measure which the Government has taken in this direction.

You will remember that by former purchases the Government had, with the sanction of the Landtag, bought 15,909.25 kilometres, to which must be added 2,236.37 under the Government's control, making in all 18,145.62 kilometres. A few weeks ago, just before the close of the Landtag, the Minister of Public Works sent in a new bill, according to which five very important and one insignificant roads were proposed to be acquired. The most important of these lines are the Berlin-Hamburg, the Altona-Kiel, the Rechte Oderufer (Right Oderbank), and the Oberschlesische (Upper Silesian). The whole length of these roads amounts to about 3,000

kilometres, and their final purchase, which is not in the least doubtful, will complete the present railway system of Prussia. It is an interesting fact, which speaks highly in favor of the moral soundness of Prussian officials, that up to the hour of the signing of the respective bills nothing leaked out of the proposed measures, and thus neither the Stock Exchange nor any speculator elsewhere could use a knowledge of them to advantage.

Since a final result has been reached, it will not be out of place to throw a retrospective glance at the different stages of the transition of railways into the Government's exclusive possession and sole control, the remaining small ones not deserving to be mentioned. Ever since the introduction of railways the idea that the state must occupy a promoting and regulating attitude toward them has been considered necessary in Prussia. The first public sentiment of the Government in relation to railways—viz., the railway law of November 3, 1838—was based on this idea, which was pronounced more distinctly when, after five years, private enterprise proved not to be up to the task of supplying the state with the most necessary railways. Until 1847 the Government, from purely political motives, could do no more than support the building of railways pecuniarily; but after that time, when it was in want of a connection between the centre and the east of the monarchy, it was compelled to build itself. The year 1848 almost brought the purely Governmental system; but the plan of Secretary Hansemann to buy all the then existing railways for the state had only passed through the first stages of development when its originator was compelled to resign his office. Thus, only after the removal of political difficulties, and after the adoption of the Constitution (1850), could the idea of the direct interference of the state with the building of railways assume a distinct shape.

The merit of having taken this step is due to Mr. Von der Heydt. In December, 1848, he became Minister of Commerce, and in September, 1849, he laid before the Second Chamber the draft of a law for the construction of several railways through the state, which was sanctioned by the Legislature. He was the first Prussian Minister who appreciated the real importance of railways, and with firm will worked toward a definite end. Even if he did not expect to gain it himself, it is owing to his activity that a state railway policy has been made possible. The example of Italy and France shows how extremely difficult and almost impossible it is to introduce state management into a country which has heretofore only known private management. Although the above-named countries are both in favor of state management, it is difficult to carry out the system, as even its adherents hesitate to accept superintendence in a country which has no experience at all on this subject. Mr. Von der Heydt smoothed the way for Prussia and removed many obstacles, by introducing state management in small districts at a period of comparatively small development of the network of railways, thereby in time educating skilled administrative officials.

In the following years, the necessity of extending this network as quickly as possible was felt to such a degree that the Minister of Commerce cared less who should build the railways than that they should be built somehow. The position of the Government toward the railways was greatly strengthened by the fact that, by the acquisition of the new provinces (Hanover, Hesse, and Nassau), extensive well-conducted and developed railways came into its possession. In the years of conflict, more extensive enterprise in the building of railways had been impossible; and between the two wars from 1866 to 1870 the pursuit of a definite railway policy in Prussia alone was greatly hindered by the amalgamation of the North German with the Prussian railway relations. Besides, the nation was occupied with more important subjects than railway questions, and an inducement to interfere with their development only came with the Franco-German war, which originated not only the suddenly appearing difficulties of transportation, but also the feverish speculation which immediately after the war manifested itself in railway building and stock gambling.

The unexpected growth of trade and commerce coincided with the total exhaustion of the railways. Their material had been worn out by the war, their officials had become inefficient, notwithstanding that they were required to manage an intercourse larger than ever before. That they were not up to the task will easily be understood, and the opinion more and more gained ground that the whole organization of the railways was at fault, and that it must be radically changed. The authority which should undertake the constitutional superintendence of the railways in the interest of the national defence was the Empire. The great progress in intercourse was followed by a corresponding increase of income. The dividends of private railways rose, and nothing was more natural than that the building of railways should be regarded as a particularly good investment, and the Government be stormed with petitions for the concession of new roads. It was then that Prussia resolved to build a new line for the direct connection of Berlin with the west of the monarchy (Berlin-Wetzlar-Metz), at her own cost, instead of leaving it to private capital. Deputy Lasker availed himself of the occasion when this plan was introduced to reveal how the railway concessions had several times been misused, and caused the appointment of a Parliamentary committee, which was charged to investigate (*a*) whether and how far the respective laws and administrative rules were qualified to insure the fulfilment of the ends aimed at, and whether they protected the public from deceptions and impositions; (*b*) what changes were necessary in legislation and in administrative management to remedy the existing drawbacks and evils This committee came to the conclusion that politico-economical reasons and considerations required the unification of all railways under state control, and further deemed it necessary to charge the Government of the Empire with the management of the railways, to be ruled by its railway laws and controlled by its jurisdiction.

The excitement of public opinion caused the enactment of the law of 1873, which ordered the institution of an imperial authority for the supervision of all German railways—the Imperial Railway Office. The Reichstag had many difficulties to overcome, especially with the governments of the middle States, before this law, which its originators only intended to be temporary, could be carried. The principal duty of the new administration was to make rules for the regulation of all railway business in preparation for an imperial railway law. The new Railway Office made two attempts to solve this task, but both failed after consultation with the representatives of several Federal States had proved that an understanding with and between them was impossible. Prussia, in the meantime, had returned to a definite state railway policy. On occasion of the second conference the Minister of Commerce, Dr. Achenbach, on May 13, 1873, submitted his programme. While acknowledging the merit of the private railways in developing the network of railways, he nevertheless regretted that Prussia had not followed Mr. Von der Heydt's railway policy. He declared it indispensably necessary that the Government should be in a position to compete with the private railways. By granting the necessary funds the Landtag enabled the Minister to realize his plans. In the years 1873 to 1875 endeavors were made to find and introduce a uniform and legal tariff for all German railways. At the same time the tariff for goods was raised 20 per cent.—a measure now generally admitted to have been wrong; but a rivalry between the Imperial administration and that of the larger single States could not then be avoided. The Imperial controlling administration, however, did not win sympathy by sanctioning the measure.

The result was that at the end of 1875 the condition of German railways was far from being gratifying. It was then that the idea was conceived of bringing all the chief railways into the possession of the Empire, of extending its railway policy to the single States, and of organizing a uniform railway system. Those who aspired to national unity saw a powerful promotion of their aims in this measure, and on that account put aside their scruples as far as politico-economical considerations were concerned. The plan found its chief opposition in the governments as well as in the population of the middle States. The princes, having had to yield the command of their troops to the Emperor—"I must make them civil kings," Bismarck said at the time, which frightened the rulers of the middle States excessively—apprehended that they should lose the essential prerogatives of their position, and were thus in this instance heart and soul with their subjects, who foolishly wished to save what they called their state rights. The railways were for the greater part state railways, and they wanted to keep them for themselves.

Prussia, in order to define her position on the question, submitted a bill to the Landtag in 1876, in which she set forth that the German railways were suffering from the overwhelming development of the private railways and from the false position which the Empire occupied toward them. The chief object must be to give the state more powerful influence over the development of the railways, and that right should belong to the Empire. To guard its rights control does not suffice; it must also own railways. Prussia is willing to help the Empire. She is willing to turn over all her railway possessions to it on condition that by and by it must buy the remaining private railways. If the Empire does not accept Prussia's offer, the latter will be compelled to concentrate all Prussian railways in her own hands. The bill was passed by both houses of the Landtag, and became law on June 4, 1876.

Prussia's attempt by this law to introduce the state railway system, not only for her own provinces but for the whole country, had little success. She declared herself bound to yield to the Empire every possible advantage which it could derive from the above-named system, but the other Federal States were of a different opinion, and lent no help at all, so that Prussia finally saw herself obliged to solve the task herself, and to regard the extension and consolidation of her railway possessions as the first step in the proper direction. The history of the last six years shows the execution of this programme. Three years were preparatory, and during the next three the greater part of the existing private railways came under state ownership. To detail the negotiations would lead too far: it will suffice to give a table of the private and state railways, and of those controlled by the Government, for the last three years:

	State Railways.	Private Railways Controlled by the State.	Private Railways.
1879–80.....	km. 6,198	km. 3,525	km. 10,033
1880–81.....	" 11,392	" 3,526	" 5,032
1882.....	" 15,505	" 2,142	" 3,850

The total will still be increased, by the above-named six private railways, by about 3,000 kilometres.

In conclusion, allow me to point out one drawback, which I have already mentioned in one of my former letters, and which has already proved more injurious than was at first anticipated. With the purchase of the last six lines the Government will have invested a capital of 1,327,983,000 marks (about $330,000,000), which it paid in consols with 1,867,339,885 marks, (about $460,000,000). The holders of these securities kept only a small part of them, and in their stead bought foreign or other shares and bonds which pay higher interest and offer a better chance at the exchange than a Government bond. You must, further, take into consideration that while the private roads had their financial business done by the private banks, the Prussian Government avails itself of the services of the Imperial Bank and the Seehandlung (a royal financial institution), and thus deprives the banks of a large and lucrative business. The same policy exerts an influence also on the exchange, the effects of which have not yet been fully developed. † † †

Correspondence.

MR. JARVES AND MR. STILLMAN.

To the Editor of The Nation:

Sir: In the *Nation* of July 12 I find a letter from W. J. Stillman, Florence, June 20, which calls for notice. Most emphatically I disclaim the language he puts into my mouth regarding the electrotype bust of Michel Angelo, "without doubt contemporary and hitherto unknown," and that I regarded it "as a most important discovery," etc. In this case Mr. Stillman's "imagination is far greater than his" regard for fact. I did purchase for a few francs a bust of Michel Angelo, and was curious to know from what it was taken. At the request of Mr. Stillman, I lent it to him to put into the background of a picture he was then painting. When it was returned, I gave it away as an object of no importance to me. So much for the bust and his use of it to disparage my reputation in the same field which he tries to occupy himself.

He further says: "His two busts of terracotta are not supposed by any authority in Florence to be what Mr. Jarves believes them to be," without stating what my belief is. Any one caring to know what this is has only to refer to page 319, 'Italian Rambles,' and see for himself that, after describing them, I simply concluded that, "if not executed by Michel Angelo, they must have been done by some hand that knew him well," an opinion which is shared by authorities both in Florence and elsewhere. Some have printed their opinions to the effect that either they are by Buonarotti himself or "sono degni di Michelangelo" (see pamphlet 'Sulla Scoperta di due Busti in Terra-cotta rappresentanti Michelangelo e Vittoria Colonna.' Domenico Rembadi, Firenze, 1874). These busts will be shown at the Boston Exhibition of Foreign Art to open Sept. 3, and those interested can there judge for themselves how far Mr. Stillman is justified by anything I have written of them in his assertions regarding them and me.

He is generous enough to say that my writings have done "not much harm, but certainly no good." I think we had both better let the public decide for itself as to their "harm" or the reverse, certain that it is seldom long misled or deceived in its judgments. Personally I have no reason to complain in regard to critics and the public. Any deficiency of severity in their opinions is certainly counterbalanced by the protest of Mr. S. against my being considered an authority in art matters. But Mr. S. is always severe on those who succeed where he fails. As excavators and archæologists, Doctor Schliemann and General di Cesnola have been eminently successful; but Mr. S. tells the world they are egregious "charlatans," etc. I am quite content to be abused in their company, whatever may be the value of my own more humble work. We cannot all be as profoundly wise and erudite as Mr. S., but we can be just to others and without envy and guile. I am always ready to correct my judgments by the superior light of others, but it must shine in more convincing form than personal abuse and unsustained assertions.

James Jackson Jarves.

Hotel Vendome, Boston, August 10, 1883.

MR. McMASTER AND HIS CRITICS.

To the Editor of The Nation:

Sir: The chorus of praise which greeted McMaster's 'History of the People of the United States' on its appearance last March was altogether too concurrent to continue so. It was inevitable that the pendulum should have its backward swing before it found a point of rest. There may be, however, some of your readers who will mistake some of the criticisms upon the book for evidence that the book itself is fatally at fault, and I feel impelled to call their attention to the fact that the criticisms are not levelled at essentials. I do not know the author or his feelings in the matter; but I am sufficiently indebted to his work to feel bound to honor such a draft upon my time.

I have seen no criticisms on the book further than allegations that its author has falsified the history of Rhode Island; that he has copied Macaulay's style; that he has stolen from Macaulay and Rives; and that he has been guilty of offences against English grammar. The first is a special case. Rhode Island is certainly a State to be held in honor. It has not been allured by the smallness of its territory and population into any copying of its neighbors, but lives a life—a most honorable and useful life—of its own. In the many-sided development of American State life, its place is as high as that of its largest associate. But no student of American history can be ignorant that this very indifference to the opinions of others, which makes Rhode Island of the greatest use now, made it a positive source of danger during the period covered by McMaster's first volume. Washington's opinion (in his 'Writings,' x. 39) is so harsh that I do not care to cite it here; but all contemporary correspondence echoes it. McMaster's effort seems to be to bring out plainly the contemporary feeling, and the result is naturally more unpleasant to a Rhode Islander than we, who are on the outside, can properly appreciate. One good Rhode Island authority goes so far as to say that, "so far as this State is concerned, this 'History' is indeed valueless, for only an expert would be able to detect the false from the true."

So serious a criticism seems to be in need of specifications, and of these there are two: that McMaster mentions the proposed forcing act of 1786 as if it had been a finality; and that he turns a proposed disfranchisement of the Cincinnati into a positive enactment. I cannot see how the first charge can stand. He who consults the page of McMaster (p. 340) in question will find the fact that it was only a *proposed* law referred to directly and indirectly; its overwhelming defeat by the town meetings is ascribed to the "honest and fair-minded men" of the State; and I fail to see how any reader can be in doubt. As to the second specification, it is enough to say that while McMaster gives in the text his own opinion that the Cincinnati were disfranchised, he gives in the note his authority in full, from which any reader may see that the disfranchisement was only proposed when the writing took place. Here, also, there is no danger of any mistake on the reader's part, and that is the essential point.

That McMaster has, in the opening of his first volume, and in the arrangement of parts of it, followed Macaulay's style, and occasionally, consciously or unconsciously, followed some of his methods of securing the reader's attention, is evident. It is doubtful whether any competent critic or reader failed to notice it, or to ascribe it to its true reason, the desire of a new writer to publish as plainly as possible, without direct statement, his intention to follow Macaulay's method. If McMaster had ever written a book before; if he had got his sea-legs on, so to speak, he would have known that he was abundantly able to rely absolutely on himself. His work, a wonderful success for a first book, must nevertheless show something of the hesitancy with which a new writer tries his wings; and we can only be thankful that the hesitancy in this case took so grateful a form. At any rate, no reader can complain that his publishing of his adherence to Macaulay's method is obscure. I do not think, from his first volume, that McMaster was fool enough to suppose that his imitation of Macaulay's opening was likely to escape notice. I give it rather the obvious interpretation above stated.

It has seemed to me all along that the contest as to the Macaulay-McMaster style was unworthy. So far from the similarity being unnoticed, it was noticed from the beginning. The first three readers whom I met spoke of it; almost every review in the critical journals referred to it. Some, as your own, contented themselves with drawing a parallel between Macaulay and McMaster; others, as Mr. C. D. Warner, made the comparison "in a spirit of national pride that a writer has arisen capable of weaving our common life into as brilliant and vivacious a narrative as that which entranced the world when Macaulay took up his pen." Others, as Mr. W. F. Poole, directed special attention to the exact verbal similarities. But all the critics seem to have felt that, since there must be some fault in a first book, it was matter for thankfulness that the point of criticism was so minute.

Then the matter passed out of the hands of the critics into the hands of those who took a more strictly business view of it. Many of them were equally delighted and surprised at the discovery that there was an historian named Macaulay, and that McMaster had imitated his methods and, to some extent, his style; and each hastened to put in his journal's *caveat* for so remarkable an instance of acumen. For a time the contest raged with all the characteristic sound and fury of the proverbial tempest in a teapot. There were claims and counter-claims, and each "pointed with pride" to his own journal's record, and expected a large increase of subscriptions thereby. Before the battle died away, an attack upon the book appeared in the New York *Tribune*.

I do not propose to refute that attack in particulars. Its tone and temper are enough, to the literary men among its readers, to stamp it as a worthless criticism, and there is already a feeling of keen regret among the readers of the newspaper that it ever was inserted. I desire only to call attention to the fact that the transfer by McMaster of two sentences in Macaulay and one extract from Rives is the only basis of the attack; and that the alleged offences against English grammar, so far as they are not the slips of the printer, exist only in the reviewer's imagination.

So far as the three "appropriations" are concerned, any one familiar with the common difficulties of authorship will dismiss them as petty and vexatious specifications. In so vast a body of notes as is needed for a work of this extent, it is a sheer impossibility to guard against an occasional mistake of an extract for one's own note. Twenty instances would be evidence of an author's dishonesty; three are only evidence of a reviewer's malice.

I write to you mainly for the purpose of endeavoring to recall criticism to its proper field. It seems to me that McMaster's first volume is, for the period that it covers, by long odds the best history in existence; that it transfers the reader directly into the scenes which it is describing, and gives him as good an idea of them as he could have obtained by living among them; and that it is, in the best sense of the phrase, a complete success. If this is correct—and I have seen no evidence whatever arrayed to dispute it—I for one would not choose for myself the ungracious task of searching with eagerness for microscopic defects, or the petty triumph of showing that the statue is a line too long here or a thought too broad there. If any man would choose such a field of exertion, let him at least confine himself to it. Let him not assume his researches as a standpoint from which to pronounce upon the general merits of the work: *ne sutor ultra crepidam.* J.

NORWALK, CONN., August 13, 1883.

GENERAL CROOK AND THE APACHES.

TO THE EDITOR OF THE NATION:

SIR: The value of General Crook's campaign among the Apaches in Mexico seems to me to have been overestimated. A great personal triumph over natural obstacles has been so exaggerated in importance that it appears as a public benefit. Why the capture of the Apaches General Crook brought in was not of the value which has been given it, may be shown briefly.

In the first place, according to General Crook's statement, the Apaches, when he came up with them, were anxious to be on the San Carlos reservation—of course without loss or discomfort to themselves, if possible. The reason why they were anxious to come in, General Crook thinks (if he has been correctly reported), was because they realized that they were no longer able to make a successful stand against the whites. How the Indians arrived at this conclusion, or what past experience they had had on which to base it, we are not told. It is the fact that for several years past the Apaches on our southwestern border have received no punishment from United States soldiers that would deter them from crime or lead them to ask for peace. Whence, then, came the anxiety to be on the reservation? It may be accounted for by remembering that during the months of April, May, and June Southern Arizona and New Mexico and Northern Mexico are in a condition least favorable of all times during the year to the success of marauding parties. The grass is poor, the streams and springs low or out of sight altogether, and the game not desirable. Naturally the Apaches would at that time prefer reservation life. How to get back there safely after the recent commission of so many crimes, may easily have caused anxiety. Fortunately for them, General Crook stepped in, and the Apaches became "personally conducted." We actually witnessed without protest the transfer of a band of murderers from a place of discomfort and danger to a city of refuge where they are hospitably entertained and fed at the expense—in very small part, it is true—of the friends and relatives of those murdered! And this, too, not only without adequate punishment to the Indians, but with excuses for the lack of it, founded on a policy which will not bear a moment's careful examination. In fact, almost the same arguments advanced by General Crook to justify his course would liberate half the murderers that are sentenced.

The sole promise of good that has so far come out of General Crook's campaign has come in spite of him and because of the firm stand taken by Secretary Teller. I refer to the fact that the military has charge of these "personally-conducted" Apaches. And it is even a question whether that will be of benefit. If the military in charge shows a spirit the opposite of that which has controlled its movements on the frontier for the past three years, the Apaches conducted by General Crook to San Carlos may be kept from war; otherwise not.

I may be alone in this, but I confess to a feeling of shame for our frontier soldiers that when the Apaches broke out last March, killing men and women who had the right to believe they were in a peaceful country, General Crook was not able to strike the quick, hard blows these Indians deserved, and still deserve.—Respectfully,

F. E. R.

INTERNATIONAL SOCIAL TYPES.

TO THE EDITOR OF THE NATION:

SIR: I have just been showing your highly instructive article on the two new social types, the Bouncer and the Whooper-Up, to an English literary friend who takes great interest in the development of society; and he assures me that the Bouncer is not altogether a novelty hitherto unknown to science, but at best only a variant of a type recognized in Great Britain and her colonial dependencies as the Chucker-Out.

In the course of our conversation, it was also suggested that the Whooper-Up is perhaps only a coarse and vulgar variation of the familiar Professional Diner-Out, whose habits have been investigated and described by Mr. Thackeray and other scientific observers of social development. Should this prove to be the case, my English friend sees in the evolution of the American female Whooper-Up from the British male Diner-Out additional evidence of the higher civilization of the United States. J. B. M.

ATHENÆUM CLUB, LONDON, July 25, 1883.

Notes.

AFTER October 1 the price of the 'American Catalogue,' of which but seventy-eight complete sets remain on hand, will be raised to $40 by the publishers, A. C. Armstrong & Son. The value of this work will not diminish with time. Mr. F. Leypoldt now intends to supplement it with a single volume, bringing the list down to 1883 (the 'American catalogue' stops with July 1, 1876), and asks that subscriptions may be speedily sent him at 31 Park Row, the cost of the new volume depending upon the prospect of support thus afforded. It is to be hoped that the responses will be numerous as well as prompt, and that the editor's losses on the original publication will be made good by the new, and by the placing of the unsold remainder above mentioned.

Mr. Edward H. Stiles, Ottumwa, Iowa, purposes writing a brief history of the bench and bar of Iowa, and desires assistance in collecting materials for it.

'English Cathedrals: their Architecture, Symbolism, and History,' is the title of a compilation by Miss E. W. Boyd, of Albany, to be published, with illustrations, by Thomas Whittaker.

G. P. Putnam's Sons' "early autumn" list of announcements embraces the long-expected 'Woman Question in Europe,' a series of essays by representative European women; 'Work for Women,' practical hints by George J. Manson; 'The American Girl's Home Book of Work and Play,' by Helen Campbell; 'Plutarch for Boys and Girls,' selected and edited by Prof. John S. White; the 'Essays of Elia,' printed from wholly new plates and illustrated with etchings by American artists; a 'History of the Northern Pacific Railway,' by E. V. Smalley; an important 'History of the Discovery of America to the Year 1525,' by Arthur James Weise, who has given eight years to his researches; 'The Hand-book Dictionary,' English, French, and German, in parallel columns, by George F. Chambers; 'Lectures on Painting,' by Edward Armitage; and 'The Wonders of Plant Life,' by Mrs. S. B. Herrick. The same firm (who, by the way, have become the regular publishers of the *Journal of the Military Service Institute of the United States*), will bring out new and enlarged editions of Roosevelt's 'History of the Naval War of 1812'; the late Dr. Chadbourne's 'Instinct in Animals and Men'; Thwing's 'American Colleges'; and Shepard's 'Pen Pictures of Modern Authors.'

E. P. Dutton & Co. will publish early in September a new volume by the Rev. Phillips Brooks, with the title, 'Sermons Preached in English Churches.'

Roberts Brothers, Boston, announce the following works: 'The Expansion of England,' by Prof. J. R. Seeley; 'Autobiography and Letters of Orville Dewey, D.D.,' edited by his daughter; and 'S'wanee River Stories,' by the late Sherwood Bonner, illustrated by Frank T. Merrill.

Lee & Shepard, Boston, will publish 'Twelve Months in an English Prison,' by Mrs. Susie Fletcher, a spiritualist medium, who writes from experience.

According to the *Academy*, the Clarendon Press has already in type more pages of the Philological Society's English Dictionary than are required for Part 1, which will be published next month. It appears that the enterprise still needs all the pecuniary support which private liberality can bestow upon it. Any millionaire seeking a novel form of public beneficence should have his attention directed this way.

Scott's 'Lady of the Lake,' edited by W. J. Rolfe, has just been published by J. R. Osgood & Co., in a style uniform with the "English Classics" and the Harpers' Shakspere which Mr. Rolfe has likewise edited. Typographically, it is a very pretty volume, and Mr. Rolfe gives ample proof of the superiority of his text to the more or less corrupted ones which are reproduced without critical scrutiny. In this part of his task, he says, he encountered unexpected difficulties. His notes, in which the various readings are preserved, have been prepared with excellent judgment to meet the requirements of students and teachers, and are placed together at the end of the book. For pictorial illustrations there was at hand the series made for the publisher's luxurious holiday edition last year, and of these Mr. Rolfe has wisely rejected nearly all the figure pieces, preferring the scenic. Thanks to all this painstaking, the present edition merits a wide popularity.

Ginn, Heath & Co. begin a series of "Classics for Children" with 'Robinson Crusoe' (the first part), condensed by W. H. Lambert, Superintendent of Schools in Malden, Mass. We do not quite understand the editor when he says that "the long and involved sentences which characterize the writers of the age of Defoe have been cast into a simpler form, while the diction of the author has been carefully preserved." One would have thought these characteristic in-

volved sentences inseparable from the diction. But Mr. Lambert has gone further, and changed such marks of the period and the style as the following phrases exhibit: "As far as house edution and a country free-school generally *goes*"; "*being going* by sea to London"; "no sooner . . . *but*"; "most *inexpressible* sick," etc. He does worse in making Defoe an authority for such a usage as "to seriously reflect," when the original reads, "seriously to reflect." He began, too, by simplifying the style, substituting "hurry" for "precipitate," etc.; but, as he went on, more wisely left the hard or obsolete word, and explained it in a footnote. On p. 35 the young reader is advised to follow on the map the ship's course before the shipwreck; but, curiously, no allusion is made to the common identification in children's minds of Juan Fernandez with the island opposite the mouth of the Orinoco. Except, however, for an occasional unnecessary loss of coloring, Mr. Lambert's task has, on the whole, been well done, and the little book is very attractively printed.

The same publishers have brought out a second edition of Dr. Dippold's faithful and otherwise meritorious translation of Emanuel Geibel's 'Tragedy of Brunhild,' first issued four years ago.

Three editions of a work so orderly and scientific as Dr. George E. Walton's 'Mineral Springs of the United States and Canada, with analyses and notes on the prominent spas of Europe, and a list of seaside resorts' (D. Appleton & Co.) establish its standard qualities. It is ten years since the first edition appeared, and the appendix describing new springs now enlarges the work by one-third. The chapter on sea-side resorts, however, so far as it is a directory, is decidedly out of date, and calls for a fresh tour of inspection on the part of the author, whose home is in Cincinnati.

With the fourteenth *livraison* of Racinet's 'Costume Historique' (New York: J. W. Bouton) is given the text belonging to the thirteenth, and this disjointed arrangement will be maintained in the case of the next instalment of plates and letter-press. The present series ranges from Egypt through India to the land of the Eskimo, and through the divers countries of Europe and tribes of Africa. Furniture, jewelry, and domestic interiors receive the usual attention. Hogarth is among the sources laid under contribution for English costumes and family morals. Unavoidably, it would seem, in this work national and racial characteristics are preserved chiefly in the dress and accessories; seldom in the features of the men and women delineated.

With the marine mammals is concluded, in Parts 85–89, the third volume of the new edition of 'Brehm's Thierleben' (Leipzig: Bibliographischer Institut; New York: Westermann & Co.). The colored plates, on the other hand, while showing the whale and dogfish, happen to be occupied chiefly with the more familiar animals of the menagerie—the camel, deer, elephant, yak, etc., capitally delineated in their natural surroundings. The woodcuts are, as usual, numerous and of good quality.

Recent issues of the *Bulletin de Correspondance Hellénique* (Paris: E. Thorin) have shown in heliogravure the remarkable terracotta figurines of Myrina. The July number pictures some interesting examples of bronze mortuary vase handles from the same source, which are artistically novel and pleasing. An even greater interest attaches to an Attic bas-relief, representing an *apobates* remounting his chariot while in motion, of which the original is very probably to be sought in a fragment of the Parthenon frieze, closely resembling it in treatment.

Some "References for the History of the Settlement of Western New York," as complicated by the claims of Massachusetts upon that territory, are given in the July number of the *Library* of Cornell University.

The programme of "Old South Lectures for Young People," begun last week in Boston, is before us. The course consists of eight, by numerous well-known scholars and writers, some of whom, like Messrs. E. E. Hale and G. M. Towle, and Mrs. A. M. Diaz, have already learned how to approach the youthful mind, and others, like Messrs. John Fiske, G. Stanley Hall, and J. K. Hosmer, will have no difficulty in adapting themselves to it. Mr. Edwin D. Mead began with "Governor Bradford and Governor Winthrop," and other topics will be "Plymouth," "Concord," "The Town Meeting," "Franklin," "How to Study American History," "The Year 1777," and "History in the Boston Streets." Connected with this scheme is the printing of "Old South Leaflets," as, with reference to the opening lecture, Cotton Mather's Life of Bradford, from the 'Magnalia.'

We spoke lately of Prof. G. F. Wright's determination of the southern limits of the northern ice-sheet in Ohio. This line has been connected with that long since traced in New Jersey by similar exploration in Pennsylvania, executed by Prof. H. Carvill Lewis, partly with the assistance of Professor Wright. The result was made public at Montreal a year ago, and is now accessible in the Proceedings of the American Association for the Advancement of Science, as well as in the current issue of *Science*. As shown on the accompanying map, the course of this terminal moraine from a point on the Delaware a few miles north of Easton is almost directly northwest till the New York border is reached and passed, shortly after which it reënters Pennsylvania with a southwesterly trend, and leaves the State to enter Ohio at the same latitude at which it entered from New Jersey. The resultant figure is a great right-angle. In Potter County, the divide for the Atlantic, the Gulf, and the Laurentian Basin, the moraine reaches its greatest height in this country, or 2,580 feet.

On September 26 will be held in this city a convention of American ornithologists, for the purpose of founding an American Ornithologists' Union upon a basis similar to that of the British Ornithologists' Union. Its objects are social and scientific intercourse among its members and the promotion of their favorite study, but also especially and immediately the revision of the current lists of North American birds, in order to secure a uniform classification and nomenclature which shall have the authority of the Union. Its meetings will be yearly at least. Those who attend the first one will be *ipso facto* Founders. The call is signed by Messrs. J. A. Allen, Elliott Coues, and William Brewster.

—"R. H. D." writes us from Munich:

"In the *Nation* of July 12 the reviewer of Mr. Henry Ruggles's 'Germany Seen Without Spectacles' says that Mr. Ruggles's statement that in Germany 'beer takes the place of coffee in the morning' is untrue. Speaking generally, the reviewer is right; but in boldly asserting that 'no German ever misses his morning cup of coffee' he is much mistaken. With regard to other cities I am unable to speak with certainty, but in Munich numbers of people drink beer in the morning, and not coffee. The German in whose family I live did so formerly himself. The habit is mostly confined to the poorer classes, such as carpenters, masons, etc., but I know of one family of considerable means who never drink coffee: males and females drink only beer in the morning."

—All Americans who have visited Greece—and the number is becoming a large one—regard with interest every faithful description of the life of the modern Greek people. No extended attempt at such description has been made, so far as we remember, since Felton's 'Ancient and Modern Greece,' now a quarter of a century old, and there is undoubtedly room for a new venture in this field. Mr. Denton J. Snider, the author of 'A Walk in Hellas' (Boston: Osgood), is a teacher, we believe, of literature and history in the St. Louis High School. After acquiring the modern Greek language, he set out, in the winter of 1879, for a tour of several months in the more interesting parts of Greece, especially Attica, Bœotia, and Phocis. Unlike most travellers, he accomplished this tour, from beginning to end, alone and on foot. Thus he was brought into very close contact with the Greek people, to whose best traits—their hospitality and responsiveness—he does full justice and no more than justice. Mr. Snider is familiar with Greek literature and history, and has a genuine enthusiasm for everything Hellenic. He is also an excellent observer, has an eye for what will make a good picture, and must have been most conscientious in the use of his note-book. In consequence there are descriptions of persons and scenes which are almost photographic, and better than anything else of the kind that we remember reading. We wish that our space permitted us to quote in confirmation of this statement. The book, a bulky volume of 675 pages, is divided into twenty-four chapters called "Talks," prepared, we imagine, for the author's pupils, who must have heard them with interest and profit. The numerous digressions, in the form of philosophical monologues, are far more appropriate to a "Talk" or "Conversation" than they are to the book with its present title. Though usually interesting in themselves, original, and even poetic, they are swollen to disproportionate length, and bury out of sight many charming bits of description which one would gladly turn to at once. The value of the book would have been doubled had it been cut down to half the present size, and had it been furnished with an index and a map. We regret the more that this has not been done and that the proof-reading has not been more careful, because this would have entitled it to a place in every school library, and would have insured it the attention which the author's ability, originality, and enthusiasm might justly claim.

—A posthumous benefactor of the University of Pennsylvania accompanied his endowment with the condition that the phenomena of spiritualism should be investigated scientifically, and a few weeks since the composition of the committee was announced, together with its programme—how this member expected to show up the humbug on this side, and that member on the other. One can imagine the testator grieving in spirit, and wishing he had left his money to the Society for Psychical Research. This significant association, at the head of which stands Prof. Henry Sidgwick, author of the 'Methods of Ethics,' is but a year and a half old, but at the close of last year it had attained a membership of 150, and, as its aims and proceedings become known, will doubtless find a very much larger support through associate members wherever the English language is spoken. Among its officers are Prof. W. F. Barrett, of the Royal College of Science, Dublin; Prof. Balfour Stewart, Owen's College, Manchester; John R. Hollond, M.P., and Messrs. Roden Noel, Hensleigh Wedgwood, Edmund Gurney, Frederic W. H. Myers, etc.; while in the list of members are found the names of Oscar Browning, Wm. Crookes, Titus Salt, Rev. F. Chenevix Trench, Percy Wyndham, Rev. H. R. Haweis, Stanley Lane-Poole, G. J. Romanes, Alfred R. Wallace, and many other notabilities of all professions, together with a goodly number of ladies, including Miss Rhoda Broughton. The

Society's committees indicate by their very titles the work it is engaged in. They are six in number, of which four are as follows: on Thought-transference; on Mesmerism; on Physical Phenomena; on Haunted Houses. Another is on certain alleged magnetic properties and luminous appearances of special organizations, and is called the Reichenbach Committee. The Literary Committee, finally, deals with dreams, premonition, second-sight, apparitions, etc., etc.

—It is this last committee's report (the work of Messrs. Gurney and Myers) which fills the greatest space in Part 2 of the Society's Proceedings (Trübner & Co.), and possesses most interest. There is no circle, however cultivated or free from vulgar superstition, that could not add some experience of a kindred nature to the thirty-four tales here given with circumstance, and generally with the names of the relators. They are such as the late Robert Dale Owen massed together in his 'Footfalls on the Boundary of Another World,' and are, in a majority of cases, connected with the lives of our contemporaries, many being very recent. There is no endeavor to refer them to spiritualism, and they are treated throughout as if ordinary operations (however mysterious) of mind upon mind. Quite the most remarkable, though it may be taken as a type, is that of the apprentice of an exacting employer, deceived by the clock into thinking he had overstayed his lunch hour, and being so shocked by the discovery that (if we may credit the narrative) his employers saw his image return and bang up its hat, and then cover itself again and leave the store while the apprentice was all the time sitting at the lunch-table round the corner, and gradually woke to the consciousness that he had misread the time fifteen minutes. The committee have gathered an enormous amount of this material, and purpose bringing out a book. "The point in the evidence," they say, "that impresses us is not its exciting or terrific quality, but its overwhelming quantity—overwhelming, we mean, to any possibility of further doubting the reality of this class of phenomena." And again: "Taking all these people [the several classes of witnesses] into consideration, they often seem to us like a multitude of persons standing side by side in the dark, who would be astonished, if the sun rose, to see their own overwhelming numbers." The discussions in this volume will commend themselves as sane, cautious, and moderate. There are some excellent stories of haunted houses, and some curious experiments in thought reading or clairvoyance.

—The Society for Photographing Relics of Old London has, in its ninth year's issue, once more gone south of the Thames, and gives three views of Lambeth Palace—the Great Gateway (Morton's Tower), the Great Hall (Juxon's Hall, now the Library, freely open to the public), and the Lollards' Tower (more properly, the Water Tower). This fine and imposing example of early Tudor brick building, which another five hundred years may pass over without substantially changing it, furnishes the noblest as well as the least perishable of the antiquities pictured in the present series. Three other views, however, will also gratify an eye which delights in architectural refinements. The old house in Great Ormond Street, already hemmed in and overtopped by public buildings, and since (1882) demolished, is almost an ideal home of solid wealth and respectability, yet a Queen Anne structure which would be unrecognized and unappreciated by the votaries of the so-called style in this time and country. The graceful Corinthian portico was acquired by the South Kensington Museum. Less princely and much inferior in design, but still interesting and effective, is the double house on Queen Square, Bloomsbury, which has been erroneously attributed to Sir Christopher Wren. Here the two doorways, combined in one motive, are the chief feature. Of exceptional beauty on account of its proportions is the doorway adjoining "the oldest shop in London" (1690), on Macclesfield Street, Soho. The shop itself is a projection consisting of graceful Ionic members, skilfully adapted to modern uses. In this, as in the two preceding photographs, one sees in area and stairway railings delicate examples of a species of wrought-iron work which has become a lost art with us. Relics of old inns are shown in views Nos. 76, 77, 78, the last, near Lambeth Palace, having most character. No 80, a modern shop at 37, Cheapside, commemorates the site of the "Nag's Head" tavern, "famous in the controversies on the validity of Anglican orders, as being the supposed scene of the consecration of Archbishop Parker." Another Cheapside building shown in No. 81, "The Old Mansion House," has doubtful authority for being considered the work of Wren (1668–9), and will hardly be claimed for him by his admirers. Very picturesque, finally, and curious, and of a rapidly vanishing class, is "The Golden Axe," St. Mary Axe, a three-story, overhanging, stuccoed, gabled house, on a street corner. The usual sheet of explanatory letter-press accompanies this issue, which fully maintains the interest of its predecessors, while enhancing their value by steady accumulation. The Society accepts subscriptions for single sets of these artistic autotypes. The honorary secretary is Mr. Alfred Marks, Long Ditton, Surrey.

—The best biography of Manzoni which has appeared since his death is undoubtedly the recent work of Cantù, bearing the modest title of 'Reminiscences' (Milan: Fratelli Treves). The long and close intimacy of the writer with the subject of his memoir enables him to give a mass of interesting personal details, which, for the first time, make the readers of the 'Promessi Sposi' feel acquainted with its admired author. Manzoni's family, his education, first visit to Paris, marriage and conversion, literary activity, domestic and social life, and political views are discussed and illustrated with an unexpected wealth of material. Inedited correspondence and, above all, Cantù's personal reminiscences add peculiar value to the book. A few debatable points in Manzoni's history are not cleared up. He never spoke himself of his conversion to Catholicism, and his alleged visit to the church of St.-Roch in Paris is pronounced a legend. The genesis is given of another legend—to wit, that his confessor, Tosi, shut him up in his room until he completed his work, 'La Morale Cattolica.' It seems that Manzoni was overrun with curious visitors, and attributed to this his inability to complete certain work. Tosi told the servants to say that Manzoni was out, or was not receiving company; hence the story of his confinement. Manzoni was of medium height, somewhat stooping in his old age; his head was not large; his forehead retreated; his eyes were small, bright, and sparkling with intelligence; his mouth large, with thin lips. Although he had a slight impediment in his speech, he was a brilliant talker and full of sly humor. His great memory furnished him with many apt quotations, which he sometimes used with comical effect, as when, the argand lamp having gone out, he cited the line from Tasso ('Ger. lib.,' xix. 26):

"Moriva Argante, e tal moria qual visse."

It is known that for a long time Manzoni resisted his friends' entreaties to be painted or photographed. Cantù gives a portrait from an aquarelle of 1829 and from a daguerreotype taken in 1854, and also portraits of his mother and first wife. Among the curious documents printed by Cantù is a denunciation of the 'Promessi Sposi' presented to the Austrian Government. It is well known that some critics, Settembrini at their head, saw in the 'Promessi Sposi' an unpatriotic work, while the author of the denunciation regarded it as dangerous to the existing government.

—The results of the observations of the last two total eclipses of the sun are of high importance in solar physics. Dr. Arthur Schuster has lately reported to the Royal Astronomical Society a detailed account of the observations obtained in Egypt during the eclipse of May 17, 1882. Three photographic instruments were at work during the progress of the eclipse: one took photographs of the corona, a second was a photographic camera with a prism placed in front, and the third was a complete spectroscope. The direct photographs of the corona indicate its variations from eclipse to eclipse; for if the photographs taken during eclipses in the past twenty years be compared with each other, it may be seen that the corona varies in a regular way with the state of the sun's surface, although there are irregular minor changes. At the sun-spot minimum the corona is much more regular than at the maximum. At the minimum there is a large equatorial extension, and about the solar poles a series of curved rays. At the maximum there is practically no regularity at all: the long streamers go outward sometimes in one direction and sometimes in another; and during this eclipse—which was near the sun-spot maximum—there was absolutely no symmetry in the appearance of the corona. The transparency of its streamers is most striking. One streamer can sometimes be traced through another, showing that the matter, whatever it is, must be very thin. The photographs taken with the second instrument show one prominence with a great number of lines in the ultra-violet. The fact was brought out in this eclipse that the brightest lines in the prominences are due, not to hydrogen, but to calcium. In considering the results obtained with the complete spectroscope, it is a striking fact that some of the lines cross the moon's disc, and especially the two calcium lines H and K—thus proving that these lines were so strong in the prominences that the light was scattered in the earth's atmosphere, and reflected right in front of the moon. The coronal photographs bear out the distinction between the inner and the outer corona, the former being much stronger in light. The continuous spectrum of the corona is stronger on the side where the prominences are weaker. No known substances have been traced in the solar corona. The greater number of the prominence-lines in the ultra-violet are also unknown, but they seem to be present in Doctor Huggins's photograph of the spectrum of α Aquilæ.

—These results were all obtained by the English party, no American expedition having been sent out to observe this eclipse. An English and an American party were sent out to observe the total eclipse of May 6, 1883, from the Caroline Islands, in the South Pacific Ocean. They were favored with a clear sky during more than five minutes of the total phase, and met with entire success—observing the solar corona extending over a distance of two diameters from the sun; searching for intra-Mercurial planets, but finding none; obtaining good photographs of the corona and the coronal spectrum, the former probably surpassing in beauty and detail everything which has heretofore been secured; and photographing, for the first time in the history of eclipse-observation, the momentary flash of bright lines seen just before the beginning and

immediately after the end of totality. The English observers find that the lines obtained in the spectrum of the corona by their various methods are chiefly those of hydrogen. The American observers arrived in San Francisco, June 11, on their return journey, and reported the successful execution of their plans in every detail for the observation of the eclipse. Professor Holden swept for intra-Mercurial planets, but discovered none. Spectroscopic observations were made by Dr Hastings, Mr. Rockwell, and Mr. Upton with interesting results. Dr. Hastings had devised a spectroscope by which the spectra of two opposite sides of the sun were brought into juxtaposition, and could be examined simultaneously. He interprets the results secured with this instrument as conclusive proof that the outer corona is mainly due to diffraction. The bright hydrogen and magnesium lines were seen by several observers. The duration of totality was five minutes and twenty-five seconds. The corona was bright, and characterized by five well-defined streamers, careful sketches of which were made by M. Trouvelot and Doctor Dixon. The meteorological observations showed a slight but well-defined rise in barometric pressure, a rise in humidity, and a fall in temperature. The temperature reached the values given at night, while the radiation-thermometers indicated that the receipt of heat by the earth was almost wholly checked. The next total eclipse of the sun occurs on September 8, 1885, and the duration of totality is about a minute and a half, visible only in New Zealand.

THE REAL LORD BYRON.

The Real Lord Byron. New Views of the Poet's Life. By John Cordy Jeaffreson. Boston: J. R. Osgood & Co. 1883. Pp. viii.-556.

We have had occasion more than once of late to take note of recent Byronica as evidences of a reviving interest in the study of the poet. Mr. Jeaffreson's book will, we are confident, be welcome to every one who wishes to grapple seriously with one of the most puzzling problems in literary psychology. We all know *who* Byron was; but *what* was he? A monster, or a mere scapegrace, or a scapegoat? Are we to side with Mrs. Stowe, or with Moore, or with Macaulay? The student of our nineteenth-century literature cannot evade the question; it is ubiquitous. Necessarily welcome, therefore, will be any sincere, well-directed effort toward answering it or supplying the materials for an answer. The present work, as its title suggests, is such an effort. It does not profess to be a new biography of the poet, much less a critique of his writings. It is evidently not intended to supersede either Moore or Elze; indeed, it gives scarcely enough of the known and uncontroverted facts of the poet's life for a reader unfamiliar with other works. But what it undertakes it does thoroughly: it reveals to us the man Byron as he has never before been drawn with pen and ink, his character—both in its formation and in its final development—his good qualities, his foibles, and his vices. The portrait is not an agreeable one to contemplate, but that is not the author's fault. He has treated his subject with what seems to us the strictest justice. Avoiding equally the fulsome adulation of Moore, the absurd defamation of Mrs. Stowe, and the almost as absurd declamation of Macaulay, he gives us facts—hard, unpalatable facts—and in general leaves the reader to draw his own conclusions.

Such a work must, of course, be largely negative in its procedure. One cannot get at the facts of a literary controversy without first overturning false views and theories. How false the usual views have been, even on the most ordinary points, may be learned from the following passage in the introductory chapter:

"Who has not been invited to ponder on the habitual melancholy of the man who, in his brighter time, brimmed over with frolic, and even in the sadness of his closing years made the world ring with laughter and delighted in practical jokes? Who has not heard of his gloomy brow, black locks, dark eyes, and club-foot? And yet his face was not more remarkable for the beauty of its features than for the brightness of its smiles: his hair, light chestnut in childhood, never darkened to the deepest brown of auburn; his eyes were gray-blue; and he hadn't a club-foot."

In the limited space at our disposal we can do little more than indicate the most prominent steps in Mr. Jeaffreson's investigation. The first bubble that he pricks is that of the poet's boasted aristocracy. He shows that the Byron family, however promising they may have been in the days of William the Conqueror, speedily degenerated into tiresome mediocrity, and that the peerage title conferred on them in the seventeenth century was a misfortune rather than a gain; not to speak of the bar sinister in the line, which must have been known to the poet. The poet was the only man of genius in the line. Furthermore, the trait of recklessness which was so prominent in the poet, and which earned for his father the sobriquet of "Mad Jack," was really due to the Berkeley blood in their veins, and not to the Byron.

Mr. Jeaffreson decides in favor of London as the poet's birthplace. His lameness was not the result of a club-foot, but of a contraction of the tendo Achilles—at first in the right foot, but subsequently extending to both. The point is not so unimportant as might be supposed. Had the evil been merely a club-foot, the poet, both as boy and man, might have been at least as good a pedestrian as Sir Walter Scott, whose club-foot, we all know, never prevented him from climbing, walking, or other sports of the kind. Byron's lameness was peculiarly unfortunate in depriving him of the only permanently efficacious means of overcoming a tendency to excessive corpulence inherited from his mother. Mr. Jeaffreson's remarks on this subject are the first, to our knowledge, to throw light on one of the most obscure points in Byron's life. Every now and then the reader of Moore stumbles upon some allusion to Byron's fatness, without perceiving what it can mean. The obvious explanation is, that Moore himself, who knew the poet only in his prime, when he had reduced himself by the most merciless diet, was very imperfectly acquainted with this inherited weakness. The reader of Mr. Jeaffreson will now understand fully what a ceaseless struggle Byron waged, what means he used, and how he weakened and finally ruined his constitution, only to succumb to the fever of Missolonghi. Fasting and Epsom salts to reduce fat, tobacco-chewing and laudanum to allay the cravings of hunger, boxing, swimming, and riding—in short, a great deal of what might else appear mere eccentricity in the poet's mode of living, will now appear as so many frantic efforts to overcome a lifelong evil.

Mr. Jeaffreson's remarks upon Byron's sensibility, memory, and imagination, as the impelling forces in his early love affairs, and the verses to which they gave occasion, are among the best passages in the book. They suggest, without expressly reiterating, the old but now half-forgotten caution, not to judge a poet according to the ordinary rules of life—above all, not to take his outpourings too literally. How unintelligible to prosaic mortals is this intense self-abandonment to the latest sorrow or loss, in which occult slumbering remembrances of former griefs only help to make the present flame burn more fiercely! Mr. Jeaffreson finds in Byron's cousin, Margaret Parker, the original of Thyrza, and doubtless he is in the main correct; yet a good deal may be said in favor of other views, into which we cannot enter. At all events, he is cruel enough to demolish "The Dream" as a bit of genuine autobiography. What many readers have suspected, he proves, so far as there can be any proof—namely, that Byron deliberately misrepresented his own feelings. Wishing to insult the wife from whom he had parted in anger, it pleased him to make the world believe that he never loved her, that even on their wedding-day his heart was filled with regret for another. Unfortunately for the poet, the evidences that he did love his wife sincerely during their engagement and for months after marriage, that his heart had lost all its quondam affection for Mary Chaworth, are too numerous and indisputable. But to Mr. Jeaffreson belongs the credit of being the first to sum them up. The same may be said of his analysis of Byron's relations with Miss Milbanke, both before and after marriage. We now perceive why the poet fell in love with her, how strong and genuine his attachment to her was, how the affair was a bit of clever match-making on the part of Lady Melbourne, and how entirely free Byron was from any taint of fortune-hunting. Setting aside this personal liking, we need hesitate no longer to say that the match was in all respects the reverse of brilliant for the poet. It brought upon him grave responsibilities, and gave him little or no pecuniary help to meet them. It was, in truth, a love-match that was doomed to end disastrously.

What Mr. Jeaffreson says about Byron's life at Cambridge is good enough as far as it goes; but it surprises us to see no mention made of Hodgson among Byron's college friends. Can it be that our author is unaware of their great, and on the poet's side most self sacrificing, friendship? The publication of Hodgson's 'Memoirs,' three years ago, brought into new light many good points in the poet's early life, and also gave the *coup de grâce* to the Stowe scandal. On the other hand, the discussion of the influence of the society of Southwell upon the formation of Byron's language and manners is positively refreshing, when contrasted with Moore's snobbishness and Elze's pedantry. It will do us all good, we trust, to learn that the lordly poet by eminence was indebted to refined and disinterested ladies of the middle class for the best part of his breeding and diction. New to us is Mr. Jeaffreson's surmise as to the authorship of the famous *Edinburgh Review* article upon 'Hours of Idleness.' He suspects that it was written by some Cambridge Don in revenge for the satire upon the University in the 'Hours of Idleness.' This is quite plausible, and disposes, of course, of both Jeffrey and Brougham, much to our relief.

Those who wish to revive the now somewhat faded glories of "Childe Harold" and to see the hero of the hour in the first flush of success, will read and reread chapter xii. Here, again, Mr. Jeaffreson exhibits to the full his powers of observation and discrimination. He shows us that the success of "Childe Harold" was not so wholly spontaneous as one is apt to fancy—at least, that it had been prepared in a measure by private circulation of the book (before publication) among friends and well-disposed critics. On the other hand, Byron's undisputed supremacy was really quite short lived. Envy, detraction, religious bigotry were soon at work, undermining the poet's throne long before his separation from his wife. To read Macaulay, one would suppose that the storm which drove Byron from England was a sudden act of moral frenzy on the part of a righteous or self-right-

eous public, whereas Mr. Jeaffreson makes it clear that the storm was long in brewing, that it began in Tory hatred of the poet's liberalism and holy horror of his infidelity. The quarrel between Lord and Lady Byron was little more than a convenient pretext for giving it vent. We cannot attempt to restate our author's strictures upon Lady Caroline Lamb, much less to enter into his explanation of the causes leading to Lady Byron's separation from her husband. With regard to Lady Caroline, Mr. Jeaffreson is unquestionably right; of the two parties, she was the more sinning. As to Lady Byron, we can only say that he has gone over the whole ground carefully and weighed impartially all the *known facts*, possibly excepting the letters and statements in the Hodgson 'Memoirs' already referred to. His judgments are even-handed and his words measured. We shall, perhaps, never know with certainty the real causes that led to the separation; but Mr. Jeaffreson makes it at least highly probable that they were twofold—first, Byron's brutality to his wife during the latter months of her confinement; second, his intrigue with Claire (the mother of Allegra) just before or soon after his wife left him to visit her father, in January. But this intrigue did not come to Lady Byron's knowledge until after she had left him. Her sole ground for leaving him was his brutality. At first she attributed this to incipient insanity; but when satisfied that Byron, however violent, was still sane, she and her father took steps for a separation. It was after these first steps had been taken that fresh information (probably the intrigue above mentioned) came to her ears and made the breach hopeless. Such is the most meagre outline of our author's summing up of a *cause célèbre*. Without fully satisfying the inquisitive mind, it will certainly relieve the heart of an honest reader, and suffer him to restore the poet to the class of ordinary offenders. The charges brought by Mrs. Stowe are so thoroughly disproven that Mr. Jeaffreson does not even mention them except by implication. It only remains to add that Byron's conduct toward his wife during her confinement was the result of many causes—notably the duns of his creditors, an attack of jaundice, and nervous derangement produced by the excessive use of laudanum, tobacco, and alcoholic stimulants.

Mr. Jeaffreson's happy guess that the meeting of Byron, Shelley and his wife, and Claire at Geneva was not an affair of chance, but a preconcerted arrangement, is another one of the novelties of his book, and reveals the utter hollowness of the famous "Fare Thee Well" lines. But Mr. Froude, in the August *Nineteenth Century*, relieves the Shelleys of their apparent complicity. As to the quarrel between Byron and Southey, we may remind Mr. Jeaffreson that the subject was discussed exhaustively, two years ago, in the *Anglia*, and that it is more complicated than he seems to perceive. Byron's orgies at Venice are the darkest chapter in his life; every reader will be glad to pass them over in silence. Mr. Jeaffreson does not add much to what we have already read in Moore, but he supplies the righteous condemnation which Moore was too faint-hearted to speak out. It is now clear to us that these frightful excesses were the remote cause of the poet's death—they sapped his vitality. When afterward he resumed his abstemiousness, in the effort to shake off obesity, his constitution had no longer strength to resist the attacks of fever. One other feature of the change that Byron underwent in Italy has been brought by our author into due prominence. More than once the reader of "Don Juan" is surprised by a note of praise in behalf of avarice as the most satisfying and genteelest of vices. This sounds odd, coming from the author of "Childe Harold," who scorned to receive copy-money, and had an open purse for every borrower, worthy and unworthy. But Mr. Jeaffreson shows us how Byron came step by step to learn the full value of money, to drive a hard bargain with his publisher, scrutinize sharply his weekly bills, swell his income to handsome proportions, insist rigorously upon his full share of his wife's estate (which came to her from Lord Wentworth at the death of her mother), and accumulate a capital of ten thousand pounds. This desire for money was not mere avarice in the poet: money was to be the means of procuring political eminence of some sort. There can be little doubt, after the publication of Trelawny's 'Memoirs' and the investigations of Elze, of Professor Jebb, and Mr. Jeaffreson, that Byron, had he lived, would have placed himself among the leaders of the Greek movement—perhaps have made himself king. To quote Trelawny's words: "Had he lived to reach the Congress of Salona as commissioner of the loan, the dispenser of a million silver crowns would have been offered a golden one." It may be stated, in explanation, that Byron's own princely contributions to the cause qualified him to be commissioner. Some of the details in our author's account of Byron in Greece are new; but in the main his estimate of Byron's political abilities and conduct agrees with Professor Jebb's and that in the English translation of Elze, rather than with Elze. Most Englishmen certainly are now agreed that Byron acted with foresight and energy, and was anything but a political Don Quixote. His failure was due, not to want of capacity, but to a shattered constitution and exposure to malarial fever.

The object of Mr. Jeaffreson's most searching criticism is the Countess Guiccioli. He goes to the opposite extreme from Moore. The latter, wishing to inflict as much annoyance as possible upon Lady Byron, represented the Italian Countess as a model of all that the English Lady should have been but was not: she it was who rescued him from the slums of Venice, interested him in Italian literature and politics, and was to him—in everything but name—a loving and loyal wife; and Byron repaid her with a devotion that ended with his life. What Moore began, the Countess herself completed in her well-known 'Recollections.' Byron was "whitewashed" as thoroughly as he well could be. But Mr. Jeaffreson leaves scarcely a vestige of this whitewash. He makes it clear that Byron's *liaison* with the Guiccioli, although outwardly more decorous, was of the same sensual order with his other *liaisons—e. g.*, with Claire, and Marianna Segati; that he wearied of her, neglected her repeatedly, and practically abandoned her when he embarked for Greece. On the other hand, he argues that the Countess not only acted very foolishly, but even acted against Byron's wishes in bringing about a separation from her husband, and that she was really Byron's evil genius in hindering him from returning to England at a juncture when reconciliation with his wife became once more possible. Our author's facts and arguments are very forcible, and will doubtless carry conviction with them. Yet we cannot refrain from suspecting that they are urged a trifle too zealously. They are not in the sober, judicial tone of the rest of the book, but have a ring of advocacy, as if the author had accepted a retaining fee against the Countess and were bent on earning it. We do not say that Mr. Jeaffreson is wrong; but we cannot help feeling that the Countess was not utterly weak and silly, and that she did the poet at least some good at a time when he most needed it. To do real justice to such a character, the critic should have a lighter touch and more knowledge of Romance temperament than our author seems to possess. We say this without wishing to offend one to whom we are under great obligations. This part of the book should have been written by George Sand.

A good deal of space, more perhaps than was needed, has been devoted to the account of the destruction of the memoirs given by Byron to Moore. It is enough for the reader to know that they were destroyed, although doubtless the Byron family will be gratified by this public declaration that the destruction was the work of Hobhouse and Mrs. Leigh. This, of course, clears Lady Byron from every imputation of cowardice or selfishness. The quarrel between Lady Byron and Mrs. Leigh, which sprang up after the poet's death, has hitherto been a puzzle; our author is the first to make it entirely clear in its origin and bearings. But his explanation of the way in which Lady Byron came to suspect her husband of the terrible crime, the secret of which she revealed to Mrs. Stowe, will not satisfy most readers. We doubt if she evolved the suspicion from her own mind through morbid brooding over works like "Manfred" and "Cain." Was not the charge of incest whispered about during the earlier stages of the anti-Byron crusade, and even darkly hinted at in some of the scurrilous London newspapers? If so, the suspicion, reaching Byron's ear, may have prompted the works, but not vice versa. It was an arrow from without, that lodged itself in Lady Byron's heart after she had been led—by other motives—into her quarrel with Mrs. Leigh. At any rate we are unable to agree with our author when he says: "The word [monomania] in no fair way represents the condition of her mind, which never was mad or unsettled or disordered in such a manner as to justify a writer in rating her with sufferers from insanity." The woman who, after having given the most numerous and wholesale proofs *in writing* of her trust in Mrs. Leigh *after* the separation, could then turn around and accuse her to a quasi-stranger of the most monstrous crime, as the *cause* of the separation, *must* have been a monomaniac. Besides, Mr. Jeaffreson seems to have overlooked the circumstance that Lady Byron's treatment of her sister-in-law is not the only evidence of her disposition to fixed ideas. Elze has cited several others.

One serious fault of our book is the absence of all references to authorities. This is inexcusable in a work which deals with so many points in controversy. In more than one place the author has evidently had access to materials not within reach of the public, but in only one instance, to our recollection, has he indicated the present ownership of a manuscript letter. A full list of books and documents, printed or unprinted, would have doubled the practical usefulness of his work. As to discussing the poet's genius adequately, and in all its relations, Mr. Jeaffreson has wisely refrained from making the attempt. Indeed, we should be at a loss to name a single writer thoroughly qualified. The time has gone by for praising or condemning Byron; the problem is now to understand him, and the first step toward understanding him is to know all the great social and political movements of Europe for twenty years. Which one of us has such knowledge? Certainly not Matthew Arnold, who speaks of Byron as if he were a mere writer of English verse, like Wordsworth, and has yet to learn the patent fact that he was and in a measure still is the mouthpiece of revolutionary Europe. As to Byron's phases of style, the most suggestive opinion is contained in these words, written by Shelley to Gisborne, June 18, 1822: "He touched the chord to which a million hearts responded, and the coarse music which he produced to please them disciplined him to the

perfection which he now approaches." When will our critics learn to see with Shelley's eyes that the later Byron is a vast improvement on the earlier?

ROMANES'S ANIMAL INTELLIGENCE.

Animal Intelligence. By George J. Romanes. D. Appleton & Co. 1883.

THE object of this treatise is "to pass the animal kingdom in review, in order to give a trustworthy account of the grade of psychological development which is presented by each group." To carry out this plan in a satisfactory manner, Doctor Romanes a few years ago issued an invitation to all who possessed trustworthy facts bearing on this topic to correspond with him. The facts thus obtained, supplemented by very extensive reading and personal observation, are embodied in the present work, which is without doubt the most carefully-selected and sifted record of the psychic powers of animals ever issued in the English language. Books of anecdotes relating to animals are as common as books of travel, but the vast majority of them are of no scientific value whatever, on account of the absence of all attempt to verify the stories. Doctor Romanes claims that his facts "are either matters of ordinary observation; or they stand upon the authority of observers well known to me as competent; or they are of a kind which do not admit of malobservation; or, lastly, they are well corroborated by similar accounts received from independent observers." With very few exceptions, these claims are justified by the character of the book, and, if the author has erred at all, it is on the side of excessive caution rather than of credulity. 'Animal Intelligence' does not open any new views of extensive range, like the famous first chapters in Darwin's 'Descent of Man,' but it throws light on many points of minor importance, and in dubious cases the evidence is always weighed with that calm absence of bias which the late Mr. Darwin taught his pupils. To him, indeed, Doctor Romanes is indebted not only for advice and suggestion, but for permission to use his notes and clippings on animal intelligence which he had collected for forty years, and for the original MS. of his chapter on "Instinct," which appeared in the 'Origin of Species' in a very condensed form. Doctor Romanes's original plan was to divide his book into two parts, the first dealing with the facts of comparative psychology, the other with their relation to the theory of descent; but the work expanded under his hands so greatly that he saw himself obliged to make a separate treatise of the second part, which he expects to issue in a year or two, under the title, 'Mental Evolution.'

The greater part of the present work is, therefore, devoted to a careful and interesting account of the habits of animals, intermingled with such a large number of anecdotes that it appeals to a much wider circle of readers than is formed by the students of psychology alone. One of the greatest sources of pleasure in reading a novel is supposed to lie in the opportunity it affords the reader of comparing himself with the characters in it. In the same way, all who have pets of any kind will be pleased to discover a resemblance between them and the remarkable specimens here described, and thus perhaps be induced to make original observations, all of which will be gratefully received by Doctor Romanes, at the address given in the volume. Still another class of readers will be greatly edified—namely, those who abhor the notion of their descent from lower animals, on account of the mediæval idea that these remote progenitors and cousins of ours were and are devoid of mind and "soul." They will find how useless it is to attempt to find an adjective exclusively applicable to man, such as "a reasoning animal," "a tool-making animal," etc.; for animals have all the senses we have—they have memory, imagination, reason, emotions of love, pride, disappointment, anger, jealousy, curiosity, fright, æsthetic emotions, etc.; they form social habits, carry on wars, make slaves, communicate with each other, keep "cows" and pets, yawn, indulge in play and leisure, punish injustice, bury their dead, store up food for a rainy day, organize a division of labor, sleep, wash themselves and each other, discipline their offspring, die of a "broken heart," assist the sick, adopt orphans, etc., etc. Formerly all these and a thousand other habits and powers of animals were by the book-philosophers attributed to a verbal fetish called "instinct"; but it is now clearly established that instinct is simply inherited experience—the experience of the race as distinguished from that of the individual—and that in all those numerous cases where an animal adapts its actions to a new set of circumstances, and is able to profit by individual experience, we are concerned with inference or reason as distinguished from instinct.

The whole problem of "animal intelligence," indeed, hinges on this distinction between instinct and reason, and in the introductory chapter Doctor Romanes has presented the difference in very clear language. To draw an absolute line between reflex action and instinct on the one hand, and instinct and reason on the other, is as impossible as to discover a distinct break between sanity and insanity; but most of the actions of animals can be pretty accurately classified as belonging to the one or the other division. Our author has perhaps erred in devoting too much space to a description of cases of unquestioned instinct. More than a hundred pages, for instance, are given to an analysis of ants; and although Darwin was quite right in observing that "the brain of an ant is one of the most marvellous atoms of matter in the world, perhaps more so than the brain of a man"; and although many of the actions of ants are unquestionably the result of conscious intelligence and deliberate choice, yet the vast majority are of the nature of pure instinct. In several mysterious and complex cases—as in that of the beaver and the migration of birds—Doctor Romanes has deferred discussion to his second volume, in which he purposes to consider the genesis of mind as a whole. For that volume, accordingly, we must wait before finally deciding upon the value of his contributions to the literature of this fascinating subject, which has busied many great minds, and which stimulated Mr. Darwin, among others, to some of the most subtle and profound efforts of his intellect. Meanwhile it is cause for congratulation that psychologists have taken up the study of such questions, instead of trying to find out how many angels could dance on the point of a needle, or to prove that non-existence and existence are identical.

Next to the problem of instinct, no department of comparative psychology is so interesting and important as the study of the senses of the lower animals. On this Doctor Romanes has not bestowed a sufficient amount of attention. In the works of Gegenbauer, Claus, Haeckel, and other comparative anatomists and zoölogists are to be found a host of facts and speculations regarding the senses of the lower animals which are not only very suggestive in themselves, but which have to be constantly borne in mind in attempting to explain the actions of these creatures, because otherwise it may happen (and often does happen) that an animal is credited with some mysterious "instinct" or superior power of reasoning when it has been simply guided by some unheeded sense. Many of the lower animals seem to have special senses peculiar to themselves; and even where this is not the case, we are too prone to imagine that the two highest senses play the same almost exclusive rôle in intellectual matters as with us. An illustration of this remark is to be found on page 43 of the present treatise. A series of careful experiments made by Sir John Lubbock, in reference to the remarkable power displayed by ants of recognizing members of their community, showed that their recognition cannot be due to a personal acquaintance between all the members of a community, nor effected by means of any sign or pass-word. Doctor Romanes, therefore, concludes that the matter is as yet "wholly unintelligible," whereas a very simple explanation can be suggested. Ants are known to have an acute sense of smell, and Professor Jäger, of Stuttgart, has shown in a pretty conclusive manner that every class and sub-class of animals has its own specific odor. This makes it easy for ants to recognize their fellows, or, as in the case of Amazon ants, their slaves; and our explanation is corroborated by the fact that an ant deprived of its antennæ can no longer distinguish its friends from its foes, as well as by an account, published in *Nature* some five or six years ago, of a combat between two hostile communities of ants which lasted several weeks, but could be interrupted at any time by impregnating the surrounding air with eau de cologne—a proceeding which did not otherwise interfere with their activity.

The emotional life of animals is almost as varied as the intellectual; and although not so fully treated by Doctor Romanes, is well attended to under special headings. Beginning in the simplest form of attraction and aversion very low in the scale of life, it becomes of interest in the case of ants, which already display traces of tender emotions, although hatred and pugnacity appear to be much stronger. Sympathy is shown by bees and ants rather for the injured than for the healthy and those in distress. In sympathy, affection, devotion, elephants, monkeys, and especially dogs, are hardly inferior to man. In maternal self-sacrifice many animals equal woman. If we can infer from the outward expression of emotion to its subjective existence, then dogs and horses are capable of feelings of pride, and dogs also of shame. The order rodentia offers a curious contrast in two of its representatives—the hare, most timid of animals, and the harvester-rat, which spends most of its time in fighting all the animals that come in its way, no matter what their size. The proverbial courage of the lion has been shown to consist, as a rule, in "the better part of valor." Very curious is the entire emotional change which occurs in the "rogues," or those elephants which have become separated from their own herd, and are not allowed to associate with any other herds. "From being a peaceful, sympathetic, and magnanimous animal, the elephant, when excluded from the society of its kind, becomes savage, cruel, and morose to a degree unequalled in any other animal." In the expression of fright very great differences are observed, some animals being indifferent to the wholesale slaughter of their companions, while others show, by the extreme terror and anguish painted on their features, that they have an abstract notion of death. Cats and monkeys appear to be the only animals which share the delight of primitive man in cruelty or torture for its own sake. Vindictiveness is as strongly developed in elephants as if they had Spanish blood in their veins; and a good memory is used in its service. That birds and some other animals display æsthetic emotion, as shown by the development of beautiful ornaments in the males, was clearly proved by Mr. Darwin,

whatever may be thought about the theory of sexual selection, in which he was at issue with Mr. Wallace. Considerable doubt, however, remains in regard to the reported cases of love of music displayed by mice, spiders, etc. Indeed, in regard to spiders, Mr. C. V. Boys (quoted p. 206) has indubitably proved, by means of experiments with a tuning-fork, that what excites spiders is simply the vibrations of the air affecting their web, and leading them to think that a fly has been caught in it. To them the buzz of a fly's wings is doubtless sweeter music than the notes of a Stradivarius or a Steinway. Another myth is disposed of in the chapter on snakes. Sir Joseph Fayrer's opinion, that snake "fascination is only fright," is quoted as "the opinion of all persons who have had the opportunity of looking into the subject in a scientific manner." It has long been a moot question whether a scorpion could be caused by despair to commit suicide. Mr. G. Bidie gave an account in *Nature* of an experiment with a scorpion which was to inflict on itself a fatal sting after the rays of the sun had been focussed on its back. But in a recent number of the same periodical Mr. Bidie says:

"On reconsidering the whole affair, however, it occurred to me that in wounding its own back the scorpion may have merely been trying to get rid of an imaginary enemy. The concentrated rays of the sun, no doubt, caused pain, and the sting was probably directed toward the seat of this in an automatic manner, as a defensive act. This seems to me a more feasible explanation than to regard the action as due to an instinct detrimental to the individual and to the species."

We may close this notice with a paragraph on the psychology of the horse, which is a good specimen of the author's style:

"Another curious emotional feature in the horse is the liability of all the other mental faculties of the animal to become abandoned to that of terror. For I think I am right in saying that the horse is the only animal which, under the influence of fear, loses the possession of every other sense in one mad and mastering desire to run. With its entire mental life thus overwhelmed by the flood of a single emotion, the horse not only loses, as other animals lose, 'presence of mind,' or a due balance among the distinctively intellectual faculties, but even the avenues of special sense become stopped, so that the wholly demented animal may run headlong, and at terrific speed, against a stone wall. I have known a hare come to grief in a somewhat similar fashion when hotly pursued by a dog. This, however, was clearly owing to the hare looking behind instead of before, in a manner not, under the circumstances, unwise; but, as I have said, there is no animal except the horse whose whole psychology is thus liable to be completely dominated by a single emotion."

TWO LIVES OF CROMWELL.

Oliver Cromwell: The Man and his Mission. By J. Allanson Picton. With steel portrait. New York: Cassell & Co. 8vo, pp. 516.

Life of Cromwell. By Paxton Hood. [Standard Library.] New York: Funk & Wagnalls. 12mo, pp. 286.

WHEN one follows in detail the events of the nine years during which Cromwell was, under different titles, virtual ruler of England, it is hard to point to any serious mistake that he made, or to censure either his general policy or his administration. Certainly his conquest of Ireland and his Irish settlement were bloody and stern; but if a Catholic country was to be held under Puritan rule, hardly less would have sufficed. One would have desired a different treatment for Harrison and Vane; but if opposition was to be suppressed, milder measures of repression were hardly possible. His words and his conduct throughout his entire career are those of an earnest, heroic, devoted man, who is led from one step to another by a fatal necessity, until he stands at last upon the summit of empire, and that by no wish or effort of his own, but because nobody else could do the work that had to be done. What was, then, this work?

The contest between King and Parliament had ended in civil war; the civil war had ended in the death of the King and the establishment of the Commonwealth. The task, therefore, which Cromwell found to his hands in 1649 was the organization of a stable and permanent government of the republican type. Now, the first thing to be noted is that this condition of things—the existence of this problem—was not the work of the people of England by any organized and recognized action. Perhaps the people of England desired the execution of the King and the establishment of a republic, but they had had no opportunity to say so. The lawful organ of the English people was Parliament, and Parliament had ceased to exist. During the civil war, and the years that followed, the Long Parliament had by necessity continued to govern the country by its sole authority, and, through new elections, filling vacant places—by the so-called "Recruiters"—had kept up a tolerably complete representation. Parliament, as thus constituted, was the legitimate representative of the country, so far as a genuine representation could be had in such times. Unfortunately, this Parliament was wrong-headed and intolerant; and a deadly feud ensued between it and the army, a body which represented far better than the Parliament the worthiest temper and sentiment of the English people.

The question at issue was of the most vital and fundamental nature, and was determined by the sword. The leaders of the army, bent upon bringing the King to justice, and solely with the view of accomplishing this end, excluded enough members of Parliament to secure a majority for it. This act is known as Pride's Purge. From this moment there was no longer a Parliament. The "Rump" that remained called itself a Parliament, and continued to exercise all the powers of a Parliament; but it was no longer in any true sense an organized representation of the people of England, but an irresponsible body of men invested with authority by the army, and who would be allowed to exercise that authority just so long as they satisfied their masters, and no longer. There is, therefore, something ludicrous in the outcry that they made when Cromwell, on the memorable 20th of April, 1653, told them that the Lord was done with them, and sent them about their business. "You are not a Parliament," he said; and in fact they were not, and never had been.

As to the object for which this weeding out of Parliament took place, it is hard to see what else could safely have been done with the King. A man who, as long as he lived, was an essential part of the Constitution, but who, on principle, broke every engagement that he made, was a difficult element to deal with. Whether in prison or at large, he was equally an embarrassment. Only, when he was dead, it soon appeared that his son, at large and with no bad record, was a new embarrassment. And, worst of all, when they had executed the King, and proclaimed the Commonwealth, they found themselves face to face with a new problem, which was practically impossible of solution. It was easy enough for Cromwell, a man born to rule, to govern England with the strong hand; but to devise a form of republican government without a King, which could be administered by ordinary Englishmen, was not so easy. This was the task which fell to Oliver Cromwell, as the one strong man, to attempt to perform. No republican himself, he had cut loose from the traditional monarchy, and was at the head of a state which called itself a Commonwealth. The natural drift of events converted this Commonwealth into a monarchy of a new type, but a monarchy which lacked all the elements of permanence. An hereditary protectorate in the family of a Huntingdonshire commoner could never appeal to that sentiment in the people which lies at the very foundation of royalty; and a scheme of government which placed imperial powers in the hands of Richard Cromwell was predestined to failure.

But this scheme of government, predestined to failure, was the only one open to him. That he should seize the helm in the confusion which followed the death of the King, and, by his sole strength, hold the Government together as long as he lived, was a matter of course. The cause of final failure, then, is to be sought, not in his acts as ruler, but in the events which made him ruler—a series of events in which he had as large a share, and as serious a responsibility, as any one. The fatal mistake—that which brought the revolution to shipwreck—was committed when the constituted civil authority was set aside by the military. Mean and incompetent as was the Parliament, it was, nevertheless, the lawful authority in the land; and when it was overthrown, and the country placed under military rule, the result followed which always follows the triumph of the military over the civil authority—despotic rule, the prostration of all the liberties for which they had been so long contending. An impatient American reformer—was it Theodore Parker?—said: "God is not in a hurry, but I am." But the reformer who is in a hurry, who refuses to wait for constitutional methods and the slow ripening of events, always in the end mars his own work.

It is a mistake to assume, as Mr. Picton appears to do, that there was so wide a difference between the notions of the seventeenth century and those of the present day—that the suppression of parliamentary privileges was a slighter offence then than it would be now. He says (p. 382): "The doctrine of government by representation was not so matured nor so well understood then as it is now." And again (p. 416): "As he did not live in the nineteenth century, his notion of the functions of a parliament was perhaps not so clear as ours." Of course, the parliamentary powers of the seventeenth century were less developed than those of the present day; but at a time when the greatest contest between Parliament and prerogative which history records had been going on for nearly half a century, to underrate the importance of the issue in the minds of that generation is to blink the whole question. This was not a dull and remote age; it was an age which was all on fire for constitutional liberty. The remark made on page 392 is more to the purpose: "He did not care much by what constitutional—or, for that matter, by what unconstitutional—methods these things were got done, but done they must be." This is Cromwell's real justification—the military temper of mind which cares only for ends, and regards methods as indifferent. We are no worshippers of constitutional forms, but, after all, these forms are the only security against misgovernment and tyranny. If the "benevolent despot"—as Mr. Picton calls Cromwell—if the great and disinterested man could safely disregard these forms, what would happen when he was succeeded by his weak son or by the base Charles Stuart? One step leads to another, and the illegal act which was deemed necessary one year in order to secure the fruits of the contest against illegal power, was followed by another and yet another—every one of them justifiable except the first.

At last the time seemed to have come for a settlement on a permanent and constitutional basis—the second Protectorate: the old monarchy in its essential features, with Protector

instead of King. It is plain from the tenor of the discussions, the speeches of Cromwell and of the Parliamentary Committee, that the first object of the "Petition and Advice" was to put an end to arbitrary government. The desire to make Cromwell King appears to have this simple motive: the office of King was a magistracy, with a well-defined meaning and limitation in English law—what was the fighting for, all these years, but to establish these limitations?—while the title of Protector was undefined, elastic, capable of being stretched to cover unconstitutional powers. If Cromwell is crowned, his new title, says Whitlocke, "will ground itself in all the ancient foundations of the laws of England." And, again, he speaks of the jealousy "of new titles bringing unknown powers." We would not assert that Cromwell's rejection of the crown was due to a preference for the unconstitutional over the constitutional office and power. The crown had no doubt its attractions for him, as it had for Cæsar and for Napoleon, and it seems probable it was solely on account of the opposition of his leading supporters that he at last declared that he could not "undertake this government with the title of King." Moreover, he consented to define and limit the new title so as to make it to all intents and purposes the equivalent of the old. For all that, it must be recognized that the proposition to convert his irregular authority into a constitutional one did not emanate from him, but from Parliament itself. And even this scheme broke down, in its turn, within a few months. Cromwell's ambition was directed toward the practical and moderate end of building up a good government in his own country: no schemes of universal dominion, no constructing of vast empires to fall to pieces by their own weight, like those of Alexander and Napoleon. Sober and earnest, he had none of Napoleon's restless and vulgar vanity. He shared with these and with Charlemagne the defect of some of the greatest minds—that of constructing powers so great that no one but themselves can administer them. These great men forget that common men are to come after them.

The two books which we have placed at the head of our review are characteristic expressions of the feeling of the present day about Cromwell. Mr. Picton's book is a thorough, elaborate study—probably, take it all in all, the best single work upon the subject. Mr. Hood's is shorter and more popular, less guarded in its language, running often into excessive praise or unbalanced censure, but a worthy introduction to the excellent series of popular works of which it forms the first number.

WORK AND WAGES IN PARIS.

La Vie et les Salaires à Paris. Par M. Othenin d'Haussonville. Extrait de la *Revue des Deux Mondes*, livraison du 15 avril. Paris: Quantin. 1883. 8vo, pp. 56.

M. HAUSSONVILLE has recently resumed his studies of life among the poor in Paris, by an exhaustive article on the wages of working men and women and their cost of living. The well-meant effort to secure cheap, wholesome lodgings for the working classes, by combining charity with building and loan associations, has effected, he says, an increase of lodging apartments, such as pay a fair return by being rented at fifty or sixty dollars a year, or half the old rates; but as more than thirty thousand families, out of the forty-six thousand registered on the lists of the public charities, pay much less than forty dollars a year, the well-to-do workman alone can be benefited by the new building societies. The statistics of Paris are very minute and exact, and in 1880 it was shown that, out of 684,952 separate apartments, housing on an average three persons, 468,641 were let for less than sixty dollars, and that the per-capita rent had risen about one-fourth every ten years in a period of sixty years, so that any increase in wages was much more than overcome by the steady progress in the cost of living. A careful study of the bakery and other food trades of Paris proves that bread alone constitutes about one-third of the food supply of each family, and that it has remained stationary in price for a long period of years. Meat, on the other hand, has cheapened, and has therefore come into much greater use by all classes, although butter, eggs, and cheese have grown dearer; and the high wages of the well-paid workmen are often spent on the purchase of chickens, oysters, and other luxuries that were a few years ago quite unknown to any but the rich. Wine, sugar, and groceries have also steadily advanced in price, but their proportion in the cost of living is a comparatively small one. The public kitchens of Paris have done a great deal to make the workmen comfortable, by supplying good food at cheap rates; and some of the great railroads, and other employers of labor on a large scale, have found it worth their while to supply good meals at cheap rates to their workmen. Still, it costs a man, at least, from a hundred to a hundred and fifty dollars a year to get a fair supply of food such as the French workman requires, including bread and wine, soup and meat, vegetables and cheese, on a basis of twenty-five cents a day, in which bread will cost two cents; wine, six cents; soup and meat, nine cents; vegetables, five cents; cheese, three cents.

The next item in the cost of living is clothing, and that has very sensibly diminished; for now a workman or workwoman can clothe himself or herself for an average of twenty to thirty dollars a year, and be and look both comfortable and neat. Other items, such as washing for six dollars, light for the same sum, fire for heating for four dollars a year, show the economy incidental to Parisian modes of life. The expenses of benevolent societies and of luxuries, such as tobacco, refreshments, car-fares, presents to children, entertainments, are all fair items in the cost of living, which, all told, varies from one hundred and seventy to two hundred and forty dollars per annum (the year, with deductions for Sundays and holidays, means three hundred working days), and from seventy-five cents to a dollar must be earned every day to make a workman's life comfortable. Now, census returns give only averages, and personal investigation is the best means of ascertaining how far the Paris working classes are above or below the line of wages necessary to support life comfortably. In Paris a very large proportion of the higher rates of wages is earned by the men who work in art objects; next come those whose trades imply both training and strength—workers in iron and the building trades; and then all others may be roughly classed as laboring men. Strikes are the luxury of the well-paid workmen; for those who live from hand to mouth have no faith in such a means of bettering their condition. The jeweller's and silversmith's trade is one that seems particularly at home in Paris, and the perfection attained in it is largely due to the long training of the apprentices, who, for three or four years, receive no wages, but begin, as soon as they are working on their own account, with a dollar a day, and, finally, as foremen, earn from three to six dollars a day. Type-setters earn from a dollar and a half to three dollars a day; pressmen from a dollar and three-quarters to two dollars and a half a day. Wood-engravers vary from a dollar and a half to three dollars a day, but those who are recognized almost as artists earn from that to six dollars.

Of the men employed in the building trades the wages are ascertained by a rule special to Paris. The city of Paris is a large employer of skilled labor of this kind, and, as it prescribes the rate of wages to be paid by its contractors, that has become practically the rule for all Paris. Although originally intended only as a maximum rate, it has now become the average for all employers, and thus the increased cost of building is one of the factors in the heightened cost of living in Paris. The city now pays to stonecutters two dollars and a half for twelve hours' work in summer, and two dollars for eight hours in winter—that is, from November 1 to April 30. Other masons get a dollar and a half in summer, and a dollar and a quarter in winter; and helpers get a dollar in summer, and eighty cents in winter. Carpenters get a dollar and three-quarters in summer, and a dollar and a quarter in winter; and tinsmiths, marble-masons, and painters and glaziers about the same, with, of course, higher rates for those engaged in the artistic branches, such as fresco and other decorations. Many out-door workmen go home to the country for the three winter months. Under the generous example of the city as an employer, the wages have advanced from 25 to 60 per cent. in the various kinds of trades, with no particular reason for the difference other than an accidental influence in the city government. In the trades that have to do with interior decoration, the wood-carvers earn from two dollars and a half to three dollars a day, upholsterers and others at the same rate, while German and Italian workmen get from sixty cents to a dollar a day. Machinists earn from a dollar a day up, according to their special employment and mastery of it, and there the wages have increased in the last ten years by one-third, although the gain has been mainly to those earning the highest wages. Wagon and carriage-building is a special Paris industry, and the men working in it earn from one to two dollars a day, and their wages increase much faster than the cost of living.

The average ordinary day-laborer, in all varieties of employment, gets from sixty cents to a dollar, and often the foreigners, who come in crowds together to Paris, live in such a way as to save something to take home. The hundreds of modes of earning a living seen in the streets of Paris, by other than regular industries, are curious and well worth studying, and M. Haussonville supplies much information, the result of personal observation. He estimates the number of regular workmen in Paris at 250,000; of those who live by occasional jobs, at 75,000; and of beggars and vagabonds, at 15,000. Then, again, he estimates that 74 per cent. of the working population earn a dollar and more a day, 22 per cent. earn from eighty cents to a dollar, and 4 per cent. earn less than the former sum. Paris is, indeed, in the eyes of the French workman, the paradise of wages; but, on the other hand, it is the scene of many strikes that have reduced good workmen to helpless poverty, and on the lists of those receiving public charity there are five times as many mechanics of the best-paying trades as there are, for instance, of cobblers, the humblest class of shoemakers. Paris is in a still greater degree the paradise of workingwomen, for they find employment in much greater variety than anywhere else. In every pursuit, however—painting, designing, printing, wood-engraving—they must be content with from 20 to 40 per cent. less wages than the men engaged in the same kind of work. In many of their special trades—flower-making, embroidering, dressmaking—where the wages average a dollar a day, there is a long dull sea-

son, so that enough must be earned during the busy times to tide over this. Many industries pay women only fifty cents a day, and this is largely due to the competition in all kinds of sewing of the prisons, reformatories, convents, and other charities; and thousands of poor women in Paris are thus reduced to the lowest point of misery or vice. Naturally, there are nearly twice as many women registered as recipients of public charity as men, and of the total of over 40,000 of the former, 5,000 are day-laborers, 2,298 are house-servants, 1,500 are sewing-women, and 1,200 dressmakers. With an average of $170 as the lowest amount that will suffice for living in Paris, to be earned by 300 days' work, there are many women whose earnings fall below that modest minimum. That women never go on strikes is some evidence of their common sense, and that many of them endure their misery and hardship rather than purchase comfort at the cost of virtue, is an evidence of the highest qualities. It is only the aristocracy of the working class that indulges in strikes and in other luxuries.

Of coöperative societies and kindred alliances between capital and labor, the well-paid workingmen are the only beneficiaries. In Paris there were in 1880 only twenty-five establishments with any such principle at work, and, as some of these were banks and insurance companies, the proportion of workingmen engaged in the experiment was very small, and its benefits were almost exclusively enjoyed by those earning the best wages. The easy suggestion of industrial training does not really help to solve the question, for only those who master their trade (no matter where it is learned) are lifted out of the class of workmen not earning a fair average support, while for the large class of workingwomen there seems no such remedy at hand. The increase of charities of all kinds to help them in time of greatest need, is, after all, the one provision that is always most urgently suggested by a study of their condition.

Reminiscences and Memorials of the Men of the Revolution and their Families. By A. B. Mussey. Boston: Estes & Lauriat.

THE author of this work, as appears incidentally, is a Unitarian clergyman, a graduate of Harvard in the class of 1824, and a native of Lexington, Mass. It is also inferrible that he is an hereditary member of the Society of the Cincinnati, his paternal grandfather having been one of Captain John Parker's company, and in the Lexington fight, though apparently not on the Common. As a boy he knew many of the survivors of that memorable engagement. In the early days of his ministry he became acquainted with many of the Revolutionary celebrities, both military and civil. From such an experience he has woven the present work, without much attention to form or sequence, and with a certain not unpleasant naïveté. If there is a tendency nowadays to overlook the merit of the men who fought in the ranks or in command to secure national independence—a disposition to pay higher honors to the moral heroism which discards carnal weapons—Mr. Mussey has done what he could to counteract it. He even bids us to observe that Emerson, as if by virtue of his descent, was "by eminence," not a Poet, or a Seer, but "a Patriot."

He first describes the more prominent members of certain great families, the Otises, Adamses, Quincys, Lincolns, Parkers, Kirklands, etc., some of them related by marriage among themselves or with the author's family. Then he passes to the Society of the Cincinnati, giving numerous biographical and genealogical sketches; tells of the Revolutionary men in the war of 1812, with a special chapter on Oliver Hazard Perry; describes (and this is one of the most valuable functions of the book) the personal appearance of Revolutionary officers; relates what he saw of Lafayette on his last visit to America, and of Andrew Jackson in his New England tour, in 1833; goes over the battle of Lexington, recording the traits of individual participants, and throws a sop to Southern sensibility by balancing his one-sided reminiscences with a tribute to the Revolutionary valor of the non-New England colonies. Channing and Ware are celebrated by their co-sectary, along with Emerson and Theodore Parker. Finally, there is a curiously interpolated chapter on the Anti-slavery Movement, which is excused by its autobiographical bearing, as well as by its intrinsic importance. Mr. Mussey was a member of the Cambridge Society which undertook ostensibly to put down slavery by the use of soft words under the direction of the Unitarian brotherhood, but which was really meant as a bridle on the harsh language of the editor of the *Liberator*. It lived long enough to discover its incapacity for either job, and then dissolved and was forgotten. Mr. Mussey gives its constitution and membership.

Much might be copied from these pages if space permitted, but we must be sparing. In 1823 Harrison Gray Otis was a rival of William Eustis for the governorship of Massachusetts.

"Eustis had won fame as a surgeon in the Revolution, and in subsequent civil capacities. Otis was strongly opposed, among other things, for his theological views, being an avowed Unitarian; while Eustis was of the Orthodox faith, and widely supported by that denomination, which gave him success at the polls. Mr. Otis, on meeting him in the street the next day, after the result was known, said to him, 'I have no doubt you believe now in the doctrine of election'" (p. 35).

Of Benjamin Lincoln we read:

"General Lincoln's home was in Hingham to the last, and the house in which he was born and died is now owned and occupied by his grandchildren, who are the seventh generation who have lived there. The estate has descended in a direct line from the ancestor who settled there in 1636. Six generations of Lincolns have been born on that spot, and each family had a son named Benjamin" (p. 113).

The following picture is seldom in mind when we think of the time which it recalls:

"The privations we suffered during the war of 1812 were only second to those of our fathers in the Revolution. I can never forget the straits to which it brought us in the family. Nearly all imported articles were beyond our means; our garments were of cheap fabrics. A blue broadcloth of American manufacture, presented to my father, was made for long years to do service, until its threads could be almost counted. Not only foreign coffees and all the best teas were denied us, but at last the miserable bohea tea and rye coffee were cut off from constant use; and we would sit around our board, confined, one and all, to the oft recurring baked apples and milk. Not only did the whole country feel the indirect pressure of want, but a fearful direct taxation consumed their very substance" (p. 247).

We close with Mr. Mussey's account of the great gale of September, 1815, following the war:

"It began between eight and nine o'clock in the forenoon, coming from the southeast, and continued about four hours. Houses and barns were blown down, chimneys were overthrown, and windows dashed in; the tides in Boston and Cambridge, we heard, were fearfully high; and in the latter place a vessel was washed up from the shore and driven into the main street of the town. I saw, during the morning, trees of the larger sizes uprooted in every direction. A new shed, 100 feet long, which my father had built for his hotel, was taken up, carried high in the air, as if by a giant's hand, and dropped a long way from its foundation. I followed my father to one of his houses, where he saw the roof at one end beginning to rise, and rushed with him to the attic, where, axe in hand, he dashed out the windows at the other end, and thus saved the unroofing of the house. The air, at a distance of thirteen miles from the ocean, was so saturated with salt water that it was difficult to breathe. This was Saturday; and the next day the church was not opened, for the roads were all so covered with trees uprooted and blown into them that, as was said, 'the people could not ride to meeting'" (p. 250).

Familiar Sketches of the Phillips Exeter Academy and Surroundings. By Frank H. Cunningham. Boston: J. R. Osgood & Co. 1883.

To write the history of a great public school is to work in the direction of its founder, for to extend its fame is to add to its endowment and prolong its existence. This, however, is only part of the service rendered by such a commemoration in a country where the example of public spirit is so contagious as in our own; and the handsome volume before us may well determine many a latent benefaction in the direction of education. The two Phillips academies at Exeter, N. H., and Andover, Mass., are a singular monument to the illustrious family whose name they bear; certainly, in the hundred years since the junior institution here celebrated was established, we can recall no parallel, whether we consider the circumstances of their common origin or the high success which both have achieved.

Mr. Cunningham's narrative, as its title implies, is marked by good-will and devotion rather than by literary skill, and is rightly to be viewed as a compilation, even for the editor's own part in it. But he is almost a pioneer in Phillips Exeter antiquities, and deserves credit for much laborious research as well as for the collaboration which he has secured. The biographical sketches in particular are the work of many hands, and are interesting if not particularly well done. They all agree in taking a genial view of the character described, except in a solitary instance, that of Jeremiah Kingman, whose "one grave fault" is faithfully remembered, though no name is given to it, and though it is morally and historically certain that as great failings have been entirely overlooked in the case of other subjects of these sketches. Whether this is worth consideration in preparing a second edition, as Mr. Cunningham contemplates, we leave it for him to decide. There is a good story of the father of Lewis Cass (who, like that other unsuccessful Presidential candidate, John P. Hale, was a graduate of the Academy). When asked by the principal, Dr. Abbot, who had taken the "very wild boy" to see what he could do with him, how his son was getting along, "Well, sir," said the Major, "if Lewis was half as afraid of the Almighty as he is of you, I should never have any more trouble with him." It is also worth while to quote the instructive experience of Webster at Exeter: "The kind and excellent Buckminster sought to persuade me to perform the exercise of declamation like the other boys, but I could not do it. . . . Mr. Buckminster always pressed and entreated with the most winning kindness that I would venture *once;* but I could not command sufficient resolution." The Reminiscences and Anecdotes grouped around the dates 1808, 1811, 1822, 1855 are very entertaining.

The volume is well illustrated with heliotype views and woodcuts, and it has been possible to present photographic views of the three Academy buildings. The first is still standing. The second was burnt to the ground in 1870, and the present building was to a certain extent, as in the distribution of its parts, modelled upon it. If it is safe to judge from the prints, the elder design was much superior to the later (we are now speaking of externals merely), in proportion, dignity, and simplicity. One need only

compare the belfries to see how far the translation is from the original. Yet, according to Mr. Cunningham, the new building is "perfect in its proportions and graceful in its outlines."

A Study of the Manuscript Troano. By Cyrus Thomas, Ph.D. With an Introduction by D. G. Brinton, M.D. From 'Contributions to North American Ethnology,' vol. v. Washington: Smithsonian Institution. 1882. Pp 237.

THE last five years, in this country, have been uncommonly fruitful in the production of work which shows a marked tendency toward digging somewhat deeper than formerly was the habit, into the manifold layers of rubbish lying between us and the soil upon which ancient American civilization built its mysterious structures. When we were young and wished to inform ourselves about what kind of magnificent empires were conquered and destroyed by Cortez and Pizarro, it was Robertson whom we were directed to look up as the authority to be consulted. An epoch then followed in which we were freely referred to the pages of Prescott. We shall never forget the delight with which we listened to the music of his diction, nor the confidence we felt, on studying the learned notes appended to the brilliant text, that he had been dipping from the very sources of sound knowledge. Yet both Robertson and Prescott have had their day. They are reproached with having fascinated our imagination and misled our judgment by fancies and perfumed dreams. A new class of students has arisen, bent upon reviewing and adequately reshaping the material left for the reconstruction of the early history of our continent. Various important contributions to this end have been made by Messrs. Bandelier, Valentini, Putnam, Powell, Mallery, Yarrow, Gatschet, Rau, Holden, and others, as well by the learned societies, the Archæological Institute of America, the Antiquarian American Society of Worcester, the Peabody Museum in Cambridge, and the Smithsonian Institution in Washington, which is almost uninterrupted succession, during the last five years, have made the work presented by students accessible in print to the reader at home as well as abroad.

A study of the Manuscript Troano is now laid before the public. All who are interested in learning the final results obtainable from an examination of this remnant of Yucatecan art when interpreted by a competent scholar, will feel satisfied with the sound common sense and the thoroughness with which Mr. Cyrus Thomas has accomplished his arduous task. After the more than ridiculous attempt made at their interpretation by the late Brasseur de Bourbourg it is refreshing to follow Mr. Thomas's patient and judicious analysis of the host of little pictures, and to witness his organizing faculty in grouping them so as to present an intelligible whole. It was always supposed that the Codex Troano was nothing else than one of those peculiar pictorial calendars which the Yucatecan priests made use of for their ritual purposes, and no doubt about its being so remains in view of the abundant and minute evidence which Mr. Thomas offers. Not only is this evidence based upon a constant reference to a group of Yucatecan calendar symbols, the meaning of which is known, or upon a sagacious identification of the painted objects themselves, but also, above all, our author was able to adapt a whole set of successive groups to a description which Bishop Landa, right after the Conquest, gave of the contents of such a ritual calendar. It almost seems as if, while writing, the Bishop had this specimen of the Troano painting either in mind or before his eyes. The interpretation itself is prefaced by a very able discussion of the fundamental structure of the Yucatecan Calendar. Laymen ambitious of general information, as well as scholars who are conversant with this abstruse specialty, will be made aware that the subject is handled by a master hand.

Our thankfulness for Mr. Thomas's teachings, however, does not go so far as to make us yield unconditional acceptance. If, on the one hand, for instance, he seems to be remarkably felicitous in his identification of many of the Troano pictures, and views them accordingly as representing objects drawn from nature, though somewhat distorted and not conventional with our methods of delineation, on the other hand, he indulges in the opinion that a portion of them may be amenable to phonetic interpretation, and this to such a degree that he attempts a translation of them. He neither clearly explains why both modes of interpretation are allowable, nor traces the limit at which the ideographic interpretation must cease and the phonetic begin. Moreover, it must be borne in mind that the phonetic clew employed by Mr. Thomas is of a very doubtful character. He relies upon the authenticity of the so-called clew of the Landa alphabet. The credit, however, which this clew enjoyed during the first decade of its discovery has lately received such rude shocks that it will hardly succeed in ever recovering from them. Besides, only recently, its most ardent champion, Prof. Léon de Rosny, of Paris, has publicly avowed that the supposed clew has proved to be unavailable for the purpose of deciphering the Yucatecan hieroglyphics.

In conclusion we venture to call Mr. Thomas's attention to an interesting suggestion made by A. von Humboldt in his famous 'Essai politique sur la Nouvelle Espagne' (Livre iii., Chapter viii.). When preparing the edition of this work in Paris, he had a visit from a highly-cultured Persian gentleman to whom he chanced to show one of the pages of the so-called Dresden Codex, a book which in arrangement and composition is known to be almost a counterpart of the Troano. This gentleman, Humboldt goes on to narrate, thought he recognized in these pictured pages, *at first sight*, certain paintings of Asiatic geomancy, which in his country bear the name of *alem al raml*. And again, in the 'Vues des Cordillères,' when discussing the Mexican Calendar Stone and its twenty symbols for the days of the month, the German savant, with his usual precision as well as cautiousness, points out a surprising similarity between these symbols and their arrangement and those engraved on the ancient Turanian Zodiac. And these are not the only striking resemblances between the civilization of the two continents, which for three hundred years have formed topics of learned discussion among archæologists.

The Sportsman's Gazetteer and General Guide. By Charles Hallock. Orange Judd Co.

THIS is a large book, of nearly 900 pages, and contains a vast amount of information about almost every kind of wild beast, bird, and fish in North America, with directions as to their successful pursuit. It is meant to be a manual for sportsmen, and is quite as near the mark as any book covering so much ground can hope to be. Directions are given how to get to any place in any State where game or fish is to be found; where to stop, and how to proceed to despatch the animals pursued. We do not think it would in all cases be safe to place implicit reliance on these instructions. There are a number of chapters on dogs—principally those used for sporting—and their diseases; a good chapter on guns; one on fly-fishing; one on boats, a "bibliography for sportsman"; a most amusing "glossary—common words in local use throughout North America," which would interest and edify any ascetic; and recipes and cures for every ill and accident that can possibly befall a sportsman while exercising his craft; *e. g.*, "Fishbone in Throat.—If you get a fishbone in your throat fast there, swallow an egg raw: it will be sure to carry down a bone easily and certainly." There are, as might be expected, mistakes in some of Mr. Hallock's statements, but not enough to affect materially the general trustworthiness of the book. A number of good railway maps accompany the volume, which is illustrated.

Sketching from Nature. A Handbook for Students and Amateurs. By Tristram J. Ellis. With a frontispiece and ten illustrations by H. Stacy Marks, R.A., and twenty-seven sketches by the author. London and New York: Macmillan & Co. 1883.

THIS is a loosely written and superficial little book, which can, as a whole, give very little real help to students or amateurs. Yet as we sometimes find useful hints and suggestions in books of this character, there are here scattered passages from which may be gathered more or less that is serviceable. In his introductory remarks the author alludes to the embarrassments to beginners which often arise from the intensity of out-of-door light, and makes some good observations regarding the choice of position in relation to the light, and on various modes of shielding the work from its glare. He also explains why a drawing in color executed out of doors has so different, and often so disappointing, a look when viewed under the light of an ordinary room; and suggests what allowance, during the progress of the work, should be made in consequence. These are matters, indeed, which an intelligent beginner will sooner or later find out for himself; but much time and vexation may be saved by his being apprised of them at the outset. On p. 4, in speaking of the carefulness necessary to good workmanship, it is well said that "the quicker the manipulation the closer the care required." This is an important truth for the young sketcher. It does not generally appear, but it is nevertheless the fact, that the care necessary to make a slight sketch that is worth anything, and the resulting fatigue, are much greater, proportionately, than in the case of more deliberate and elaborate work. It is important for the beginner to know that a good artist always takes great pains. He never works carelessly. His quick work is done by intense effort and a simplified aim, not by any manner of recklessness.

On p. 6 the fundamental principle that any scene, or group of objects, in nature presents to the eye an assemblage of variously shaped patches of colors, variously shaded, and that the good colorist lays hold of this as his primal color conception and temporarily resolves these patches into essentially flat fields—Egyptian fashion—is seriously misstated as follows: "All nature *appears to the eye* as a series of flat patches of color and shade of different strengths." The words which we italicize convey an absolute untruth. Nature does not *appear* in flat patches. On the contrary it is hardly possible, in nature, to find such a thing as an apparently flat patch of color. The instructions for practice are given too much in the form of recipe, as, for instance, on p. 14, where a pupil is told, in sketching a passage of distance, to "be careful to make the lights and shades only slightly different." It would be better to direct him to observe the conditions, stating perhaps, at the same time, that, as a general rule, the contrasts of light and shade in the distance are less strong than they are in the foreground. On p. 29 we find the unwarrantable affirmation that in working with

the lead pencil the lines must always be kept firm and sharp. "Directly rubbing or stump is employed, all the beauty of pencil-work vanishes," says the author. Now, the fact is that one of the most valuable qualities of the lead pencil consists in the brush-like softness which it may be made to give; so that tint and line may easily be combined in sketching with it. A good draftsman will rub in a tint of soft pencilling with his finger, or a stump, and define forms with the pencil point, with delightful as well as most legitimate effect. Such effects are preëminently legitimate, since they are precisely those which call out the complete capabilities of the instrument.

On p. 76 are some good remarks about placing figures in a landscape. The principles referred to in this connection, though obvious enough, are not always heeded by amateurs, or even by artists. On p. 76 the pupil is advised never to copy, as "it utterly stunts the imagination and self-dependence." We consider this wholly untrue, and contrary to both reason and experience. The great Italian masters were often most faithful copyists in their pupilage: of this the notable case of Michael Angelo is an instance. It is true that the mindless and slavish copying which is so deplorably common in European galleries, is useless enough; but intelligent copying, from the works of true masters, is an invaluable, if it be not also an indispensable, mode of study. It will hurt neither the imagination nor the proper self-dependence of the student. The lesson in Tone given on pp. 90, 91 is involved with serious fallacies, as where the author says that "to the modern French school must be given the credit of carrying out the study of values to its greatest refinement": and, again, that Rembrandt was "the pioneer of relative tone." We have repeatedly, in these columns, shown that the "values" of the modern French school, and of Rembrandt, are usually so extravagant as to be far from refined and true. The advice, p. 92, to "Put in the background with strokes as evenly as you can, but going in different directions" (*sic*) is erroneous; for the expression of tone is not dependent upon the manner in which the lines which may compose a tint are drawn; and it is waste of time and misdirection of effort to bestow any care upon such lines. Again, with regard to a black dabber (grouped with other objects as a model) the author says: "Make it as black as you can," whereas the only proper advice, in such a case, would be to make it, if possible, as black as it appears. That is to say, the student, in these matters, should never be required to do anything in simple obedience to a precept, but he should be required, rather, to observe the model and represent what he sees as nearly as he can. Nothing is said, anywhere in the lesson, on the important fact that, since the scale of light and dark in nature greatly exceeds that at the disposal of the painter, it is impossible, in most cases, to reproduce values with anything like actual truth—a fact which is generally ignored by nearly all writers and teachers, even those who lay most stress upon the importance of values.

The book is divided into twelve chapters, among which is a very inadequate one on Elementary Perspective. The best are those upon "Composition and Selection of Subject," and on "Figures in Landscape," respectively. The illustrations are, for the most part, poor; though there are several among them which show a pleasant sense of composition, which, it is but just to say, is as rare in popular treatises of this kind as it is in popular art.

BOOKS OF THE WEEK.

A Newport Aquarelle: a Story. Boston: Roberts Bros. $1.

Art, L'. Vol. xxxiii. J. W. Bouton.

Benedict, F. L. The Price She Paid: a Novel. Philadelphia: J. B. Lippincott & Co. $1 25.

Blanchard, R. History of Illinois, accompanied by an Historical Map of the State. New York: C. L. Woodward. $3.

Brehm's Thierleben. Chromo edition. Parts 90-94. B. Westermann & Co.

NEW YORK, THURSDAY, AUGUST 23, 1883.

The Week.

THE testimony of Mr. A. H. Seymour before the Labor Committee on Monday contained an interesting account of the different steps by which the Western Union Telegraph Company has established its monopoly. Mr. Seymour is a telegraph manager of many years' experience, and, while there are some obvious errors in his estimates and some important breaks in his narrative, the statement as a whole is sufficiently accurate to be taken as a trustworthy sketch. The nest-egg of the Western Union Company was the New York and Mississippi Valley Company, whose plant was valued at $250,000. The first company absorbed was the Erie and Michigan, whose plant had cost $150,000, but whose lines did not pay, and were regarded as almost worthless. After absorption in 1856 the stock of the original company was watered to $4,000,000, and the name Western Union was adopted. The increased business of the war made the company prosperous, the stock was increased, and a 100 per cent. stock dividend was declared. The great prosperity of the company stimulated the building of competing lines, and this in turn made the business of absorption a regular industry. Company after company was absorbed, and as each disappeared there was always an increase in the stock out of all proportion to the value of property acquired. Thus, when a rival line costing $400,000 was absorbed, the stock was increased by a round million. When another, costing $600,000, was acquired, the stock was enlarged by two millions. The acquisitions of ten or a dozen small companies up to about 1864 had in this way swelled the stock of the Western Union to eleven millions, although the value of the entire plant was only two and a quarter millions. As nearly as we can make out from Mr. Seymour's figures, about twenty-five different companies have been absorbed in all, and the process has swelled the nominal capital of Western Union to $100,000,000.

Mr. Seymour estimates that the Government could duplicate the entire telegraph system of the country for $25,000,000. He recommends that the Government should not attempt to exercise complete control over the business, but should become a competitor with other companies, conducting its business on sound civil-service principles. Whether the Government began business as competitor or not, it would soon be without competition, for it would conduct the business as it does the Post-office, with no intention to make money out of it. Competition by outside companies on a basis of rates which was only designed to pay actual expenses would be impossible. Existing companies would be so quick to realize this fact that if the Government were to begin the construction of a separate system it would not get far before the present corporations would be willing to sell their plant at a reasonable price.

The Postal Telegraph Company, under its new head, Mr. Mackey, the California millionaire, seems to be regarded as a really formidable rival of the Western Union—the most formidable it has yet had. The new company has apparently abundance of capital, and has several patents of extraordinary value. We believe it claims the power of sending any number of messages simultaneously over the same wire. The "sagging" tendency of the Western Union stock is freely ascribed to its appearance, and it is just possible that we are at last about to see something like real competition in the telegraphic business. But it is not to be supposed that the Western Union managers yet take this view. To them the new organization is still simply something which will have to be bought up or absorbed with more "watered stock," like the twenty-five others which have preceded it. So, instead of improving their service as yet, they will probably for some time to come simply occupy themselves in getting the water ready for the stock, and seeing that the hose is in order.

The ending of the telegraphers' strike last week relieved the public mind of a source of much uneasiness, and removed a great obstacle to business transactions. Strikes in other lines of employment have been abandoned, and there has also, apparently, been a cessation of mercantile and bank failures. The flurry in the stock market, which at one time last week was panicky, has, after all, caused but few failures in that line of business, and its principal result has been to place the majority of stocks at lower prices in stronger holding. Capital is still to a large extent distrustful, though apparently less so than before the late occurrences. Money is still offered on call loans at the abnormally low rates of 2 and 2½ per cent. on the best stock collaterals, while rates for discounts of mercantile paper are ½ to 1 per cent. higher than ten days ago, and all time-paper is subjected to the closest scrutiny. On the 15th instant the United States Treasury gave notice that it would redeem, without rebate of interest, on each Wednesday—beginning on August 22—an amount equal to $5,000,000 of the bonds that had been previously called for redemption and payment on November 1. Though this would give the holders of such bonds their money at once and also their interest up to November 1, there are as yet no indications that many will take advantage of the offer. Officers of financial institutions which hold these bonds say they have no employment for the money, and prefer it should remain in Government bonds rather than in their vaults as currency. The foreign exchanges have been gradually declining in favor of the United States, and are now within 2 cents on the pound sterling of the specie-importing point. The latest advices from Europe confirm the reports of deficient crops of wheat, not only in Western Europe, but also in Russia, and the prospect of a good foreign market for our surplus breadstuffs at moderate prices has improved. The Western crops have been slower in their first movements than usual, which also accounts for the tardy beginning of the usual autumn trade. On the whole, while confidence has not yet been restored, there has certainly been an improvement in almost every aspect of the commercial, financial, and industrial situation.

The Shaw Brothers have made an explanation, at a meeting of their creditors, of their failure, which comes, we are bound to say, much nearer to ours than any the Boston *Advertiser* has yet furnished. The amount of their liabilities is enormous—$7,509,000 or thereabouts; and the assets, good, bad, and middling, only $5,262,000. This, the senior partner says, is how it came about: After the Pacific Bank failure in 1881, several large customers came to them in a state, not of insolvency, but of uneasiness. The Shaws gave their affairs "a hasty glance," and, without more ado, endorsed as much of their paper as was necessary to help them out. In the course of a year the firm had endorsed so much of this paper, or, to use Mr. Shaw's language, "the volume of it had grown so large," that their own credit began to suffer, and they had to ask their protégés for help by getting them to endorse their paper. Then they tried to advance the price of leather, but "the market failed to respond to a decided effort" in this direction. When the firm failed they found that the amount of paper they had out "was much larger than they expected," which is not surprising considering that when they began endorsing they took only "a hasty glance" at the affairs of the people they undertook to save. What the Boston *Advertiser* meant by the suggestion that it could not be the tariff which upset the Shaw judgment, because leather is on the free list, we do not know. The duty on leather under the present tariff, as well as under the old one, ranges from 10 to 25 per cent. ad valorem.

Mr. I. E. Dean, familiarly known as "Farmer Dean," the Chairman of the "Alleghany County Committee of the National Greenback party," has issued an address to the voters of that county, which shows a curious change of front on the part of the Greenbackers. The evils described by the address are all anti-monopolist grievances. In fact, the address is an anti-monopolist document. It describes the corruption, and spoliation, and oppression wrought by the great corporations. It contains no allusion to the condition of our present currency or to any defects in it, but its chief remedy is nevertheless "the issue of all money, whether gold, silver, or paper, by the Government," which is to "control its value by carefully limiting its amount." It would thus appear that a good Greenbacker now is not a man who is for greenbacks only and opposed to the use of gold and silver coinage. He is simply the enemy of circulating bank notes. So that he is really not distinguishable from a Democrat who hates national banks. Farmer Dean con-

cludes with an assertion which probably accounts for the total disappearance of the old greenback principles from the greenback platform, although he appears to be somewhat loose in his astronomy, viz.: "that the world moves faster with every revolution, and we can learn more in this generation in a week than we could fifty years ago in a year."

The evidence given at the inquiry into the late murder of the Rev. Mr. Sewell, the Texan minister, that when examined after he fell he was found to have a self-cocking revolver secured by an India-rubber band up his sleeve, so arranged that by a slight motion of his arm the muzzle dropped into the right position for active service, will well repay the attention of the American Bible Society, whose local agent he is said to have been. We do not think a clergyman in the service of the Bible Society ought to carry concealed weapons. If he will wear a revolver or a knife, he ought to wear it openly in a belt, so that his brother clergymen may know where he stands on the homicide question. Would it not be well, therefore, for the Society to send a little circular to its Southern agents, cautioning them against murder and felonious assaults, and pointing out the strong temptations to both these offences created by the practice of going armed? There appears to be a marked mediæval flavor about the clergy in the Southwest. One of the greatest difficulties the Church had to contend with in the dark ages was getting the priests and bishops to leave off fighting, and, above all, to avoid bloodshed. This was hard on the barbarians, who could not see, even when in holy orders, how a respectable man of any calling could get along without occasionally killing somebody or "cutting" him with a knife.

Judge James Jackson, a Southerner, has written an article in the *North American Review* on the homicide question, under the very taking heading of "Shooting at Sight," which we thought would throw new light on it. We are sorry to say, however, that all he does is to restate the case, and ascribe the Southern readiness to shed blood to what we have called "Cavalierism," or a Cavalierish origin. But, as we have already pointed out in these columns, this is no explanation at all. Very few Southerners, indeed, have inherited either Cavalier blood or traditions. Moreover, the bulk of the Cavaliers stayed in England. But neither their descendants, nor their man-servants, nor maid-servants, nor dependents, nor any persons who are in any way under their influence, or imitate them, now either carry concealed weapons, or shoot at sight, or fight duels, or have "difficulties," or brawls, or have anything to do with murders or fights, except in the way of hunting down the persons who engage in them, or sitting on the juries which try them. To be truly Cavalierish in our time, in fact, is to be peaceable, law-abiding, sober in speech and behavior, and an avoider of rows, broils, cuttings, shootings, and the like.

The recent revival of prize-fighting, of which there is plenty of evidence in the brutal encounters reported in the newspapers nearly every day, is the direct consequence of the impunity attending the sham sparring matches which take place every now and then between noted pugilists in the presence of the police and of vast crowds of spectators. The theory which these matches have generated, that a "glove fight"—that is, a fight with any kind of glove on—is lawful, leads every week to savage "mills" with hard gloves, which have every concomitant of an ordinary prize-fight. The main objection to prize-fights, on which the law prohibiting them is based, is that they are decided by the physical exhaustion of one of the parties, produced by pounding with the fists, and this result is reached by a glove fight just as effectively as by a fight with the bare fists. Mr. Blaikie, who used to be a well-known Harvard athlete, called attention, in a letter to the *Tribune* the other day, to the imposture of the matches which attract such great crowds at the Madison Square Garden under pretence that they are sparring matches, the fact being that they are simply disguised "mills" of the ordinary kind, in which one of the combatants is "knocked out"—that is, exhausted by the severe pummelling of his opponent—and the victory is won, just as in the prize-ring, by his inability to stand up and bear more "punishment." This is not sparring at all, however; for sparring is a game not of strength, but dexterity; and, if the police are to superintend these affairs, they ought to stop them whenever attempt is made to beat down an antagonist by sledge-hammer blows. They might as well permit fencing in which heavy blows of a steel bar were substituted for the touch of a foil button.

An expert in theatrical business makes the welcome statement that the practice of hanging lithographs in shop windows has had such an unfavorable effect upon the receipts at the box-office that its abandonment is only a question of time. He says the man who hangs one of the pictures in his window is presented with two admission tickets as remuneration. These he can have exchanged at the box-office for reserved seats by paying the additional charge of fifty cents each. The result is that bar-tenders and other objectionable persons monopolize many of the choicest seats in the theatres, and respectable people object to occupying places next to them. In this way "many of our best people" have been driven permanently away, and the theatres have lost a good deal of money. The most cheering thing about this proposed reform is that it will do away with the lithograph-portrait abomination, by which all our principal thoroughfares are now made hideous. The public has borne this infliction with saint-like resignation for several years, but the reappearance of several millions of lithographs of Oscar Wilde's most distressing countenance has started ominous mutterings which foretell revolt.

A large meeting of colored people was held lately at Muscogee, Ga., to oppose the proposed national colored convention at St. Louis, in September, to complain of the failure of negroes to get more offices. The Georgian negroes resolved that a convention for any such purpose would "be detrimental to the welfare and advancement of their race." The speakers recommended the ignoring of politics and conventions, and the devotion of each family to its own fortune, as the best means of giving the race political weight. No better advice was ever given. What the negro race on this continent needs is more successful negro farmers, and manufacturers, and merchants; more good negro doctors, and lawyers, and journalists; more negro musicians, and painters, and architects; more successful negro candidates at competitive examinations for admission to the civil service. When these exist we may be sure negro office-holding will follow in abundance. The difficulty the race now has to contend with is that it does not yet rank with the whites in the arts of civilized life. If this be removed, all else will follow.

Judge Nelson has delivered an opinion in the case of the Chinese laborer Ah Shong, which introduces a new complication into the working of the act of 1882. Ah Shong, it will be remembered, is a ship-carpenter, born in Hong Kong since it became a British colony, and consequently a British subject. Judge Nelson holds that he is, properly speaking, a British and not a Chinese laborer; or, in other words, that "Chinese," as used in the act, refers to nationality and not to race. This decision exempts from the operation of the act the population of Hong Kong (about 100,000), and will make it necessary for the officers of the Government to be cautious whom they exclude from our ports. The reasoning on which the decision is founded is very simple and conclusive. The act was passed nominally to carry out certain treaties made by the Emperor of China. Now the Emperor makes treaties only with regard to his own subjects, and not those of Queen Victoria. Hong Kong was clearly overlooked by the reformers who passed by the Anti-Chinese Law, and the decision makes the Anglo-Saxon future on this continent dismal indeed. There is nothing that we can see to prevent the 100,000 Mongolian "lepers" who inhabit Hong Kong from coming over in a body and settling in our midst, and perpetuating here those disgusting habits of thrift, industry, and self-denial which have created such alarm among the statesmen of the Pacific slope.

A very touching account has been going the rounds of the papers, which, even if invented, does honor to the inventor's heart, of the way in which Mr. Blaine received a proposal, or something in the nature of a proposal, *not* to insert the portrait of his old enemy, Roscoe Conkling, in his forthcoming historical work. This work is to be, if we are not misinformed, a subscription book, to be disposed of, in part at least, by travelling agents; but the subscription book must, as every one knows, have pictures in it to make it go, and Mr. Blaine's is to have portraits of the various statesmen who have been his political contemporaries, friends or foes, as the case may be. Somebody, some low, dastardly person, said to him that he supposed Mr. Conkling's portrait would of course not appear. The

author of the Pan-American Confederation scheme, we are told, on receiving this suggestion, arose with kindling eye and advanced on the author of it, and told him that the portrait would appear, and that when it did appear it would be the portrait of a man who had been "the brains of New York" for a matter of twenty years or thereabouts. As we have said before, the story may have been invented or embellished, but, if invented, the composer of it must have been a good man, if not a book agent. If a book agent, he is a pretty cute fellow, for that one story, supported by showing the Conkling portrait, will sell the book.

The thirst of the Irish Invincibles for blood appears to be reaching a point where extreme measures should be employed to check it. Henry McDermott, the brother of the man who is under arrest at Liverpool for conspiracy against the British Government, went to the police authorities in Brooklyn last week and asked for protection. He said he was in fear of his life through the importunities of agents of Irish secret societies, who wished him to publish an affidavit declaring his belief that his brother was a British spy. He refused, on the ground that he had no knowledge on the subject; whereupon it was intimated that if he did not consent "the whole McDermott family in this country will be wiped out." This is in the nature of a summary proceeding, inasmuch as nobody is aware of the precise cause of the arrest of the McDermott in Liverpool. The Irish "patriots" here suspect that he is an informer, but they have no evidence that he is, and no intimation that he is has been sent from the other side. His brother has been so worried by the avenging Invincibles that he says: "He has always been a curse to me and my family, whether he is innocent or guilty." This general denunciation of his brother as a "curse" ought to satisfy the avengers, and at least delay the "wiping out" of the whole family until further developments in Liverpool.

It seems probable that Mr. Parnell's obscure but dreadful threat uttered last week in the House of Commons, taken in connection with the meeting held at Limerick, at which judicial rents were denounced, means that we are shortly to witness the beginning of an agitation for peasant ownership, with or without compensation to the landlords. He says he is going to lead something "deeper and more desperate" than anything he has yet undertaken, and this must be what he means. There is nothing deeper or more desperate left than the appropriation of the land by the tenantry without payment. Unfortunately, even if he take this step, Parnell will not be without a certain justification. Grave defects in the Land Act have been revealed by the judicial decisions called forth by its working. They were foretold by the Irish party in the House when it was under debate. Mr. Gladstone has admitted them fully. The prompt correction of them was urged upon him not by the Parnellites only, but by the Ulster members. He refused to make it, partly because the House was occupied with neglected English business, and partly because English opinion would not tolerate any modification of the act at present. The result has been to alienate the Protestant farmers of the North, as well as the Southern Catholics, as shown in the Monaghan election, when the bitterest of the Parnellites, Healy, was returned by a clear majority over both Liberal and Tory combined, by a constituency which has not before shown any anti-English feeling. The consequence is, probably, that Parnell is encouraged to believe that he can now go one step further with increased strength. It is not unlikely, too, that in clamoring for peasant proprietorship he will have the landlords with him, if money to compensate them can be got out of the Treasury.

The success of Parnell in wringing concessions from the Government is fast making a position for him which no preceding Irish agitator—not even O'Connell—ever attained. O'Connell's great achievement — Catholic emancipation—after all, only relieved the upper class of Catholics from certain galling disabilities. The tenant farmers derived no direct material benefit from it. They did profit by the abolition of the Protestant Church tithes, but this they owed rather to their own physical resistance than to any agitation. Everything else having failed, they rose on the tithe proctors and bailiffs, prevented sales under the distraints, and in some cases killed them. Of this movement O'Connell was not the originator or master. Parnell, on the other hand, has relieved nearly all the farmers on the island of 20 per cent. of their rent. He has given fixity of tenure to all who were not already secured by lease, and he has obtained a free gift of one year's rent to all who were three years in arrears. He has now, by dint of obstruction, obtained a vote of $250,000 in aid of his scheme of migration as a substitute for emigration, that is, the plan of removing tenants from the barren mountains of the west coast to the naturally rich but undrained and unreclaimed lands of the interior. The sum is not large, but if the experiment succeeds the concession may turn out very important. In any case it will be to the Irish voters one proof more of Parnell's power, and will help him at the elections. He has been running one of his own men for Sligo, and has elected him, for his appearance on the scene prevented any contest on the part of the Liberals, who seem thoroughly cowed by the defeat in Monaghan.

The defeat in the House of Lords of the bill prohibiting pigeon-shooting will probably deepen the dislike with which the Radicals now regard that branch of the Government, and hasten a change of some kind in its constitution. Pigeon-shooting is one of the most recent and most cruel of the sports invented by the idle class to while away the time during the season in London, when country sport is not to be had. The pigeons are confined in a trap, from which they are forced out, to be fired at from a distance of thirty yards or so. Matches are so numerous, and the slaughter at them so great, that the supply of pigeons for them has become a great industry. Of course, large numbers of the birds are not killed outright, and fly away wounded, to die miserably. A gentleman who had lately taken a house close by a pigeon-shooting ground near London was sustained by the courts in an attempt to prevent its use, owing to the annoyance and pain caused by the flight of the wounded pigeons into his grounds and windows. The Princess of Wales has been the first to make a stand against the practice, and it is her influence, it is said, which led to the introduction of the bill into the House of Commons. As the Lords themselves are among the chief pigeon-shooters, they are again, as in most cases where they make a stand against the Commons, holding out for their own privileges and interests.

The French have what we suppose may be called a "Mongolian" question of their own. Their failure or refusal to increase their population, while maintaining a large standing army, has produced a great scarcity of labor, in the country districts an alarming scarcity, which large bodies of French, German, and Italian laborers are rushing in to meet. These the French workmen have now begun to look on as a "Mongolian horde," who by their cheap living and disgusting assiduity take the bread out of the mouths of the natives. Accordingly, it is proposed to clap a tax on them, which would either bring in, some say $2,500,000, and others $6,000,000 to the Treasury, or else keep them out. But the *Temps* points out that Frenchmen cannot play the part of the dog in the manger. They must either fill up France themselves or let others do it. These foreigners would not come if there was not room for them; could not get work if there were Frenchmen to do it. So that France must either increase the size of her families or receive immigrants. It further says that the best thing to do is not to tax the immigrants, but to welcome them and get them to settle in the country and become Frenchmen. There can be no objection to this on the score of race, it adds, because the French are the most mixed race in Europe; in other words, there is no French race, but simply a delightful and glorious moral entity called France.

The discharge of the Jews accused in Hungary of the "ritual murder" of a Christian girl, after their acquittal seems to have been a pathetic scene. They were received by their wives and children in the presence of an immense crowd at the prison gate; but one of the women, the stepmother of the boy who testified for the prosecution, had become quite gray at the age of twenty-eight. The boy refuses to go back to his parents, as well he may, after having tried to send his father to the scaffold, and remains in custody of the Government, which must be much puzzled about the best plan of reforming him. There could hardly be a better illustration of the ferocity of the race hatred with which the Jews have to contend than the fact that, in spite of the utter breakdown of the case, and of its extraordinary malignity and wickedness, the mob attacked the counsel for the defence in the street, and, when he escaped, tried to wreck his house.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 15, to TUESDAY, August 21, 1883, inclusive.]

DOMESTIC.

WEDNESDAY in Wall Street was characterized by a partial return of confidence and an advance in the prices of stocks all along the line, with the exception of Western Union, which remained weak. About 1 o'clock, however, the failure was announced of the firm of E. C. Stedman & Co., and prices fell considerably. The head of the firm is the well-known poet and critic. It soon became known that Mr. Stedman's personal judgment had not led him into difficulties, but that his son, who was his partner, had speculated with valuable securities belonging to the firm without his father's knowledge, and that these had been swept away in the general decline. Thursday's market was feverish and active. There were no large transactions on Friday, but prices were sustained. The situation was not materially changed during the rest of the week.

At noon on Wednesday a committee of five strikers, formerly employed by the Western Union Company, had an interview with General Eckert to inquire on what terms the operators would be taken back. The committee was treated with brusqueness, and the men were advised to apply individually to their respective superintendents for terms and work. The committee did not officially represent the Brotherhood. Nevertheless, the Executive Committee of the Brotherhood, offended at the treatment received, immediately sent a note to General Eckert, acting President, declaring their intention to ignore his advice and carry on the fight with renewed vigor. The wires leading from this city were interfered with on Wednesday night, but the company were not seriously inconvenienced. On Thursday the strikers began openly to admit that they were defeated, and there was a general failing of confidence. Several first-class operators applied for work and were taken back. There were reports from many places on Friday of strikers returning to work. Late that afternoon a message was sent from the Executive Committee of the Brotherhood in this city to all assemblies in the United States and Canada. It was briefly as follows: "The Executive Board of the Brotherhood regret to say that the strike is a failure. All members who can may return to work immediately. A circular follows by mail." A stampede to the various offices followed among the nearly 5,000 operators who had remained on strike. In Chicago the operators were amazed at the announcement of the end, and they resolved to remain out several days longer. Dissatisfaction at the action of the Committee was expressed in several other cities. The Western Union superintendents in many places received the men coldly and refused work to many first-class operators, asserting that their places had been filled. About one hundred male and twenty female operators were received back at the Western Union office in this city up to noon on Monday. It is expected, however, that the company will find work for nearly all the strikers in the course of several weeks. The strike lasted for twenty-nine days.

Mr. Mackey, one of the "bonanza kings," was elected a director of the Postal Telegraph Company on Wednesday, having secured a large interest in its stock. A syndicate, of which he is a member, intend to push the interests of the company and extend its wires.

The final session of the Convention of the Amalgamated Association of Iron and Steel Workers was held in Philadelphia on Thursday. William Weihe, of Pittsburgh, Pa., was elected President to succeed Mr. Jarrett, who declined a reelection. The latter gentleman was given several handsome presents by the association as marks of esteem. The next annual Convention will be held in Pittsburgh.

The United States Senate Sub-Committee on Labor and Education has been hearing testimony in this city during the week on various topics coming within their scope. Several labor unions have been represented before them.

It is found upon investigation that a clause in the postal agreement between Canada and the United States provides that the local rate of postage must govern. The authorities at the United States Post-office Department decide, therefore, that a two-cent stamp will carry a letter to Canada from the United States after October 1, but that three cents will be required on a letter from Canada.

Proctor Knott's majority for Governor in Kentucky will be about 49,000, nearly 2,000 larger than the majority two years ago. It is thought now that the call for a State Constitutional Convention is defeated.

The Virginia Republican Straightout Convenion met in Richmond on Wednesday. A platform was adopted favoring a strict adherence to Republican principles and a protective tariff, and endorsing James G. Blaine for the Presidency. In the platform the action of the Administration in aiding General Mahone in the repudiation of one-third of the State debt is condemned. It declares that the power thus given to Mahone has been used for the persecution of life-long Republicans. The platform opposes mixed schools, and favors civil-service reform, the honest enforcement of the recent acts of Congress, a free ballot, and an honest count. It declares that the Republican party never advocated the imposition of a capitation tax, and that the Republican party of Virginia placed in the State Constitution the clauses commanding the establishment of public free schools.

A. Beimann was nominated by the Minnesota Democratic Central Committee on Friday for Governor, in place of W. W. McNair, who declined. Mr. Beimann accepts the nomination.

The Republican State Committee of New York met in this city on Wednesday, and decided that the State Convention should be held at Richfield Springs on September 19. The general sentiment of the meeting was for harmony within the ranks of the party.

Returns to the New York Railroad Commissioners show that during the six months ending August 1, 160 persons were killed and 401 injured on the railroads of this State.

A fresh discussion of the Union College troubles has been caused by the publication of a letter from Mr. Howard Potter, making charges against the Rev. Dr. J. T. Backus and Platt Potter, in regard to their actions as former trustees of the College. A son of Dr. Backus has written a reply.

The annual session of the American Library Association was held at Buffalo, beginning on Tuesday, August 14, and ending on Friday, August 17. Mr. Justin Winsor presided. Many interesting papers were read.

The American Association for the Advancement of Science has been in session at Minneapolis, Minn., during the week.

James W. Bell, proprietor of a restaurant on Pennsylvania Avenue, Washington, was convicted on Saturday of misdemeanor for having refused to serve a colored man, George H. Smith, of Norwich, Conn., in his restaurant.

The Second National Bank of Warren, O., closed its doors on Friday afternoon, the cashier, Mr. K. M. Fitch, confessing that he had lost about $80,000 through stock speculation. The bank inspector says that all depositors will be paid in full, and the stockholders will receive about 40 per cent. Mr. Fitch disappeared, but gave himself up to the authorities in Boston on Tuesday.

Five of the car shops of the United States Rolling Stock Company, of Chicago, were burned on Wednesday night, with a loss of about $500,000.

Great excitement was caused in the Grand Union Hotel at Saratoga on Wednesday by a slight fire in one of the stores under it. The damage only amounted to about $500.

There is a great drought in the neighborhood of Galveston, Texas, and a water famine is impending. The cotton crop has been seriously injured.

Yellow fever has appeared at the Navy-yard, Pensacola, Fla., and a cordon has been established around it to protect the city.

Hanlan, the Canadian oarsman, was an easy winner in a professional single scull race at Watkins, N. Y., on Wednesday. Among the competitors was Courtney, who failed to get a place in the preliminary heat which would entitle him to row in the final contest. One of his excuses was that on the previous night he had been hit on the head with a sand-bag. This is probably entitled to the same credence as his famous excuses in other races. On Monday Hanlan was defeated by Teemer in a regatta at Fall River, Mass., on account of his boat being swamped.

Judge Jere. S. Black died at his home in York, Pa., on Sunday morning, at the age of seventy-three. He was a famous lawyer and judge in Pennsylvania early in his career. In 1851 he was elected one of the Supreme Court Judges of that State, and was reëlected in 1854. In March, 1857, he entered President Buchanan's Cabinet as Attorney-General. The President and he did not wholly agree on the question of coercing the States in case of secession. Nevertheless, he remained in the Cabinet, and when Lewis Cass withdrew, Mr. Black succeeded him as Secretary of State. It is claimed for Judge Black that his influence prevented the Administration from being wholly given over to the South. It is certain that he was a staunch friend of the Union throughout the war. Since his retirement from office he has added to his reputation as a lawyer and disputant, and was the author of many articles in the reviews.

The Rev. William M. Baker, of South Boston, died on Monday at the age of fifty-eight. He was the author of 'The New Timothy,' 'His Majesty Myself,' and other novels.

Prof. S. J. Wilson, President of the Western Theological Seminary at Pittsburgh, Pa., and one of the ablest theologians in the Presbyterian Church, died on Friday.

FOREIGN.

There has been considerable activity in Tonquin during the week on the part of the French. It was announced from Namdinh on Friday that Colonel Badens made a sortie on August 6, supported by a gunboat. He proceeded northward, and outflanked and drove off the enemy. On August 7, with 1,200 men, he made a movement to the south and attacked the earthworks of the Anamites. The enemy abandoned their works in confusion. The loss of the French was two killed and six wounded. The enemy's loss was heavy. It is affirmed in Paris that the bombardment of Hué by the French was begun on Saturday. This has since been denied. Admiral Peyron, Minister of Marine and of the Colonies, has ordered six gunboats to be constructed for Tonquin. It is asserted that France has informed the Powers that any ships attempting to land arms in Anam will be liable to seizure. This is believed to be a warning specially levelled at large exports of arms from American ports. The French fleet has sailed from Haiphong to reconnoitre the Cochin China coast. M. Harmand, the French Civil Commissioner in Tonquin, who is on board the French Admiral's ship, will be the bearer of an ultimatum to Anam, and if the ultimatum is rejected a blockade will be proclaimed against Anam by the French. It was reported from Hong Kong on Tuesday that Haidung, in Tonquin, was attacked by the French on August 19. The result of the attack is not yet known.

Statements have been made by the Chinese Legation in Berlin that place beyond doubt the fact that China will go to war rather than relinquish her suzerainty over Anam.

Rear Admiral Galiber, the successor of Admiral Pierre in the command of the French fleet in Madagascan waters, will meet Admiral Pierre at Reunion. He will afterward go to Tamatave and open negotiations with the Hovas. He will insist upon a French protectorate over Northwest Madagascar, the abolition of the law relating to tenure of land by Europeans, and the payment to the French of 1,000,000 francs indemnity. The latter demand may be waived, however, if the others are complied with.

It was asserted in London on Monday that Mr. Shaw, the British missionary in Madagascar, who was imprisoned by the French there on a charge of concealing two Hova spies, has been released.

In the House of Commons on Monday night Mr. Gladstone, replying to a question by Sir Stafford Northcote relative to the case of Mr. Shaw, said that Mr. Shaw had been accused of having relations with the Hovas and of direct acts of hostility to the French. Mr. Gladstone said that Mr. Shaw was confined on board a French man-of-war, and would be tried by court-martial, having full facilities for defence and the right of appeal. On Tuesday afternoon another warm discussion of the subject took place. Mr. Gladstone declared that he had no reason to believe that France had exceeded her jurisdiction.

The French trade-returns for the first seven months of 1883 show that the value of the imports increased 58,000,000 francs as compared with that of the same period last year, and that the exports decreased 50,000,000 francs. The increase in the value of the imports was due to the demand for foreign raw material. The decrease in exports was in manufactured goods.

The Government of France and the authorities at the Vatican have decided to issue a joint statement, with the object of removing the misunderstanding which is likely to arise in consequence of the non-publication of the letters which have recently passed between President Grévy and the Pope.

At a dinner held recently in Paris, at which 1,200 persons were present, speeches were made in favor of Prince Victor, son of Prince Jerome Napoleon, as chief of the Bonapartists.

Quiet was gradually restored in Spain during the week, though there were frequent disturbing rumors. It was asserted by Madrid newspapers on Thursday that French speculators had raised $150,000 for the purpose of corrupting the Spanish Army. Notwithstanding advices from the military authorities, Prime Minister Sagasta determined to restore the constitutional guarantees before the King should start on his visit to Germany, September 20. King Alfonso has started on a short trip through Spain. At Valencia, Barcelona, and other places he has been received with enthusiasm. The various bodies of gendarmerie engaged in quelling the revolt have returned to their former stations. The Cabinet had a meeting on Sunday, at which was discussed the attitude of France toward Spain, and it was resolved to make overtures to Germany for support.

A meeting of 400 Irish National League delegates was held in Limerick on Wednesday. A resolution was passed declaring that judicial rents are rack rents, and that the meeting was convinced that a couple of successive bad harvests must lead to a general strike against judicial rents. A priest presided over the meeting. In the House of Commons on Thursday evening Mr. Parnell declared that unless the deficiencies of the Land Act were speedily remedied he would lead a deeper and more desperate agitation than any that had yet been witnessed. Mr. John Redmond, the representative of the Irish National League in Australia, in a letter to the Treasurer of that organization, denies that his mission in that country has been a failure. He says he expects to be able to continue to send £1,000 every two weeks to Ireland. A debate on the Government's estimates was continued in the House of Commons from Thursday afternoon until 6 o'clock on Friday morning. The Irish members were active in pointing out their grievances, and the debate was very personal.

During the session of the House of Commons on Saturday Mr. Gladstone took occasion to rebuke what he termed the "habitual violence" of the language used by Mr. Healy (Home Ruler), Member for County Monaghan. He said that Mr. Healy's utterances deserved the severest reprobation, as they were calculated to stimulate national hatred, which it had been his (Mr. Gladstone's) desire to mitigate, and, if possible, extinguish. Mr. Healy made a defiant response. Ireland, he said, wanted justice, not appeals to fine sentiment. The Dublin *Freeman's Journal* disapproves of the violent language. The House of Commons continued in session until 2:20 o'clock Sunday morning. The Supply Bill was finished, and the Irish Tramways Bill passed its third reading. The Government assured Mr. Parnell and his followers that only £50,000 would be devoted to internal migration. It is probable that an Irish bishop will go to America to raise money to supplement this amount.

The Agricultural Holdings Bill passed its third reading in the House of Lords on Thursday night. Amendments adopted by the House of Lords limiting the scope of the measure will probably be rejected by the House of Commons. The House adopted the clause in the Irish Tramways Bill devoting £50,000 to the experiment of migration in Ireland, and it passed through committee on Friday night. The House of Lords has rejected the bill against pigeon shooting by a vote of 30 to 17.

The Irish Registration Bill was rejected in the House of Lords on Tuesday afternoon by a vote of 52 nays to 32 yeas.

An election in County Sligo, Ireland, on Saturday, to fill the seat in the House of Commons made vacant by the death of Mr. Denis Maurice O'Conor, Home Ruler, resulted in the return of Mr. Nicholls Lynch, the Home Rule candidate, who received 1,596 votes, against 1,020 for Mr. Kane O'Hara, the Conservative candidate.

James McDermott, who was arrested in Liverpool recently on his arrival from America in the steamer *City of Montreal*, on suspicion of complicity in the dynamite conspiracy, has been further remanded. The prosecution will show that McDermott had been in Cork in company with Featherstone, the convicted dynamite conspirator.

Eight thousand weavers in the Ashton-under Lyne district of England struck work on Friday, owing to a refusal of the masters to increase their wages. Twenty thousand persons are idle on account of the strike.

There was serious rioting in Coatbridge, Scotland, on Saturday and Monday between Orangemen and Catholics. Officers and mounted police charged the mob on Monday, and arrested twenty of the rioters. More trouble was expected on Tuesday, but the police prevented an outbreak.

William Wirt Sikes, United States Consul at Cardiff, Wales, died at that place last Saturday. Mr. Sikes was a frequent contributor to *Harper's Magazine*. His widow is Olive Logan.

The Shapira manuscript of Deuteronomy, which has caused such lively controversy in English literary circles, is pronounced by Doctor Neubauer and Professor Sayce a forgery, without any claims to antiquity.

A British Jew representing a business firm of London was expelled from St. Petersburg on Wednesday by order of the authorities, although provided with the proper British passports. It was announced in the House of Commons on Friday that the British Government had asked Russia for an explanation.

Arrests of students have occurred daily in Russia recently. Much dissatisfaction has been discovered at the Cadet School in the South. As regards the attitude of the students in the civil schools, the Minister of Education has addressed a circular to all of his subordinates. There have been serious disorders in fourteen gymnasia. Twenty-two students from the University of St. Petersburg were sent to Siberia for being connected with a Nihilist journal.

The Mayor of Moscow has tendered his resignation, having incurred displeasure by a speech which he delivered at the time of the coronation of the Czar.

It is announced in St. Petersburg that Count Tolstoi will soon resign the office of Russian Minister of the Interior, and that he will be succeeded by M.W. Kakhanoff, now a member of the Council of the Empire.

A new Socialist newspaper of rather moderate tone, called the *New Era*, made its appearance in St. Petersburg on Thursday. It asserted that the present inactivity of the Nihilists is not the result of weakness.

A number of Socialistic pamphlets, which attack the Emperor Francis Joseph in a virulent manner, have been found in the neighborhood of the imperial summer palace at Laxenburg, nine miles from Vienna.

A mob paraded the streets of Trieste, Austria, on Friday evening, crying: "Away with Italians and foreigners." An Italian gymnasium was attacked.

Bernhard Freiherr von Wüllerstorf-Urbair, the Austrian scientist, died on Friday. He was born January 29, 1816, at Trieste, and entered the Austrian Navy as midshipman in 1833. In 1839 he was made Director of the Austrian Naval Observatory and Professor in the Naval Academy at Venice, of which he became Director in 1848. He was Minister of Commerce from the autumn of 1865 till the spring of 1867, in which year he became Vice-Admiral and a Liberal member of the House of Lords.

The Vienna Electrical Exhibition was opened by the Austrian Crown Prince Rudolph on Thursday, with great ceremony.

The Public Prosecutor of Brussels has appealed against the verdict of not guilty in the case of Canon Bernard.

The Italian Envoy at Tangier, Morocco, on Wednesday lowered the flag on the Consulate, and the inhabitants were in consequence in a state of great panic. This hostile act on the part of the Envoy was on account of the Sultan of Morocco not having yielded to the ultimatum of Italy, insisting upon full payment of the claims of Italian subjects. The panic subsided when the flag was again hoisted on Thursday. An Italian squadron was in position to bombard the town if necessary. It was on Friday reported in Rome that Morocco had agreed to settle all claims.

It was announced on Wednesday that the river Nile was falling, and there was no longer any fears of a flood in Egypt.

The cholera epidemic throughout Egypt has been diminishing during the week, although the death-rate in Alexandria increased.

A German business colony has been established at Angra Pequeña, on the western coast of South Africa, on a purchase of 350 square miles. The German Government has permitted the hoisting of the national flag over it.

There was a two-days' battle reported on Wednesday between the followers of Cetewayo and those of Usibepu, in South Africa, with great slaughter on both sides. Usibepu is said to have been defeated and to have fled. Cetewayo has recovered from the wounds received in the late engagement between his forces and the insurgents, and has requested Queen Victoria to have full inquiry made into the treatment he has received.

WHY THE STRIKE FAILED.

THE real and full explanation of the failure of the telegraphic strike has been made plain enough. The strike was based at the start on two expectations. One was, that it would cause so much public inconvenience that the Company would be coerced into surrender either by legal process or by popular indignation. The other was, that the pressure of business would overwhelm the small force of operators which stuck by the Company or came to its relief. Both of these were disappointed. There was no legal mode of coercing the Company, and the public, instead of getting furious over the delays, cut down its telegraphing.

After this there remained nothing but the popular dislike of a corporation owned and managed in large part by Jay Gould. This would have been more effective if it had not been perceived by business men, very early in the day, that the theories of laborers' rights produced against the monopolists could not, if successful, be confined in their application to monopolists. The notion that a laborer ought to have high wages because his employer is vicious and unpopular, or because his profits are larger than his neighbors think such a man deserves, could not, of course, if established, be long confined to the Jay Goulds and Russell Sages. All employers of labor would speedily have to succumb to it, and it would soon make an end of successful industry. Any stick is, of course, good enough to beat a dog with, but every one who lends a stick for that purpose likes to know whose dog is going to catch it. The defects of this theory might have been supplied by popular sympathy with the strikers as an oppressed class. Of this there was a good deal at the beginning, and some people were carried off their feet by it. But it rapidly subsided when it was discovered that the strikers were, as one of their spokesmen described them before the Senate Committee, "mostly young unmarried men living in comfortable boarding-houses." The woes of young unmarried men who persist in sticking to a sedentary occupation in which they say they are insufficiently paid, do not touch the American imagination very long.

The remedy for young single American males whose business does not pay them enough to live in the way they like, has long been familiar to the public in the concise prescription of the late Horace Greeley. Popular sympathy for the underpaid is reserved for men with families, in callings laboriously acquired through long training, and which cannot be readily changed. Telegraphing does not belong to this class. It can be acquired in a high degree of perfection by a smart boy in three months, and the single man who thinks it inadequately remunerated, and yet stays in it, with strong crying and tears, suggests inevitably, by so doing, the suspicion that he is wanting in energy and pluck, and is probably paid as much as he is worth. The truth is that the business of telegraphing properly belongs to women, and any sympathy the public has to spare in the matter is due to the women whom these young fellows keep out of it, or to the women now in it whose wages their competition keeps down. In England the women in the Government service are rapidly taking hold of the telegraph offices. For all but the great offices, where the pressure of long despatches is severe, they are amply qualified for the work. For all the smaller offices, where assiduity, zeal, and conscientiousness, without supervision, are required, they are much superior to men.

The public interest in the strike during the last few days was rapidly extinguished by the appearance of the leaders before the Senate Committee. If these gentlemen had had an earlier opportunity to talk, it would have been extinguished sooner. Many who took up the strikers' cause in the beginning were probably startled to learn that the wrongs of the operators could not be righted without a thorough reorganization of modern society, and the assumption by the Government of the direction of all branches of industry. Nobody who owns anything is quite prepared for a change of this sort just now, in the present condition of the stock market. But every one will do well to remember that the leaders and spokesmen of most of the strikes, in our day, of the less skilled laborers are fluent men, to whom the strike is interesting mainly as a step toward some form of communism, and that the strikers' idle hours are apt to be filled with instruction touching the iniquity of having any accumulated savings. It is only the more highly skilled trades which strike on business principles and for business purposes, and do not bother themselves with plans for the regeneration of human society.

THE LATEST FRENCH REFORM.

THE French have just taken the most daring step in the way of judicial reform taken by any civilized people since the Revolution of 1789—much more serious than the conversion in this country of the permanent appointed judges into judges elected for short terms. They have suspended the fixity of tenure of their entire bench for three months, and have armed the Ministry with power to put about 600 of the judges on the retired list. The chief object, or rather the nominal object, of the measure is to reduce the total number of judges and abolish all courts of the lower grades having less than 150 causes in the year. But it is not necessarily the judges of those courts who will have to go into retirement. The Minister of Justice is authorized to pick out the total number to be displaced from all the courts, and it is avowed that he will use his power first and foremost to get rid of judges who are known to be hostile to the Republic. The bill covers, too, what is known in France as the "parquet," or that portion of the bar which serves the Government as public prosecutors. Public prosecutors, or district attorneys, are called "magistrates" in common with the judges on the bench, who are distinguished from them as the "sitting magistrates." The distinction is not really as great as it seems to us, because with us the judge is supposed in criminal cases to be perfectly neutral, and to be occupied simply with holding the scales of justice evenly between two contending parties. In France, on the other hand, he performs many of the functions of a prosecutor. It is part of his duty to help to get a conviction. He conducts a long and always hostile examination of the prisoner, in the course of which he browbeats him, tries to confuse him, and makes savage comments on his life and character. He is consequently only a little way removed from the parquet in position and duties, or in feelings and prejudices.

There are 2,500 judges or magistrates, small and great, in France, and of these a considerable number owe their original appointment to the Empire, and still retain their sympathy with it, or, at all events, with monarchy of some sort. A good many more came into office during the seven years between the war and the overthrow of MacMahon, when hostility to the Republicans was the dominating motive of the party in power, whether Legitimists or Bonapartists. Moreover, French judges, like all judges, are long-lived men. Few die, and none resign, so that the Republicans have got tired of waiting for a chance to "purify the bench," as they call it, through the natural filling of vacancies. What has done most to make the process of waiting intolerable, however, is the indiscretions of the judges themselves. Large numbers of them made themselves highly obnoxious by their zeal in the prosecutions set on foot against Republican writers and politicians under the MacMahon régime, and have thus remained marked men. A great many more have revealed their contempt for the Republic by chance remarks on the bench, or by outbursts of monarchical fervor, or by refusing to take part in Republican fêtes or demonstrations, or by uncivil treatment of Republican members of the bar who happened to be active in politics. The French bench, too, of all grades, like all the upper grades of officials until now, has been in a certain sense an aristocratic body—that is, it has been taken on the whole from the upper section of the bourgeoisie—not the well-born class, exactly, from the Legitimist point of view, but the well-dressed, polished class, which knows how to behave in society, and order and eat its dinner correctly—the class which in our politics is known as "the white-cravat and daily-bath men." Perhaps nothing has done so much to disgust this class with the Republic as the appearance in high office of the "nouvelle couche sociale" of which Gambetta talked—that is, of the plain men of humble origin, like Gambetta himself, whose boots do not fit, and who do not wear gloves, and who would be out of place in a salon. Their appearance in the diplomatic service was a dreadful mortification to the young secretaries and attachés of legation of the old régime all over Europe, who accordingly resigned a few years ago in great numbers. There is to-day a tale of horror among them, about one foreign Minister who keeps his old mother, a plain, unpresentable peasant sort of woman, on the top floor of the Embassy. In fact, "society" has in France gone out of politics almost as completely as here. And the bench, which belongs to society in Paris, and forms the best part of it in the provinces, feels the change keenly, and does not conceal it.

The Republican patience has accordingly been exhausted, and the process of "épura-

tion," as they call it, is going to begin; or, as we should say, the axe is about to fall, and 600 judicial heads will soon be in the basket, selected as the Minister of Justice pleases. He says he will be impartial, and will be guided by the reports of the presidents of the various tribunals, and that his main object will be to get the bench completely and finally out of politics. Of course, however, the Monarchists do not believe him. To them the measure is one of political proscription pure and simple. The dismissed judges are not, to be sure, to be cast on the world—they are to be pensioned for the rest of their lives; but it cannot be denied that it is as extraordinary and dangerous a power as ever was lodged in the hands of one man. Final judgment, however, can hardly be passed on it as yet. If the Republic lasts, and remains as moderate and conservative as it is now, the mischief of the scheme will rapidly disappear. But if the monarchy should be restored, or the Clémenceau Radicals should ever get into office, it would furnish a precedent which would probably be used to destroy the last traces of judicial independence in France.

SUMMER REST.

THE question has occurred to a good many, and has been more than once publicly asked, When do the people who frequent "Summer Schools" of philosophy, theology, and the like, which are now showing themselves at some of the watering-places, get their rest or vacation? At these schools both the lecturers or "paper"-readers and the audience are engaged in the same or nearly the same work as during the rest of the year, and therefore in summer get no rest. We have been asked, for instance, whether a clergyman or professor who has a period of leisure allotted to him in summer, in order that he may "recruit," as it is called, is not guilty of some sort of abuse of confidence if, instead of amusing himself or lying fallow, he goes to a Summer School, and passes several weeks in discussions which, to be profitable either to himself or his hearers, must put some degree of strain on his faculties.

The answer undoubtedly is, that nobody goes to a Summer School who could get refreshment through sheer idleness. One of the greatest mistakes of the Middle Ages, and one which has come down to our own time in education, in theology, and in medicine, was that all men's needs, both spiritual, mental, and physical, are the same; and it long made the world a dreadful place for the exceptional or peculiar. In most things we have given up the theory. It was soonest given up as regards food, because the evidence against it was there plainest and most overwhelming, in the severe suffering inflicted on some people by things "disagreeing with them," as it is called, which others relished and profited by. It has only been surrendered with regard to children and youths, however, after a hard struggle. The idea of a young person being entitled to special treatment of any kind—that is, having in any respect a marked individuality—remains to this day odious to a great many of our theologians and teachers. It is, however, rapidly making its way, and has already obtained a secure footing in some of the colleges. It is the hotels, perhaps, which are now the strongholds of the old doctrine, and in which a person who does not want what everybody else wants is considered most odious; partly, of course, because he gives extra trouble, but mainly because he is considered to be given up to a delusion about himself and his constitution. There is probably nothing which excites the anger and contempt of a summer-hotel clerk more than a request for something which is not supplied to everybody or which nobody else asks for. We remember once irritating a White Mountain hotel-keeper extremely by asking to be allowed to ride up Mount Washington alone, instead of in a party of forty. He not only refused our request, but he punished us for making it by selecting for our use the worst pony in his stable, and watched us mounting it with a diabolical sneer.

There is, however, still a good deal of intolerance about people's mode of spending their vacation. Those who take it by simply sitting still or lounging with no particular occupation, are more or less worried by the people who take their rest actively and with much movement and bustle. So also the young man who goes off fishing and hunting, on the other hand, scorns the young man who hangs about the hotels and plays lawn-tennis, or goes to picnics with the girls — a rapidly diminishing class, let us add. A correspondent, who takes a low view of sermons, wrote to us the other day complaining of some mention which recently appeared in our columns of Mount Desert as a good place for "tired clergymen," and wished to know what there was to tire them, seeing that they did nothing but produce two essays a week, which need not be very original. The truth is, however, that everybody's occupation, including that of the young man who does nothing at all, does a great deal to tire him. What probably tires a minister most is not the sermons, but his parishioners; and we suspect that nine-tenths of the ministers, if they made a clean breast of it, would confess that rest to them meant getting away from their parishioners, and not in getting away from the sermons. Sermon-writing in our day, when the area over which a preacher may select his subject is so greatly widened, is probably to a reflective man a great help and relief, as furnishing what nearly every student needs to stimulate study—a means of expression. Sustained solitary thinking is something of which very few men are capable. To keep up what is called active-mindedness nearly every one needs somebody to talk to. Conversation with a friend is enough for most, but those who have more to say find a sermon or a magazine article just the kind of intellectual stimulus they need. What probably most wears on a clergyman's nerves are his pastoral duties, which do not consist simply in consoling people in great trials, but in listening to their fussy accounts of small ones. Nine-tenths of a minister's patients, like a doctor's, do not know what is the matter with them, and consult a physician largely because they take comfort in talking to anybody about themselves, and doctors and clergymen are the only persons who are bound to listen to them. A professor or teacher is somewhat similarly situated. His business is the most wearing of human occupations—that of putting knowledge into heads only half willing to receive it, and persuading a large number of people to do their duty to whom duty is odious.

To these men, a Summer School of philosophy or theology or anything else must be repose of the best sort. It gives light work of the kind they love, free from all nagging, and in good air and fine scenery. At such schools, too, one finds uses for "papers" that no periodical will print, and which no audience would assemble to listen to in a city in the busy part of the year, and to many men an audience of any sort, interested or uninterested, is a great luxury.

The persons who perhaps find it hardest to get rest in summer are brokers. Their activity in their business and the excitement attending it are so great that quiet to them, more than to most other men, is a hell; so that their vacation is a problem not easy of solution, except to the rich ones, who have yachts and horses without limit. Even to these, every day of a vacation has to be full of movement and change. An hour not filled by some sort of activity, spent on a piazza or under a tree, is to them an hour wasted. A land where it was always afternoon would be to them the most "odious section of country" on earth. The story of one of them, who in Rome lost flesh through pining for "the corner of Wall and William," is well known. Such a man finds nearly all summer resorts vanity and vexation of spirit, because none of them provides excitement. The class known as financiers, such as presidents of banks and insurance companies, is much better off, because it has Saratoga. Its members have generally reached the time of life when men love to sit still, and when the liver is torpid, and they are generally men of means, and wear black broadcloth at all seasons, as being what they have from their youth considered the outward and visible signs of "respectability" in the financial sense. What they need is a place where they can have their livers roused without exercise, and this the mineral water does for them; where they can see a good deal going on and many evidences of wealth without moving from their chairs, and this the Saratoga piazzas supply, and where their financial standing will follow them, and for this there is perhaps no place in the country like Saratoga. Newport has not nearly as much solidity. It is brighter and gayer and more select; but though it contains enormous fortunes, a great fortune does not here do so much for a man. It has to bear the competition of youth and beauty and polo and lawn-tennis. The young man with little besides a polo pony, an imported racquet, and good looks counts for a good deal at Newport; at Saratoga he would be nobody.

THE LIBRARIANS IN CONVENTION.

THE American Library Association continues to be young; its period of interest and enthusiasm is not over. This may proceed in part from its varying membership, but it is worthy of note

that those who take the chief part in its debates are for the most part its earliest members. The same questions, too, are discussed each year, but there is a change in the relative prominence given to them. Fiction, for instance, no longer rouses every ear to listen. A general consensus seems to have been reached that the best fiction is literature to be studied, that the worst is poison to be shunned, and that between these limits there is a vast amount, of varying merit, which is to be furnished in greater or less quantities, according to the demand of the public, the degree of independence of the purchasing board, and their views of their duty to the readers. The technical questions of cataloguing and classification, when they are touched upon, receive as close attention as ever; but more time is given to matters that can be better appreciated by the general public—to the architectural and educational side of librarianship. At Buffalo, last week, the Library of Congress was considered, as usual, and the Washington scheme (as it may be called) of making it a vast show-building was defended in a letter from the Librarian. The Association would like to see the national library housed in Washington in a building which should be a worthy representative of the three thousand libraries of the country. They have no objection to its being a monument to the glory of the architect and a symbol of the wealth of the nation; indeed, it is manifestly to their advantage that the importance of libraries to the country should be materially represented in the capital. They have no objection to seeing it associated with an art gallery, or with any other reasonably appropriate show-rooms; but they desire that it should be first and foremost a library, a place expressly made for the safe keeping and convenient use of books, a place where the library idea shall receive its best expression. If they can have this, they care not whether ten or fifteen millions are spent in ornament; but they do not wish the books to be subordinated to or made a part of the architecture, for they know by wretched experience what that always leads to. For the success of a building as a library it is absolutely necessary that the purpose of making a *library* be prominently and persistently put forward as the first, almost as the only, object: the plans must be made for that end only, and, when they are complete, the architect may be permitted to design a handsome case for the machine. No other course ever prevents the books and readers being sacrificed to the stone and the gazers. This appreciation of the true object of a library may have existed in the various committees or commissions who have had the plans in consideration, but there has never been the slightest indication of it. Moreover, in the judgment of many persons, even in an architectural regard there is little to applaud in the designs hitherto exhibited; so that the petition of the Association, "that Congress provide suitable buildings for the library of the nation," does not excite in its members any lively hopes of a pleasing result.

A new building plan for large libraries was suggested on the present occasion. We have already three leading forms, any one of which is good when taken at its best, and carefully guarded against its special defects: first, the cathedral form, in which the reading-room is a central nave, surrounded by alcoves and galleries; second, the separate reading room fed by a stack of shelves, which are divided by narrow passages and lighted from the top and sides; and third, the plan advocated by Mr. Poole two years ago in Washington, in which a number of separate rooms contain each the books of a single class, with the tables at which they can be studied, each being in fact a reading-room, with a small stack in it. The new plan, presented incidentally in a paper by Mr. Cutter on "The Buffalo Public Library of 1983," is for a vast central stack, surrounded by a rim of reading-rooms, work-rooms, and special libraries. As it is lighted entirely by electricity, and is independent of the sun, it can be used as well by day as by night, and its extent is limited only by the number of books which are to be placed in it. The stack is the most compact method of storing books, and this is the most compact of stacks, for it needs no light-wells. It is also the coolest, because it is heated by no glass roof. Nor are the lights expensive, since they burn only so long as some one is using them, whether to get or to look at books, being lighted on entering, and extinguished on leaving, each passage. The reason for desiring compact storage is that it is necessary to quick service, and no doubt the greater cost of artificial light would be in a degree made up by the saving in the time of attendants. The saving in time of the public would justify almost any expense, for nothing is more exasperating and more complained of in great libraries than having to wait for books.

The interest in the educational work of libraries has entirely grown up since the American Library Association began to meet. The idea of interesting the schools in the libraries was initiated by its members, and has been made known and extended through its conventions. At Worcester, at Boston, at Chicago, and at a score of smaller places, attempts have been made, often successful, to attach the school children permanently to the library; and by interesting them in investigation and teaching them to seek books for information rather than amusement, to lead them to continue their studies after they leave school, in the hope that the next generation of adults may read something besides the novel and the newspaper. It is a matter peculiarly suited to the conventions, because it concerns the smallest as well as the larger libraries; indeed, the keeper of a few books in a town may hope to do even more than the librarian of a great collection in a populous city, because he or she comes into closer contact with the children, and can know them better. Especially in the city the teachers can effect more than the librarian if they will only try. Unfortunately, they have too much to do already. But both this year and last some teachers have been present on the day when this subject was to come up, and have shown considerable interest in the account of what had been done. Very little can be effected in a city, however, unless the superintendent of schools or the head master of some great school takes an interest, not to force the teachers, but to leaven them with enthusiasm. Probably it will be found in time that only a teacher or a library here and there does much in this spade husbandry, because it needs peculiar powers, and those who do not feel themselves capable of doing much will not attempt anything.

THE END OF THE SUEZ-CANAL INCIDENT.

LONDON, August 4

AFTER filling men's minds for about three weeks, the Suez-Canal question has now vanished from sight almost as quickly as it appeared, and with its departure the public interest in the proceedings of Parliament has begun to decline. Much will doubtless be said about the abortive agreement during the next few months on Tory platforms, for the mistakes, or at least the failures, of a Government are of course the favorite topics of Opposition oratory. What the so-called "Treaty of Kilmainham" (the communications which resulted in Mr. Parnell's release from prison in May, 1882) was to Conservative speakers last year, the Lesseps negotiations will no doubt be this autumn—a subject upon which abundant invectives against the incompetence or timidity of Mr. Gladstone's Ministry may be poured forth. But as everybody is now tired of politics, and anxious to get soon away to Scotland or the Continent, the affair is quickly dropping out of view, and the time has come when an opinion as to its effect on the position of the Government may be ventured.

That it has damaged their reputation can hardly be denied. To make a solemn proposal to Parliament, and within a fortnight confess that it has been so unfavorably received that it must be withdrawn, is a slur, if not on the administrative skill, at least on the foresight, of a Ministry which ought to have foreseen what the public would think, and have done nothing unless it could do what they were likely to sanction. There has also been a want of tact, as I observed in a previous letter, in the mode which Ministers took in launching their scheme. Yet now, when the first excitement has subsided, and people are looking more calmly at the matter, the censure passed on the Government has sensibly abated. The vehemence with which it was at first expressed provoked a reaction; and those who had at first been loudest in dissatisfaction said the less because they felt they had said somewhat too much. When the various aspects of the matter were regarded, it was perceived that the difficulties surrounding it were greater than had been recognized by the outside world. There was the claim of M. Lesseps and his company to a monopoly of water communication across the Isthmus, a claim which, whether well grounded or not, was at least arguable, and could not be hastily overridden by any honorable Government any more than a similar claim in private life could be by an honorable man. There was the fact that the only courts to decide on the validity of such a claim were the courts of Egypt, a country in our military occupation and so much at our mercy that Europe would have regarded any decision given there as practically dictated by us. There was the fact that M. de Lesseps had made the canal when nearly the whole world derided or disbelieved in him, and made it against the wishes of England, who, in the person of Lord Palmerston, threw every obstacle in his way. And lastly there was the irritable jealousy of France, whose people are already mortified at the supersession by England of the authority they claimed in Egypt, and who look on the canal as virtually a piece of their own national property. They would have resented bitterly anything that could have seemed hard treatment of M. de Lesseps; and although we have in one sense nothing to fear from France, because she cannot afford to add to her European enemies, still any serious estrangement between the two nations would be a misfortune for us as well as for them, and a menace to the peace of Europe. The sense that the hands of the Government had been tied in their negotiations by these and similar considerations told greatly on public opinion; and though it did not make people acquiesce in the provisional agreement, it disposed them to judge it more leniently.

To this there was added the fact that the Conservative leaders failed to improve the occasion, and indeed actually helped the Government out of its embarrassments. The disapproval of the provisional agreement came at first from all classes of commercial or shipping men alike, Liberals as well as Conservatives. But the Parliamentary chiefs of the Tory party could not refrain from the temptation to injure the Government politically. They denounced the agreement warmly. They argued that M. de Lesseps had no monopoly and that the Government had been grossly mistaken and grossly incautious in

admitting its existence. Sir Stafford Northcote gave notice that he would move to reject the agreement when it came before the House of Commons. And the *Times*, which has frequently shown of late that it has little love for Mr. Gladstone, came out with a vigorous attack on the Ministry as generally incompetent. A reaction at once took place. The Liberal party in the constituencies rallied to the Government, and their representatives in Parliament intimated that they had not the least wish to desert, and would be glad to see the agreement got rid of in the quietest way, since it clearly could not be carried. Thereupon Mr. Gladstone, in a speech of great dignity and tact, announced that the agreement would be dropped, M. de Lesseps having, at the instance of an envoy sent to Paris for the purpose, consented not to ask for its submission to Parliament. This was palpably a retreat to avoid disaster, but it was effected in such good order that the prestige of the Government scarcely seemed to suffer. Thereupon Sir Stafford Northcote, not wishing to let his foe escape, gave notice of a resolution repudiating the claim of the Canal Company to a monopoly of water communication "from the Red Sea to the Mediterranean." As these words would cover a canal from the Levant through Palestine and the Wadi el Araba to the Eastern arm of the Red Sea, or from Alexandria to Suez, regions to which the company have never asserted their concession to extend, Mr. Gladstone replied that the Government had no objection to such a resolution, and, while suggesting in a patronizing way that perhaps it would be better not to discuss the matter, gave Sir Stafford a day, and his resolution was duly debated and rejected by a large majority in favor of one, moved by a Liberal shipowner and accepted by the Government, which declared that it was undesirable for Parliament to express any opinion on the matter. This wind-up to the affair went far to rehabilitate the Ministry, and on the whole they have come out of it much less damaged than was at one time expected. Some people think that it would have been better to take M. de Lesseps's terms. But the general feeling is that better terms will yet be obtained; and if he is prudent, he will not only proceed to execute those improvements in the canal which he has announced, but make some other alterations in management and reduction in rates which will appease the discontent of British shipowners and prevent further trouble. It is not unlikely that negotiations for this purpose may be resumed in a few months, but improbable that a Ministry will again burn its fingers by submitting to Parliament proposals which have not previously given satisfaction to the mercantile world.

The general character of the incident, its moral, as one may say, is not wholly creditable to the English commercial class. They expressed themselves with a haste and vehemence which might rather have been expected from Frenchmen. They forgot that Egypt does not belong to us, though we are in temporary military occupation of it, and that we have no right to deal in a high handed way with those to whom the former rulers of Egypt have given valuable rights. They did not realize what the feelings of France are, nor the mischief of exasperating her. On the other hand, it must be admitted that British good sense soon reasserted itself; that the proclamation of exaggerated claims soon led to a reaction in favor of moderate courses, and that the declarations of the Government, that they considered fair dealing and a scrupulous respect for the rights of others to be the safest as well as the most honorable course, were received with general approval. If our people are unreasonable, it is not for long together. Y.

IRISH REFORMATORIES AND INDUSTRIAL SCHOOLS.

DUBLIN, August 4, 1883.

A VISIT paid lately to Glencree leads me to write something regarding the reformatory and industrial schools of Ireland and the substantial benefits they have conferred upon the country. As many of my readers are aware, the county of Wicklow borders the county of Dublin some ten miles to the south of the capital, stretching thirty miles along the seacoast and extending inland in an irregular form some twenty miles. Comprised in this district is some lovely scenery —wooded glens, valleys, small lakes and tarns, mountains (none of them higher than 3,100 feet), not wooded like yours, but covered with heath, bog, and rock. The baronies bordering the sea are inhabited by a population better off and more comfortable than that of most other parts of Ireland. There are many fine demesnes and gentlemen' seats. The western portion of the country is for the most part wild and uninhabited, and there, after "'98," bands of light-footed insurgents held out for months, setting at defiance the heavily armed and lumbering bodies of troops who upheld the supremacy of the law. To prevent a recurrence of such a state of things a military road was shortly afterward constructed, chiefly by Scotch regiments, from north to south through this western district. It is still kept in tolerable repair, and there it winds and doubles over lonely mountain sides, along valleys, and over drear and apparently limitless moorlands—hour after hour one can follow it without seeing an inhabited house, or a living creature except sheep and cattle, and wild birds and hares. Upon the road four large barracks were built. Thirty years ago they had for the most part fallen out of use; and upon the passage of a Reformatory Schools Act for Ireland, one of them, Glencree, with a tract of moorland surrounding it, was placed at the disposal of the community of Catholic ecclesiastics to whom the care of one of the proposed institutions was confided. It is twelve miles from Dublin, and stands 1,000 feet above the sea. Behind the building stretch bogs and mountain; in front, to the south, the glen from which it takes its name (Glencree—"The glen of my heart")—a wide valley, more than a glen, six miles long, the waste mountain tops toning down into patches of cultivation and comfortable farmsteads.

The corporation of Dublin give a considerable annual grant to this Reformatory, and thither the corporation and their friends, to the number of some 400, are invited annually by the managers. The excursion for this year took place some days ago. We were much favored in the weather. A few miles south of the city the road begins to wind up the mountain side between lawns and plantations. There are grand views over the bay—Dublin "in feudal pride," the plains of Kildare and Meath, the islands of Lambay and Ireland's Eye, and in the distance the Mourne Mountains in County Down. The carriages and cars, the "croydons" and "gigs" dotting the Moorland Road, upon which we emerged, seemed out of keeping with the wild landscape, and must have startled the larks singing above, and the sheep and mild-eyed mountain cattle browsing among the heather and turf-banks. The entrance to the Reformatory was decorated with flags—the Union Jack conspicuous by its absence, and the Stars and Stripes by its presence. We drove into a large courtyard, where we were welcomed by the reverend fathers in their canonicals and the large crucifixes distinctive of the "Order of Mary Immaculate." From the terrace and greenery in front of the main building, slightly raised above the courtyard, we watched the arrival of the other guests. The boys, 200 in number, were marched into the yard from the hillside, where, to leave room for the arrangements of the day, they had been dining. The Lord Mayor arrived in state in his brilliant carriage with his powdered footmen; the lads cheered and the school band struck up. Prizes were distributed and the musicians put through their facings in concerted and solo playing. The boys, from twelve to twenty years of age, coarsely but comfortably clad in frieze and corduroy, looked remarkably healthy and happy, and upon this as upon all previous visits I remarked the kind and confidential relations which evidently existed between them and their superiors. The book prizes appeared to be well chosen—I noticed Miss Martineau's 'Peasant and the Prince,' and others of a like liberal character. While some of the younger visitors listened to the band or entertained themselves on the large swings used by the boys in play hours, the rest of us inspected the departments of the institution. In addition to the main building, in which the Reformatory was commenced (the old barrack now is occupied mainly by the heads of the establishment), workshops, school-rooms, play-rooms, and dormitories, as well as a church in cut stone, have been added, built chiefly by the boys themselves. A large proportion of the inmates are trained in agricultural pursuits. The meadows and cultivated fields surrounding the buildings are results of their labors—an earnest of the change it is possible to work in the bogs and mountain wastes of Ireland. A reservoir on the mountain side supplies the establishment with water at high pressure. A steam engine drives the machinery in the various workshops, where we saw the boys busily engaged at shoemaking, tailoring, cabinet-making, and the forge. The lavatory is well arranged. The main dormitory is a sight in itself, with its vistas of 300 white-covered beds, between which lay-brothers of the institution promenade all night.

At 3 o'clock we were summoned to a plentiful dinner, laid out on long tables in the recreation room, which was tastefully festooned with ivy. The Lord Mayor and Lady Mayoress and persons of distinction occupied a table on a dais. Then came the usual toasts, speechmaking, and mutual admiration. After the meal our party visited those lovely and impressive mountain tarns the Loughs Bray, two miles beyond the Reformatory. Tea was prepared for all who desired; as for us we returned in the twilight through the beautiful scenery of Enniskerry and the Scalp, the air sweet with the scent of hedges and bayfields. The weather at Glencree is often severe in winter. A stone cross on the road near the Reformatory marks the spot where a few years ago a poor boy perished from exposure on an open vehicle while being conveyed to the institution.

The reformatory and industrial-school system of Ireland was commenced some twenty-four years ago. These institutions now number sixty-nine—twenty-one for boys, with 2,420 inmates, and forty-eight for girls, with 3,486 inmates. They are strictly denominational, fifty-six being Catholic, and thirteen Protestant. They are intended to save juvenile offenders from the demoralizing influences of prison and from evil courses—to reform rather than to punish.

They are of three kinds: (1) Reformatories, to which are consigned juvenile delinquents (after they have undergone a few weeks' or months' imprisonment) for terms varying up to five years. These are by last report ten in number, with 1,149 inmates, costing £28,572 per annum. A Government capitation grant gives £18,125; £7,822 comes from local funds, and £578 from voluntary contributions, and £2,047 profits on work sold. The average cost per head per an-

num is £22 15s. for boys, and £26 9s. for girls. The desire to bring children of depraved parents under the influence of these institutions often explains the apparent harshness of sentences for such trifling offences as "stealing flowers," or, as I saw the other day, "stealing a pair of scissors from a mother." These reformatories are for children under sixteen years of age; but as the period of detention extends to five years, many of the inmates are grown up before they are discharged.

(2.) There are 59 industrial schools, with 5,900 inmates, costing £19 19s. per head for boys, and £19 4s. for girls. They are meant for the reception of vagrant or derelict children under fourteen years of age. The advantages of the training afforded by them are so great that it is to be feared many pious frauds are perpetrated to bring children within their scope. I knew a decent lad in Dublin whose parents died, leaving him with several little brothers and sisters, whom he could not support, and whom he managed to have arrested for vagrancy and sent to these schools. This is by no means a pleasing feature of the system, and is but one aspect of the inevitable difficulties and complications certain to arise from the workhouse, reformatory, and state philanthropic systems to which the United Kingdom appears for the present committed, and in which Louise Michel, when she visited England lately, was surprised to find "enlightened communism." The industrial schools in Ireland receive altogether £116,987 per annum—£73,437 from the state, £25,073 from local grants, £6,098 from voluntary contributions, £12,379 from industrial profits and sundries.

(3.) The probationary industrial schools were only lately authorized. We have every right to expect the most beneficial results from their working. It will be open to magistrates to commit to them juvenile offenders under twelve years of age, without any preliminary or contaminating detention in prison; and inmates upon reaching the age of twelve are passed on to the industrial schools.

The beneficial result of all these institutions has, it is safe to say, exceeded the most sanguine anticipations of those who promoted their establishment. In 1853 there were 12,238 children under sixteen years of age in Irish prisons. According to last report, there are now but about 853. To these we must of course add those in the reformatories and schools already mentioned (7,049); but how differently are they circumstanced! These schools are under the inspection of Sir John Lentaigne, a gentleman who has given himself earnestly to the work, and has thereby gained respect and title. He is well advanced in years—a prominent figure in literary, non-political, and Castle circles in Dublin. His annual report to Parliament, from the last issue of which I have taken the foregoing figures, is a deeply interesting record of the progress and condition of these institutions—fully stating as it does the particulars of each, its educational, industrial, and sanitary condition, the efforts of the managers to prepare children for the struggle of life, what they have done for them on discharge, and their after success or failure. Of those discharged from reformatories within the past three years, 84.1 per cent. boys and 86.5 girls are reported as "doing well," 1.3 boys and 5.7 girls "doubtful," 10.5 boys and 6.3 girls "recommitted to prison," 4.0 boys and 2.1 girls "lost sight of." Of those discharged from industrial schools, 89.5 per cent. boys and 93.9 girls reported as "doing well," 2.3 boys and 2.9 girls "doubtful," and 6.5 boys and 3.1 girls "unknown."

The literary education is confined to a course of reading, writing, and arithmetic. History is, as in all our Government schools, excluded. What is the result of this exclusion? Would it not be safer for the Government to permit the use of moderate histories, even of a purely national and Catholic type, than to leave the youth of Ireland entirely and solely to draw its historical information, which it must and will imbibe somewhere, from green-flag and sunburst literature? If we may judge by the repetition in Sir John Lentaigne's report to the effect that "the pupils played the National Anthem remarkably well," we may suppose that the Government are not without hopes of influencing loyalty through the medium of music.

The success of these schools, which it would have been impossible to approach under the "ascendancy" theories of past generations, is suggestive as to what may yet be accomplished in Ireland in other directions, as we utilize rather than thwart the prejudices and aspirations of our people. The monastic teaching and régime of the Catholic (the greatest) Irish reformatories are not such as may commend themselves to Protestants; and yet Protestants can but hope to emulate their results.

There is nothing in Irish architecture or interiors to detain the average American visitor who passes through Ireland on his way to Great Britain and the Continent of Europe. But in such institutions as I have mentioned there is much to stir deeply, and to interest if not to instruct. The Irish may well be proud of Glencree Reformatory and Artane Industrial School, near Dublin, the Malone Reformatory and *Gibraltar* training-ship at Belfast; and these are only samples of what is being done in kindred institutions under Irish management in other parts of Ireland.

D. B.

ORIGINAL EDITIONS OF THE FRENCH CLASSICS.

PARIS, August 3.

THE great bibliophilists are rendering a great service not only by the collection of historical documents, but also by the collection of the original editions of the best writers in every language. It may seem almost an affectation, in the eyes of many people, to choose in preference editions which have been revised by the authors themselves. There are, however, many reasons why a bibliophilist should prefer an original edition, and under that name ought to be comprised all the editions of a work which have appeared in the lifetime of an author, with his additions and corrections. First of all, we must consider a book as an intellectual whole, and fully to appreciate it we must see it, just as a picture, in the original, not in a copy. We like to see it with the type of the time, with the cover or the binding of the period, with the illustrations—if there are any—which show us how the book was first understood. From the philological and grammatical point of view, it is extremely important to read a work in its original edition, for there we find the correct punctuation, the true accentuation, the peculiarities which contribute to the history of language. Just as a story told several times by one person to another becomes altered very rapidly, the original texts in the course of time become extremely distorted, as the booksellers, especially when they reprint a very popular work, content themselves with copying a late edition, and do not take the trouble to refer to the primitive text. It is only very recently that we have become more "difficult" in this respect; but it is quite extraordinary to see how little the editions of Molière printed a few years ago resemble the original editions.

The bibliophilists have always instinctively felt the value of these first editions. Their science is now taking a more systematic form, as several special catalogues, made with great care, have added much to our knowledge of original editions. We are no longer contented with Brunet's famous 'Manuel du Libraire'; we want, for the great classics, more details than can be found in this excellent work, which, nevertheless, preserves all its importance for many parts of literature and of history. M. Rochebilière, who was for many years Conservator at the Library of Sainte-Geneviève, near the Pantheon, left a library entirely composed of original editions of the French authors of the seventeenth and eighteenth centuries, and I cannot too highly recommend a very modest volume, the catalogue of this special library, made by a very learned bookseller of Paris, M. Claudin. The reader of this little work will not lose his time, and he will find himself at once in the *arcana* of bibliophilism.

Let us first take Montaigne. We learn at once that there is not *one* original edition of the famous 'Essays'—we must have several editions; and in the succession of the editions and in their changes we have the history of the development of a great mind. The first original edition, which appeared at Bordeaux (then spelled Bourdeaus), had only two books; it was eight years afterward, in 1588, that Montaigne gave his third book in an edition which was already the fifth. Whoever wishes to have the original Montaigne must of necessity have the first and the fifth editions. After the death of Montaigne, his niece, Mlle. de Gournay, published a folio edition, in 1595, which must also be added to the preceding works as having been based upon the manuscripts of Montaigne. In a modern edition, it would be well to mark what belongs to the first, to the fifth, and to the posthumous edition. We should thus have a more distinct view of the transformations of Montaigne's thoughts, as these editions mark different periods in his life. M. Guillaume Guizot, the son of the famous statesman, is preparing an edition conceived in this spirit.

La Bruyère offers an even more difficult problem to the editor. This great moralist published no less than nine editions of his 'Characters,' and each edition has its additions. If we could mark out, in a complete edition, the chronology of the thoughts, we should, so to speak, render visible the development of La Bruyère; we should see him become more and more eloquent, more and more misanthropic, in the highest sense of the word. An admirer of La Bruyère, who likes to live with him, as it were, and to see him first young and then old, must of necessity find these nine original editions, which are described with the most minute care by Claudin. There are subdivisions for each edition, for books were not made then as they are now, and, the process of printing being then very slow, an author often made slight changes in the midst of it. Consequently, we find that two editions marked "second edition," for instance, can be slightly dissimilar. These shades are not very important, and it seems to me hardly necessary to look for such small peculiarities; but it is of the highest literary importance to study from edition to edition, from the beginning to the end, the creative energy of a great mind. The first edition of the 'Characters' of La Bruyère was published in 1688; he died on May 11, 1696, and the ninth edition appeared three weeks after his death. It is very difficult to collect all the nine editions; the first, the second, and third have become very rare. A collector ought to have them all of the same size, if possible, in their original calf binding. Some copies are found in old morocco, but they are a great rarity. As a rule, the bibliophilists prefer now an original calf binding, with all its simplicity, to a modern mo-

rocco binding. The original binding is a proof of perfect authenticity: it shows that no leaves have been interpolated, no changes made.

The first editions of La Fontaine have an extreme and pleasing simplicity. The 'Contes' appeared before the 'Fables' La Fontaine first published anonymously a few of the *contes*. The first collection of ten signed by him was brought out by Barbin (the publisher of many of our greatest classics, mentioned by Boileau in his 'Satires') in 1665; it is one of the rarest books I know. Other editions appeared in 1667, 1669, 1671, with some additional *contes*. I do not refer to the editions published in Holland. Amateurs now prefer (and the reason of it is obvious) the French editions to the Dutch *contrefaçons;* and even the Elzevir editions of French writers, though they are admirably printed, only hold a second place in their estimation.

The first original edition of the 'Fables' was printed in 1668 at Paris by Denis Thierry. It is a quarto volume, and has engravings by Chauveau, in a *naïf* style, and quite in harmony with the subject and with the spirit of La Fontaine. The 'Fables' were, in the same year, reprinted in a second original edition, in a smaller form, again with Chauveau's engraving. A collector ought to have the two volumes published in 1668, the volume published in 1671, and also the four volumes published in 1678–1679 by Denis Thierry and Barbin, which form the *complete* edition of La Fontaine's 'Fables.' The history of this last edition, which is the definitive text, is very complicated, as the volumes have all been reprinted with *cartons*—that is to say, interpolated pages; but these minutiæ must be studied in a descriptive catalogue. These modest volumes were put in the hands of children. One may imagine, therefore, how difficult it is to find them in perfect condition; but it is an agreeable sensation to see the immortal 'Fables' just as they came out of the shop of Barbin. Few books have been more often and more admirably illustrated than the 'Contes' and the 'Fables' of La Fontaine. Everybody has heard of the *fermiers-généraux* edition of the 'Contes,' which have the exquisitely delicate engravings of Eisen. The splendid edition of the 'Fables,' illustrated by the famous Oudry, is one of the finest books published in the eighteenth century. An amateur is proud to possess fine copies of these two works; still, if he cares for literature as much as for art, he must have also the modest little editions which gave pleasure to the first admirers of the "bonhomme," and which preserve something of his "bonhomie."

Among the rarest original editions are those of Perrault, the immortal author of the 'Histoires ou Contes du temps passé, avec des moralités,' because they were nearly all destroyed by the children of the seventeenth century. The original edition was that of Barbin in 1697. I have only seen it two or three times in my life. Each *conte* has a small vignette. This little volume contains: "La Belle au Bois Dormant," "Le petit Chaperon rouge," "Barbe-bleue," "Le Maistre Chat, ou le Chat Botté," "Cendrillon," "Riquet à la Houppe," "Le petit Poucet." "Peau d'Âne" and "Griselidis" appeared separately, and are equally rare. There was an edition of the 'Contes' in 1697, which has been sometimes taken for the original edition, and which is quite as rare. The widow Barbin published a new one in 1707, and Gosselin reprinted the 'Contes' in 1724. His edition is the third original edition, and is much esteemed, as the first two original editions are hardly to be found. The contemporaries of Perrault were fond of fairy-stories. Madame d'Aulnoy wrote some with much success, and with an extraordinary purity and charm of style. She dedicated her 'Contes de Fées' (Barbin, 1698) to the Princesse de Conti. The same Princess accepted also the dedication of the 'Contes de Fées' of Mme. de Murat (Barbin, 1698).

No work shows how interesting original editions can be for the student of literature better than the famous 'Gil Blas de Santillane,' by Lesage. This work may be considered to have made a revolution in novel-writing. Everybody reads it even now, which can be said of few novels: and it is curious to contrast its present popularity with the limited success which it met with at the beginning. 'Gil Blas' was issued in separate parts. The first two were published in 1715 in Paris; the third part did not come out till 1724, and the fourth till 1735. These dates show that the public was not very eager to follow 'Gil Blas' in his various adventures. Lesage was very much discouraged at the reception given to the first two parts, and he continued his novel without any enthusiasm. For a very long time bibliophilists were contented with a last collective edition which he revised in 1747, and which was published in 1747 by the "Libraires associés," but now they seek, and with much reason, the original editions which contain the parts published separately; and, in fact, the student of literature who cares about the greatest work of Lesage must have the four separate parts as well as the collective edition.

I have, perhaps, said enough to show that quest after original editions is not an idle pleasure, but even a serious and useful undertaking; and since there is a collector and a maniac in every man, especially when he has to divert his mind from some great trouble or some painful recollection, the mania for choice books is among the least frivolous. I recommend to the bibliophilists of America the little catalogue of Claudin, which contains the most exact descriptions of many original editions of Corneille, Descartes, Pascal, Bossuet, Molière, Racine, La Rochefoucauld, Boileau, Fénelon, Régnard, Bourdaloue, Massillon, etc.

Correspondence.

MOUNT DESERT AND ITS FREQUENTERS.

To the Editor of The Nation:

Sir: Your correspondent "A. R." has touched upon an evil of some magnitude at Mount Desert, but has, as I venture to think, somewhat misapprehended its cause. The course of the cottagers (of whom I may mention that I am not one) toward the public generally has been, with perhaps a single exception, most kind and friendly, often, as you evidently know, under tolerably severe trials. The fault lies really with the local government, the Selectmen, on whom it never seems to have dawned that they ought to do anything to make the place attractive. I do not suppose that there exists anywhere in the world a spot so frequented by strangers where so little effort has been made to render it pleasant for them.

For example: of all the roads leading out of the village, there is not one that has a side path of any sort outside the village limits; so that every one who wishes to walk must take the middle of a dusty road, full of vehicles often recklessly driven (the native buckboard men are in this respect far worse than the visitors), returning home covered with dust. Consequently almost no one walks, though the roads are very beautiful. A very few hundred dollars would put side paths on all the roads for two or three miles out.

Again, the eastern shore of the island, from the boat landing to Seal Cove, is one of the most beautiful in the world, but it is entirely inaccessible except at two or three points, where it can be reached by leaving the vehicle and proceeding some distance on foot. There is an urgent need for an ocean drive on its whole length. Such a drive would be of unsurpassed beauty, and, as a question of expense, would pay for itself ten times over in a few years. Nor need the expense be very heavy; the property which it would open would be very greatly increased in value, and might therefore properly bear a part of the cost of road construction. A road jury would no doubt take this view, which is, in fact, everywhere acted on. It would be difficult to exaggerate the influence that such an ocean drive would have on the prosperity of Bar Harbor.

The difficulty is not that people will not come here—the hotels are now all full—but that they come for so very short a time. Except for about three weeks, the hotels are almost empty. August is with us so oppressive that people will go anywhere for fresh and cool air, such as they find here. What is wanted is such attractions as will make the place a pleasant residence for a whole summer: pleasant walks in all directions, more roads, especially the eastern-shore drive just spoken of, and a shore drive from Hull's Cove to Salisbury Cove; more tidiness, better-watered streets, better horses, and stronger vehicles. Then visitors would find it pleasant to stay for months instead of weeks, and Bar Harbor would enter upon a long career of success and prosperity.

A Boarder.

Bar Harbor, August 13, 1883.

THE METHODIST CHURCH, SOUTH.

To the Editor of The Nation:

Sir: I have just read in the *Nation* of the 9th instant an editorial containing the following:

"Only about a year ago the mere proposal to send a fraternal message of greeting from the Methodist Church, South, assembled in convention at Atlanta, to the Methodist Church, North, also in convention in a Northern city, excited in the former body a discussion which continued for several days, and in which violent opposition was developed, on the ground that such a message would be a confession that the Southern Church had been wrong in upholding slavery and supporting secession. The proposition was finally carried, and the message was sent."

This is a mistake, and does great injustice to the M. E. Church, South. The first General Conference of the M. E. Church, South, which met at Petersburg, Va., in May, 1846, by a unanimous vote appointed the Rev. Dr. Lovick Pierce "to visit the General Conference of the M. E. Church to be held in Pittsburgh, May 1, 1848, to tender to that body the Christian regards and fraternal salutations of the General Conference of the M. E. Church, South." The Northern General Conference refused to receive Doctor Pierce in his official capacity. The Southern General Conference held in St. Louis in 1850 took the following action:

"*Resolved*, . . . That we cannot, under their act of rejection and refusal, renew our offer of fraternal relations and intercourse, but will at all times entertain any proposition coming from the M. E. Church to us, whether it be by written communication or by delegation, having for its object friendly relations, and predicated of the rights granted to us by the Plan of Separation adopted in New York, 1844."

Fraternal messengers from the M. E. Church, duly appointed, appeared for the first time before the General Conference of the M. E. Church, South, at Louisville, Ky., in 1874, and were kindly received. Fraternal delegates from the Southern Church were sent to the General Conferences of the M. E. Church at Baltimore in 1876, and at Cincinnati in 1880, and "violent opposition" was certainly not developed at

Nashville, Tenn., last year, when it was proposed to send delegates to the General Conference of the M. E. Church which will meet in 1884. Fraternity between the two Churches is now an established fact, and I feel safe in saying that opposition to it is felt by no representative of the M. E. Church, South. Feeling sure that you will correct the mistake inadvertently made, I am, yours, very respectfully,

JOHN W. SHIPP.

VANDERBILT UNIVERSITY, NASHVILLE, TENN., August 15, 1883.

THE POLITICAL PROSPECT IN OHIO.

TO THE EDITOR OF THE NATION :

SIR : This is a place first settled on the Western Reserve—the home of the Fords and Hitchcocks, one of whom was Governor, and another for many years Chief Justice, of Ohio. It is now as much a New England town, perhaps more, than any east of you. Among its people one finds a fair expression of the descendants of the genuine New Englanders of these eleven northeastern counties of the State upon current topics. It is the season of the annual reunions of the pioneers and of families—of unusual activities—and one meets men of all shades of opinion and from many places. The son of a pioneer, and widely acquainted, having taken some part in many political campaigns in Ohio, and a present visitor of two weeks, I offer you a word on the political outlook from this point.

The indications are most favorable for the election of Foraker. The Republican county and district conventions are held unusually early, and all the delegates attend ; action is harmonious and satisfactory. There are no local splits, secessions, and small quarrels ; and when you recall the fact that the country population of these counties is diminishing, while the ratio of representation is advancing, and that hence there is a frequent necessity of joining two counties for a representative in the State House, and many for a senator, the harmony of these counties shows a thoroughly healthy state of the Republican organization, and betokens a campaign of very unusual vigor and activity. The old county of Geauga (now Geauga and Lake) nominated G. H. Ford, son of the late Governor Seabury Ford, an able and experienced young man, for the House, while the same, with Ashtabula, Portage, and Summit, renominated Woolcott for the Senate. Ashtabula promises 4,000 majority. When she does nearly her best, the State is certain for 12,000 to 15,000 Republican majority.

Your observations of July 12 were especially true. The aspirations of the Democracy are bad, vicious. Its true men cannot trust it. Chase wanted to find "a new democracy," to evangelize the party, and had to leave it. As you stated, it debauched Thurman ; it will depress Pendleton, or slay him. It is essentially low, bad, depraved ; and in this is the utter hopelessness of good from it. The Republican party occupies a totally different position—the highest in the political history of the Republic. When much is exacted of a party, when it is held to the highest accountability and everything is expected of it, this shows that by some means it has acquired a high, the highest, position in the regards of the people. This is the status of the Republicans.

Coming over the Narrow-Gauge from Warren here, I had a conversation with a brakeman, a Republican, who last year voted with the Democrats.

"The Republicans disapp'inted me. They had most all the brains, an' the places—had done fust-rate ; but somehow they'd kinder fell off like, an' I thought I'd try the Democrats."

"What can the Democrats do for you—what do you expect from them ?"

"Wal, I d'n know as anythin'. I'm kinder tired o' the Republicans, so I thought I'd try the Democrats. I d'n know as they can do anything ; they never have ; but the Republicans has let things kinder run down, an', darn 'em, I'll show 'em."

The talk ran on to details. The idea was one which widely pervades the common mind, that the Republicans, with power, brains, position, the prestige of success, were to be held to a higher standard, a stricter account, or "darn 'em, we'll show 'em," as they did here last year. They know the Democrats, and don't trust them, and will not vote with them except when they want to "show the Republicans," or once in a long time. Like a man weary of lying in one position, they turn over for a change, as some men will.

The Republican party cannot be too often and too strongly impressed with its position before the masses, and the responsibility they unconsciously demand of its leaders in consequence. The criticism of the Republican campaign so far may be, that too much labor is wasted in assailing Hoadly. He presents a fair and broad mark, but there is other work for the Republicans.

A. G. R.

BURTON, GEAUGA CO., O., August 18, 1883.

Notes.

THE *English Illustrated Magazine*, to be issued simultaneously in London and New York by Macmillan & Co., will probably make its first appearance in October. It frankly enters the field against the class of American popular magazines which have invaded England with such signal success, both in respect to its literary contents and the quality of its engravings. It will also compete severely in price, being offered at the low rate of 20 cents a copy, or $2 a year postpaid. The first number, therefore, must be awaited with great curiosity.

The new edition of 'Boston Illustrated' (Houghton, Mifflin & Co.) appears, upon careful examination, to have been extensively revised and brought down to date, as may be seen under such heads as the Old State House, the Public Library, and the Music Hall. It would be well, in a future edition, to mention and copy verbatim the tablets erected beside the historical burial grounds, and to give a sketch-map of the park system now in course of development. A modern map of the city proper accompanies this volume, and shows the ancient shore-line.

We spoke lately in commendation of Mr. Henry J. Winser's Guide to the Yellowstone Park. The Messrs. Putnam now publish 'The Great Northwest: a Guide-book and Itinerary,' by the same author, which has been prepared with exceptional facilities and will at once become the standard *vade-mecum* of tourists. The introduction contains a summary account of the building of the Northern Pacific Railroad. The information in the successive chapters on the States, Territories, and places through which the road passes is noticeably direct and practical, made readable by literary extracts as well as by anecdotes, whose captions, by the way (*e. g.*, "Origin of Mother Goose," "Turning the Tables," "Wabasha's Logic," etc.), appear too much like the names of stations, being set in the same type and interspersed among them. The illustrations are fresh, and engraved from photographs, and there is a sufficient railroad map. An index will doubtless in time be added. We cite a single passage from the text: "The term Bad Lands . . . is a gross misnomer. It conveys the idea that the tract is wortbless for agricultural or stock-raising purposes. Nothing could be wider from the truth. The fact is, the soil possesses fertilizing properties in excess, and the luxuriant grasses which here flourish attract herbivorous game animals in large numbers."

A little more refinement would still improve Dr. Up de Graff's 'Camping in the Alleghanies,' first published in 1879 and now appearing in a second edition (Lippincott). Its timeliness is unimpaired, for it aims to prove that one need not go 1,000 miles from home to enjoy the benefits of wild wood life.

"The Classic Series" of Roberts Bros., Boston, includes in one volume Scott's "Lay of the Last Minstrel," "Marmion," and "Lady of the Lake." We have a convenient criterion of the editing of the last-named poem in Mr. Rolfe's recent labors, of which we spoke last week in connection with the Osgood edition. The time-honored errors he has detected are all here: in other words, nothing more has been done than to copy a predecessor, himself a copyist. The impression of the work in hand we find a little pale.

We cannot say much for the literary quality of Mr. Rufus Blanchard's 'History of Illinois' (New York: Chas. L. Woodward), but its value as a convenient summary would be considerable even without the historical map which it illustrates. The latter is cloth-mounted and drawn on a very generous scale, and has the distinction of being the second (perhaps in some repects the first) of its kind. An historical map of Pennsylvania was published a few years since, and we do not recall any other. On this of Illinois are delineated the routes of the early explorers Marquette and Joliet, La Salle; Indian trails; army marches; individual journeys; mail roads; the sites of forts and ferries, etc.; while the dates of formation of counties and settlement of towns and many other details are appropriately set down. On the margin we have census statistics and chronological tables ; in the latter the murder of Lovejoy is commemorated, and might well have been inscribed against Alton on the map. Mr. Blanchard's work is deserving of all praise, and ought to become a part of the educational apparatus of the common schools. Moreover, his example should lead to a like service being performed for other States.

The *Modern Age* (Buffalo) has completed its first volume (a very comely one, by the way), and has certainly succeeded in its endeavor to furnish agreeable light reading. Its translations from foreign languages have been a marked feature.

Dr. Coan's latest "Topics of the Time" (Putnams) groups five "Historical Studies"—England (Village Life in Norfolk), Italy (Siena), France (General Chanzy), etc.

No. 5 of the "Théâtre Contemporain" (Wm. R. Jenkins) contains Léon Gozlan's "La Pluie et le Beau Temps" and M. Legouvé's "Autour d'un Berceau." A little more care is desirable in the proof-reading of this useful series. An error like *le* for *la* (*pluie*) shocks one in capitals upon the title-page.

Mr. Sidney S. Rider's *Book Notes for the Week* (Providence) gratifies both the commercial and the antiquarian prochivities of its editor and publisher, and has a more than transient worth. The 'Catalogue of American Poetry,' issued by Mr. Wm. T. Tibbitts, of the same city, is marketable on its own account along with the more or less rare and curious books it offers for sale.

The thirty-first annual report of the Trustees of the Boston Public Library is remarkable for containing two special reports or *aperçus*—the one, by Mr. T. W. Higginson, on the Theodore Parker collection; the other, by Mr. Thomas S. Perry, on the French books in the library. Mr.

Higginson, after describing its chief features, shows that three-fourths, if not nine-tenths, of the Parker collection is in foreign languages; that very few contain the owner's notes and memoranda, such as do being in the line of American history, and obviously having been used in the preparation of 'Historic Americans,' of which, we are told, Mr. F. B. Sanborn is about to prepare an enlarged edition; and that eleven volumes, collected and made up of pamphlets, magazines, original letters, etc., by Miss Matilda Goddard, form a very important aid to a personal understanding of the distinguished minister. These general statements of the strong points of the library or of its departments are even better for the public at large than catalogues would be. Doubtless we shall some day see the principle carried out in a comprehensive view o all our great libraries, as a sort of students' guide. For instance, how else will this item in the present report be remembered (p. 33)?—"Received . . . a collection of more than a thousand portraits and engravings . . . to illustrate Carlyle's 'History of the French Revolution.'"

In the current number of the *Fortnightly Review* Mr. Francis Galton gives a brief sketch of a plan he has conceived for obtaining medical family registers. He offers to award prizes amounting in all to £500 to the successful compilers of family statistics embracing four generations and giving all obtainable details in regard to race, conditions of life, form and feature, health, vigor, sense perception, artistic capacities, intellect, character, etc. Such registers, he thinks, would prove of incalculable benefit for anthropological and medical purposes. They would discover the diseases that are hereditarily interchangeable, and the effects produced by the hereditary union of different varieties of disease-tendencies; they would throw light on the physiological causes of the rise and decay of families and of races; and they would give a physician useful hints in regard to what his patients may and what they may not do. The difficulty lying in the fact that men and women naturally shrink from having their family infirmities recorded, Mr. Galton proposes to overcome by an ingenious plan, for the details of which, as well as for the conditions on which the prizes are to be awarded, we must refer to the article itself.

In the *Antiquary* for June and July Mr. C. F. Keary continues his interesting series of papers upon Coins, in these two numbers treating of "the Coinage of the British Islands." The second paper begins with the reign of Henry VII., in more than one respect an important dividing line in English history. With this sovereign, he says, "portraits began on English coins"; while his successor "was the first of English monarchs who debased the sterling fineness of the coin." The June number contains two other articles of special interest in constitutional history. Rev. Wentworth Webster begins a series upon "Simon de Montfort and the English Parliament," in which he reviews Montfort's administration in Gascony, and undertakes to show that his acts in the contest against the King of England were "almost all framed after the model of his dealings with the courts and with the municipalities of Gascony." Another series is begun by Mr. G. Laurence Gomme, entitled "Notes on some Rebellions in English History"; this first paper is upon Stephen of Blois. This successful rebellion, as it may be called, illustrates two important principles. In the first place, the election of Stephen was by the people of London, acting as it were for the people of England. A more interesting point is in the principle that a daughter might transmit a claim to inheritance, although she could not herself inherit—the rule asserted by Edward III. in claiming the crown of France. It would take too long to discuss this principle; it is enough that it rests upon very archaic usages, discussed by Sir Henry Maine in 'Early Law and Custom' (p 91), to which Mr. Gomme refers. The article is illustrated by frequent reference to Maine, Freeman, and Green.

The thirty-third volume of *L'Art* (J. W. Bouton) possesses more than ordinary interest. We place in the first line of its articles four by Henri Delaborde, on book-illustration in Florence, Venice, Modena, and Bologna, in the fifteenth and sixteenth centuries, and on engraving in Milan in the same period. These are accompanied by fac-similes of early cuts on a larger scale, and may well be chapters of a future book. The chief book review is of Perrot and Chipiez's admirable 'Origin of Art in Antiquity,' borrowing many of the illustrations from the work itself. Among the full-page etchings, the portrait of the painter Chardin, the friend of Diderot, and the conjectural portrait by Jean de Calcar of Andrew Vesalius (from the Brussels Gallery) deserve mention, along with the winter scene after Philip Wouverman in the Demidoff gallery; but none surpasses Mlle. Lucie Contour's masterly etching of E. Renard's "Grandmother" in the Luxembourg. Another lady, Mlle. Louise Abbema, who had the pretty fancy of portraying actresses of the Comédie-Française as types of the four seasons, is shown in two of these essays—Mlle. Samary ("Summer"), and Mlle. Barretta ("Spring"). Finally, let us not overlook the fine architectural designs drawn from the Château de Fleurigny; the *orfèvrerie* of Froment Meurice; and the Pergamos fragments, with the letterpress appertaining thereto

L. W. Schmidt, 7 Barclay Street, has received the photographically illustrated catalogue of the remarkable art collection of the late Chevalier Carlo Morbio, of Milan, to be sold in Munich on September 10. It embraces Egyptian, Etruscan, Roman, and early Christian antiquities, in gold, bronze, and glass, and a great many precious pieces of Middle Age and modern manufacture, including some fine articles of furniture.

Any Oriental numismatist desiring to acquire a collection of Chinese and Corean coins, probably the most complete in existence, numbering several thousands, to be sold at the bare cost of collecting, will, on sending his name to W. J. Stillman, Florence, Italy, be put in direct communication with the proprietor.

Every one knows how difficult it often is to obtain any general view of a contemporary literature, and what tiresome researches in periodicals and biographical dictionaries are necessary, even when these take account of living authors. We can commend to students, in spite of its shortcomings, Roux's history of the contemporary Italian literature, which forms part of Charpentier's 'Histoire de la Littérature contemporaine dans les différents états de l'Europe.' The part devoted to Italy is comprised in three volumes, the first embracing the period from the beginning of the century to 1859, the second the literature of the "régime unitaire," 1859-1874, and the third the period from 1873-1883. These volumes were published in 1870, 1874, 1883 respectively, the second alone belonging to the Charpentier collection. The second volume contains a very valuable official list of the papers and reviews published in the kingdom of Italy in 1873, which amount to the large number of 805. An appendix to the third volume mentions the most important changes since 1873. The last two volumes are provided with good indexes.

It is announced that Mr. Worthington C. Ford will succeed the late Mr. R. L. Dugdale as Secretary of the Society for Political Education, whose office is at 4 Morton Street, New York.

Nothing shows better the singularity of Newport as a watering-place than the institution of a local Natural History Society, with Prof. Raphael Pumpelly for President, Prof. Alexander Agassiz for first Vice-President, Mr. George C. Mason for Corresponding Secretary, Lieut. Wm. McCarty Little for Librarian, Dr. J. J. Mason for Curator, etc. Its object is to promote the study of science among residents and visitors, to investigate the geology, botany, and zoölogy of the neighboring lands and waters, to form a museum and library, and establish an aquarium and zoölogical garden. The constitution provides for the Society's dissolution, but we may hope that this contingency will not arise. The annual fee is but $3, and there is no other qualification for membership. The prime object of the museum will be to illustrate the local rocks, fauna, and flora. Field meetings during the summer are contemplated. The Society was incorporated in May last. Contributions to the library are already solicited.

—President Hinsdale has well edited the Works of the late President Garfield, which J. R. Osgood & Co. publish in two handsome octavo volumes. They anticipate the biography which is to follow, yet leave untouched the materials of every kind that antedate the year 1864, when Garfield's Congressional career began, or, more accurately, began to be manifested in speeches on public questions. They also take no account of the minor speeches made between his nomination at Chicago and his inauguration. But in these 1,500 pages are certainly included his highest intellectual productions and his most useful contributions to American legislation. They all have the note of preparation, as opposed to the spontaneity of such a stored and disciplined mind, say, as John Quincy Adams's, and confirm the editor's remark (p. xxi.) in regard to currency, banking, taxation, appropriations, resumption, etc., "that when he [Garfield] entered Congress, he had given no systematic study to any of these subjects." His speeches relating to them are therefore remarkable evidences of diligent and conscientious study, only too rare in Congress, and which, in the case of the census, for example, actually made him almost the only member capable of becoming the advocate and exponent of the improved system which Congress reluctantly adopted. Of what we may call the natural Garfield there is a group of speeches, here found distributed chronologically, which we believe are most truly representative. We refer to the personal tributes, brief or long and elaborate, paid to deceased colleagues and friends and public characters. Such performances are indeed a severe test of the speaker's tact, discrimination, fidelity to moral standards, thoughtfulness, and originality. We do not think these fall below the average of their kind; perhaps they do not greatly rise above it.

—The *Atlantic* for September contains a very amusing criticism on a new writer who has recently set up as a critic of the poets in their treatment of birds. He has had a great run in the *Contemporary*, *Harper's*, and the *Atlantic* itself, and writes with such an assumption of knowledge as to the different species of birds and their career in verse as to make the discovery that his articles have been an elaborate imposture upon the public, and contain the most overwhelming proofs of profound ignorance, combined with the most wanton recklessness, rather funny. It is Harriet C. W. Stanton who comes forward and says all this, and seems to prove it too. The object of our magazinist was to show that the British poets were a set of noodles, who knew little or nothing about birds and had no sympathy with them, and that it was reserved for the poets of

this country to use birds in poetry with force, intelligence, and feeling. His critic, who is very self-restrained and temperate, does not undertake to deny that the fact may be so, but she insists very fairly that any one who makes such a charge ought himself to have "a knowledge of ornithology sufficient to enable him to approach accuracy in the statement of scientific facts, great familiarity with the poets, and a standard of criticism which should be clearly defined in his own mind and which he should be able to make fairly intelligible to his readers." No ornithologico-poetical critic can fairly object to these demands, yet the present writer seems to be able to show that the writer whose work she carefully goes over has not a single one of the qualifications in question, or, in other words, no qualification whatever but that facility of expression which is part of the stock-in-trade of most impostors, literary and other. He coolly begins, for instance, with the cautious statement, well calculated to entrap the unornithological magazine publisher and reader, that there are "known to science more than three thousand species of birds." The joke of this lies in the fact, it seems, that Gray's Hand-List, published in 1871, and accessible, we presume, to any one desirous of informing himself, contains the names of over eleven thousand birds "known to science," while other authorities give over three thousand in the "neotropical" region alone. Of the three thousand of which he admits the existence, our author gives a third to Great Britain; but, alas! another handbook, published in 1871, gives Great Britain only 325. These two remarkable statements are followed by a "complete" list of all the British birds found in the eighty poets, "carefully examined" by our expert. This list begins with the albatross, which perhaps might have been a British bird, but is not. From this beginning, the sequel may be inferred. The articles, our critic insists, abound in flat contradictions and absurd criticism, showing that the critic did not examine his eighty poets carefully, and knows little or nothing about birds. For all this she gives chapter and verse, and makes an article to which he will find it difficult to reply, unless, indeed, he should claim that he is by trade a humorist, and that this is one of his little jokes. But it is dangerous to be jocular in this way.

—*Harper's* has several illustrated articles that are worth looking at, particularly one in which Mr. Montgomery Schuyler belabors Queen Anne architecture in a way that would make the good old Queen blush for shame, were she alive to do it, and handles the New York house of this and all other periods without gloves. The subject is one of appalling proportions, and the wonder still grows why the main feature of the New York house, no matter whether it be Greek, or Gothic, or Queen Anne, or simply New York, should always be ugliness. Bostonians do not make their streets as hideous as we do, and even the New York householder builds himself a nice-looking house in the country, and we have always thought that one reason why he keeps his family, or his family keep him, every year longer and longer in the country is the recollection of the hideous building in which the winter has to be spent. Mr. W. R. Grace, late Mayor of New York, contributes an article on the government of cities, from which we take the following extract, as it relates to a subject on which every ex-Mayor is qualified to speak from sad experience, and is also of great immediate practical importance:

"The first step in the proper direction has already been taken in this State, but only after long delay and much opposition. In 1881 a resolution was offered in the Assembly at Albany proposing an amendment to Section 9, Article VIII., of the Constitution, guaranteeing to cities the right of municipal self-government, republican in form, and restricting the power of the Legislature to the enactment of general laws in reference thereto. It prescribes that it shall be the duty of the Legislature to provide for the organization of cities and incorporated villages, and to restrict their power of taxation, etc., by the passage of general laws only, applicable alike to all incorporated cities, and that the Legislature shall not pass any special or local bill affecting the municipal government of a city. It also provides that 'no city shall increase its permanent debt, or raise the rate of taxation above that prevailing at the time of the adoption of the amendment, or undertake new public works, or direct public funds into new channels of expenditure, or issue its bonds, other than revenue bonds, until the act authorizing the same shall have been published for at least three months, and thereafter submitted to the people of the city at a general election, and received a majority of all the votes cast for and against it at such election.' The resolution failed of passage until 1882, when it passed both the Senate and the Assembly. It will now come up for a second passage by the Legislature about to be elected, before it can be submitted to the people of the State. Whatever objections may be made to the latter part of the proposed amendment, it is certain that its first part is the longest and most practical stride which has ever been taken in this State toward securing the liberties of localities and making a recurrence of past and a continuance of present evils impossible."

The first thing to be done, Mr. Grace insists, is to free the cities from the tyranny of the Legislature; then, and then only, will charter reform be possible.

—The *Rundschau* for August contains two short stories by Wildenbruch and the conclusion of a novelette by Kielland. No less than thirty-six pages are devoted to an article by C. Justi on the "Spanish Bridal Tour of the Prince of Wales in 1623," full of interesting details. An article by Prof. von Urlichs, on "Schiller and Fichte," contains some fragments of letters which enable the writer to give a more complete account than his predecessors of a curious episode in the life of the two Jena professors. Schiller, as editor of the *Horen*, had made arrangements with Fichte for an article on "Spirit and Letter in Philosophy." Schiller, however, did not approve of the article and refused it, telling Fichte in very plain German that he was neither satisfied with its form nor its contents, that it lacked definiteness and clearness, and was guilty of the fault of passing from the most abstruse generalizations to tirades. Fichte's answer, elicited by this severe criticism, contains in a few lines an admirable criticism of the difference between the two thinkers, not to his own advantage, it must be confessed. "You generally adopt the analytic method," Fichte says, "the method of a strict system; and you base your popularity on your inexhaustible supply of images, which you almost invariably make use of in place of abstract notions. You chain the imagination, which can only be free, and wish to compel it to think. For my part, I am obliged to translate everything you write before I can understand you, and others are in the same predicament. Your philosophical writings have been admired and wondered at, but so far as I can find out they have been less read and not at all understood." Prof. L. Sohncke, of Jena, writes on the aims of modern physical science. The four principal aims and problems, he thinks, are the working out of the consequences of the law of the conservation of energy; the further study of spectrum analysis; the solution of the fundamental problems of molecular physics; and the explanation of electrical phenomena. Theoretically, the greatest advance of recent time lies in the abandonment of the notion of six imponderable "fluida," which have been reduced to three, while there is reason to believe that two of the remaining ones—positive and negative electricity—will be ultimately identified with ether, while, inversely, the vibrations of light may be conceived as small electric currents. A. Lammers discusses the new temperance movement in Germany, without seeming to be able to advance any definite proposals or conclusions. The new movement has so far met with passive rather than active opposition, the public indifference being largely due to the fact that a similar movement, started thirty years ago, collapsed spontaneously. It is the opinion of some physicians and managers of charitable institutions that drunkenness is on the increase, but this does not tally with the fact that a drunken person on the streets in German cities is a much rarer sight than formerly. The question, how far drunkenness is responsible for poverty, is to be scientifically considered at the Congress of German Overseers of the Poor, which is to meet at Dresden in the autumn.

—"Can English Law Be Taught at the Universities?" is the title of an inaugural lecture delivered at All Souls' College, Oxford, by Mr. A. V. Dicey, whose name needs no introduction to our own readers, and is familiar to the profession on both sides of the Atlantic. He has recently been appointed Vinerian Professor of English Law at Oxford, which, if we remember right, was the chair from which Blackstone a century ago delivered the lectures that form his Commentaries. It is hardly necessary to say that Mr. Dicey answers the question in the affirmative, and gives good reasons for his belief (largely drawn from the examples afforded by the successful law schools of this country), that law may be learned at a university, and that, without some systematic instruction in legal principles, the law is rarely, if ever, more than half learned, even in the course of the most active practice. Here the old theory that law is something that can only be acquired in an office has been long exploded. In fact, what will most surprise American readers of Mr. Dicey's lecture—and it well deserves reading—is the backward condition of English lega education which it reveals. There has been of recent years so much talk about the Inns of Court and legal examinations that the echoes of it produced an impression that a great deal in the way of educational reform had been accomplished: but Mr. Dicey is able to make the statement that "of direct instruction or tuition English lawyers have, till within the last twenty-five years, received nothing whatever, and even now the lectures which are delivered by distinguished professors in the hall of the Temple or of Lincoln's Inn are the ornament rather than any essential part of legal education. Knowledge of law is still, as it has been for centuries, acquired by actual practice in the courts, or by the imitative practice miscalled 'reading' in Chambers." Moreover, the whole bar is so wedded to superstition on the subject that Mr. Dicey believes that, in the high noon of the enlightened age in which we live, if the question could be submitted in the form of a "case" to a body of eminent counsel, there is no doubt that their answer would be that English law cannot and ought not to be taught at the universities. There are so many points at which the American bar feels the profession here to be a good deal below the level of the profession in England, that it is a satisfaction to reflect that in the opportunities of obtaining a good legal education we long ago took the lead, and that American lawyers have in the Harvard and Yale and Columbia Law Schools a set of institutions which are fair subjects for boasting. Among the class of men who go through college in this country there are hardly any who are so ignorant as to imagine that the law can be best learned by practice, without any theoretical preparation.

With us the trouble is not with the universities, but with the State examinations, which are worthless as a means of keeping out uneducated lawyers, and the result is that with some of the best law schools in the world, we have a bar the level of whose general acquirements is at least not higher than that of the profession in England. The proportion of lawyers who go through the schools with us is very small in comparison with the whole number of the profession, and in the requirements for admission preparatory study in a school generally counts only as so much time devoted to what in England is called "reading"—*i. e.*, sitting in an office and acquiring law chiefly by absorption through the pores of the skin—would do. Young men who get a medical education by watching druggists put up prescriptions, labor all their lives under a disagreeable suspicion of being quacks; and it would be a great thing for the law, both in England and America, if there was the same feeling about the rule of thumb in the preparation for the delicate work of assisting in the administration of justice.

—A curious case has just been decided in the French courts. M. Mario Uchard, the novelist, saw in M. Sardou's play of "Odette" an imitation of his own play "La Fiammina," and he brought suit against the dramatist for literary theft, with the result that M. Sardou has been cleared of the charge. A year ago M. Uchard published his statement in a pamphlet, 'Un Dossier: "La Fiammina" contre "Odette."' M. Sardou prepared a counter-statement, which he published at the time of the trial, 'Mes Plagiats: Réplique à Mario Uchard' (Paris: Librairie Universelle; New York: F. W. Christern). M Sardou is almost as vigorous and as pointed in his memoir as was his predecessor, Beaumarchais, and we imagine that M. Uchard has found this pamphlet very interesting reading. Such it certainly is to all who are familiar with the more modern French drama. Not content with demolishing M. Uchard, and with proving plainly that he owes him nothing, while the indebtedness is probably on the other side, M. Sardou takes occasion to meet squarely the charge of plagiarism brought against many of his works. In this he succeeds not quite so well, although he gives many details as to the characteristic origins of certain of his plays. For instance, "Les Pattes de Mouche," known to us as the "Scrap of Paper," was suggested to him by a half-burnt fragment of a letter with which he lighted his cigar, and he is indebted to Poe, not for the main suggestion, but only for the device of concealing the letter well in sight. "Fédora," again, is based on an episode of Spanish history, for which M. Sardou gives chapter and verse. It is with some surprise that we learn that this sombre tale of Russian intrigue was at first only a plot for an *opéra comique*. But although M. Sardou fences well, he has to stand on the defensive always; and he confesses the obligation to Poe, secondary as it was, for the "Pattes de Mouche," and to an anonymous tale for the chief situation of "Nos Intimes," and to Diderot for "Fernande," and to Charles de Bernard for "Les Pommes du Voisin," thus confirming the general belief that his strength is more in extreme ingenuity of construction than in originality of invention.

—It has been a standing puzzle to antiquaries how the great stones of Avebury and Stonehenge were put into their places. A nation that could command the ingenious mechanical contrivances by which the Egyptians erected their great temples and obelisks and pyramids, would have been able to shape and polish and carve its megaliths better than the pillars at Stonehenge. The *Builder* makes a contribution to the solution of the difficulty by bringing it into connection with the reported discovery in the Pas de Calais of the fossil remains of a race of giants. Muscular strength increases very fast in proportion to height. If the pre-Adamite giants were seven feet high, they would be two and a half times as strong as a race that was five feet four inches high on the average. Such a powerful race could and would delight to build with rocks which their puny successors could not even overthrow. Their existence in geological periods is by no means sure; the very great age of the so-called druidical and the so-called Pelasgic monuments is contested. But the half-proved suppositions confirm one another, and the fractions of certainty come much nearer making two assured facts than the laws of arithmetic would allow. The giants will explain the position of the monoliths; the existence of the enormous buildings implies a race of extraordinarily powerful builders.

MAINE'S EARLY LAW AND CUSTOM.—I.

Dissertations on Early Law and Custom. Chiefly selected from Lectures delivered at Oxford. By Sir Henry Sumner Maine. London: John Murray. 1883.

TWENTY-TWO years have passed since Sir Henry Maine published his 'Ancient Law.' His "chief object" was then "to indicate some of the earliest ideas of mankind as they are reflected in ancient law, and to point out the relation of these ideas to modern thought." This aim he has pursued for nearly a quarter of a century, and whoever studies English literature, or watches the current of contemporary thought, must feel that Maine has more completely than any living writer attained his end. He has turned the mind of English readers, as it never has been turned before, toward the earliest ideas of mankind; he has made them all see that these ideas are reflected in 'Ancient Law'; he has convinced even the dullest of students that such early ideas have a very close relation to modern thought. No doubt the time has been favorable to the success of our author's labors: he has sprung into the current and swum with it. But to discern the line of speculation which suits the age, and which will be fruitful of results, is itself no trifling achievement. The want of such insight has rendered the toil of Buckle utterly futile, and has struck with sterility a good deal of the work of John Mill. Moreover, a man may pursue the right direction in speculation and yet be unable really to further the thought of the world: he may be deficient in freshness of intellect, he may lack the power to impress his ideas on his generation. When a writer produces such an effect on the men of his time as has been produced by Maine, it becomes a subject of legitimate and interesting inquiry to consider what are the special gifts by which his success has been accomplished. 'Early Law and Custom' is a book full of interest from its specific contents. It contains chapters as good and suggestive in their way as the best parts of 'Ancient Law,' and it is hardly possible to give higher praise to the last of Maine's writings than to assert that it may be compared, without disadvantage, with the earliest and best-known expression of his ideas. But the most interesting point in 'Early Law and Custom' is not any one of the theories which it contains, but the light which it throws upon the genius of its author. From a candid and intelligent study of its pages a critic can discern in part what are the qualities to which Maine owes his brilliant success.

To read 'Early Law and Custom' (and the same remark applies emphatically to 'Ancient Law') is like looking of a summer's morning out upon an open landscape. The observer is charmed with a mixed sense of expanse, of light, and of serenity. Of all the qualities which have enabled Maine to fascinate the imagination of his countrymen, none has served him so well as the capacity for seeing, and making others see, the marked outlines, the wide bearings, the infinite interest of legal speculation. Englishmen had been accustomed to think of law as a dry, technical pursuit, of little interest except to persons who wish to succeed at the bar. Historians till very recent times had (as we have often pointed out) overlooked or forgotten the close connection between the legal and the political development of the nation. The one class of thinkers who had made law a subject of speculation had both neglected and even discouraged the historical side of their topic. Till Maine opened a new train of ideas to the English world, law was considered either as a branch of technical training, or, by the school who followed in the steps of Bentham or Austin, as a portion of applied logic. A sentence which we have already quoted, from the preface to the first edition of Maine's first work, struck a new note. The notion "that the ideas of mankind" were "reflected in law," the conception of the "relation of early legal ideas to modern thought," were themselves new thoughts to the mass of even the educated public. They were in fact the expression of a new, broad, and general view, which fascinated readers by its very expansiveness. Look through the headings to the chapters either of Maine's earliest or of his latest book, and the very names display his aptitude for dealing with the general aspects of legal history. "Ancient Codes," "Legal Fictions," "Primitive Society and Ancient Law," "Religion and Law," "The King in his relation to Early Justice," "The Decay of Feudal Property in France and in England"—each of these titles and a dozen more is itself suggestive of new inquiries and of new ways of regarding law, history, and philosophy.

The capacity for taking in the various aspects of a large topic, of which these titles are, so to speak, the accidental sign, is not of itself the same thing as originality; and most of the actual facts laid before the reader in Maine's 'Ancient Law,' though new to the generality of English lawyers (who were twenty years ago profoundly ignorant of any law but their own), might have been gathered from foreign authors or from Roman law. The nature of customary law, the extent and influence of the *patria potestas*, the mode in which the Prætors had moulded the civil law of Rome in accordance with notions of equity, the growth of the ideas connoted by the term 'law of nature,' and the influence which, under different forms, the conception or fiction of a law of nature had exerted in different ages, were matters about which, in 1860, Englishmen might, if they had chosen, have obtained much information (though in matter of fact they did not obtain it) from foreign writers, without waiting for the appearance of Maine's 'Ancient Law.' But the fact that many of Maine's ideas must have been the result of studies which, owing to his influence, are far more usual now than they were when he trained himself as a jurist, does not in any way detract from the true preëminence of our author. This lies not so much in the exposition of ideas in themselves peculiar to himself, as in the breadth of view that enables him to bring together notions which, while scattered and isolated, failed to produce any adequate effect, even among those who knew of their existence, and which, until combined together, could not arrest the attention even of thoughtful and educated men. Neither Mill nor Grote was a man of ordinary type; each of them sought to catch sight of all new truth; each of them had come under the influence of Austin, yet neither of them obtained even a glimpse of the discoveries to be made by the student of early law.

The width of the field, moreover, which Maine is able to take in at one glance is the source of one quality which has a special charm for intelligent readers: he possesses beyond any other author whom we can mention the art of bringing together ideas which seem to ordinary minds to be unconnected, and which yet, when our teacher has combined them, appear to have an intimate connection. What, for instance, is more full of interest than the parallel traced in 'Ancient Law' between the equity of the Prætor and the very different equity administered by the Court of Chancery? or what is more full of real enlightenment than the comparison, constantly suggested by Maine, between the growth of the law of Rome and the development of the law of England? These unexpected approximations of things which, but for the teacher's aid, we should have supposed to have nothing in common, have sometimes almost the character of wit.

"Perhaps there are few things which at first sight seem to have a more distant connection with one another than the customs of Primogeniture and Borough English and the Scriptural parable of the Prodigal Son. Yet precisely the same group of usages lies at the root of the institution and gives its point to the story. The division of the family property does not wait for the father's death. The son who wishes to leave the family home takes his share with him, and goes abroad to add to it or waste it. The son who remains at home continues under *patria potestas*, serving his father and never transgressing his commandments, but entitled at his death to the entire remnant of his property. 'Son, thou art ever with me, and all that I have is thine,' says the father in the parable, and this is precisely the foundation of the rule of ancient law. Which, indeed, shall be the home staying son is a point on which there has been much diversity of usage. In the Scriptural example, it is the eldest son."

Here, indeed, we have a brilliant specimen of what may fairly be termed the wit of generalization. But candor compels the admission that the passage we have cited, if it displays the brilliancy, also betrays the weak side of our author's genius. He takes in so wide a view that one doubts whether he does not occasionally bring into one range of ideas notions between which there is no real connection. The brilliant suggestion that the well-known parable contains a reference to Jewish law and custom, may be the result either of such a flash of insight as is sometimes granted to thinkers whose thoughts and imagination have been long turned to one favorite topic, or of actual knowledge which Sir Henry Maine does not communicate to his pupils. But, so far as these pupils are concerned, the suggestion of their teacher remains neither more nor less than an ingenious hypothesis. What is needed is to show from Jewish law the existence of some such rule of inheritance as Maine's comment on the parable assumes to have been in force. It is hardly conceivable that, if his view be correct, it is not capable of confirmation. But if, as we are perfectly willing to believe, study of the legal ideas of the Jews in the time of Christ would show that Hebrew lawyers then knew of customs resembling Borough English, it is to be deeply regretted that the proofs of a remarkable fact are not laid before the readers of 'Early Law and Custom.' We dwell upon this point because the case we have cited illustrates the one great defect in our author's speculations. Hypotheses which are full of possible instruction are often left by him unverified and therefore unestablished. This is provoking to admirers who are more than inclined to believe that research would generally confirm, as it in many cases has confirmed, the theories propounded in 'Ancient Law,' and the volumes which have followed it. But it may be well doubted whether the somewhat indefinite line which in all Maine's works separates ascertained fact from probable and always ingenious conjecture, has not rather increased than lessened the influence of his writings. A wide and striking view is none the less impressive because of a certain vagueness about its distant outlines.

For if our author's theories are infected with a certain vagueness arising from the very boldness of his conjectures, no reader of Maine's writings has ever reason to complain of obscurity: they are full of light "It was not," he writes, "part of my object to determine the absolute origin of human society. I have written very few pages which have any bearing on the subject, and I must confess a certain distaste for inquiries which, when I have attempted to push them far, have always landed me in mudbanks and fog." This is one of the few statements as to personal feeling or disposition to be found in the pages of a writer little given to obtrude his personality upon his readers. No one can doubt its absolute truth. An abhorrence of intellectual "mudbanks and fog" is exactly the quality which is suggested by every line that he has written. It is, we may add, a quality as rare as it is valuable among thinkers who delight in the captivating pursuit of bold theories. There are authors enough who have mistaken fogs of their own raising for light which was perplexing only because of its dazzling brightness, and have been prepared to declare any mudbank to be a new land of promise if it happened to be a mudbank discovered by themselves.

But width of view and lucidity of style have scarcely conduced more to the impressiveness of Maine's writings than a quality hard to define, but which may be described as intellectual serenity or suavity. The topics in which he has been engaged are full of controversy. Deal with the origin of society, with the early ideas of mankind, with the nature of law, and the like, and you at once enter a field where at every step you meet a disputant, and (truth compels us to add) in general an angry disputant. Why, indeed, purely speculative inquiries should excite hot anger among men who ought to be rivals only in their eagerness to arrive at truth, is a question well worthy the consideration of moral philosophers. But that it is difficult indeed for any one to engage in these inquiries, and yet to preserve a philosophic calm, is proved to any one who wants proof by even a slight acquaintance with literature. That, however, the dignified urbanity of a philosophic inquirer can be maintained even by one engaged in investigating the early habits and institutions of mankind, is convincingly shown by the whole tenor of our author's works. His writings are from their nature controversial, but never did any man preserve a tone less provocative of dispute. In this he is unlike the leading writers of our day. Sir James Stephen, Mr. Freeman, and Mr. Froude are as unlike each other as it is possible for three men to be who are all persons of very marked individuality; yet they have each this in common, that they display throughout their writings a tone of defiance and self-assertion. None of them would dream of avoiding a fight; each of them would perhaps go a little out of his way to seek a fight. The author of 'Early Law and Custom' deals with opposition and with opponents in a manner quite foreign to any of these eminent intellectual athletes. He provokes no combat; he states and expounds his views, and his very statement and exposition become their best defence.

Nor is his calmness the apathetic indifference of a man who avoids discussion. He shows in every page he writes his knowledge that his theories may meet with legitimate and fair opposition. To the thinkers whose writings confirm or extend his own conclusions, such as Mr. Pollock or Sir Alfred Lyall, he gives a courteous welcome. To theorists such as Mr. Morgan or Mr. McLennan, who would undoubtedly have ranged themselves in opposition to many of his views, he displays the courtesy of an opponent who acknowledges that he and his critics are laboring in the same field of inquiry and may learn much from one another. "I think it useful to remark that the point at issue seems to me capable of being more simply stated than it usually is by these writers and their followers." This is the sort of gentle correction of statements to be treated with the utmost respect, by which Maine confutes by simple restatement the theories of "those two most original inquirers," McLennan and Morgan. He offers a sort of compromise to thinkers whom he refuses to regard as in reality opponents. The whole tone of his language suggests that, though he is unwilling to "take sides" with Morgan or with McLennan, he accepts their views as partial solutions of problems that do not admit of any uniform answer, and meanwhile makes the telling if quiet remark that "the physiological elements of the Family must always have been present," and that "the fact alleged [namely, that descent was at one time traced through the mother] is not a fact of human nature, but a fact of human knowledge." The conclusion, in short, to which the reader is inevitably conducted is that the language used by Morgan and McLennan does "lead to a good deal of confusion of thought." Their views are displaced rather than confuted, and Sir Henry Maine's readers are convinced not only of the soundness of his own theories, but also of the intellectual calmness which marks his judgment.

The urbane critic achieves something more by his serenity than the mere avoidance of irritating friction against the self-love of rivals. He conciliates his readers. There is, no doubt, a certain charm in the knock-down, cut-and-thrust style of controversy, but an author who treats his opponents like fools whose errors deserve remorseless exposure, is almost certain to overreach his object. His blows are apt to fall on his readers. His pupils are irritated, they take sides against their teacher, they at best look at him as one subject to the human frailties of passion or impatience. Maine avoids all the disadvantages which in the long run detract from the reputation of the literary polemic. He soothes, he conciliates, he gains over his audience. They are charmed with their teacher's suavity, they trust a philosopher so firmly established in the truth that he cannot be ruffled by contradiction; they above all admire a serenity of wisdom which seems somehow to belong as much to the intelligent reader himself as to his instructor.

THE TWO VAN ARTEVELDES.

James and Philip van Arteveld. Two Episodes in the History of the Fourteenth Century. By James Hutton. Harper & Brothers. 1883.

James and Philip van Artevelde. By W. J. Ashley, B.A., late Scholar of Balliol College, Oxford. Being the Lothian Prize Essay for 1882. London and New York: Macmillan & Co. 1883.

AFTER Froissart, the great chronicler of the time, the character and career of James van Artevelde have down to our time generally been described in the following manner. James (or Jacob), a native of Ghent, of low birth but great ability, acquired wealth as a brewer, and by the shrewd use of it, and still more by his fascinating eloquence, won a leading influence over his fellow-citizens Revolting against their feudal lord, the Count of Flanders, and his over-lord, the King of France, they made him the chief captain of their forces. Equally audacious and sel-

fish, he surrounded himself with a body-guard of armed ruffians, proscribed the nobility, assassinated his opponents, and used the revenues of Ghent and her allies, the other great communes of Flanders, for his own gratification. He formed an alliance with Edward III. of England, drove the Count of Flanders into France, and induced the Flemings to acknowledge Edward as King of France; but when he formed the project of making the Black Prince Governor of Flanders, the people of Ghent rose against him, and he was slain in the summer of 1345. His son Philip, who, from the tranquil retirement of an obscure life, was, during the siege of the city by the younger Count in 1381, suddenly called to the captaincy by the acclamation of the guilds, and defeated and captured the Count, but in the following year succumbed and fell in the battle of Roosebeke, fighting against the French, has been depicted, after the same Froissart, as a man affected by the popularity and power so suddenly won, fond of pomp and magnificence, and aping the semblance of royalty.

Even after the patriotic historiography of such Flemish writers of our own age as Voisin and Kervyn de Lettenhove had done justice to the higher aims and qualities of James van Artevelde and his son, and exploded many fables about them, English writers continued to represent them in the false light of mediæval prejudices and anti-popular animosities. As early as 1845 Mr. Hutton made an attempt to draw the attention of the English public to the incorrectness of their conception of that period in Flemish history—a period specially interesting by reason of events connected with English conquests; but his attempt was too feeble to achieve its object. He has now returned to his old theme and task after an extensive study of Flemish history, and supported by the great authority of Lettenhove's 'Jacques d'Artevelde' (1863) and 'Histoire de Flandre' (1874), and Vanderkindere's 'Siècle des Artevelde' (1879).

The purpose of his work is thus "to place in their true light, before English readers, the characters and careers of two remarkable men, who, for the space of well-nigh six centuries, have been cruelly misunderstood and misrepresented." He does, however, more than that—though not to the advantage of his sketches as pictures of interesting historical episodes. He tells the history of Flanders from the beginning of the Middle Ages down to the time of James van Artevelde, of the interval between James and Philip, and of the age following the latter, with considerable minuteness, and by so doing not only destroys the dramatic unity of the work, but fatigues his reader with unattractive details before introducing his heroes.

Mr. Hutton also labors under the disadvantage of lacking sympathy with democracy, while vindicating two of its champions from imputations upon their characters made by writers imbued with aristocratic prejudices. He sides with the Flemish communes and their leaders in their struggles with the Counts of Flanders and the Crown of France, and sees in James van Artevelde—instead of the self-seeking demagogue of the chroniclers—a patriotic defender of constitutional freedom and an able statesman, who conceived the lofty ambition of founding a nation through the close alliance of Brabant and Hainaut with Flanders, and with the aid of England; but he shows very little inclination to admire, with Motley, "the violent little commonwealths," with their frequent popular commotions—especially if contrasted not with despotisms, but with states in which a powerful hereditary aristocracy stood between the monarch and the people. His tableau of public and private life in the industrial and commercial cities of Flanders in the fourteenth century—of the galling and stupid oppression constantly practised by the guilds on the laboring classes, of the reckless cruelty with which the commonwealths waged wars against each other or chastised the insubordination of the unprivileged, of the bloody feuds of rival corporations, of such ingratitude toward eminent citizens as caused the tragic end of the elder Van Artevelde, of the vulgar extravagance of the rich, and the superstitious ignorance and laxity of morals which pervaded all classes—is as dismal and distressing to the student of mediæval history as any picture of life in the monarchico-aristocratic states of the same period could possibly be. A mild kind of historical pessimism, which manifests itself even in forebodings of an evil democratic future, breathes through the whole book; and, if correct in his shadows, the author can certainly be reproached with scarcely alluding, in his able review of the time, to all that was then bright through the workings of industry and nascent art, civil communion, and religious benevolence. And with all his zeal in the defence of his two heroes, Mr. Hutton is not blind toward their defects either. Of the younger of them, whom even his detractors depict as just and equitable, eloquent and courageous, he says: "Philip van Arteveld was great neither as a general nor as a statesman. Whatever greatness he had was thrust upon him, chiefly through the accident of his birth." Of James and his position the following extract will suffice to present the principal features:

"The weavers were the most numerous and powerful of all the craft-guilds, and are believed to have been about 40,000 strong at the period under notice. . . . Perhaps as a counterpoise to the weavers, Van Arteveld labored to improve the position of the minor crafts, and caused his name to be entered on the register of the brewers—which may very likely have originated the rumor that he was a brewer [and of low birth]. . . . No sooner was he admitted into the brewers' guild than he was chosen their *deken*, or *doyen*, and then by common consent the fifty-two minor crafts elected him *souverainen deken*. In this capacity he appears to have been entitled to a body-guard of *zweerd draegers*, or sword-bearers, clothed in red, with striped sleeves. . . . James van Arteveld was by no means a dictator or an autocrat. Whatever power he exercised, it was through the free choice of his fellow citizens. . . . In 1342 he had tendered the resignation of his post as *hooftman*, and he was reëlected with three of his former colleagues. He was neither a usurper nor a revolutionist. The real charge to be made against his policy is based on its civic selfishness and commercial narrowness of vision. He thought less of Flanders than of Ghent, and less of Ghent than of the prosperity of the woollen manufactures. He would not have hesitated to slay with his own hand a respectable, industrious fellow-countryman if he presumed to work a loom without belonging to the weavers' guild in one of the 'good towns.' Nor would he have scrupled to raze to the ground any town or hamlet that encroached upon the charters granted to Bruges, Ghent, and Ypres."

Mr. Ashley's book on the Arteveldes differs in plan and execution from Mr. Hutton's. It is almost closely limited to its subjects, as stated in the title. Though considering the history of the Artevelde in its relation to the general development of the Flemish towns, it does not attempt a history of Flanders. The introductory parts are brief, and even the condition of the Flemish commonwealths in the fourteenth century, in which the heroes of the book acted, is sketched only from a political standpoint. Within its narrower scope, however, this concise little book—the author modestly calls it an essay—is much more exhaustive than the other. The general view taken of the two leaders of the Gantois and of the circumstances under which they were called to lead, being mainly based on identical authorities, is nearly the same in both works. But Mr. Ashley analyzes the national, feudal, and municipal points involved more fully than Mr. Hutton, and, without much troubling himself about characters and general moral aspects, examines tendencies and results in a different spirit. He shares as little Mr. Hutton's historical pessimism as his anti-democratic opinions, though his opposite leanings are kept in check by a calm and judicious literary disposition. To him "the history of the Flemish towns in the fourteenth century is the record, not of jealous and meaningless squabbles, and of the uproars of the 'residuum,' but of an intelligible advance in the world's order." Nor does he regard the democratic commotions of Flanders as isolated movements. All Western Europe was beginning to move in the same direction. He decidedly rejects the former notions concerning James van Artevelde, does not believe that he ever assumed the title of Rewaert, or Governor, but is strongly inclined to believe in the scheme attributed to him of making the Prince of Wales Count of Flanders. Of his violent fall he offers the following as "a tentative explanation":

"It has been seen that so long as the Counts were struggling to maintain their independence against France, the ruling class in the great towns were uniformly on the side of the French King. But when, after the battle of Cassel, the Count had become the obedient tool of France, and the King began to assist him in attacking their privileges, the 'majores' were forced to ally themselves with the artisans, with whom, up to that time, they had been engaged in a bitter contest. They had therefore acquiesced in the elevation and measures of Artevelde. But these measures were such as to weaken their power and to concede in principle, if not in fact, the whole contention of the artisans. As soon therefore as Artevelde had freed the country from the yoke of France, his power was threatened. . . . Probably most of the great families . . . were ready to support the present régime, in which they had still considerable power; but it is possible that even they had become lukewarm in their attachment to Artevelde since the Prince of Wales scheme had been put forward. A large body of the burgher aristocracy, however, had not learned wisdom from recent events: they were eager to overthrow one who had attacked their monopoly of office, and who, as a member of their own class, was in their eyes only the more guilty. It was not difficult to induce the fullers and small crafts to rise—men who preferred the semblance of power, if their rivals were excluded, to its reality if shared with them. A convenient cry for all was that Artevelde was betraying county and city to the English. They succeeded. With Artevelde fell the English alliance, and the return of the Count became inevitable."

ENGLISH PAINTERS.

La Peinture Anglaise. Par Ernest Chesneau. [Bibliothèque de l'enseignement des Beaux-Arts.] Paris: A. Quantin; New York: J. W. Bouton.

WRITING for a French public, and apparently called on to give a guide-book on English art, M. Chesneau has suddenly been lifted into a place of importance for the English art-world by the eccentric commendation of Mr. Ruskin, who, after his usual contradictory manner, having told us that he makes no mistakes in matters of art, has recommended M. Chesneau as a critic who knows more than he of art (wherein he is undoubtedly correct), and that where they differ he is wrong and M. Chesneau right. And, although the opinion of Mr. Ruskin on matters of practical detail or individual works of art is of no real value, and is every day, even in England, losing more and more of that ecclesiastical sanction which it has so long enjoyed, there remains to him a considerable congregation of faithful, and his influence on the literary side of art has been far too great in this generation for what he may say on any point in æsthetics not to attract serious attention from a very large public.

M. Chesneau has certainly, if our opinion is trustworthy, written the most sound and lumi-

nous critique on English painting which has yet seen the light. If it is marked by two decided defects, perhaps imposed on him by the guide-book nature of his essay—viz., a too great and too evident condescension to the English point of view, and a want of perspective in his comparative estimates of the artists, so that in his résumé the little men are out of all due relation magnified, when often they are not worthy of mention more than some who are entirely omitted—at least the general views offer a singular contrast to the accepted English criticism, and ought to teach the dabblers in praise and dispraise that there is such a thing as positive knowledge in criticism, and that it is not enough to ape Ruskin in his dogmaticalness and rhetoric to pass for an art critic. If English painting is not art, English criticism is not æsthetic; and this M. Chesneau may show even to men like Mr. Gosse, Mr. Comyns Carr, and Mr. Monkhouse. But there is little danger that they will profit much by M. Chesneau, for though opinions are glib and the public ignorant, it is safer to give, after *their* way, their opinions, than, after *his*, to give their reasons for them.

M. Chesneau deals in first principles, and his opening inquiry is, "Is there an English school?" and his reply is by so much the most important factor in his general review that it is worth quotation entire:

"If we hold to the strict sense of the word 'school,' it applies very imperfectly to the movement of painting in England. In fact, it serves generally to designate an *ensemble* of traditions and processes, a technical system, a particular taste in design, a feeling for color equally peculiar, aiding in the expression of a common ideal followed by the artists of a given nation in a given epoch. In this sense there is a Flemish school, a Dutch school, a Spanish school, different schools in Italy, a French school, but there is no English school. There is no English school, for what is made clear by the study of painting in England is precisely the absence of all common tradition: it is the absolute independence and, so to speak, isolation of every painter."

That this is true is rather a matter of pride to the Englishmen who affect art; the individuality and isolation of their painters being accepted as qualities in the best sense of the term, because they do not understand that art is collective, and is expressed by a development of tradition and a suite of discoveries and experiences through which the expression of the common ideal or ideals is finally attained, and not at all what the standard English critic and amateur take it for—a peculiar way of regarding nature, or a special manner in imitating her facts. English painting, with some few salient exceptions, is not art, but naturalism—neither the search for an ideal nor the expression of an emotion, but the gratification of a love of nature's facts. The most faithful representation of nature, no matter how complete in its faithfulness, is not necessarily art—is, indeed, almost certainly not art at all, but a form of science. Nature is merely the nurse of art at her very best. This is the error of the English as a people, and the explanation of their love for and success in landscape.

Up to a certain point, M. Chesneau follows the merits of English painting with judicial acumen, if showing at times a leniency which is more flattering to the English than useful to the audience to which the "Bibliothèque de l'enseignement des Beaux-Arts" addresses itself. That he fails to rise to the few exceptional attainments of individual English painters—Turner, Rossetti, and Blake, notably—is because in the essence of French art-culture there is a decorum and discipline which does not accept the work of such visionaries, as they seem to the École des Beaux-Arts and its world. To the purely plastic qualities of painting the author does complete relative justice, tempered by quite sufficient indulgence; and when it is question of Sir Joshua, Gainsborough, Hogarth, Wilkie, etc., he is frankly appreciative. Of Hogarth he sums up the qualities as follows:

"Anglo-Saxon in all the force of the term, sternly faithful to the spirit of his race, Hogarth did not understand, and in good faith despised, that which we call style, the traditions of masters, Art as expression or pictorial realization (*réalisation figurée*) of the Ideal. Drawing, color, composition are for him a dead letter—words without sense so long as they do not serve to express, firstly an idea, and secondarily an idea useful with moral tendencies, easily applicable and intelligible to all the world, from the peer of England to the lowest sailor in her ports. He had no feeling, therefore, for Art. . . . In a word, he was not an artist; he was, and was never anything other than, a moralist."

The comparison between Reynolds and Gainsborough is an excellent piece of criticism; there is nothing better in the book, and nothing better has been said of those true artists. Of the former's "Nelly O'Brien" he gives a charming critical description, concluding:

"This masterpiece of Reynolds, which is his greatest title to glory, could only be produced by the brush of an artist who had seen and studied everything at the north as well as at the south—all the sublime realizations of the masters in every country where the Genius of Art has set his divine feet. Everything in this admirable picture belongs to Reynolds, or rather he made his own on that day the elements which he had borrowed on his travels, from Leonardo da Vinci, from Correggio, from Velasquez, and from Rembrandt.

"It is by the employment of consummate science, trained to all processes, that Reynolds obtains in his portraits such piquant effects. He forged for his own use an arsenal of weapons, a collection of rules and processes solidly proven [this sentence shows that M. Chesneau's study of Reynolds's works is incomplete, for many are in a deplorable state—almost faded from view], collected and chosen in attentive study of the masters. He must have so much shadow and so much light; he avoids systematically such and such tones, and, by the extreme cleverness of his execution, he succeeds well in hiding this dreary forethought (*préoccupation aride*).

"Gainsborough, on the contrary, places himself before his model as before nature. The model furnishes him for every new work with new elements of the picturesque. He sees with his own eyes those demi-tints, those reflections which Reynolds planned for. Guided by an elevation natural to him, by the surest instinctive taste, he does not fall, though always sincere, into the trivialities of Hogarth, who was equally sincere, but in another way. Hogarth exaggerates the ugliness of the type to show it off better; hence all his portraits, according to what we learn from contemporary witnesses, have a striking resemblance, but exaggerated, antipathetic, and at least vulgar. Gainsborough imbibes especially the noble and pure impressions of the personage before him, and, without deceit, he gives to every work of his pencil a special character of ideal gravity as well as freedom. He keeps as far from the learned affectations of Reynolds as from the naïve brutality of Hogarth—he is by nature true."

We have space for but a few extracts from special criticism, to show the author's general current of thought:

"What other schools call high art (*peinture de style*), historical painting, has only had in England miserable representatives—certain unfortunates have dared the struggle bravely, but have utterly failed, and left but painful proofs of their courageous efforts. It is a sad series of bad daubs, without taste, without color, and scarcely composed."

"And if Hogarth is scarcely a painter, Wilkie is scarcely more so. The pictures of Wilkie, even in his best time, are marked by a great dryness, extreme weakness of handling, and no sentiment of the artistic wealth of nature. It would seem that these two artists saw with their brains, and not with their eyes."

"It is with Landseer's compositions as with those of John Martin and many other English painters: it is better to look at their engravings and avoid their painting, under penalty of irremediable disillusion. . . . Sir Edwin, then, is not, in the severe sense of the word, a painter any more than were, with all their great pretensions, Benjamin West, Hilton, and two or three other painters of whom we must speak."

"The English painters have finally discovered this pictorial impotence in their elders, but they seem to have considered it due not to a vice inherent in the national temperament, but to a technical mistake—a mistake too long accepted in arranging the palette. Struck as we are today by the fatiguing monotony of neutral tints, they have wished to try the other extreme, seek new processes, and, in their horror of bitumen, given themselves up to a veritable orgie of colors. . . . In the English galleries (Exhibitions of 1855 and 1867) a blinding cacography, a chaos of stupefying colors—not a tint; everywhere crude tones placed side by side, with a barbarism without example: blues and greens, violets and yellows, red and rose, placed at random generally; a face scarred, cut into two equal parts, one violet, the other straw-yellow, or a red earth and a green rock. Certainly there were fine exceptions. But where the French painter, however trivial, becomes at once serious, when the artist is before his easel, it would seem that the young English painters of this epoch, if they were not insane, became so, and put in their pictures all the madness which had troubled their lives: they doubtless believed painting a safety-valve for reason."

The conclusion of M. Chesneau's judgment of the pre-Raphaelite school must content us: "We must decide if the rôle of the painter consists in showing us the anatomy of life—that is to say, death—or the aspect of life. The question thus posed, there is no possible hesitation—we must pronounce against the pre-Raphaelites."

The endorsement of our author by Ruskin must be taken as one of those opinions he reserves the right to reverse when he pleases, upon the alternative of nullifying a great part of his own teaching. We prefer that the latter alternative should obtain.

"'Every plant,' says Mr. Ruskin [we retranslate our author's translation, not having Ruskin's book at hand], 'every flower of the field has its distinct and perfect beauty: it has its habitat, its expression, its particular function, and the highest art is that which seizes the specific character, which develops and illustrates it, and gives it its proper place in the *ensemble* of the landscape, and, by so doing, exalts and renders more intense the great impression which the picture is intended to excite.' Admirable theory, if the application did not destroy its value. . . . Mr. Ruskin attributes pictorial virtues to this truth to detail, studied with rigorously scientific exactitude, which do not belong to it. He seems to me to be in precise contradiction to the evidence given by the facts, when he affirms that this truth of detail is sufficient and necessary to obtain that 'simple, serious, and harmonious character which distinguishes the effect of unity of nature's views.' I insist with great regret, but it is precisely the contrary which happens with the pre-Raphaelites."

There is in this book too much evident reference to another public than that the author openly addresses, and too great a deference to Mr. Ruskin in exposing the differences between them. The general good seems to demand as great a freedom in dealing with the living critic as with the dead painters. So far as artistic culture and common-sense art go, M. Chesneau seems safe and comprehensive; where he fails is when art rises above the common sense to an uncommon attainment of individuality and a position which cannot be measured by the conventional standards. As to the three greatest (as well as most individual) of the English painters—Turner, Blake, and Rossetti—the author is lost. Like Ruskin, he may not underestimate them, but he misestimates them alike. The highest claim to greatness of none of these seems ever to have appeared either to Ruskin or Chesneau.

Martin Luther's Leben und Wirken. Von Gustav Plitt und E. F. Petersen. Leipzig. New York: B. Westermann & Co. 1883.

On the 10th of November of the present year occurs the four hundredth anniversary of Luther's

birth. The Protestant world, divided on a multitude of inferior questions, will be united in rendering honor to the man who, more than any other, gave to the religious movement of the sixteenth century the form which it needed to insure its success. Already numerous signs of a newly-awakened interest in the great reformer have appeared. The little book before us, begun by Professor Plitt, of Erlangen, and continued, after his death, by his pupil and friend, Pastor Petersen, in Lübeck, will remain a worthy contribution to the memorial literature of the occasion. Recent investigations have added much to the stock of information about Luther's life and activity. The result of these investigations has appeared in Julius Köstlin's 'Life and Writings of Luther,' and it is upon that work that at least the contribution of Doctor Petersen to the present volume is avowedly based.

The purpose kept in view by Plitt was to present, in a form suited to the understanding of the whole German people, learned and unlearned, the work of Luther as a reformer; to show him as the devout believer, the cautious doubter, the obstinate dogmatist, and finally the skilful organizer of a new ecclesiastical system. This purpose has been ably fulfilled. Our store of knowledge will not be materially increased, but our picture of the reform will be rendered clearer and more lasting by the reading of these pages. This will be especially true in regard to the many contradictions of temperament and intellectual character which appear in Luther's life, and which have served to obscure his figure in the minds of succeeding generations. Seldom has a character lent itself more readily to every form of misrepresentation. The Catholic writers, who represent Luther as a loud and often foul-mouthed demagogue, bent upon overturning the whole existing order of things, can find authority enough for their opinion. He may truthfully be represented as the fearless advocate of religious liberty, and as the timid, time-serving opponent of every form of individual freedom. We may think of him as the genial, whole-souled, affectionate husband, father, and friend, or as the passionate, bitter, and unforgiving enemy. It has been wisely said of him that he was courageous in character, but timid in intellect. If his mind could have followed where the dauntless heroism of his nature seemed always to be leading him, he might have appeared more consistent, more like our own ideal of what a reformer ought to be; but the German Reformation would never have gained the ground it did, and probably Luther would have found his place in history by the side of Karlstadt and Münzer, instead of towering above them as he now does, like a giant above pigmies.

The volume before us is no fulsome eulogy. Its tone is historical throughout; it presents the man with all his contradictions, leaving the reader to form from these many-sided reflections his own image of the central figure. For this service the authors deserve our thanks. Among Protestants the most usual impression of Luther is probably that of a restless seeker after improvement. We may fancy him, perhaps, to have been like some of our own modern professional reformers, men with a bee in their bonnets, which they are chasing for dear life without regard to other interests. The true Luther, however, as here presented, was as far as possible removed from this type of man. He was by nature conservative, and it was only through the force of a terrible struggle with himself that he was brought into action. Thus it was that all through his career he found himself bitterly opposed to all those other leaders of the religious movement whose primary object was the reformation of outward evils in the Church. Let one read here the story of the conference with Zwingli at Marburg, where Luther wrote with chalk upon the table, "This *is* my body"; and, in place of all answer to the irresistible arguments of his opponent, simply pointed to these words, and refused to budge from the utterly untenable ground he occupied. One must call this the very extravagance of obstinacy, and yet there is a deeper significance underneath. Luther refused to deal with the Swiss Reformers, not because they denied the trans- or consubstantiation, but because, as he elsewhere expressed it, "these men are of another spirit." They took another point of departure, and their methods were other than his. We read of these reformatory movements springing up spontaneously all over Europe, and we must regret that they could not have been united into an opposition which, humanly speaking, must have been irresistible. To Luther, however, alliance with men "of another spirit" would have been treason to his own cause, and it was this fine perception of difference in spirit which saved Luther to Germany, and gave him his far-reaching influence as the one man who could not waver, who overlooked all considerations when the purity of the new faith he had declared was endangered. We might multiply illustrations of this same dogged persistence in what he believed to be right.

This little volume holds thus a unique place in Luther literature, combining as it does a popular style with a true scholarly method, and in a compass which does not alarm even the most careless reader. A very poor woodcut of Luther after the Cranach portrait is in striking contrast to the otherwise elegant appearance of the work. There ought to be in English either a translation of this or a work occupying a similar place.

Brook Farm to Cedar Mountain in the War of the Rebellion—1861-62: A Revision and Enlargement (from the latest and most authentic sources) of Papers numbered 1, 2, and 3, entitled 'A History of the Second Massachusetts Regiment,' and the 'Second Massachusetts Regiment and Stonewall Jackson.' By George H. Gordon, Brevet Major-General, U. S. V., U. S. A., etc. Boston: James R. Osgood & Co. 1883.

General Gordon has done the public a real service in publishing this volume. It is made up of papers written for the annual gatherings of the officers of his regiment; it was suited to the ears of those who on these partly cheerful and partly pensive occasions are eager to recall the mirthful and the serious incidents of their military service, but whose thoroughly truthful appreciation of each other would never tolerate any exaggeration of statement or any simulated feeling. Hence we have as correct a picture of the real life of one of our very best volunteer regiments as it is possible to get. We have the story of its first year's experience, and let us say at once that the story is told very well. General Gordon writes easily; he passes from one mood to another very naturally; he has the power of saying strong things; he has also a nice sense of humor. His narrative is animated; the details never become tedious; and, owing to the fact before pointed out, that the chapters were all prepared for the officers of the regiment, the reader is almost made to feel that he too is in some sense a comrade in this noble regiment, whose organization and early achievements are here related.

The Second Massachusetts Infantry was as much like a regiment of regulars as it was possible for a volunteer regiment to be. Its colonel (Gordon) and lieutenant-colonel (Andrews) were graduates of the Military Academy; both were excellent soldiers. They remained with the regiment or in the same brigade for more than a year from the organization of the regiment, and they contributed largely to give it its solid, trustworthy character for steadiness, gallantry, discipline. There is much in the book before us relating to this subject of discipline. The reader will find how Governor Andrew tried to force Colonel Gordon to replace officers who had been, for some breaches of good order, compelled to resign; how the punishment necessary for soldiers in the field aroused suspicions and hard feelings in neighboring regiments. And it will also be seen how completely the experiment of a thoroughly-disciplined regiment finally succeeded, and what a strong, compact, harmonious body of men the Second Massachusetts became. Nowhere is this most important subject of military discipline treated of or illustrated with such carefulness as in General Gordon's history of his own regiment.

The Second were, fortunately, not engaged in the disastrous affair of Ball's Bluff. But the regiment came up, like many others, just after the fight was over, and our author not only gives us a vivid picture of the appearance of things on the day after the battle, but he has taken the pains to write a connected and lucid account of the whole affair, perhaps the best to be found anywhere. During the winter of 1861 and 1862 the army was in winter quarters. The Second was at Frederick, Maryland, a most loyal place. When the spring campaign opened, the regiment, being in Banks's corps, was sent to Harper's Ferry, and played a very prominent part in the advance and retreat of that corps in the spring of 1862. The descriptions of the night march to Winchester, when pursued by Stonewall Jackson, the gallant little fight near Kernstown, the brave but brief stand made at Winchester, are all very forcibly done, and constitute, we think, the most interesting portion of the book.

In the summer of 1862, Jackson having been recalled to Richmond, our forces again reëntered the valley of the Shenandoah, and the remains of Banks's corps were incorporated into the Army of Virginia under the command of General Pope. The Second Regiment had not, as yet, suffered to any great extent; it was now to pass through its first great experience. The battle of Cedar Mountain, a most unnecessary and unfortunate affair, fought, as General Gordon maintains, against General Pope's orders, cost the Second very dearly: the major was mortally wounded and a prisoner; five officers were killed, seven wounded, of whom two were prisoners, besides one unwounded officer taken prisoner; thirty-five per cent. of the regiment were killed, wounded, and missing. This loss has, of course, often been equalled by other regiments; the Second, we believe, equalled it at Gettysburg. But the feeling of the needlessness of the sacrifice, which was so strong at the time, is well brought out in General Gordon's pages.

A single word more. This narrative is valuable as showing very fairly and impartially the lights and shadows of a soldier's life in time of war, and the tremendous uncertainties of that royal game. No one can read it and retain much of his youthful ardor for the battle-field. But it shows what an admirable school war is for many of the manlier virtues—for self-denial, steadfastness, hopefulness, courage, and, in fine, for devotion to duty, whose claims, presented as they are to a soldier, in a concrete and inevitable shape, can be perhaps less easily evaded than the more general appeals made to peaceful and pleasure-loving humanity.

Text-Book of Geology. By Archibald Geikie. London and New York: Macmillan & Co. 1882.

COMPILING a text-book of science is a very simple matter, and implies merely a moderate amount of industry and access to a fair library. What need is there, then, for the enormous number of such books which is published every year, and why do nearly all of them take their places on the shelves of unused volumes almost or quite as quickly as commonplace novels? How is it, on the other hand, that the appearance of certain text-books is hailed in scientific circles as an event, and that references to them, decades after their appearance, are always treated with respect? It is because the purpose of scientific instruction is to teach not mere information, valuable only as a possession, or, as children say, "to have," but to impart the power of applying the knowledge obtained in new combinations and under other conditions than those set forth. If an author or a teacher cannot apply the principles of science, if he has no practice in solving the problems which nature presents—in short, if he is not himself an investigator—he cannot vitalize his teachings or impart anything better than barren information. One cannot learn to read either the primer or the geological record from a schoolmaster who has never deciphered a single sentence for himself.

Mr. Geikie is not a mere man of learning, but a very successful original thinker; he is also endowed with excellent judgment in the fields in which his special work has not lain, and he possesses in a high degree the literary faculty. This happy union of qualifications has enabled him to write a text-book which marks an era in British science, as did Lyell's fifty years ago. It is almost impossible to avoid a comparison between the books, and not to dwell on the advance in science marked by the difference between them. Lyell wrote at a time when geological fancy, stimulated by some astounding developments as to the forces which had moulded the earth's surface, and the vastness of the lapses of time which must have preceded the historical period, had run riot, and no theory of tremendous physical revolutions which could be suggested was too absurd to meet acceptance. Lyell wrote in the interest of moderation, and pointed out that action such as can be traced at the present day was sufficient, if long enough continued, to account for many geological changes for which the aid of violent catastrophes had been invoked. In some respects he went too far; but his followers naturally outdid him, and adopted a doctrine of uniformitarianism so rigid as to preclude their acknowledging that any changes more violent than those now going on, or any changes of a different nature, had ever occurred. Thus wild speculation was succeeded by a bigoted conservatism scarcely less harmful to progress.

The English school of extreme uniformitarians is not yet extinct; but it is a most significant fact that neither uniformity nor catastrophe finds a place in Mr. Geikie's index, while in the body of the work each phenomenon as it comes up for discussion is considered upon its own merits, without any evidence of a preconception based upon the historical record. He concedes that physical revolutions which brought about breaks in the continuity of the chain of being sometimes extended over a whole zoölogical province, though more frequently over a minor region; and he was entirely convinced, while in this country, of the validity of the observations and reasoning by which geologists in America were led to believe that immense areas have suddenly been flooded with lava, not from volcanic cones, but from gaping fissures in the earth's crust. As the intellectual descendants of those whom Lyell opposed have long since abandoned the idea of the simultaneous annihilation of life over the whole world, uniformitarians, as represented by Mr. Geikie, and catastrophists of the modern school now meet half-way, and the question between them has disappeared, like the controversy which preceded it between the neptunists and the plutonists. There is, it is true, a fascination about Lyell's 'Principles' which Mr. Geikie's text-book does not possess; but this arises from the fact that Lyell wrote under the inspiration of a great idea, and, though it led him too far, it nevertheless gave a coherency to his disquisitions which no impartial exposition of the present condition of geological science could have. Not that this text-book is dull reading; on the contrary, the development of the subject is so good and the language so clear that one is always tempted to read a few pages further than he had intended.

American geologists cannot but be pleased with the recognition their work receives at Mr. Geikie's hands. Much geological matter has been published in this country which any specialist must recognize as trash, and many of the geological features of the Far West are so astounding in their character that, even in the absence of prejudice, it is difficult to credit without seeing them. The result has been that American memoirs were looked upon in Europe with suspicion, but Mr. Geikie recognizes the large amount of capital work which has been done, and draws his illustrations largely from this country. Indeed, his frontispiece is a copy of one of Mr. W. H. Holmes's wonderfully striking and admirably accurate drawings of the Grand Cañon of the Colorado. One important volume, however, the 'Descriptive Geology' of the Fortieth Parallel Survey, seems to have escaped his notice.

Neither has Mr. Geikie exhibited the too usual aversion of British scientific men toward going to the Continent for material, as he shows especially in his discussion of rocks. The study of rocks under the microscope began in England, but the Germans and French have pursued the subject with far more energy and with great success; and it is to the publications of Messrs. Rosenbusch, Zirkel, Fouqué, and Michel-Lévy that Mr. Geikie usually appeals as authorities on this subject, while adding independent matter of his own.

As a proof of the growing specialism in geology, it is worth while to mention the comparatively small space which historical and palæontological geology occupies in this work—less than one-third of the whole—while in the text-books of twenty years ago structural and dynamical geology, lithology, etc., were always greatly subordinated. Meantime, palæontology has become so vast a science that those who embrace it cannot pursue the other branches, while the general geologist is fain to leave the discussion of fossils to specialists.

It is not to be expected that any other geologist should agree with Mr. Geikie upon all the subjects treated in this book, or, in other words, on every geological question; but our author does not arouse the antagonism of those who differ from him, because he is not dogmatic. Many writers on geology seem to wish to convey the impression that their own views are the only reasonable ones, and that those who do not share them are either ignorant or incompetent; but this text-book, while stating conclusions as definitely as the condition of the science warrants, points out the uncertainty of many of them, and is full of suggestions as to what is yet to be learned, and how it may be approached. In short, it is a candid and suggestive book as well as a sound one.

The Chronicle of James I., King of Aragon, surnamed the Conqueror. (Written by himself.) Translated from the Catalan by the late John Forster, Esq., M.P. With an Historical Introduction, Notes, Appendix, Glossary, and General Index, by Pascual de Gayangos. London: Chapman & Hall; New York: Scribner & Welford. 1883. 2 vols., paged continuously. Pp. xxxii.–726.

MR. FORSTER and Señor de Gayangos have earned the gratitude of all who do not read Spanish by placing within their reach one of the most remarkable historical productions of the Middle Ages. The translation was begun by Mr. Forster nearly eight years ago, and was completed, except a few chapters at the end, when his sudden death occurred, on the 7th of January, 1878. Señor de Gayangos, who had given him constant aid in the solution of such questions as demanded an especial knowledge of Spanish history and literature, then took the work in hand, and at last, after unavoidable delays, the 'Chronicle' has appeared in English. The editor seems to have printed the text very nearly as the translator left it, and portions of it are consequently very rough; but, with this exception, the book is readable throughout. The treaty or "capitulation" containing the terms of the surrender of Valencia, a table of contents, and a list of "*vocables obscurs*" have been omitted. The editor has inserted an excellent glossary of his own in place of the last, and the text of the "capitulation" may be found in the Spanish translation.

No one is better fitted to edit such a book than Señor de Gayangos, the translator of Al-Makani's 'Mohammedan Dynasties in Spain,' and the author, editor, or translator of many other very valuable works on kindred subjects. The first of his contributions to the present volume is the introduction, containing a brief sketch of the history of Aragon from 1104 to 1213, which, supplemented by the appendices "On the Military Orders of the Temple and the Hospital of St. John of Jerusalem"; on the "Civil and Military Constitution" (of Aragon and Catalonia); and on the Moors in Majorca, Valencia, and Murcia, gives one a very good idea of the political condition of the Spanish peninsula and the Balearic Islands at the beginning of James's reign. There the historical sketch stops, and, as the chronicler is very chary of dates, and as those given in the notes are often strangely contradictory of one another, it is not always easy to follow the course of the narrative. A short estimate of James's character, a brief analysis of the 'Chronicle,' and a discussion of its authorship, complete the introduction. The translator and the editor adhere to the opinion, now almost universal in Spain, that the 'Chronicle' was the work of the King, and, in accordance with a memorandum left by Mr. Forster, the words "written by himself" appear on the title-page.

As to the notes, many show great learning, but a large number are mere repetitions of former statements, and not a few are positively incorrect. As an example of this latter defect, take the second note to page 458, which says: "In 1179 a treaty had been concluded between Ferdinand of Castile and James of Aragon." Now, James was born on either the 1st (note to page 10) or on the 2d (note to page xxiv.) of February, 1208; while, according to the last paragraph of "Appendix H.," a treaty was made between "his [James's] own father and Ferdinand of Castile." James's father was Pedro II., who reigned in the years 1196–1213, during which period no Ferdinand ruled in Castile. In fact, from any information contained in these two volumes, it seems impossible to discover when or by whom the treaty described in these ex-

tracts was concluded. The same want of care is very noticeable in the index, as, for instance, under Alfonso X. (of Castile) we find "his daughter married to James, 225," on which page of the 'Chronicle' the author mentions his own marriage with Yolande, daughter of Andrew II., King of Hungary, while Alfonso X. (of Castile) married James's daughter Yolande, or Violante, as the Spanish chroniclers call her. Innumerable errors of this nature, and an entire lack of system in the spelling of the names of persons and places, make the book difficult to use.

But these are subordinate matters, and, although very annoying, do not materially impair the value of the work. The 'Chronicle' is really an autobiography of James, or En Jacme, as he was christened (who is called Jayme by Muntaner, Jakmish by Al-Makani, Gaycum by Condé, and "King Jacob" by Woolsey in his 'International Law'), and the story is told in a manly and graphic way that is perfectly charming. The vicissitudes of the King's early life taught him a shrewdness which one does not generally associate with the times of chivalry. Thus, during the expedition to Majorca, he said: "Barons, horses are of great value in this country; each of us has but one, and one is worth twenty Saracens. I will show you how to kill this one [a dismounted Saracen knight]: Let us surround him; when he thrusts at one of us with his lance let another strike him in the back and send him down, so he will hurt no one." And in after years he writes: "I would not treat with them [certain men of Nules, in Valencia] till they were well warmed with meat and wine"—a passage which, corroborated as it is by others, shows that the Mohammedans of Valencia were not strict observers of the Koran. Another side of James's character is shown in the pretty story of the swallow "that had made her nest by the roundel on my tent, so I ordered the men not to take it down till the swallow had taken flight with her young ones, as she had come trusting in my protection."

James's nature was essentially warlike, and he believed that wars and good deeds were synonymous, as is shown by the following extract, which is remarkable in many respects. He is addressing the King of Navarre, and thus begins:

"Well do you know, King, that when the hour of death comes we kings take from this world nothing but a shroud apiece, which is indeed of better cloth than those of other people; but this only remains to us from the great power we once had, that we can serve God with it, and leave behind a good name for the good deeds we did. If in this world we do not do them, there will come no other time in which we can. If you please, I will show you how you can conquer in this war."

But the 'Chronicle' is of especial value from the glimpses it gives us of the art of war in the thirteenth century, and of the working of the Constitution of Catalonia and Aragon in those days. And here it is interesting to note the high opinion the King had of the common people, and the almost fiendish delight with which he used their money and good-will to thwart the projects of his barons, from whom he received little but opposition and ingratitude. In fine, these volumes deserve a place beside De Joinville on the library shelves.

The Provincial Councillors of Pennsylvania who held Office between 1733 and 1776, and those Earlier Councillors who were some time Chief Magistrates of the Province, and their Descendants. By Charles P. Keith. Philadelphia. 1883. Pp. 476.

So little has been written about the genealogies of families outside of New England, that it is with pleasure we hail a book relating the history of some of the leading families in Pennsylvania. The origin of many of the first settlers of that colony is evidently easily to be found. Unlike the founders of Massachusetts, they came hither after colonization had become open and reputable. They were not devotees seeking a refuge, men who willingly broke all family ties for the sake of conscience, but they were simply emigrants seeking in the fertile fields of a noble province a chance to establish themselves and acquire distinction. Those who were Quakers recorded their connection with the congregation they left in England; those who were agents or protégés of the proprietors seem often to have kept up their relationship with England. It is evident, therefore, that the genealogist will be on unusually sound ground in testing the pedigrees here collected.

The first family recorded herein is that of William Markham, a first cousin of William Penn, of a family long settled in Nottinghamshire. He left an only daughter. The next record is of Thomas Lloyd, son of Charles L., of Dolobran, in Wales, who was graduated at Oxford, and became President of the Council of Pennsylvania. He had one son, whose male line failed in the third generation, and numerous descendants through his daughters. Edward Shippen was a gentleman by birth, a merchant at Boston, where he married a Quakeress, and, joining that sect, he finally found it best to remove to Philadelphia. The sketch here printed was prepared by Elise Willing Balch, and is substantially that which appears in Thomas Balch's book on 'Letters and Papers relating to the Provincial History of Pennsylvania.' Not only is the Shippen name still extant, but one hundred pages are here given to the numerous female lines springing from this stem, and including many famous names in England as well as in this country.

The Logans claim descent from a good family in Scotland, though James, the President of the Council, was born in Ireland. He was a merchant in Bristol when he accepted Penn's invitation to emigrate. Descendants of the name survive, and are recorded herein, with their family connection.

Isaac Norrice, or Norris, was of London, and founded a flourishing family. Samuel Preston, from Maryland, left only two daughters, but it requires forty pages to trace their numerous progeny. Next follow Palmers, Hamiltons, Allens, Brookes, Grœmes, all noteworthy, some especially so. Then Plumsteds, Griffiths, Reads, Tills, Strettells, Hasells, Taylors, Turners, Growdons, Peterses, Shoemakers, Hopkinsons, and Asshetons. The name of John Penn brings in a short notice of that family. Then succeed the Lardners, Chews, Mifflins, Cadwaladers, Tilghmans, Molands, Laurences, Shippens, and Hickses.

It would be impossible to do justice to this volume in any review of moderate extent. It is a "Burke's Commoners" for Pennsylvania, treating in many cases so fully of families of national reputation that the reader is tempted to copy all he sees. It is a new piece of evidence for the argument that certain families and races are above the average of their fellows in qualities which insure them the control of whole communities. Of late years Pennsylvania has done much to redeem its reputation from the Bœotian taint, by the spirited and successful labors of its Historical Society; and as the organ of that society terms this book "the most important of the kind relating to Pennsylvania that has ever appeared," we are sure we have not overrated the value to be attached to it.

Such general collections usually lead to an increase in smaller treatises on particular families, and we hope that such may be the result now. Many of the families herein touched upon would furnish materials for separate genealogies of interest and historic value.

BOOKS OF THE WEEK.

Bethan Edwards, Miss. "Disarmed!" Harper's Franklin Square Library. 15 cents.

Boston Illustrated. New ed. Boston: Houghton, Mifflin & Co. 50 cents.

Demarest, Mary Lee. My Ain Countree, and Other Verses. A. D. F. Randolph & Co. $1 25.

Wants.

A GRADUATE of Phillips Exeter Academy ('83), full four years' classical course, desires a position as private tutor until beginning of Harvard academic year.

H. W. S., Dover, N. H., Box 22.

A GRADUATE (Ph.D.) and former Fellow of Johns Hopkins University desires an engagement. Physics, Mathematics, Chemistry. Two years' college experience. Johns Hopkins and other references. F. H. J., office Nation, New York.

A HARVARD GRADUATE, with highest honors in classics, who has had experience in teaching, wishes a few private pupils to fit for college. References given.

Address A. L. HODGES, Taunton, Mass.

A LADY, graduate of one of the best high schools near Boston, with two years of experience, particularly as teacher of Latin and French, desires an engagement for the coming year.

Address P. O. Box 692, Newton, Mass.

A YOUNG LADY, graduate of an Eastern college, desires a position as assistant in a library. Best of references. Address D., Box 288, Lynn, Mass.

LECTURES TO SCHOOLS, by a Yale graduate. Scientific and other subjects. Illustrated by drawings, diagrams, and experiments. References. Address Box 506, Morristown, N. J.

WANTED—An assistant in a private school for boys in Baltimore. Salary, first year, $700. Address, with references,

W. S. MARSTON,
St. Catharine's, Ontario, Canada.

LOANS secured by deeds of trust, negotiated on the rich, black lands of North Texas. These lands are rapidly and steadily rising in value. 9 per cent. interest guaranteed. I have and am lending over $40,000, and have never lost a dollar in interest or principal. Address

JAMES B. SIMPSON, Att'y-at-Law, Dallas, Texas,
Agent Scottish-American Mortgage Co., Limited, of Edinburgh; Western Mortgage and Investment Co., Limited, of London, England; and Dundee Mortgage and Trust Investment Co., Limited.

PRINCE & WHITELY,
No. 64 Broadway, New York.
(Branch Office, 180 Fifth Avenue.)

All classes of Railway and Mining Stocks bought and sold on Commission.

Private telegraph-wires to Philadelphia, Wilmington, Baltimore, Washington, Boston, Bridgeport, New Haven, and Richmond, Va.

BROWN BROTHERS & CO.,
59 WALL STREET,

ISSUE COMMERCIAL AND TRAVELLERS' CREDITS
For use in
THIS COUNTRY AND ABROAD.

KIDDER, PEABODY & CO.,
1 Nassau St., N. Y.; 113 Devonshire St., Boston.

EXCHANGE AND LETTERS OF CREDIT ON GREAT BRITAIN AND THE CONTINENT.

Correspondents:
BARING BROTHERS & CO., London;
PERIER FRERES & CO., Paris;
MENDELSSOHN & CO., Berlin.

A. P. TURNER & CO.,
207 WALNUT PLACE, PHILADELPHIA,
DEALERS IN RAILWAY BONDS.

Orders executed at all the exchanges. Correspondence solicited.

VICTOR TRICYCLES.

Highest class work; new features. Send 3-cent stamp for Illustrated Catalogue.

OVERMAN WHEEL CO., Hartford, Conn.

F. W. CHRISTERN,
37 West Twenty-third Street, New York,

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

Johns Hopkins University,
BALTIMORE, MARYLAND.

Collegiate and University Courses.

Announcements for 1883-84 will be sent on application.

GERMAN rapidly and conversationally taught in a few months. Send for circular.
JULIUS, 27 Union Square, Room 13.

The Nation.

NEW YORK, THURSDAY, AUGUST 30, 1883.

The Week.

ONE of the workingmen who testified on Monday before the Senate Committee—Mr. Edward King, a type-founder—declared that the growing opinion among workingmen was that the free admission of commodities, combined with the free admission of labor, would be more just than the exclusion of commodities with the free admission of immigrants. The wonder is that this opinion has not long ago become strong enough to make itself felt. Labor of all kinds, skilled as well as unskilled, is all that the man without capital has to offer for sale, and if any native commodity is worthy of protection, it is. In fact, the high-tariff men are so well aware of this that they always put the effect of the tariff in raising the price of labor in the forefront of their battle. But they never explain why the workingman does not need direct custom-house protection for his wares as well as the manufacturer for his. There is no doubt whatever that under the protectionist theory the American laborer is entitled to the benefit of the tax on immigrants, as the only proper set-off to the high price he has to pay for his clothing and lodging and tools. Every foreign laborer entering the country should undergo an appraisal based on age, health, and the current wages of his calling, and have a sufficient ad-valorem duty levied on him to keep down European competition in the labor market. This is simple justice, and this instead of high tariffs on commodities is what the now deluded American mechanic should hereafter demand at the polls of the protectionist Congressmen.

Justice Angell, of one of the district courts in this city, has awarded $100 damages against the Western Union for refusing to take a message during the late strike, unless the sender agreed to give it "subject to delay and mailing en route." The opinion is very long, and there is a great deal in it which does not seem to flow from the statute which furnishes his text, as that simply requires companies to receive despatches and transmit them "with impartiality and good faith." It does not prescribe the speed with which they will be transmitted, although the Justice seems to think it does. The probabilities are, therefore, that had the company said nothing about delay, but taken the despatches and sent them as fast as it could, it would be in a much better position than it is to-day. It is the imposing conditions which gives its assailants their principal hold on it in law. If a railroad takes a passenger, and carries him only at the rate of three miles an hour, and afterward pleads that it could not do better, it is much less open to attack than if it refuses to take any one who will not sign an agreement to be satisfied with three miles an hour.

We hope the State Department will in some manner explain the recent removal of Mr. B. O. Duncan, American Consul at Naples, who previously held a similar position for four years in Germany, and is in every respect a most competent man. We believe no reason for his dismissal has been given him, but we can hardly believe that the reason is to be found in the fact that his successor is the son of a personal friend of the President, who has never before been in the service, speaks no foreign language, and knows nothing of consular business, but is in poor health and wishes to have a year or two in a southern climate. We can hardly believe this; not simply because it would be a gross piece of jobbery, if true, but because it would not tally in the least with the President's civil-service reform professions. We know that he is in favor of keeping qualified, experienced men in their places as long as they behave well, and therefore do not see how he could turn such a man out in order to enable an invalid to reside abroad at the public expense. It must be that the new man is a robust person, possessing even greater familiarity than Mr. Duncan with the Italian language and life, and that it is supposed that he will make better reports, and be able to stand the wear and tear of the office better, and, in fact, be in all respects an improvement on his predecessor. It must be, too, that the President chose him for the place not because he was the son of an old friend, but because he had been struck with his remarkable natural fitness for consular work.

Judge Hoadly's present "fix" is a curious illustration of the condition of the Democratic party. He was nominated by the Ohio Democrats in the belief that the party must be "progressive" and "keep up with the times," and because he represents in a general way what is called "Tilden." A "Tilden man" among the Democrats has long since ceased to mean a man who desires Tilden's nomination; it only signifies a Democrat who thinks that a political party ought to have some principles, and even insists on putting down in black and white what he thinks they ought to be. A Tilden man always believes in a revenue tariff, some sort of civil-service reform, and, in fact, differs little from sensible Republicans except that on election day he generally votes for a Democrat who hates all reform, instead of a Republican who equally dislikes it. Judge Hoadly was a Tilden man and formerly a Republican, and on his nomination began to prepare to give his followers as much Tilden as he could. It appears, however, that Tilden has a very bad effect on a large part of the Ohio Democrats. It makes them positively sick and disgusted, and not only this, but fills them with thoughts of suicidal revenge. To be revenged on Hoadly they circulated a story at once that he had bought his nomination. As often as he gives them any Tilden, they produce some awful story about him, a mode of carrying on a campaign which naturally takes the heart out of his followers, besides greatly depressing the Judge himself—all of which looks very badly for 1884. The stomach of the party must be drilled into enduring all that Tilden implies, or the "mortgage on success" which it holds will never be foreclosed.

The New York *Globe*, the organ of the colored people in this city, thinks the opinion that the law ought not to compel persons who keep restaurants for white people to admit colored people to them, if by so doing they would drive the white people away and ruin their business, "appears grounded in selfishness and narrowness rather than in law or equity." But the *Globe* must remember that restaurant-keeping is essentially a selfish business. It is intended for the profit of the proprietor simply, and the legitimacy of this purpose is fully recognized by law. Moreover, he is not an innkeeper to whom travellers may have to resort for shelter. Under no conceivable circumstances can it be absolutely necessary for a colored man to get into a particular white restaurant in a large city. We think it is most melancholy and absurd that a respectable, well-behaved colored man cannot have any accommodation whatever that he can pay for, but there is radical injustice in singling out one class by law, and imposing on it the burden of rising, at heavy expense, above a prejudice felt by the bulk of the community. The cause of all the trouble about color in theatres, and hotels, and restaurants, lies in the fact that each man who feels the color prejudice, but is ashamed to confess it, likes to ease his conscience by compelling somebody else to disregard it, even at a great loss. During the late Whittaker affair at West Point it came out that one father, who brought his son up to enter, was very fierce in his denunciation of the color prejudice among the cadets, and the Commandant eagerly availed himself of this to propose that the son should share Whittaker's room, but the offer was promptly and firmly rejected. The way to put down this relic of barbarism is to have every man begin *himself* to testify against it, at some personal inconvenience, however small, and not impose the duty on restaurant-keepers.

Father Lynch, of Lakeville, Connecticut, has succeeded in stirring up a miniature religious war in that quiet town which gives some promise of involving the whole State. The holy man began the trouble by putting up in the main walk leading from the street to the door of the Catholic church a crucifix twelve feet high, an object such as has never been seen in a New England village street, and which a hundred years ago would have been at once pulled down. The Lakeville Protestants protested, on the very fair ground that their feelings were outraged; the Catholics replied by "boycotting" the Protestant shopkeepers; to meet this, Senator Barnum, the local railroad and factory "king," is said to have threatened to discharge every Catholic in his employ if the image was not removed, and to deprive Catholics of all railroad facili-

ties on the occasion of the dedication of the convent, which is to come off next month. Father Lynch, unless he is a very obstinate or foolish man, will take down the image. Catholics can carry on their worship indoors without offending Protestants, and the Pope does not require priests to adorn Connecticut villages with objects which shock the feelings of other Christians. The idea that religious liberty involves the right to do whatever you please in public, or even in public view on your own grounds, is nonsensical; and the Protestants, if they will not wander from the original cause of dispute and seek the aid of kings and monopolists, can easily prevent Father Lynch from posing very long as a martyr.

Many of the most disquieting features of the general business situation have disappeared in the last few weeks. Chief among these, of course, were the various strikes, notably that of the telegraph operators, which not only failed, but is already almost forgotten. The apprehension caused by a succession of mercantile failures and bank embarrassments has also disappeared. The crops are all turning out to be quite as good as the best anticipations of a few months ago, and in consequence of the now acknowledged deficiency of the principal grain crops of Europe, there is a better prospect for a good foreign demand for our surplus. Notwithstanding these improvements in the general outlook, the present situation is not satisfactory. There is still a prevailing distrust on the part of capital regarding new enterprises and even as regards the older channels of investment. Mercantile paper is scrutinized so closely that few are able to borrow except those who have least necessity for it. Railway mortgages have steadily declined in price day by day for more than a month. Those who have taken large amounts from the various bankers' syndicates with the expectation of retailing them out at a profit find no market for them. The banks are unusually full of idle money, which is offered for call loans, and to some extent for short-time loans on collateral security. Between now and November 1 there will also be $27,000,000 more capital dislodged from investment in United States bonds by the redemption of $5,000,000 weekly under the 121st call of the Secretary. The rates for foreign exchange are also gradually declining, so that the importation of specie in the last three months of the year is more than probable, and will thus add to the amount of capital for investment in this country.

All the accounts of the Minnesota tornado agree in saying that the signs of it were distinctly visible for many minutes before it came, that there was time for everybody who was at home when it approached to get into a cellar, and that no one who took refuge in a cellar was hurt. All this seems to point to the conclusion that the towns which lie in the zone which these storms most frequently traverse, and which the meteorologists seem able to define, must create and maintain a new officer, whose duty will be simply that of a lookout, and provide him with bells or other means of giving the alarm when the usual signs of a tornado show themselves. Even if the construction of the houses in these regions, too, has not to be changed, the cellars will have to be prepared as refuges, and it is a question whether farmers will not provide themselves with a pit in every field, into which laborers can jump when likely to be caught by the storm when out working. Safety seems to lie below the surface of the ground, and nowhere else. Anyhow, it is very unlikely that the present condition of unpreparedness which these tornadoes everywhere find, can last much longer, and it would be very un-American if it did so.

The Sultan has failed in his lawsuit against the Providence Tool Company, owing, as the lawyers say, to his having "mistaken his remedy." His complaint was that he had bought arms of the company and paid for them, but they had never been delivered. By a natural mistake, he came to the conclusion that the best thing for him to do was to apply for an injunction —the remedy which, with mandamus and habeas corpus, must by this time seem to foreigners the corner-stone of American jurisprudence. Judge Blatchford has decided, however, that he should have tried replevin or trover, remedies of which neither he nor the Mussulman jurists who surround him have probably ever heard. We fear that he will find the litigation into which he has so precipitately plunged very tedious and unprofitable, though, as tending to spread a knowledge of the common law in Turkey, all American jurists must regard it with approval.

The visit of Lord Coleridge to this country is an interesting event, both in itself and as a reminder of the close kinship that has always existed between the American and the English bench and bar. It is a commonplace that the law under which we live is in substance, notwithstanding all the differences between the two countries, the same as that which governs the relations between man and man throughout the British Empire. For the origin of great safeguards of personal liberty and private right by which our judges protect us against the encroachments of corrupt or arbitrary power, we have to go back to a period of English history in which it was as yet unknown that the western hemisphere existed. The very constitutions which form the legal basis of our Government are modelled upon that of England. American judges and lawyers are so nearly like English judges and lawyers, and their work is so like that which English judges and lawyers have to perform, that until very recently one of the most eminent leaders of the English bar to-day was an American, who had never appeared in an English court until a period of life at which many men retire from practice altogether. Kent and Story are cited in English courts precisely as Blackstone is cited in ours, and the English law reports are as much a part of the necessary equipment of an American lawyer's library as the statutes of the United States. Still, the visit of an English judge of Lord Coleridge's rank serves strongly to suggest that the wonderful advances we have made in the last hundred years in population, in wealth, in literature, in science, and in the arts ought not to blind us to the possibility of our still learning a great deal as to the administration of justice from England. The American ideal of a judge does not differ from the English. It is one of the best and purest ideals that the development of society has ever produced in the world; and that it can be actually realized, the careers of Kent, Marshall, and many living American judges remain to remind us. But that the tendency of our present method of treating the judicial cause—that is, of cutting down judicial salaries to the lowest point, and making the office a political prize, instead of a reward for legal services—is to bring on to the bench the best type of judge, no American lawyer who knows anything about the condition of the profession will venture to assert. English judges have still some of the defects which spring from the connection of the bench with the court, and the aristocratic constitution of the "upper classes" in England; but in the great matters of the law—in perfect independence of politics, in entire freedom from corruption or suspicion of corruption, in absolute impartiality between the rich and the poor, the strong and the weak—the English bench is a signal proof of what a good system of appointment and remuneration might do for us.

The session of the British Parliament has closed, leaving the two parties in a curiously unexpected condition. It has been anticipated, for instance, for some months, that by this time Mr. Gladstone would be so much reduced in health and spirits that he would probably retire. It is now reported, however, that he has not felt so well for ten years, and is very sanguine and cheerful. It is, on the contrary, the leader of the Opposition whose health has given way. Sir Stafford Northcote is said to be permanently disabled for the very fatiguing position of a Parliamentary leader, and Lord Randolph Churchill, in spite of his youth, is worse off physically than either of them. It was expected, too, that, owing to the obstruction both of the Irish and the Conservatives, the Ministry would have accomplished so little of their legislative programme, and suffered so much from the uncertainty of their policy in Egypt, that they would be utterly discredited with the country. Far from this, however, they seem to have produced the effect of accomplishing a good deal. The hardest nut they had to crack was the Agricultural Holdings Bill, giving the farmer compensation for his improvements, and limiting the landlord's right to distrain for rent. This they have succeeded in passing, in spite of the opposition of the Lords, who gave additional *éclat* to its passage by backing down at the last moment from destructive amendments on which they had insisted in the beginning. Moreover, the Ministers have come well out of their Irish troubles. Agrarian crime has greatly diminished. The landlords themselves, in their late remonstrances against the Land Act, bear unconscious testimony to its advantages to the tenants, and the Irish Registration Bill, which the Lords have defeated, would have increased the number of Parnellite voters, and the

blame of its failure rests wholly on the Tory peers. This has probably done something to mitigate Irish indignation over the refusal to amend the Land Act this session.

Lord Salisbury's performances in the Lords over the Agricultural Holdings Bill have sunk his reputation for sagacity lower than ever. In fact, the disorganization of the Tories seems to be greater than ever before. Their old leaders have now all either retired or been discredited, and no new ones are coming forward. They are, indeed, much in the position of the Democrats in this country. They have no hold on the press outside of London, and no very effective hold in London. The Conservative cause is, moreover, not one which attracts young men. It is everywhere the cause of the old and the rich and securely placed. But the able political writers and speakers and canvassers are generally young and poor and have their way to make, and they are therefore, one may say, naturally Liberals, and find it easier to make their way in the Liberal ranks. Under the old system, before the Reform Bill, the Tories were able to get the promising young men into their service by giving them seats in Parliament, or leading them to expect them from pocket boroughs, or by putting them into the civil service; but now, what with Parliamentary reform and civil-service reform, they have nothing to offer to rising talent. They made an attempt lately to show that they had a good deal of literary ability among them by establishing a monthly review, but the ability has not yet begun to show itself. In fact, the Tory party shows greater and greater signs of sinking down into a party of rich men engaged in bitter defence of their property against the rest of the nation, and pledged to oppose all change on the simple ground that even a good change is likely to lead to bad ones, and that, therefore, all change is bad. No political party can ever occupy this position long without having its judgment on political questions discredited, and losing its hold on the great body of the people.

The English Church seems, from Mr. Mackonochie's case, to offer to sincere men a better chance of continuous and harmless martyrdom than any other ecclesiastical organization in the modern world. The litigation over his case has been going on for sixteen years, and for this period he has been a standing testimony in the sight of all mankind of the steadfastness of faith of the good ritualist. The Church first undertook to punish the good man for his candles, and vestments, and genuflexions in 1867; and in 1868 Sir R. Phillimore decided, after a hearing lasting sixteen days, that punishment must be ordered; but so mild and gentle is the Church with offenders nowadays that he was only admonished to conform to the true and established ritual. After the decision it appeared that one or two of his offences had been overlooked, and for these he was taken in hand by the Privy Council, which admonished him over again. But, like the true martyr that he had determined to be, he paid no attention to those admonitions; and, therefore, in 1869 he was admonished once more. In 1870 he was suspended; in 1874 he was again suspended; in 1878 he was suspended for three years for continued disobedience; and now, in 1883, sentence of deprivation has at length been pronounced against him. Even this, it is believed, will not convince him of his errors. This modern kind of martyrdom is a great improvement over the old mediæval sort; but it is so obviously an excellent advertisement for the martyr, that his peculiar faith does not really derive much benefit from it. The Mackonochie martyrdom does not seem to have helped Ritualism or hurt the English Church. If the reverend gentleman, instead of being prosecuted, could have got himself roasted alive in a public place for his heretical practices, what accessions the Ritualists might have had!

The news from the French operations in Tonquin shows an advance, or attempt to advance, along two lines—one over the Red River from Hanoi, where Captain de Rivière was killed, and one over the Thai-binh River, which runs nearly parallel with it. The advance from Hanoi was successful, but the ground gained could not be retained, owing to floods. That over the Thai-binh was more fortunate, for it resulted in the capture of Haidzuong (a considerable place, which was carried by assault), and secured a large number of guns and some money, about $50,000. The French do not appear, however, to have captured any Anamites to speak of. On the most important point in the campaign, the effect of active operations on the health of the troops, we hear nothing. Nevertheless, it is on this that the support which the campaign will receive from opinion at home must depend. The joy caused by the news of the victory in Paris must have been a good deal marred by the article which has just appeared in the semi-official *North German Gazette*, accusing France of being the great disturber of European peace, and the only serious menace to it now. Nobody seems to know what it means, but it caused the funds to fall both in Paris and Berlin, and has evidently frightened the French a good deal, because it makes them see Bismarck in the air. He sometimes seems to torment them for his amusement, by saying something threatening just as they are in the middle of some scheme for the extension of French influence. He growled once or twice in this way when they were up to the neck in the Tunisian enterprise, and it seemed as if all the houses in France shook, and the children awoke and began to cry.

The Comte de Chambord has at last passed away, but his illness has lasted so long, and his death has been so long a question of days, that all its political effects have already shown themselves. The Comte de Paris has been for two months in the eyes of everybody who knows him the heir to the crown. Unfortunately for him and for the crown, probably only a small minority of the French people know who he is or how he comes to be heir to the crown. Mr. Gilbert Hamerton, in his charming description of French life—'Around My House'—gives the total ignorance of all his farmer neighbors about the Comte de Paris and his brothers, and this in a very intelligent neighborhood, as a striking illustration of the completeness with which the old monarchy has perished in France. Even the ruins are gone, as the poet says. But it has to be remembered that it is ninety years in time, and two hundred in events, since Louis XVI. was beheaded, and over fifty years since any one has sat on the French throne who owed it to the grace of God alone.

While the Comte de Chambord was approaching his last hour, his "cousin," the Comte de Paris, again visited him at Frohsdorf, whither he had formerly carried the homage of the Orleans family. The reconciliation between the chief representatives of the two French branches of the House of Bourbon was sealed anew, and the grandson of Louis Philippe, who in 1830 occupied the throne of France from which a revolution had driven King Charles X., and great-grandson of Philippe Égalité, who in 1793 voted in the Convention for the death of Louis XVI., was acknowledged as heir to his royal rights by the grandson of Charles and grandnephew of Louis. There is hardly any doubt that this succession to the dignity of royal claimant will be recognized as perfectly legal by nine-tenths at least of all the supporters of the late pretender. There is, however, a small fraction of French Legitimists who, from aversion to the revolutionary history of the House of Orleans and the Orleans princes' well-known anti-clerical propensities, favor the succession of Don Carlos, the chief representative of the Spanish branch of the Bourbons, according to Legitimist views; and the question has been mooted in independent journals whether the claim of that pretender is not valid in reality. Impartially examined, however, it proves to rest on a sophism. The Spanish Bourbons, with their collateral branches of Naples and Parma, are all descended from Philip V. of Spain, the son of a son of Louis XIV. of France, and thus, it is true, are naturally more direct heirs to the French crown than the Orleans princes, who are descendants of Philip of Orleans, a younger brother of Louis XIV. But Philip V., when confirmed on his throne, after the long war of Spanish succession, by the Treaty of Utrecht in 1713, formally and most unequivocally renounced, in a separate document attached to that treaty, every right and pretension to the French throne, for himself, for his heirs and successors, and for all times, adding, "de même que si Moy et mes Descendants n'eussions pas été néz ni ne fussions pas au monde." Now, it is pretended that, as this renunciation was made, in the interest of the European balance of power, for a distinct equivalent—the crown of Spain—and this equivalent has been taken from the direct heir, by the male line, of Philip V., through the abrogation by Ferdinand VII. of the Salic law, which ruled the Bourbon succession, the renunciation is to be considered as annulled by the revolutionary act of the father of Queen Isabella, sanctioned by the consent of all the Powers of Europe. Armed with this sophism, Don Carlos may claim the throne of France, as he claims that of Spain, but he will find it difficult to ascend either.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 22, to TUESDAY, August 28, 1883, inclusive.]

DOMESTIC.

PRESIDENT ARTHUR and his party arrived at the Upper Geyser Basin of the Yellowstone Park last Friday. Their plans were changed on Saturday by the information that Secretary Teller of the Interior Department awaited him at the Upper Geyser Basin. He accordingly met the Secretary there, and a discussion followed on the new Indian policy.

Three promotions were made in the Treasury Department on Monday by Acting Secretary French under the regulations in force before the passage of the Civil-Service Act. There are said to be six or seven vacancies in the War Department, but only requisitions enough to fill three of them have as yet been made upon the Civil-Service Commission, and all of these are for the ten-hundred-dollar class—the lowest grade of clerkship in the department. In all of these cases the vacancies originally occurred in the twelve-hundred-dollar grade, but promotions were made along the line until the vacancies existed in the lowest grade only. It is said in the departments that this will undoubtedly be the case until the rules of the Commission regulating promotions are promulgated.

The Commissioner of Internal Revenue, Mr. Evans, has decided, in regard to a certain so-called "Bitters," that when the mixture is sold as a beverage a license must be paid, but when sold in good faith as a medicine none will be required. The bitters contain 32 per cent. of alcohol.

The complete returns to the General Land Office of public lands disposed of during the fiscal year ended June 30, show that 19,035,683 acres were taken up in that time, an increase of more than 5,000,000 acres over the total for the previous year. Of the aggregate amount, 8,171,794 were taken up under the Homestead Act, 3,101,333 under the Timber Culture Act, and the remainder by cash sales and other means.

Both ends of the Northern Pacific Railroad were connected on Wednesday, thirty miles west of Mullen Tunnel, Montana. A golden spike will be driven on September 8, at the formal opening of the road. Parties of distinguished Germans and Englishmen have arrived in this city from Europe to attend the ceremonies and view the new road.

The Democratic State Central Committee of New York met at Saratoga on Thursday, and decided to call the State Convention to meet at Buffalo on September 27. Robert B. Roosevelt (anti-Tammany) offered a resolution in effect that the New York city primaries should be held by open meeting and on the plan of the County Democracy. State Senator Grady, as the mouthpiece of Tammany, made an earnest plea for the old way of selecting delegates, but Mr. Roosevelt's resolution was adopted by a vote of 18 to 12, after some bitter words not calculated to invite harmony within the party. It is probable that the resolutions will not interfere with the plans of Tammany, and that they, with Irving Hall, will send delegates as usual to the State Convention, in the well-founded hope that they will be admitted.

Chairman John F. Smyth, of the New York Republican State Committee, declared in an interview published on Monday that he would not accept a reëlection, because "the time has come when we of the Republican party must vote either as Republicans or Democrats, and, be it with reason or without reason, it is a fact plainly patent that to select me as Chairman would be viewed with distrust."

The Georgia Legislature on Thursday passed a Congressional apportionment bill which would give six out of ten districts to the Republicans on a proper count of the negro vote. The bill was passed by a Democratic majority.

One hundred and fifty leading Democrats met at the Burnet House, Cincinnati, on Monday, and appointed a committee to determine the best means of calling another convention to nominate a county ticket in place of John McLean's *Enquirer* ticket. It is the opinion of many prominent Democrats in Cincinnati that the McLean ticket will be defeated.

The Missouri Free-Trade League has issued an invitation to all who oppose a protective tariff and favor genuine reform in the revenue laws, to a conference at St. Louis on October 2, 1883, for the discussion of this question. The meeting will be non-partisan.

A Workingman's Congress was in session during the week in this city. Little action of any general interest was taken. It adjourned on Friday.

Mr. Henry George presented his well-known views on land, labor, and capital to the United States Senate Sub-Committee on Labor and Education in this city on Wednesday. The committee will probably continue in session until about the time for the meeting of Congress.

Judgment was given on Friday against the Western Union Telegraph for $100 penalty in the two suits brought against it by Messrs. Marrin, Biddle & Marrin, of this city, in the First District Civil Court. The suits were brought because the company during the strike refused to send two messages offered by the plaintiffs, except subject to delay.

The employees of the American Rapid Telegraph Company have been notified that hereafter they will receive the old rate of wages paid before the strike.

The American Association for the Advancement of Science adjourned at Minneapolis on Wednesday, after electing Prof. J. H. Leslie, of Philadelphia, President. The next annual meeting will be held in Philadelphia on September 3, 1884.

The American Bar Association closed its sixth annual session at Saratoga on Friday. Cortlandt Parker, of New Jersey, was elected President for the ensuing year.

Lord Chief Justice Coleridge, of England, arrived in this city on Friday. He is the guest of the American Bar Association during his stay in this country, which will not end until November 9.

A convention of deaf mutes was opened in Lyric Hall, this city, on Tuesday morning. More than 300 delegates were present.

The Grand Encampment of Knights Templars has been in session at San Francisco for some time. Commanderies from all parts of the United States were present.

It was asserted in Chicago on Tuesday, on good authority, that the Southwestern Railway Association would not contest the suit of the Boston Sugar Refinery, instituted to test the question whether a railway pool can divert freight from the road to which it is specially consigned by the shipper. This is accepted as a confession that the pool managers realize that they have no standing in court on the question raised—namely, that a railway, as a common carrier, is bound to accept all freight tendered, in spite of pool regulations.

The schedules of the insolvent firm of E. C. Stedman & Co., brokers, were filed on Monday in the office of the Clerk of the Court of Common Pleas, in this city. The nominal indebtedness of the firm is placed at $117,940 83, while the actual liabilities are only $62,940 83. The nominal assets are $91,047 62, and the actual assets $33,877 93. Among the largest creditors of the insolvent firm are the National Bank of the Republic to the amount of $20,000, and the Bank of North America to the amount of $35,000, for money borrowed.

Reports from the Middle and Western States say that the apple crop is almost a failure. A sudden blight has affected the Hudson River peach crop, and the earlier peaches at least will be very poor.

At Pensacola, Fla., the yellow fever has increased during the week. On Friday citizens began to desert the town. The Government, through the Surgeon-General of the Marine Hospital, has given orders for relief measures.

Hunnewell, Kansas, has been in an excited state, owing to an attempt of cowboys to run the affairs of the town to suit themselves. The authorities are now masters of the situation.

At Gallatin, Mo., the trial of Frank James, the outlaw and train-robber, has begun.

Reports were received on Wednesday and Thursday of a terrible tornado in Minnesota on August 21. The tornado struck the northern part of the city of Rochester in that State, and made a clean sweep of elevators, residences, railroad engine-house, and other property. The city contained about 8,000 inhabitants. Twenty-nine persons were killed, and about fifty seriously injured. Property to the amount of $400,000 was destroyed. In the neighborhood crops worth $300,000 were damaged. One-third of the houses in Rochester were destroyed, most of them belonging to the poorer classes. A relief committee has been formed, and at least $100,000 are asked for. It is proposed to rebuild the exterior of the workmen's houses, leaving the inside to be furnished by the occupants.

A yacht, the *Mystery*, sailed from New Haven for Nantucket on August 10, with four young men on board. It has not since been heard of. Bodies were washed ashore at West Falmouth, Mass., on Wednesday, and one of them has been identified as that of a member of the unfortunate party. A body found at Pocasset on Thursday was also identified as that of another of the yachtsmen. The sunken wreck of the *Mystery* has also been identified.

The boilers of the steamboat *Riverdale*, which has been plying between this city and various Hudson River towns, exploded when the boat was opposite West Twelfth Street on Tuesday afternoon. There were about sixty passengers on board. Five persons are known to have been killed and a number were injured. The boat sank soon after the explosion. The boilers were inspected recently and pronounced in good condition. A great many tugs and steamboats went to the assistance of the struggling passengers, and they were soon rescued from the water and the decks of the sinking steamer.

A fire in the lumber yards of Williamsport, Pa., on Monday night, destroyed property worth about $600,000.

A duel took place on Tuesday morning near Loudon City, Ill., between Louis Phillips and Jacob Rosenbrook, both residents of Bowling Green Township, in which the latter was killed instantly and the former wounded so badly that he died a few hours after. The affair had its origin in a grudge of long standing, growing out of the disrespectful remarks by Phillips concerning Rosenbrook's sister. Both duellists were young men.

FOREIGN.

Comte de Chambord died at Frohsdorf, Austria, on Friday morning, at 7:15 o'clock, after a long illness. He was sixty-three years of age, the head of the elder branch of the Bourbons of France, and the last of his line. He had acknowledged Comte de Paris, head of the Orleans family, as his successor. The Paris Republican journals spoke respectfully of the dead Count. The will of the Count has been opened. It contains no reference to his political wishes. The funeral will occur on September 3, at Göritz. The Orleans Princes on Monday went to Frohsdorf.

It is reported in Paris that Prince Jerome Napoleon intends to publish a manifesto, to

be issued coincident with the funeral of the Comte de Chambord.

Considerable excitement was caused in Europe by an article in the Berlin *North German Gazette* (Bismarck's organ), replying to the attacks of French journals on Germany and their cry for revenge. It declared that France alone threatened the peace of Europe. It said that such a state of affairs could not continue without serious danger, and that the passions fomented by the agitation might burst the bounds of peace. The article startled Paris and caused prices to fall on the bourses of Paris, Vienna, and Berlin. The French papers repelled the charges, and intimated that France was better prepared than previously for the designs of Bismarck. The English journals declared that the warning was overdone and the cause of it insufficient. The Austrian press asked if the article meant war. The Paris papers give various reasons for the article, including the recent unveiling, at Courbevoie, of the monument commemorative of the defence of Paris, the vote for fortress artillery, the tour of inspection of General Thibaudin, the French Minister of War, and the completion of forts on the eastern frontier. It is also believed in Paris that the Tonquin expedition is particularly distasteful to Germany.

The attack on Hai-dzuong, in Tonquin, the key to an important canal, reported last week, resulted in its capture by the French They took 150 cannon and $50,000 of Anamite cash. The Anamites fled to the interior. On Thursday another less successful movement was reported, which took place on August 15. An attack was made by the French on Phouhai, in the direction of Sontay, a strong post seven miles from Hanoi. The French force was 2,000 strong, and the enemy numbered 15,000. The position was carried, but was found untenable. A portion of the troops retreated to the river, covered by gunboats, while the rest went in the direction of Hanoi. There have been terrible floods, causing loss of life, in the vicinity of that city. The enemy's loss in the engagement was 300 killed and 1,000 wounded. The French doctors complain of a want of medicine and stores. The operations of the French have been stopped for the present, the number of troops being insufficient to attack Sontay and Bacninh, which are the strongest positions in the delta. The repulse of the French has disheartened them and encouraged the enemy. To cope successfully with the enemy it is said the French will require 10,000 men. It was reported from Paris on Friday that the Anamites had fallen back to Sontay. On Saturday a despatch was received in Paris announcing that the French had bombarded and captured the forts and batteries at the mouth of the Hué River after a brilliant land attack. The operations occurred on August 18, 19, and 20. Seven hundred Anamites were killed during the engagement. The only casualties suffered by the French were several men slightly wounded. The gunboats *Vipère* and *Lynx* have entered the Thuan passage. The French Admiral has granted a truce. A blockade has been declared. The Emperor of Anam desires to place himself under French protection.

The Emperor received M. Harmand, the French Civil Commissioner, on August 23, and showed complete submission. Anam is compelled by treaty to pay the costs of the war, the French to retain the forts on the Hué River pending payment. The Anamite troops in Tonquin are to be placed at the disposal of General Bouet, the French commander. The Emperor has not yet accepted the treaty submitted to him, but he will probably accept it. The treaty requires guarantees that a French protectorate shall be recognized all over Anam. The success of the French in Anam has rendered China more hostile to them. Chinese troops continue to arrive on the Yun-nan frontier.

The French Government has received a telegram from Admiral Pierre, the French commander in Madagascar, asserting that the trial of Mr. Shaw, the English missionary who was arrested by the French, has resulted in the dismissal of the charge against him, and he has therefore been liberated, and has arrived at the island of Reunion. The London *Times* declares that this settles the Tamatave difficulty, which should never have arisen. Mr. Shaw intends to press a claim for damages against the French Government.

The previous rumors of the death of Queen Ranavalo, of Madagascar, are confirmed by a despatch announcing that she died on July 13. Her reign, which began in 1868, has been marked by many reforms. The term of military service was reduced to five years. The corrupt system of legal procedure was exchanged for trial by jury. National education was so vigorously promoted that the native schools in the provinces of Imerina and Betsileo alone now muster a total of 130,000 pupils. The cruel practices of native superstition were swept away, and in 1877 all the slaves from the Mozambique coast who still remained in the country were freed. The spread of Christianity was encouraged. Idolatry was extirpated.

Etienne Énault, author of 'The Man of Midnight,' 'The Last Love,' and other novels, died in Paris on Wednesday at the age of sixty-six.

Parliament was prorogued at 2 o'clock on Saturday afternoon. The Queen's speech closing the session was read by a royal commission. She referred to the continuance of harmonious relations with foreign Powers, and reasserted that the occupation of Egypt was only temporary. She said she could refer with greater satisfaction than on some former occasions to the condition of Ireland. The provisions of the Land Act have been brought into wide operation, and the late combination against the fulfilment of contracts, especially for rent, has been in a great degree broken up. There is a marked diminution of agrarian crime, and associations having murder for their object have been checked by the detection and punishment of the offenders.

The House of Lords at the last moment agreed to the Agricultural Holdings Bill.

The Irish Tramways Bill was passed in the House of Lords on Thursday.

Mr. Gladstone, in the House of Commons on Wednesday, said that he regretted that the House of Lords had rejected the Irish Registration Bill, and added that he would introduce a larger measure on the subject at the next session of Parliament.

Sir Stafford Northcote will probably, on account of his poor health, resign the leadership of the Conservative party.

At a conference of the Irish members of Parliament held on Saturday night a programme was prepared for the Convention of the Irish National League of Great Britain, announced to be held at Leeds on September 27. The programme demands self-government for Ireland and direct representation of the Irish laboring class in Parliament.

James McDermott, who is charged with having been connected with the dynamite conspiracy, was brought into court for further examination at Liverpool on Tuesday. It was shown that the prisoner was connected with the conspirator Featherstone, who was recently convicted.

The Supreme Court at Cape Town, South Africa, has rejected an appeal made by O'Donnell, the assassin of James Carey, the Irish informer, asking to be tried in that city. On Tuesday O'Donnell sailed for England, where he will be tried.

The British Government has granted a pension of £250 a year to Matthew Arnold, the poet and critic.

The Right Rev. Francis Kerril Amherst, D.D., a well-known Catholic prelate, and formerly Bishop of Northampton, England, died on Wednesday at the age of sixty-four.

A collision occurred at 3 o'clock on Sunday morning, off Eddystone Light, in the English Channel, between the French steamer *St. Germain*, bound from Havre for New York, and the steamer *Woodburn*, from the East by way of Suez Canal. The *Woodburn* sank about three minutes after the collision, and eighteen of her crew were drowned. The *St. Germain* was disabled, and put back to Plymouth. The *Woodburn* was being towed, and the officers of the *St. Germain* thought the tugboat was the only vessel to clear. The steamer *Palermo*, bound from Hamburg to Lisbon, came in collision on Sunday, off Ushant, between the English Channel and Bay of Biscay, with the steamer *Rivoli*, bound from Bilbao to Middlesborough. The latter steamer sank, and five persons were drowned.

The Prime Minister of Spain, Señor Sagasta, on Tuesday tendered to King Alfonso the resignation of the Ministry. The Prime Minister informed the King of the divergence of opinion in the Cabinet relative to the suspension of constitutional guarantees, the King's proposed visit to Germany, and certain army measures proposed by the Minister of War, who had expressed a wish to resign. The King, deeming it unnecessary to hasten the crisis, postponed his final resolution concerning the Ministry until his return from Corunna. Nothing has been decided upon in regard to the King's proposed visit to Germany.

The German Bundesrath has unanimously approved the treaty of commerce between Germany and Spain.

The Sultan of Turkey has pressed Prince Nikita, the Montenegrin ruler, to prolong his visit at Constantinople. The impression is gaining ground that it is the intention of Montenegro to oppose a further advance of Austria into Turkey.

A reign of terror exists in the vilayet of Kossovo, in Albania. The Arnauts are murdering the Christians, and all of the latter who can get away are fleeing from the country. The Turkish officials connive at the outrage on the Christians, and have arrested and exiled a number of priests.

An American Jew, after a four days' stay, was expelled from St. Petersburg recently, in accordance with the law forbidding Jews to live in the city. Had he accepted the offer of the American Consul to apply to the Prefect for permission, as a favor, to finish his business, he might, it is said, have prolonged his stay.

Violent anti Jewish riots were reported on Monday from Egerszeg, Hungary, and Yekaterinoslav, Russia.

Twelve deaths from cholera occurred at Alexandria. The Egyptian Minister of the Interior has started a fund for the relief of the families of victims of the plague.

A severe battle was fought before Jacmel, Hayti, on August 3. It resulted in a victory for the insurgents.

The eruption of a volcano on the island of Krakatoa has caused great damage. North Bantam, in Java, is covered with ashes, mud, and stones; the crops are ruined, and roads and bridges are damaged. The European quarter of Anjier and the Chinese camp at Merak have been swept away by the overflow of the rivers. The tidal wave also swamped the lower quarters of Batavia. The latest accounts estimate the loss of life at many thousands.

Cetewayo is gathering around him in Zululand a constantly-growing army. A battalion of British troops has been ordered to the border of Natal and Zululand.

A general rising of the Ghilzais against the Amir of Afghanistan has occurred.

A CURE FOR DISCONTENT.

More testimony was given before the Committee on Education and Labor on the 23d instant, as follows: Mr. C. F. Adams told the Committee that he was a lawyer and an "economist"; did not regard private property in land as a bad thing, insisted that all public franchises ought to be sold at auction, and felt that there was no real necessity of having more than one railroad between New York and Albany. He was also in favor of postal savings-banks on the English plan. Gabriel Edmonston, a Washington carpenter, testified that carpenters were badly off, because, owing to the severe weather in winter, they could not work all the year round; he did not, however, suggest any remedy for this. He was followed by John Rogers, a stonecutter, who spoke highly of trade unions, but thought laws ought to be passed to compel owners of quarries to send all stone to be finished in New York, where wages are $3 50 a day, instead of having it done in the country, where wages are only $3. Edward King, a typefounder, said that the time for talk was passed, and what was now needed was "a great social revolution." Labor must now reorganize society, and in the new era he promised that "morals and religion would enter into the management of business, and boss the concern as they never had done before since the beginning of the world." Senator Pugh asked Mr. King what legislation would be adopted by the workingmen when they got control of the Government, a question which Mr. King said would require "considerable study and consideration," but promised to let the Committee know "at some future time."

This is a very good specimen of the testimony thus far taken by the Committee, which falls into one of two great classes. Some of it consists of testimony by representatives of that large class who feel that wages are low, or times are hard, money difficult to get, work very disagreeable, and who find in the Committee and in the press just that audience for their complaints against the injustice of life which every wronged man knows is no more than his due. The rest of it consists of legislative schemes devised by "economists" for clearing away the trouble in the world which flows from some people being richer than others, like Mr. Adams's modest little plan of selling corporate franchises and establishing postal savings banks, or Mr. Henry George's grand remedy, which he produced again before the Committee, and which we are all familiar with. Whatever its general merits may be, this last has the very serious defect of not being immediately attainable. Mr. George proposes substantially that all landed property shall be appropriated by the Government, without compensation, and then rented; or in other words, that all taxes shall be levied on land, but only after a measure of general confiscation. This, of course, gives it a chimerical air, and prevents that very large and influential body of persons who own land from giving it any serious consideration. Labor reformers are very apt to overlook the strength of the landholding class. In this country they far outnumber every other. The discontented laborers of the cities, for whose benefit most schemes of social reform are started, are very inferior to them in numbers and influence. It will take a great deal of talking, however, to persuade the American farmer who has inherited or has purchased a piece of ground, on which he has his home, that the best thing he can do for himself and others is to surrender his fee simple to the state and become a mere tenant. It will probably be impossible within any period worth thinking about to make such a scheme a practical question. At present it has excited great interest in the cities among philanthropists of the speculative kind and among people who own no land, but to succeed it must get out into the country and take hold of the rural imagination. It gives no sign of doing this as yet.

Mr. George is probably right in thinking that the discontent of the laboring classes is increasing. This would, however, seem a more important fact than it does if it could be shown that the laboring class was the only one whose discontent was increasing. The truth is that discontent is now a characteristic of all classes to a degree unknown at any previous period. There has never been a time when men were so dissatisfied with the station in life in which they find themselves, so eager for more of the world's good things than they have got. The causes of this are numerous, and many of its consequences are lamentable. We cannot discuss them here. We merely wish to point out that it is a mistake to suppose that it is only men who labor with their hands who are out of temper with social arrangements, and too ready to try violent or foolish modes of changing them. The frauds and defalcations and crazy speculation which are so marked a phenomenon of the commercial and financial world, are all due to the same passion.

Mr. George asserts that if access to the land were easier, this discontent would be appeased, but that this remedy is not now within reach. He tried to account for the failure of workingmen who are not getting on well in their particular trade, to go out and settle on land, by alleging that land is too difficult to get, that the bulk of it is taken up and held by railroad corporations, and that "to-day, if you were to open a large tract of land near New York, you would find a grand rush for it, which would relieve every overcrowded trade." The members of the overcrowded trades who happened to be present must have smiled when they heard this. We doubt if there is a man in this city, who really wishes to farm, or who could earn his living on a farm, who cannot get one. There would be a "grand rush" to a tract of land near the city if everybody who "rushed" to it was to have a good house and good meals provided for him in return for six or eight hours of easy daily toil. But there would be no rush if a living could only be got on it by the ordinary small farmer's life of long days from daybreak to dark, hoeing and digging and ploughing under a broiling sun, with the risk of having crops ruined by drought or rain, and with nobody to blame when things went wrong but himself. It is because men who have not been brought up to this life do not like it, that the cities are so full of ill-paid people who think the world is out of joint. There is a steady flow into the cities, in fact, of young men who cannot bear farming. It may, indeed, be asserted, without exaggeration, that there are not many thousand men in the United States, capable of getting a living off a farm by their own labor, who do not now live on one either as hired man or owner. There might possibly be a rush out to Mr. George's tract of land the first few days, but it would be nothing to the rush back after a little experience of hoeing or ploughing. The working class in the cities in this country are either men who like their own handicraft, or men who like the city so much — its movement, and animation, and amusements, and social opportunities—that they prefer poverty and dependence in the streets to independence and rude plenty in the country. There is doubtless always a reflex movement of population toward agriculture after a commercial or financial crisis, but the existing opportunities of getting farms is amply sufficient to create it. At best it works slowly. Men do not change their occupations by "rushes." They struggle, and hope and contrive, and wait for better times a good while before pulling up stakes and striking out for fresh woods and pastures new.

A DRY-GOODS NOVEL.

There is no country in the world in which dry goods play so important and prominent a part in commercial and social life as the United States, for the simple reason that nowhere else is there the same, or anything like the same, amount of consumption of dry goods. The great consumers of dry goods are women, who purchase both for themselves and their children; and although women and children must everywhere be clothed, and as a matter of fact are clothed, they are nowhere clothed with as much profusion and variety as in this country. In no country does so large a class of women follow the fashions, or endeavor to follow them, and probably in none is so large a proportion of the family income devoted to enabling them to do so. Not only is the dress fund of a family larger here than elsewhere, but the husband's drafts on it are so small that the wife may almost be said to have it to herself. Nothing strikes foreigners more on their arrival here than the indifference of the men to what they wear, in contrast with the care and outlay expended on the matter by their wives and daughters. As a general rule, the American man's wardrobe, considered as anything more than protection from the weather, excites the surprise and sometimes the compassion of males from other countries—it is so simple, so unpretending, so little calculated to set off the wearer's figure or face, and so free from all sign of pronounced personal taste, in the matter of color or design. "Style," in fact, is unknown in the American man's clothes. We have no national dandy. Anything approaching to him is an imitation of the foreigner. In fact, since the beginning of the present century—perhaps Mr. Grant White would say, as a result of the growth of democracy—it has not been possible for a male citizen of the United States to dress with any splendor or éclat, or even close attention to his clothing,

and remain a "true American." A man who after his first youth occupies himself seriously with the cut of his coat, with his shirts, cravats, or boots, may be said, in a certain sense, to separate himself from his countrymen. The further West one goes, of course, the more marked this peculiarity is, and it is declining somewhat everywhere with the growth of wealth; but it may be asserted, in general terms, that it is not the thing for a true American to care what he wears. In some parts of the country, if he showed that he cared, it would injure him in business, if not in society, as a sign of trivial-mindedness.

The women, on the other hand, enjoy the privilege of dressing as much as they please, or as much as their husbands can stagger under, and not only this, but are expected to do it, and find that the men enjoy their doing it. They are restrained, too, by none of the conventions which in Europe make certain styles of dress suitable for some ages or some stations in life, and not for others. Old George III. used to say, as his view of civil-service reform, that every man was fit for any office he could get. So, also, it may be said to be the rule that the proper thing for an American woman to wear is whatever she can procure. That she has shown herself unworthy of this large liberty, no one who looks at the matter only from the æsthetic side will maintain. Of course the mass of women dress badly, here as well as everywhere, because good dressing requires not only plenty of money, but a cultivated and experienced eye. But no other country now furnishes nearly so large a quota of women possessed of the means of showing what they can do in dress, who come nearer perfection in the art of looking well. In fact, the interval which separates them in this field from the wealthy women of European countries, was happily described by Mrs. Westgate, in Mr. James's 'International Episode,' who exclaimed sorrowfully in glancing at the English Duchess's clothes, "She won't know how well I am dressed."

The effect of this on the dry-goods business in America is obvious. It has given it a social eminence which it does not possess in any other country. Nowhere else is the "dry-goods merchant" so important a person. Nowhere do so many youths dream of successful dealing in dry goods as the summit of their ambition. In fact, we think it is no exaggeration to say that three-fourths of the successful business men have at some stage or other in their career been in dry goods in some capacity. In no other country is the dry-goods market watched with so much interest by the public and the newspapers, and dry-goods sales commented on so earnestly as signs of the general condition of trade. Down to 1868 or thereabouts the dry-goods king was the greatest of American kings. He has since been displaced somewhat by the railroad king, the mining king, or the lard king, but he is to-day probably surer of his crown than any of them, because his power rests on a universal and growing demand, which not only can never cease, but can never greatly slacken.

Under these circumstances it would have been fair to expect that even if the great American novel was not a dry-goods novel, some leading American novelist would have laid his scene in the dry-goods world, and made his heroine a saleswoman in the cloak or linen department, and his hero one of the dry-goods princes, and have filled the stage with characters drawn from various scenes of dry-goods activity. Strangely enough, however, it has been left to a Frenchman, M. Zola, to take possession of this field, and show what fine materials the life of a great dry-goods store affords for a very moving tale of human action and passion. He has simply gone to one of the great modern shops in Paris—where you get everything at one very low price, by which all the smaller competitors have been ruined and the old ways of doing business revolutionized—and taken a batch of salesmen and saleswomen and the head of the house, and surrounded them with a few small dealers making a hopeless struggle for existence under the competition of the leviathan, and a few women customers who love dry goods almost with a passion, and haunt the store from day to day with a thirst for novelties which no number of "openings" can slake or extinguish. The result is a very moving drama. The characters are all thoroughly French. The motives are French. The whole atmosphere is carnal. The religious and moral sources from which we here draw so much, both of what sustains and restrains us, are hardly alluded to in the book. The head of the house is simply an intelligent and active Turk, who has lost all respect for the Koran. The heroine is pure and steadfast through much temptation, but it is rather the purity of a cold temperament than of duty or self-respect. The result is, nevertheless, that one follows the fortunes of a spring opening and the going off of an unusually cheap silk with the breathless interest with which one reads of the varying phases of a historic battle or the ups and downs of a great lawsuit. Moreover, the hero, when he goes abroad, does not leave his dry goods behind. He frequents the salons of good society in Paris, but when he enters a room the ladies crowd around him to hear of the novelties he has and the novelties he expects, and of the goods he is going to "mark down" and the goods he means to "slaughter," just as they might around Bismarck or Moltke to extract from him the secret of a great negotiation or the meaning of a concentration of troops. One watches him, too, as he strides down the store on a morning when a disappointment in love or the unexpected heaviness of a particular class of goods has put him out of temper, hurling dismissals right and left at the trembling salesmen and saleswomen, as one watches the proclamation of a state of siege by a conqueror in a turbulent city.

The whole story is marvellous as an illustration of what the hand of genius can do with what seem the most commonplace materials. Probably no dry-goods novel will ever surpass this one; but there remains in plumbing an unoccupied field in which laurels can be won by a competent American writer, and in which he has nothing to fear from foreign competition. No European novelist has nearly the familiarity with plumbing which every city-bred American possesses, or has the same opportunity of studying the plumber's character or catching the situations which his life creates, or the vicissitudes with which it is filled. The plumbing of a hotel, for instance, or a "mansion," might be made the central feature in a drama of thrilling interest. There is hardly any trial, or temptation, or triumph in life which might not be illustrated by the progress of a plumber's "helper," from the period when he passes his day going to the shop for things which "the man" has forgotten, up to that in which he lobbies for the work on a State-house or a City Hall.

CONCLUSION OF THE WORK OF THE ARCHÆOLOGICAL INSTITUTE AT ASSOS.

THE firman granted by the Turkish Government to the American Expedition to make excavations at Assos has expired, and the work has been closed. The results of the work of the first year are known to the public through Mr. Clarke's preliminary report. As it will be some time before the final report can be published, some notes on the discoveries of the last two years will be of interest to all archæologists. They were gathered during a stay of several days at Assos in April of this year.

On arriving at Assos we found the work distributed among Messrs. Clarke, Bacon, and Koldewey, Mr. Clarke being engaged on the temple and walls, Mr. Bacon on the western street of tombs, and Mr. Koldewey on the agora and its surrounding buildings. About twenty men were employed, mostly Turks, experience having shown that Turkish laborers are more reliable than Greeks. It was very pleasing to note the degree of confidence which existed between the members of the Expedition and the laborers and people of the village of Behràm. This has been gained but slowly, and by honest dealings. The instrucions of the President of the Institute, to maintain a strictly honorable and truthful course in transactions with the Turkish authorities and people, have been carefully observed. No one could be more delighted than we to see the museums of America enriched by original Greek statues and other works of art, but if they cannot be obtained honestly, let them go where they rightfully belong. So many sharp practices have been indulged in with the Turks, during the last twenty-five years, by archæologists that they are now suspicious of all explorers. They have lately placed a man at the head of the museum in Constantinople who is a professional archæologist, and who will endeavor to get for it everything that belongs to it. But it must not be forgotten that honesty among Turkish officials is something almost unknown, and honesty of intention in dealing with them often places a person in the most embarrassing position. By the general law by which explorations on Turkish soil are regulated, the Turks are entitled to two-thirds of the objects discovered at Assos, but Mr. Clarke will probably secure as favorable a division as any man that could be placed in his situation. Still, the course that would recommend itself most of all would be to purchase the share of the Turks.

The objects which have been mainly studied during the last two years are the inscriptions, coins, the agora, with its surrounding buildings (stoa, bouleuterion, bath, etc.), the theatre, the gymnasium, the great atrium, the temple, the streets of tombs, and the walls. With the skill of the naturalist who from a single bone reconstructs a skeleton and clothes it with flesh, have these buildings been made to rise from their ruins. To read the preliminary report on the spot furnishes the best evidence of accuracy in

the work. In regard to the temple, information has been doubled. To what was already known has been added an accurate knowledge of the character of the ceiling, and much interesting information about the way in which the ancients cut and handled large stones. The remains of the temple were found to a great extent on top of the acropolis where the building stood. The reconstruction of the buildings about the agora was rendered more laborious by its situation on the steep slope toward the sea. The stones were widely scattered, and often built into the walls of goat-pens. The agora was bounded on the east by the bouleuterion, on the north by the stoa, on the west by a building supposed to have been a temple, and on the south by the bath. The bouleuterion has been reconstructed as to foundation and front. It had five columns in front, and four which bore the roof. It was rendered unsymmetrical by a large stairway near it. The stoa was a Doric building two stories high, with four steps and a row of columns in front, and a row through the middle, which supported the ceiling. The intercolumniations in front were all open but four; the second story was approached by the two ends, and seems to have served as an exchange and walk for people of leisure. The lower story was large enough to receive all the people from the agora in case of rain. The height is almost the same as that of the stoa at Pergamos and the stoa of Attalos at Athens. The ceiling was made of earth, very thick, so as to prevent the walking of the people above from annoying those below. Not a single capital of the upper story has been recovered. Otherwise the restoration is complete.

To the west of the agora was a building supposed to have been a temple. Here was also the principal gate to the agora, entered by the street coming from the western gate in the city wall. Below the agora was the bath, a building whose excavation and reconstruction are of the highest importance, as it is the only Greek bath known. Of it thirteen rooms are still to be seen, as well as many details which cannot be described here. It had four stories in front and three at the back, and over all a colonnade on a level with the agora. The water was collected in a large basin, and probably used for the lower part of the city as well as the bath. One of the most remarkable things about the city is that no trace of a watercourse has been found, except one which passed under the agora and conducted the water of the stoa and other buildings from a large reservoir in which it was gathered, at the upper side of the agora, to the bather below. This added much to the importance of cisterns, one of which has been preserved, and is of excellent polygonal work, bottle-shaped, 4 m. wide at the bottom and 7.50 m. deep. Among the discoveries in the agora, two of the most interesting are a standard for liquid measures and a normal for bricks and tiles. The former is similar to those found at Pompeii, the measures being determined by the capacity of holes cut in a large stone. The latter is also a large stone, with the forms of tiles and bricks cut in it.

As late as the year 1864 the most perfect of all the buildings at Assos was the theatre. In that year, however, the Turks carried many of the stones to Constantinople for the construction of docks, though enough has been left to enable an architect to reconstruct the whole. The upper rows of seats did not extend so near the stage as the lower ones, as was also the case in the small theatre at Pompeii. It had but two diazomas. Of the gymnasium sufficient remains have also been found to render its reconstruction certain. In it a church had been built, and a colonnade of it had been used for one of the aisles of the church. It was very large and the plan is very detailed.

When we arrived at Assos, interest was concentrated on the western street of tombs. There is also an eastern street of tombs, but of very little importance. Along this street, as along the Appian Way at Rome and the Street of Tombs at Pompeii, tombs of the greatest variety had been erected. They may be divided into buried and free-standing tombs. Those which were buried may be subdivided according as the sarcophagi were large enough to receive a human body, or consisted of a small stone box designed only for the ashes, either in an urn or without it. Those above ground consisted of various forms of tombs consisting of four slabs of stone set on edge and a cover, or solid blocks of stone. These are naturally the ones which have been most completely destroyed. The large covers lie scattered about in great numbers, and the slabs have often found a place in the wall of a Turk's house or some other building. In the few instances where tombs of this kind are still standing, a round hole has been broken in the side and the contents removed. Some of these last are specimens of very fine work, as may be seen by referring to the cuts in the preliminary report. The age when iron was scarce has passed over these monuments, and the ugly holes which so disfigure the ruins at Pompeii and Rome, and which were dug to get the iron clamps that bound the stones together, are also seen here. Of the buried sarcophaghi a hundred and twenty-four have been opened. They were nearly all constructed of the same stone of which the walls are built. One was found that was made of terracotta, and two of a very porous volcanic stone, which some suppose to have been the "sarcophagus stone" of which Pliny speaks.

The most interesting discoveries were often made in tombs that had once been opened and found to contain neither gold nor silver. The materials of which the articles found in them consist are terracotta, bronze, iron, glass, silver, and gold. (This order indicates the quantity of each.) Of terracotta figurines great numbers have been found. Thirty of them were found in one tomb, of which the following are the most important: four musicians, three flute blowers, and one who holds clappers in his hands; two standing figures of Aphrodite; six figures similar to the Branchidæ at Miletus, with the right hand either on the breast or knee and the left always on the knee. Add three beautiful oil bottles of green and blue glass, ornamented with yellow and light-blue stripes; eight vases, seven ornamented with black palm-leaves and one with flute-blowers. Next in number to the terracotta figures are those of bronze. Strigils, knives, coins, and other small objects were found among them. Of iron, arrow-heads and knives were most common. Of glass, some very fine iridescent bottles were found, and also some of perfectly transparent glass. Of gold and silver nothing of importance was found but coins. In late Roman times the deposits were all of glass, earthenware, and bronze. The glass of this period had been broken either by the falling-in of the covers of the tombs or by plundering.

Very many tombs had been used repeatedly, there being in many instances the bones of five or six persons in one sarcophagus. None of the bones could be removed except a few skulls. Of these, two have been sent to Professor Virchow at Berlin, and the others are still at Assos. These skulls were all found in the large sarcophagi, the bones in the small boxes having, almost without exception, been burnt. Of cinerary urns, great numbers were found. We were present at the opening of a sarcophagus which contained one of these urns. The tomb was as clean and dry as if it had been closed but for a day. The urn was of terracotta, and had a cover of lead. It had been turned on its side, probably by an earthquake, but the ashes were still in it. The lid of this sarcophagus furnished a good illustration of the character of the stone of Assos. It was perfect, except that it was split from end to end almost in a straight line. Another tomb, opened while we were at Assos, contained figures of a boar, a deer, several figures of deities, and many other small objects. In still another was a large mirror, and in another some small objects that seemed to have been weights. This enumeration makes no pretensions to completeness. There are hundreds of other objects that cannot be appreciated till they have been studied and catalogued. No one who has carefully studied this street of tombs will hesitate to attach to it the same value for Greek archæology which Roman archæologists attribute to the Via Appia and the Street of Tombs at Pompeii. About two hundred coins of the city of Assos have been found. They are determined by some form of the word "Assos" and the head of an ox or a sphinx on the reverse, and the head of Athena on the obverse. Others have the heads of various Roman emperors. Of coins not of the city, several thousand have been found. Some of the gold coins of the city are very fine, and we hope may find their way into some one of our museums.

The inscriptions found at Assos and in the vicinity are now being studied by Dr. J. R. S. Sterrett, who is, perhaps, as well qualified for this kind of work as any American scholar. He has already made some ingenious emendations, and by persistent search has increased the number of inscriptions of Assos to seventy-five. He is now at Antioch with Mr. Ramsay, where he will remain till October, and then return to make a tour in search of inscriptions through the entire Troad.

The most striking feature of the place on first approaching Assos is its walls. "They have long been famed as the finest existing monument of Greek engineering." The place is one of the most lonely imaginable. The perfection of these Greek walls, which almost assumes the appearance of newness, seems out of harmony with the ruin that reigns around them. One long stretch is still perfect to the top, and doubtless many more would have been so had they not been used as a quarry. The lines of the cuttings are as clear as if but years instead of centuries had passed over them. In only a few places has the water softened the stones and rounded their corners. Nor does the polygonal wall appear less perfect than the others. This is due to the fact that it has been enclosed in several places in a revetment of later wall of rectangular blocks. The forthcoming report will contain a survey and careful study of all the walls, as well as of the buildings of the city. The drawings of the portions of the walls that will appear in the report have been made by measuring each separate stone. Mr. Clarke has detected seven varieties of wall, which are distinguished from each other by the shape of the stones and the character of the work. Nos. 1 and 2 are built into No. 3. No. 2 is nearly rectangular. Nos. 3, 4, 5, 6, and 7 are all rectangular.

The western gate in the city wall is much admired by all visitors to Assos, but it is not now so perfect as the eastern gate, which was excavated during our stay. Modern military engineering could scarcely show anything better designed to give the besieged an advantage over the besieger. The grand lintels (gone from the western gate) are still here, one in position and one fallen. The arrangements for barring the gate on the inner side are still plainly seen, and one of the iron pans in which the gate-post had turned was still in its place in the sill. In this part of the wall there is also a peculiar kind of

tie which binds the two pieces together. In the sill was found a hole an inch in diameter, cut diagonally through the outer corner of the stone. Holes of the same sort are found in the stones of the temple and in the stones along the streets of Pompeii. So far as we know, an explanation of them has not yet been found. Some have suggested that they were used for tying animals, and Professor Overbeck that those in Pompeii were probably used for tying down awnings on hot days. To this particular one neither of these explanations is suitable, for neither ass nor awning would be in place here. In concluding this brief notice of the excavations at Assos, we may add that the final report will be a volume similar in character to the 'Ionian Antiquities,' differing from this great work only in quantity, and not in quality. J. M. Crow.

QUESTIONS OF BRITISH POLICY IN INDIA.

London, August 9.

It is not often that questions of internal administration or legislation in India attract the notice of the British public at home. People in England are so much absorbed by their own politics, so ignorant of India, and, fortunately, so conscious of their ignorance, that they leave these matters alone. Although they are very proud of holding India, and keenly watchful of anything which can affect their communications with it—witness the repeated panics about the Russian advance in Central Asia and the sensitiveness as to the Suez Canal—they have much less curiosity about India, the condition of her peoples and the methods of British rule, than might have been expected. There are plenty of retired Indian military and civil officials living in England whose eyes still turn toward the scene of their life's labors. There is scarcely a large family which has not some son or brother or cousin engaged in work there; yet among average educated people one finds not only little knowledge, but little thirst for knowledge, regarding this greatest of British possessions. Such indifference is in so far fortunate that it saves us from meddlesome interference by Parliament with the Indian Government—an interference which would not only weaken the authority of the Viceroy and his Ministers, but tend to make our policy there less stable and consistent. However, an occasion has at last arisen on which English public opinion has been appealed to by those who disapprove of the measures which the Viceroy has been recently taking, and of the behavior of the Home Government in sanctioning those measures. The defenders of the Viceroy have replied, and a pretty brisk agitation has been kept up in London for the last three or four months on the subject.

It has for many years past been a fully recognized part of British policy in India to diminish the distinction between Englishmen and natives by extending the eligibility of the latter to civil office under the Crown, and also to relieve the Central Government of part of its immense load of work, by creating local self-governing bodies, to whom functions, at first small, but intended gradually to increase in compass and consequence, may be intrusted. This policy was asserted in elevated language by the Queen's Proclamation of 1858, issued when the East India Company's rule was transferred to the English Crown, and has been repeatedly confirmed by Viceroys and English Secretaries for India since that day, whether Liberals or Conservatives. The first signs, if not of retrocession from it, at least of indisposition to carry it out, were seen in the Viceroyalty of Lord Lytton under Lord Beaconsfield's Government. Lord Ripon, who was appointed Viceroy by Mr. Gladstone in 1880, seems to have resolved to proceed all the more rapidly because his predecessor had hung back. In September, 1881, he issued a scheme for the extension of local self-government, which was further developed in 1882, and which, in spite of protests from the subordinate Government of Bombay, has now passed into law. It enlarges the powers of municipalities in towns and local councils in the rural districts, gives them a larger elective element, wider attributions, a fuller control over the local taxes they raise, and in particular abolishes, in some districts, the provision that the local English official shall be *ex-officio* chairman. This measure, and especially the feature last mentioned, which diminishes official control, excited some displeasure among Indian civilians, many of whom thought it premature, distrusting the good sense of the natives, or not liking to part with any of their own authority. Some months later a bill was brought into the Supreme Legislative Council of India (a body composed partly of high civil servants who sit *ex-officio*, partly of persons of note, English and native, nominated by the Viceroy), which provides for extending the criminal jurisdiction over European British subjects to native magistrates. Hitherto it has been exercised by European magistrates only, except in the great presidency towns of Calcutta, Bombay, and Madras, so that in the rest of the country (what Anglo-Indians call the Mofussil) those native members of the civil service who have risen to that grade in the service at which their English companions would be entitled to try Europeans for offences have been debarred from doing so. The native officials to whom the bill would have given jurisdiction are few in number, probably less than twenty, and the change is one which must have been foreseen when natives were admitted to gain posts in the civil service by competitive examination. However, it evoked a storm of opposition from the Anglo-Indians, first in Calcutta, and then over the interior of India generally. In Bombay there was, indeed, but little opposition, for in Bombay the Europeans get on better than elsewhere with the natives, who are themselves more independent and open in character than the people of Bengal. But in Calcutta the excitement rose so high that speakers at the meetings of Englishmen held to protest against the bill are said to have advised the English railway servants to strike, and the English soldiers to mutiny, while the volunteers seriously considered whether they should not lay down their arms.

From India the movement spread to England. The Calcutta correspondent of the *Times* despatched vehement telegrams, which were printed at great length in that journal, while business men and lawyers in all parts of India wrote home to their friends here bespeaking their sympathy, and urging them to agitate in England against the bill. Such appeals soon produced an effect. Strong articles appeared in the *Times* and several other papers. Committees were formed, and at length an influential meeting of Anglo-Indians was held in London to protest against Lord Ripon's policy. Notice of a motion condemning it was given in the House of Commons by Mr. Stanhope, Under-Secretary for India under Lord Beaconsfield's Government—a step which caused some surprise, as it has generally been the care of the leaders of both political parties to avoid raising domestic Indian questions in Parliament. A debate took place in the House of Lords, but no resolution was proposed, and Mr. Stanhope showed no desire to press his motion. However, the bill—Ilbert's Bill, as it is commonly called from the name of the distinguished member of the Viceroy's Council who brought it forward—has also its warm advocates here, and they started a counter agitation on its behalf. There are always a good many natives of India in London, mostly Hindoos, with a few Mohammedans and Parsees, and they were, of course, active in support of a measure intended to remove a disqualification and slur imposed on persons of Indian blood. Those who are called by enemies and friends the Sentimental Radicals, persons always ready to sympathize with the oppressed of every country, and to apply the principles of liberty, equality, and fraternity with courage and earnestness, if sometimes with deficient caution, were zealous for it; while many others, who had no decided opinion on the merits of the proposal in itself, thought that the Executive Government of India ought to be supported when it is not plainly wrong. Speaking generally, those who object to the bill are Tories, and those who approve it Liberals, but there are also some Liberals who share the Anglo-Indian feeling against it. This counter agitation produced two public meetings held within the last month in London. The first was presided over by a respectable retired Indian judge, the second by Mr. Bright. At both, the chief speeches were made by retired Anglo-Indians, while some English Liberal members of Parliament followed on the same side. The weight of Anglo-Indian opinion, no doubt, remains with the opponents of the bill, who gathered to their meeting a far stronger array of names than its defenders can put forward. On the other hand, these latter are more fortunate in their English advocates. Mr. Bright and Mr. Forster are more weighty than any of the Conservative politicians who have attended the anti-Ilbert demonstrations; and no one doubts that if the question were brought before the House of Commons it would support Lord Ripon by a large majority.

The questions of policy involved are far too large to be set forth at the end of a letter, so I must be content with observing that the opinion of judicious men who have lived in India seems to indicate that while Lord Ripon is probably right in the substance of his proposals, he would have done better to proceed more cautiously, and not to follow up a measure like the Local Government Bill, which excited much disquietude among the more conservative officials, by a second bill which irritated and even alarmed the non-official classes. This latter one might have been carried with comparatively little trouble had not the former one made men suspicious, and caused it to appear part of a general scheme for depressing Englishmen for the benefit of natives. The excitement seems to us in England out of all proportion to the importance of the point at issue, and we are forced to look at it as an evidence—a disagreeable evidence—of the extent to which feelings of aversion to, or contempt for, or suspicion of, the natives still sway the minds of Europeans in India. For these feelings there may be more or less ground—some ground there must of course be—but we in England, who receive with no prejudice any foreigner, whatever the color of his skin may be, and perhaps even make a little too much of him as an interesting curiosity, are startled at discovering the social and moral gulf which still yawns between English and natives in India. It is a serious fact for those who have to govern India, and it greatly aggravates their already heavy difficulties, that such an explosion of race hatred should have taken place. Probably the bill will be modified; but to pass it at all will annoy the Europeans, while to drop it would be to wound still more deeply the native mind, and to touch the authority of the Government itself. Y.

THE CONDITION OF THE WEST OF IRELAND.

DUBLIN, August 11.

THE introduction by the Government, at the fag end of the session, of "The Tramways and Public Companies (Ireland) Bill," and the fierce opposition of the Irish party to the clause under which it is proposed to devote £100,000 more of Irish Church surplus money to emigration, again draw attention to the condition and prospects of the West of Ireland.

As to the statistics of its misery and overcrowding we have hardly any better guide than a paper read some weeks ago by the Registrar-General of Ireland (Dr. Grimshaw) before the Statistical Society in Dublin, a paper accompanied by the most elaborate tables, evidently prepared after thought and labor. Dr. Grimshaw neither is nor professes himself to be a sympathetic man; he belongs to the governing and anti-national class in this country, or he would not have secured the lucrative and not very onerous post he holds. His object is to state facts, and these can, I feel sure, be implicitly relied on. He says: "During that sad period of depression [1879–80] I had the honor of being selected one of the Honorary Secretaries of the Duchess of Marlborough's fund, and it became my duty, in conjunction with my colleagues, to determine which districts were most in need of charitable aid. By information collected from various sources, and especially that obtained from the Local Government Board, we ascertained that if a line were drawn from Londonderry to Skibbereen, it would roughly divide Ireland into two districts, the district in urgent need of charitable assistance being situate to the west of the line, and that to the east requiring comparatively little aid. Thus Ireland would be divided into two large social provinces, the western being the less prosperous and always liable to distress, amounting in bad seasons to famine, the eastern being the more prosperous. Practically, the western division includes the six counties on the Atlantic seaboard, with Roscommon and Leitrim, and the eastern the rest of Ireland." Roughly speaking, this impoverished western division embraces one-third the area of Ireland. Doctor Grimshaw, in a series of sixteen tables, shows with what surprising accuracy this generalization is sustained by figures. Summing these up he puts the thirty-two counties of Ireland through what he calls a competitive examination regarding their social and industrial condition: "If all the conditions which represent density of population in relation to productive land, scanty means of subsistence, and low standard of education, be added together, the result will be that the counties will be arranged in the following order: Mayo, Sligo, Donegal, Galway, Leitrim, Roscommon, Kerry, Cavan, Tyrone, Armagh, Longford, Clare, Monaghan, Louth, Fermanagh, Londonderry, Cork, Wexford, Waterford, Down, Limerick, Kilkenny, Kings, Westmeath, Antrim, Tipperary, Dublin, Kildare, Queens, Wicklow, Meath, Carlow."

It is somewhat startling to remark how low down stand the nine Ulster counties, with the exception of Antrim and Down. Some of the statistics brought out in the tables are particularly worth noting. The average county decrease in our population between 1841 and 1881 was 36.7 per cent. Only two counties show an increase, Antrim 19.1, and Dublin 12.4. The greatest decrease has been in Clare, Kilkenny, Meath, Queens, and Tipperary, all above 50 per cent. Between 1851 and 1881 an average of 47.3 per cent. of our people emigrated. Has any civilized country, in a time of peace, ever shown such an exodus? One table tells us the average number of acres (three) of arable and pasture land to each person in 1881. Dublin shows the least, 0.5; Meath the greatest, 6.3 acres. The average Government valuation of holdings in Ireland is put down as £20, Mayo being the lowest, £8, and Dublin the highest, £58. But 14 people out of every 1,000 persons in Ireland belong to the "commercial class"—the lowest average being in Leitrim (2), and the highest in Antrim and Dublin (27 and 48, respectively). One hundred and ninety-three out of every 1,000 of our population belong to the agricultural class, and 134 out of every 1,000 to the industrial. A consideration of these latter tables shows the appalling waste, or, rather, inanition, of human energy in Ireland. Twenty-five per cent. of the population of Ireland of five years old and upward can neither read nor write. The largest percentage is in Galway (45.8), the most favorable in Antrim (12.1), Down (14.3), and Dublin (14.5). Of our people 18.2 per cent. still speak Irish, the highest proportion being in the western district of Doctor Grimshaw's grouping, and the lowest being in Queens, Carlow, Down, and Wicklow, where it ranges only from 4 to 3 per cent. Indeed, the rapid abandonment of the Irish tongue is one of the phenomena connected with the later history of Ireland, and is as surprising as the extent to which the Welsh have clung to their national language.

In truth, we are not a sentimental people, when sentiment is likely to interfere with our pockets. I have known parents in the west of Ireland beat their children for speaking Irish, under the impression that they could not have full command of two languages, and that it was better for them to speak English. We may indeed see what the educational difficulties to Irish emigrants, at the time of the great famine and since, would have been had they generally spoken only Irish. Catholicism, which is not by Protestants supposed to be a reading religion, has doubtless tended to the rapid abandonment of the old language, as the intense Protestantism of Wales has led to their retention of a kindred branch of the Gallic tongue. The translation and wide dissemination of the Bible and Protestant religious publications in Irish, at a time when there was no other general printed Irish literature in the country, induced the Catholic clergy (very properly, from their point of view) to discourage the acquisition of a literary knowledge of Irish, and when the national schools came the extinction of the old tongue was merely a matter of time.

The Registrar-General's figures but tend to crystallize our knowledge of the miserable state of things in the west—an unhappy present, due to the unsettled, nomadic semi-barbarism existing over those districts until within the past two hundred years, aggravated by the ruthless manner in which the people were afterward swept off the better portions of the country "to hell or to Connaught," and by the low state of comfort in which the inhabitants were satisfied to live and increase. Nothing ever discouraged me so much regarding the future of our west as the early marriages and the peopling up, in the face of a life of constant misery and recurrent famines. If people are really satisfied to live under such circumstances, what can be done for them? It may be and is robbery to increase rents from 2s. 6d. to £1 or £2 as tenants improve their holdings; but no reductions in such rents would make the difference between misery and comfort. A Catholic clergyman in one of the poorest districts admitted to me that in spite of famine, pestilence, emigration, and rackrenting, the population of his district was greater than it was in 1846. He boasted that immorality was unknown—nearly every young man married between twenty and twenty-four. What crude ideas of "virtue" such a population must have, when it is considered right to bring children into the world without the least prospect of their being able to gain a living in it. Through all their privations, the physique of these people is much higher than among populations more influenced by prudential considerations, and they are most industrious, the men neglecting no opportunity of finding employment in Great Britain in summer as migratory laborers, and the women satisfied to knit socks at three cents, and long stockings at six cents a pair. It is but fair to Ireland to remember that upon the average her people marry later than the English.

The desire of the Government by emigration permanently to improve the condition of these poor people is humane, and is, I believe, but to a small degree influenced by any desire to lessen their difficulty of dealing with Ireland by systematically decreasing the population; unless to this extent, that there has undoubtedly been among the Constabulary, perhaps without the knowledge of the heads of the Irish Executive, a wish to bully or frighten off to America the young men who took a prominent part in the Land agitation—often the highest-spirited and really best in a district; those upon whom in another country the prosperity and advancement of the nation would so much depend. The bitter opposition, often unreasonable, of the Irish party to these schemes for emigration has its *raison d'être* in this, that the Government does not apply itself as it ought to other modes of developing the country, or rather of removing obstacles to its development.

The tramway clauses of the bill lately introduced are in the right direction. They propose to permit districts to guarantee money for the construction of these means of permanently opening up and improving the country. And the imperial exchequer is, upon certain conditions, to supplement these guarantees. The effort to centralize in the Castle the actual control and arrangements in every detail connected with Ireland leads to this and all bills being exceedingly complex and obscure. None but lawyers can understand and take in their provisions, and we are more and more being hampered by officialism and red tape. From the Government's own point of view of desire to conciliate us without home rule it is difficult to understand why such grants as those contemplated in this bill are not placed unreservedly at the disposal of the Irish members. It would surely be better for the Government that the Irish party should incur the blame of failure or be gratified by success. The prognostications of our members of Parliament as to the starvation likely to ensue in the west last winter, unless a general system of Government relief was inaugurated, have not been justified; and events have warranted the Government in having stood upon the ordinary poor-relief tests. Such distribution of private charity as has taken place has borne its usual demoralizing fruits. The epithet of "pinch-of-hunger" by some applied to the Government policy is a hard one. If, however, nothing but "pinch-of-hunger" will discourage improvidence and force the people of certain districts (depressed by whatever causes) to raise their old standard of comfort and decency, we had better look the fact in the face.

The desirability of transferring to other portions of Ireland the excess of population in the congested districts is much insisted upon. If self-governed England were in the same position as Ireland, the English people would never submit to be taxed for the deportation of a portion of them abroad so long as there was an acre of reclaimable or unsettled land at home.

(It must be remembered that the funds for trying this and other late experiments are not drawn from the imperial exchequer, but from the "Church surplus," every penny of which came originally out of the pockets of Irish landowners and tenants.) With the law as it stands, and with a Government disinclined or apathetic regarding the legal charges that would be necessary to make such an experiment as migration likely to work, I see great difficulties in the way of organizing migration, and I scarcely wonder at Lord Spencer and Mr. Trevelyan regarding emigration as the readiest way out of the difficulty.

Government have offered, if a responsible company were formed for migration, to advance funds on loan. A philanthropic English gentleman, Mr. Rathbone, a member of Mr. Tuke's emigration committee, not himself believing in migration, has offered £1,000 toward giving it a trial, if certain persons he names be among the committee of management, and if £9,000 more be advanced by others. Meanwhile the National party maintain it is the duty of the Government to advance the money and show the same decisive eagerness in the question as they have shown regarding emigration. And so matters move in a circle, and the Irish peasant is made the shuttlecock of party.

I do not entirely share the belief that so long as our depressed western people are in Ireland, their habits of improvidence and early marriages will cling to them, that in fact the "dead lift" of removal to America or the colonies is essential for their elevation. The improvement in the condition of large portions of the population in Ireland has been very great within the past thirty years, and we may confidently hope the same of all in time. Indeed, when we consider what the state of our people was one hundred years ago and compare it with the present, we may hope everything regarding the future.

No thoughtful person can refuse to consider the possible feasibility of migration in the face of Professor Baldwin's belief that it is practicable. As an authority on agricultural matters in Ireland no one stands higher. He has been for many years inspector of the Government agricultural schools and model farms. He is intimately acquainted with every part of the country. As Assistant Commissioner under the Land Act, he has added to his previous opportunities and experience, having been especially engaged in the more backward districts, where there have been most distress and depression. He has long believed in migration. He impressed his views strongly upon the Richmond Commission, before which he was one of the most important witnesses; and he has lately emphasized them by publishing this evidence in book form with prefatory remarks. Additional weight is to be attached to Professor Baldwin's conclusions upon this subject in that he has never taken any part in politics, and that he is an ardent admirer of the Land Act, which he does not hesitate to pronounce "the most advanced code of land tenure in any civilized country in the world."

It will be evident from what has been said that emigration and migration are here regarded from many and different points of view. But how does it affect you? Can anything put a greater strain upon your institutions than the immigration in such vast numbers of the poor, the discontented, and the adventurous from this side of the Atlantic? Can there be any greater proof of the vastness of your resources and the self-working character of your system of government than your assimilation of all this raw material in the past and present? D. B.

Correspondence.

MR. SIDNEY LANIER'S JUDGMENT OF WALT WHITMAN.

To the Editor of The Nation:

Sir: By reason of illness I was unable to revise the proofs of my husband's lectures upon "The English Novel," recently published by the Messrs. Scribner; and Mr. Lanier's friend, Dr. William Hand Browne, of Johns Hopkins University, very kindly offered to read the proof for me. He found it best to make a few omissions from the volume, as the manuscript—prepared under great disadvantages—had been left unrevised by Mr. Lanier. Upon mature reflection I think that one paragraph omitted from p. 44 ought to be included in the second lecture, which refers particularly to Mr. Whitman and his poetry, because without it a complete expression of Mr. Lanier's views upon this subject would be wanting. While Dr. Browne apprehends some false interpretation of this passage, I feel that Mr. Lanier's exact words should be given. The paragraph, opening the examination of Mr. Whitman's work, is as follows:

"But let me first carefully disclaim and condemn all that flippant and sneering tone which dominates so many discussions of Whitman. While I differ from him utterly as to every principle of artistic procedure; while he seems to me the most stupendously-mistaken man in all history as to what constitutes true democracy and the true advance of art and man; while I am immeasurably shocked at the sweeping invasions of those reserves which depend on the very personality I have so much insisted upon, and which the whole consensus of the ages has considered more and more sacred with every year of growth in delicacy; yet, after all these prodigious allowances, I owe some keen delights to a certain combination of bigness and naïveté which make some of Whitman's passages so strong and taking: and indeed, on the one occasion when he has abandoned his theory of formlessness and written in form, he has made 'My Captain, O my Captain,' surely one of the most tender and beautiful poems in any language."

Let me add that although Dr. Browne and I differ as to the wisdom of making this correction, it is done with his kind sanction, and with his sympathy as regards my own sense of duty in the matter.—Respectfully yours,

Mary Day Lanier.

Baltimore, August, 1883.

SHAKSPERE AND THE COLLEGES.

To the Editor of The Nation:

Sir: In the list of 'Editions of Shakespeare' given in the last *Monthly Reference Lists* is this note: "Of Peabody's edition, published in Boston by Phillips & Sampson, Mr. Hubbard says: 'I am convinced that it did more to introduce the reading of Shakespeare in this country than any other before or since.'" I can easily imagine the surprise with which this statement would be received by such students as are acquainted with this very respectable, but in no way noteworthy, edition. As the question is one which has some interest in relation to the history of American publications, I beg your leave to make the following correction: One of the first enterprises of the well-known Boston house of Munroe & Francis was the publishing, in 1802–1804, of an edition of Shakspere. This was apparently soon sold, for in 1807 a second edition was printed. It is to this edition that my note was intended to refer, for this reason: special efforts appear to have been made to induce the students in the various colleges to subscribe, and with marked success, except, possibly, in a single instance. In the list of subscribers given in one of the volumes, I find the names of more than half of the students of Harvard, 99 out of about 175,* including those of Edward Everett and Richard H. Dana, the poet. Brown comes next with 28, Union with 17, and Dartmouth with 7 subscribers. Yale, I am sorry to say, is conspicuous by its absence from the list. Considering the fact that this edition fell into the hands of so many young men from all parts of the country at the most critical period of their lives for the formation of their literary tastes, I feel that I am justified in claiming for it a preëminence over all other American editions, so far as regards the awakening an interest in Shakspere's works.—Yours, etc.,

Jas. M. Hubbard.

Blue Hill, Milton, Mass., Aug. 27, 1883.

*I am indebted for these figures to the kindness of Mr. A. M. Knapp, an associate librarian of the Boston Public Library.

THE PLACE OF GREEK IN A COLLEGE COURSE.

To the Editor of The Nation:

Sir: I have been much interested in Mr. Adams's Phi Beta address and the discussion which it has called out, as far as the latter has come to my notice. But, after all that has been said, there remain some points that I have not seen suggested.

Harvard College—and probably most of the other American colleges more than fifty years old—was founded with the special purpose of fitting men for the ministry. At the present day, however, the number of graduates entering the ministry is not a majority, or even a plurality, of the whole. Taking my own class as an example, out of eighty-two who reported themselves twenty years after graduation, eighteen had gone into business, fourteen had become lawyers, thirteen physicians, thirteen clergymen, seven teachers, six had followed literature and journalism, and eleven are classed as "miscellaneous." Probably the variety of occupations adopted by college graduates is increasing rather than diminishing from year to year. Now, nobody claims, I believe, that it is the duty of a university to give a man a special training for each and every one of these different callings—that is the province of the professional schools; but I think each student has a right to ask of the university such a training as will develop what mental powers he has, so that, whatever be his future occupation, he will know how to attack his professional problems to the best advantage, and place his labor where it will do the most good. In brief, it should be the aim of the university to produce what the English call "good-all-around men," leaving the training of specialists to professional schools.

What course of study is best adapted to produce "good-all-around men"? The answer to this question should come from the professional educators; still, I give my own suggestions for what they are worth. I think a man who can observe accurately, reason logically, and express himself precisely has a complete equipment for any mental work he can ever be called upon to perform. Like the three dimensions of space, these three requirements, taken together, cover all possible needs. How are they to be met?

Accuracy of observation is to be gained by the study of the physical sciences, and that not by memorizing facts from books, but by seeing them, and as far as possible producing them, each student for himself. The second requirement is met by the study of logic and, perhaps most people would add, mathematics. I think mathematical reasoning, however, is mechanical rather than logical. The mathematical mill will grind your grist to any conceivable degree of fineness, but the value of your meal depends entirely on what you have put into the hopper. Precision of expression will be cultivated by the

study of rhetoric and belles-lettres, and the practice of writing and, perhaps, debating. If the Greek and Latin authors have a place in the course I am proposing, it must be on account of their value as literary models.

Granting for the sake of argument all the superiority that is claimed for the classical authors, the next question to be answered is, How far is this superiority due to the writers themselves, and how far to the language in which they wrote? The difficulty of making a satisfactory translation from one language into another illustrates this point. As far as diction is concerned, an English model is better than any other for a writer of English. None of the modern languages are the equal of Latin in its power to say a great deal by the use of very few words—that is, Latin as we moderns know it, in its dress-parade aspect. It is possible that the Romans in their every-day life did not use it so artistically. An attempt to reproduce this trait in a modern language would probably result in obscurity. If we are to consider the classic authors as rhetorical models, I can only say that the manner in which I read an oration of Demosthenes, for example, a page or two every other day, with the lexicon at my elbow, and thinking myself lucky if I succeeded in making logical and grammatical sense of the words as they stood, was not calculated to open my eyes to the beauties of the oration as a whole.

In what has been said above, I have considered the college course simply as a means of mental discipline, leaving the question of acquirement entirely aside. This I consider justified by the view I have taken of the respective offices of colleges and professional schools. For myself, I would say: Give the classics the same value in the course that other studies receive, and no more; and if any one desires to carry his studies in that direction further than such a course would properly go, let him attend a special school for that purpose, as he would for the study of law or medicine, or a physical science.

H. G. P.

EXPRESS CHARGES.

To the Editor of The Nation:

Sir: In No. 946 you descant at some length on the merits of our express system under the heading of "British Enterprise," and state that "immense fortunes have been made in the business." A recent experience fully prepares me to believe this statement. I received from Washington, D. C., a small box of books of about twenty-one inches dimensions in either direction. I do not know the exact weight, but it could not have varied much from 150 pounds. The charge for the service was $13 50. On inquiry of the publisher I found that the books might have been sent by mail for $1 only additional. Reflecting upon the small space occupied by the box, I came to the conclusion that "Reform is necessary" in express companies. Geo. B. Coburn.

Creelsburg, Dakota, Aug. 22, 1883.

Notes.

Nohl's 'Life of Wagner,' translated by George P. Upton, is in the press of Jansen, McClurg & Co., Chicago, together with 'Speech and Manners,' by Miss Kirkland, author of 'Six Little Cooks,' and a selection of twenty 'Sermons,' by the Rev. David Swing.

Houghton, Mifflin & Co. publish this week Bret Harte's new story, 'In the Carquinez Woods'; and, shortly, 'How to Help the Poor,' by Mrs. James T. Fields.

Porter & Coates, Philadelphia, have in preparation 'The Poetry of Other Lands,' a collection of translations into English verse, compiled by N. Clemmons Hunt.

D. Lothrop & Co. are the American publishers, but from the MS., not from advance sheets, of George MacDonald's new novel, 'Donal Grant.'

In devising a duodecimo edition for their Franklin Square Library, the Messrs. Harper seem to us to have reached the *ne plus ultra* of shapeliness, convenience, and cheapness. The result is a book with covers, and not a broadside. The first issue in this style is Lawrence Oliphant's 'Altiora Peto.' Now, is there any reason why the quarto form should not be discontinued altogether?

Louis Creighton's 'Stories from English History' will be reprinted here by Thomas Whittaker.

John Wiley & Sons begin their reprint of the second series of *Fors Clavigera* with 'Lost Jewels,' in which Mr. Ruskin first lays down in a summary way his scheme of political economy, and then slides off into calculations of the loss to the world from what seems to be God's "care, under present circumstances, to prevent, or at least to check, the glut" of "extremely good girls" by making them die early. He furnishes a novel argument to the friends of the higher education for women when he asks "how far a country paying this enforced tax of its good girls annually to heaven is wise in taking little account of the number it has left." This leads to consideration of the folly of our prevailing modes of courtship, in which, with much that is fantastic and mystical, there is also some valuable counsel. A story of two lovers who fatally mistook each other's feelings for indifference, another of a street Arab's fidelity to her father, and a letter from a vegetarian mother, complete the *potpourri*.

A modest little 'Dictionary of Useful Animals and their Products,' by P. L. Simmonds (E. & F. N. Spon), deserves commendation, if only for its fulness in respect to this country. The work is really more liberal than its title, for it admits the Colorado beetle and the phylloxera, which are not generally classed as useful animals, and such doubtful characters as the woodchuck. The products described are both raw and manufactured. The editing seems careful and intelligent, but occasionally the searcher is put off with a scientific name without further definition. The following is a favorable specimen of this defect: "Devil, a name in Tasmania for *Dasyurus ursinus*, Harr., which has a soft, thick fur."

Speaking of Tasmania, there is an interesting chapter on the flora and fauna of that island in the newly-issued 'Official Handbook,' compiled on behalf of the Government Board of Immigration, by Thomas C. Just (Launceston). The population of this colony is a little more than 120,000, with one-seventh more males than females. The climate is salubrious and remarkably equable, as is shown by the mean temperature of the warmest and coldest months, viz., January, 63.17 degrees; July, 46.44.

The proceedings in the extraordinary trial of Jews for the murder of Esther Soiymosi at Nyiregyhaza have been printed in full in pamphlet form—'Der Blut-Process von Tisza Eslár in Ungarn'—by Schnitzer Brothers, No 24 North William Street. A number of rude portraits accompany rather than adorn the text.

Admirers of Coleridge, whose number we hope is not diminishing amid the changing fashions in verse, will be interested in a biographical sketch of his son, Derwent Coleridge, who died in March of the present year, read by Mr. Augustus M. Swift, in June, at St. Paul's School, Concord, N. H. (New York: Charles F. Roper & Co.) Mr. Swift became an inmate of Mr. Coleridge's home at Hanwell in 1868, and speaks with deep affection and reverence of his already venerable teacher. His account of Mr. Coleridge's linguistic capacity and acquirements will surprise most readers. "He had complete mastery of about fourteen languages, and was sufficiently well versed in eight or nine more for all practical purposes." A fine photographic likeness of the subject of this address forms a frontispiece.

Robert von Schlagintweit has begun to celebrate for German readers the Southern Pacific Railroad in a serial work, comprising six or eight parts, called 'Die Santa Fe- und Südpacificbahn in Nordamerika' (Cologne: E. H. Mayer; New York: Westermann). The first part is before us. It is very prettily got up in every respect, and has a number of illustrations and a map. Even Americans might learn much from it.

The first number of vol. iv. of the *Newport Historical Magazine* is significantly enlarged and better printed than hitherto. This interesting periodical is one of the signs of Newport's growth and consolidation.

The Zambesi and its northern tributary the Shire are mapped in No. 105 of the Berlin Geographical Society's *Journal* (Berlin: Dietrich Reimer), after a recent Portuguese survey by Alfonso de Moraes Sarmento, whose delineations differ most markedly from those of Ravenstein's map of Eastern Equatorial Africa, especially in the neighborhood of the Shire delta. Richard Kiepert says in an accompanying article that the German marine has learned by bitter experience the little dependence to be placed on the charts of the British admiralty, and he leaves it an open question which of the maps he contrasts is the more accurate, while evidently leaning toward the Portuguese. The editor, Dr. Koner, begins a discussion of the map of Tonquin (Tongking) constructed by R. Kiepert after two French maps of good authority. He alludes in passing to the hopeless confusion of names in the country, whose Anamite-Chinese nomenclature is now being transliterated through the worst possible European medium—the French. The present map follows, in this matter, the forms given in the official chart published by the French Navy Department, and executed by J. L. Dutreuil de Rhins. Thus for Nam-dinh we have Name-digne; for Nim-binh, Nigne-bigne; for Hai-dzuong, Haï-ziuong, etc. Hué is south of the extreme southern limit of Kiepert's map, which, by way of compensation, has an enlarged side-map of Ha-noi, showing its fortifications.

Mr. Edward W. Hopkins's article on "Words for Color in the Rig Veda," in No. 14 of the *American Journal of Philology*, has a wider bearing than the title might imply, for it touches the color-sense of Homer and his contemporaries, so recently in controversy, and effectively uses the Nibelungenlied as an argument to show the fallacy of the belief in a modern evolution of that sense. "In the 9,516 verses of this poem," says Mr. Hopkins, "we have not a single mention of blue, although every opportunity is presented the poet for describing sea and sky by this color." Mr. Alfred Emerson furnishes by parallel drawings an opportunity of testing Conze's perhaps "happy thought" that the head of the "Dying Alexander" at Florence had a Pergamene origin. Mr. Emerson places it on a certain headless giant's torso in the Berlin Pergamum series, and finds it to fit the situation very well.

There is no salient article in *Le Livre* for August, though one may read both profitably and pleasurably M. Henry Houssaye's "L'Amour des Livres et la Folie du Livre," M. L. Derome's

"Olivier de Magny," and M. Fernand Bournon's notes on the library of Blois. Having mentioned in the last number M. Achille Duvau's positive ascription of some unsavory verses to Racine, which was accompanied by a public challenge to call in question the authenticity of MS. relied upon, we must not fail to remark that Mr. Ch. L. Livet denies that the handwriting is the poet's, and finds intrinsic evidence against the verses being his also. An old process, called chromogravure by the editor, has been revived to produce a delicately-colored plate representing a last-century book-worm—a theme which has long ceased to have any freshness, even in the pages of *Le Livre*. Why should we not, for a tithe of the expense, have occasional facsimiles of the title-pages of rare books, the marks of the elder printers and publishers, the more curious illustrations, etc.? If color is insisted on, there is boundless opportunity in the wealth of illuminated MSS. at the command of this periodical and its contributors.

In the August *Portfolio*, Mr. Hamerton's eighth paper on Paris deals with the Pantheon, the Invalides, and the Madeleine in his usual entertaining and enlightening manner; the review of Perrot and Chipiez's history of art in ancient Egypt is continued, with illustrations taken from the work itself; and there are notes on some (English) national portraits, including a Queen Elizabeth and Mary Queen of Scots, the latter at least of somewhat doubtful authenticity, while not lacking in sweetness and innocence of expression. In the Art Chronicle is a respectful though dissentient criticism of M. Chesneau's recent work on the English "school" of painting, which we reviewed at length last week. Kindly mention is also made of an American history of wood-engraving, but a Frenchman could hardly have distorted the author's name more completely: for "Charles G. Woodbury" read "George E. Woodberry."

Seeley & Co., 54 Fleet Street, London, announce an English version of the Eclogues of Virgil, translated and illustrated by the late Samuel Palmer, the well-known engraver. Fourteen etchings will accompany the text, such of the designs as had not been placed on copper by the artist's own hand having been reproduced in facsimile under his son's direction. There will be large and small-paper editions, all numbered. Of the latter "a small number will be printed for presentation and for sale in America."

—Speculation as to the authorship of 'The Breadwinners,' the new American novel running through the *Century*, will probably be stimulated by the appearance of the second instalment in the September number. In this it appears that the title is the name of a labor union, the proceedings and character of which are described with a good deal of minuteness. The suggestion that the novel is by the author of 'Democracy' does not appear to be based on any internal evidence of identity. One showed a great familiarity with Washington society; the other is thus far a novel chiefly of low life—that is, the characters drawn from low life in it are much more skilfully drawn than the gentlemen and ladies. It must be written by some one who knows the town of Cleveland, Ohio, pretty well; there is in it plenty of evidence that the writer is not a new hand, and it is also clear that he—for the theory that it is the work of a woman seems by common consent to be regarded as out of the question—takes a somewhat pessimistic or gently cynical view of the effect of our institutions in developing character among the poor. Mr. W. C. Conant has an article called "Will New York be the Final World-Metropolis?" in which he answers the question in the affirmative. Almost any prediction of the future greatness of this city in population and commerce seems justified by its past history, but we trust it will not become "the final world-metropolis" solely in these respects. Mr. Conant assumes that art, letters, science, and everything that makes wealth worth having and life worth living will come with commerce, but this is by no means clear. London has been thus far a final world-metropolis in point of eminence and numbers, yet, in the opinion of Englishmen, London even now leaves something to desire in many respects. The worst feature in the development of New York is that the classes who contribute to its wealth have no particular attachment to it, and probably never will have as long as they have little or no share in its government and administration except that of paying exorbitant taxes. Since the time of the Dutch families, who really governed the place, and took root here, and transmitted to their descendants an old-world town-feeling, New York has come to be looked upon more and more by all New Yorkers as a great money-hunting camp, the civic spirit being replaced more and more by the love of gain. With all our wealth our parks are not kept in repair; we have no public library; our streets are worse than country roads; we are filthy, and often in great danger of pestilence. Of literature we have little or none; nor is New York a headquarters of either science or art. It is governed, moreover, by an ignorant and superstitious "boss," the Mayor generally being his puppet. Its administration of justice is slow and not infrequently corrupt, and the best people in it are precisely those who are least encouraged by the experience of the past to engage in movements for the redemption of the city. As a final world-metropolis, it will be a failure unless in the next fifty years a great deal is done to change it; for New York as it is, with four or five millions more people in it, would not be the metropolis that Mr. Conant has in mind.

—*Lippincott's* for September has a pleasant article on an Italian watering-place, where it seems that during the height of the season cottages can be rented for 500 or 600 francs a month—a fact which, if brought to their notice, must fill the breasts of our own seaside hotel-keepers with hatred for the Italians who are undertaking to develop the resources of the Mediterranean coast. At $100 a month, a cottage would with us cost for an entire seaside season about $300, while $1,200 for this period is a common sum on the south side of Long Island. The magazines do a very unpatriotic thing in making the American reader familiar with European resorts, for the descriptions they furnish of the delights of these, combined with his own knowledge of the resources his native land affords, encourage him in his aversion for the latter, and do much to stimulate the yearly exodus to Europe. When will rich Europeans, in search of pleasure and ease, swarm over the American continent and spend their money among us, as rich Americans now swarm over Europe? Not until the dastardly magazine and newspaper writers stop showing how much better a place Europe is for rich tourists than America, and encouraging Americans to go abroad. That a Philadelphia magazine should publish articles of this sort shows that the trail of the serpent may be detected even in the very Eden of protection. Colonel McKlure contributes an "Episode of John Brown's Raid," which contains the secret history of the adventures of Captain Cook, the ill-fated abolitionist who escaped from Harper's Ferry, only to be recaptured in the mountains of Pennsylvania and to end his life on the scaffold. Colonel McKlure was, it seems, his legal adviser, and the advice he gave was the same as that given in the old story by the lawyer who, when left alone with his client, pointed to the window and called his attention to the fact that it was open. Colonel McKlure arranged matters so that Cook would have taken French leave of his captors within twenty-four hours, when the prisoner was suddenly carried off to Virginia, on a requisition which was not known to his friends to be in existence.

—The training of librarians themselves and of their assistants for their duties was among the topics considered at Buffalo. The want of some regular instruction has long been felt; members of the Association have often talked over the need of it and discussed the possibility of establishing a "school of librarianship," as they were accustomed to call it, in some large library. Indeed, much has been done in an unsystematic way at the Boston Public Library and at the Boston Athenæum. But it was not of much use to the profession, because it generally turned out that those who were trained there usually found positions in the libraries themselves. Moreover, no librarian has time to give thorough and complete instruction: it is not his business. It was very good news, therefore, that the trustees of Columbia College had been advised by their President to establish among the post-graduate courses a School of Librarianship, and it was received by the body of the Association with marked favor, though a few of the members, unacquainted with the consideration which the subject had received during the last six or seven years, thought that the Association was not justified even in recommending that the experiment be tried till all the details of the plan had been settled and approved. It was fortunate that this slight opposition was made, for it brought out more clearly the strong desire of most of the audience that some attempt should be made by so capable a body as Columbia College to supply the long-felt want. No immediate result is to be expected, for the libraries of the College must first be reorganized, and another annual convention may have an opportunity to criticise the detailed plan before it is carried into execution; but we may hope that we have seen the beginning of the end of the period of self-made librarians and untrained assistants.

—A recent issue of the Franklin Square Library (No. 320, for June 27) is 'Frederick the Second and Maria Theresa, from hitherto unpublished documents,' by the Duc de Broglie, translated by Mrs. Cashel Hoey and Mr. John Lillie. The "unpublished documents" are in great part from the family archives of the author, whose ancestor, Marshal de Broglie, commanded the French army at the time of the First Silesian War (1740-2), the period covered by this work. The recently-published works of Von Arneth ('History of Maria Theresa') and Droysen ('History of Prussian Polity,' Part 5), as well as the political correspondence of Frederick himself, have also furnished material for what may fairly be called a complete rewriting of this chapter of history. Although principally taken up with diplomatic history, the book is extremely interesting reading, and gives a very graphic picture of the times. The sketch of the political condition of Europe in chapter ii., and of the contemptible ecclesiastical electors in chapter iii., are especially instructive. The book, as might be expected, is strongly anti-Prussian in sentiment, and it must be confessed that the delineation of Frederick's character, as displayed in his diplomacy, is most damaging. We suppose, indeed, that his most ardent admirers would admit that few of the great men of history have been more unscrupulous, and probably this is the portion of his career which is most distinguished for perfidy and duplicity. The best that can be said for him is that he was the most successful

gambler in a party of blacklegs. For, if one rises from the perusal of this book with very little respect for Frederick's moral character, the other parties in the game do not impress one much more favorably—with the exception, of course, of Maria Theresa, who at this period appears wholly sincere and honorable, but who was made to suffer for the wrongs done by her ancestors. Certainly France and Austria can cast no stones at Prussia. If—which we do not believe—public morality rests upon different principles from private, Frederick's policy may be justified by the result, in the unification and greatness of Germany, which have grown directly out of his policy. As for his justification of the seizure of Silesia by the sufferings of the Protestants in that country, it happens that the very last number of the *Historische Zeitschrift* (1883, 5th Heft) contains an article by Max Lehmann on "Church and State in Silesia before the Prussian Occupation," which fully confirms this view. Indeed, considering what we know of the treatment of Protestants in the other dominions of the House of Austria, no special proof of this would be necessary.

—Summer theatres and shows are becoming every year more and more a feature of life in and about New York, and the present summer is memorable for the production, at Coney Island, of two new species of open-air amusement capable of "running" an indefinite time in hot weather. One is the Firework Spectacle, the other is the Race-track Circus. One is to be found in great perfection at Manhattan Beach, where three nights in every week a multitude of people witness the "Bombardment of Alexandria," under the pyrotechnic management of Mr. Pain, of London; the other is established at the Brighton Beach Race Course, where "Buffalo Bill," ably assisted by a horde of Indians, scouts, mules, buffaloes, mustangs, stage drivers, bareback riders, and so on, nightly illustrates Life in the Far West by representations of the most vividly realistic nature. The improvised circus afforded by the race-track must be half a mile or more round, so that it affords an ample field for brilliant evolutions of all kinds. The most striking event of the evening is the Deadwood Coach scene. The Deadwood coach—a very old vehicle which has seen hard service in its day—drawn by six mules, starts from a dark and remote corner of the arena, where the audience has for some time been watching it, and in its attempt to reach Deadwood passes at full speed directly in front of the grand stand. As it comes up, however, the yelling savages emerge rapidly from another corner, and swoop down upon it. Now the fun begins; the intrepid driver urges on his team; the crack of the rifle, the yell of the Comanche make night hideous, while a cloud of dust or sawdust, suffused with electric light, tends to give a lurid air of realism to the scene. Suddenly the rescuing troop of scouts appears in the distance from another corner, where they have been lying in wait, and surprise the Indians in the rear. Needless to say that the savages are overpowered and the stage, with its brave passengers and driver, rescued. There is besides this an attack by Indians on the lonely log cabin of the pioneer, which the wretches fire. The innocent occupants rush out to escape the flames, when the head of the cabin is ruthlessly shot down by his skulking foes and his wife pursued very nearly as far as West Brighton Beach by the mounted murderers of her husband. In this case, however, as in the first, vengeance is at hand, and in the terrible battle which ensues the Indians are "knocked out" by the whites. All this is more startling than the Bombardment of Alexandria; but in the latter, too, realism is consulted at every turn. In the first place the city of Alexandria, with its forts, harbor, mosques, and minarets, is represented by a set scene, very much like one at a theatre. There is a foreground, brilliantly illuminated, on which Egyptians, English sailors, and Americans appear, a large body of men of both services and all arms having been secured for the summer. Arabi is called upon by a bold-looking officer to surrender the town, a demand which he meets by tearing up the paper on which it is written and stamping it under his feet. The bombardment then begins, the British fleet coming into action in grooves on the back scene, and firing roman candles into the doomed town. By and by the fort nearest the Oriental Hotel is stormed and captured, the city takes fire and burns rapidly to the ground. It is all as life-like and natural as a child's play in a baby-house, and a great success as a spectacle. There seems, indeed, no limit to its popularity, and no reason why it should not run forever.

—Mr. S. G. Pratt's lyric opera, "Zenobia," has now been given several times at the Twenty-third Street Theatre, with steady improvement in the performance, although it cannot be said that all the elements engaged in the work are equal to the task of interpreting an opera conceived on such an ambitious scale. Of the principal performers, Miss Dora Henninges deserves especial praise for good acting and impressive singing, while Messrs. Connoll and Montegriffo interpreted their parts with a bold impetuosity that betokened much lung-power and self-confidence. The female chorus is small, but remarkably well trained and agreeable to the ear, while the male chorus, at first uncertain and ragged, sang the soldiers' chorus in the third act with so much effect that on Thursday it was demonstratively encored. Several other numbers were redemanded, and the verdict of the audience on the work was, on the whole, favorable. The full *ensemble* seems to be Mr. Pratt's strongest point, and the finales of the first and last acts possess so much merit as to suggest the idea that he would be successful in a choral work written for the concert stage. There is much recitative in "Zenobia," but it is generally of a semi-melodious or arioso character, and richly supported by a full orchestration, the harp, brass, and other modern means of coloring being profusely employed. The work of the orchestra, however, was sometimes rather rough and faulty, owing, perhaps, partly to the fact that the musicians had to play from the MS. Mr. Pratt's harmonies are anything but commonplace. In their concatenation and in the development of the themes in general, there is occasionally an absence of spontaneity and a lack of correlation between the different parts of the musical organism. This, however, is a fault which further experience will doubtless overcome. It would have been wiser if Mr. Pratt had made his first appearance before the public with a comic opera or an operetta. This would have given him the theatric ease, the flow and variety of rhythm, and the dramatic swing which, on the whole, are lacking in "Zenobia"; and it would have made his name familiar to the American public, which is proverbially suspicious of all novelties and newcomers. The subject of "Zenobia" is a good one for an opera, although the incidents are of that pompous style which for full effect requires the dimensions, the masses, and all the resources of a grand opera-house. Mr. Strakosch, however, has placed the opera on the stage with effective scenery and costumes. The libretto was written by Mr. Pratt himself. It does not show the hand of a skilled playwright, but it would be unfair to criticise it in a captious spirit, as its tone and language are superior to the average Italian opera libretto. Nevertheless, if Mr. Pratt writes another opera he will do well to ally himself with a professional playwright, well versed in all the tricks and technicalities of his trade. If "Zenobia" had not been produced at the most unfavorable season of the year, it would have been easy to predict a long run, as the numbers we have already mentioned, besides a quartet, a slumber song, and yet others, have in them the elements of popularity.

—M. Renan's recent lecture, 'Le Judaïsme, considéré comme race et comme religion,' has been followed by another on a kindred topic, 'Le Judaïsme et le Christianisme,' delivered by him before the Société des Études Juives. In analyzing the former, we called the attention of our readers to the philo-Semitic advance made by the liberal Frenchman in these years of rampant anti-Semitism. The lecture before us is a still more striking evidence of this new bent of his mind and sentiment, brought about equally, perhaps, by an innate aversion to intolerance and race hatred and by the charm of Old Testament studies, to which he has been of late more zealously devoted than ever. M. Renan's is an equally enthusiastic and plastic spirit. The subjects on which he fixes his mind with sympathetic predilection assume under his artistic pen symmetrically rounded forms; the angularities and irregularities disappear; the defects are wiped out by a process of idealization. Having, since the completion of his 'Origines du Christianisme'—from the 'Life of Jesus' to 'Marcus Aurelius and the End of the Ancient World'—gone back in his studies to the origins of the 'Origins,' from the apostles and their disciples to the prophets and psalmists, he has not only traced the stream upward to its very fountainheads, but he has discovered identity throughout the entire line, and proclaims this in tones that cannot be mistaken. The analysis of Christianity, he tells his Jewish hearers, has led him to the study of Judaism, and this study has worked in his mind "a most profound revolution." "What is the history of the origins of Christianity? . . . Essentially your history." They must be fixed "at least 750 years before Jesus Christ." When Isaiah told his people that God detested temple sacrifices, and demanded nothing but purity, justice, and benevolence, Christianity took its rise. The author of the fifteenth Psalm—an early writer, M. Renan thinks—sang the God of Christ. The continuator of Isaiah, in the sixth century B. C., preached a religion good for all mankind. The Sibylline poems of the Alexandrine school, the mysterious echoes of which reached Virgil, declare the Jewish dream of eternal peace and fraternity, of a paradise on earth. The founders of the Christianity of history were such Jewish dreamers. They continued the line of the inspired of Israel, and they avowed it—not excepting St. Paul himself. The least Jewish in spirit of all the Synoptics, Luke, depicts Jesus practising all the rites of the Law. The epistles of St. James and of Jude, the apocryphal books of the period, all breathe the purely Jewish spirit of the primitive Church; "none could be more Jewish than the author of the Apocalypse." The antagonism to Judaism which other writings of the New Testament reflect is of later date. Nascent gnostic tendencies ripened it. The complete break between Judaism and Christianity is posterior even to the time of Marcus Aurelius. The period of "mankind's deplorable ingratitude toward Judaism" comes later still—with the arrival of the barbarians.

—While M. Renan is thus, in essay after essay, more and more broadly and warmly avowing sentiments and convictions flattering to the Jewish race and religion, we find him rather severely called to account by a learned

rabbi for coloring history in the opposite sense in the earlier volumes of his 'Origins of Christianity.' Dr. M. Joël, in the second volume (Breslau, 1883; the first appeared in 1880) of his 'Blicke in die Religionsgeschichte des zweiten christlichen Jahrhunderts'—a book of criticism devoted to the Talmud and the earliest writings of the Christian Church, the latter part of which, owing to discussions provoked by recent ebullitions of anti-Semitism, has assumed an historico-apologetic character—strikingly illustrates the inconsistency with which sceptical expounders of the early history of Christianity repeat charges against the Jews after narratives declared to be in the main spurious or obviously false. For this delinquency he takes a number of famous writers to task, among them Keim, Hausrath, and especially Renan—not, however, without an acknowledgment of their merits as critics and historians. He selects Renan (to whom he pays many compliments) above others on account of the readiness with which he is apt to sacrifice historical precision to smoothness of outlines and richness of color, and of the poetical imaginativeness which both enables and prompts him to evolve tableaux out of shadows—that is, detailed history out of hints. As the apostles and their followers are Renan's heroes, and Christian controversialists and Roman satirists his principal authorities as to the moral and social condition of the Jews, his pictures of the latter naturally become overdrawn caricatures, contrasting with idyllic figures. Dr. Joël shows in an almost amusing manner how slender the *pièces justificatives* are which the delineator cites in his notes. Two epigrams of Martial are a dozen times, and not always correctly, referred to in explanation of offensive traits attributed to the sons of Israel. The hostile animus which pervades many Christian stories of Jewish misdeeds is fully acknowledged by the liberal Frenchman, but the story, if interesting, is preserved, and "er schildert, wie es seine Art ist, als sei er dabei gewesen." Thus, in his earlier volumes on the rise of Christianity. But M. Renan, as we have seen, is the last man to cling, for the sake of consistency, to antipathies imbibed in years of immaturity; and Dr. Joël, though yet unfamiliar with his latest philo-Semitic enunciations, knows this, and makes good use of the versatile writer's amiable readiness to contradict himself, which keeps pace with his continued advance as a scholar. The rabbi contrasts Renan's remarks on the degree of guilt which attaches to the Jews in the tragedy of the crucifixion, as contained respectively in the first and in the sixth volume of the 'Origins.' We read in the 'Life of Jesus': "Thus it was neither Tiberius nor Pilate who condemned Jesus. It was the Old Jewish party, the Mosaic law, that did it. Our modern conceptions allow of no transfer of moral guilt from father to son. . . . Therefore every Jew who still suffers today for the murder of Jesus has a right to complain. . . . But nations have their responsibility no less than individuals. . . . And if ever a crime was the crime of a people, it was the murder of Jesus." But the Renan of 'The Christian Church' writes thus: "From the middle of the second century the hatred between the two religions was sealed. . . . The Christians began to cast upon the entire Jewish nation a reproach which, surely, neither Peter, nor James, nor the author of the Apocalypse would ever have thought of directing against it: the reproach of having crucified Jesus. The death of Jesus had hitherto been considered the crime of Pilate, of the high-priests, of certain Pharisees, but not the crime of all Israel."

—The death is announced of Svend Grundtvig, professor in the University of Copenhagen. The magnificent national work upon which Grundtvig has been thirty years engaged, 'Danmarks Gamle Folkeviser,' is abruptly broken off in the middle—the fourth volume lacking, it is feared, a few sheets, and the fifth left half-done. At the rate at which this work has lately been going on, another score and a half of years would have been needed to finish it, and these years Grundtvig seems to have counted on. His father, the Bishop, whose activity in theology, politics, and literature was extraordinary, attained to the age of eighty-nine. The son, whose plans required no briefer term, has been taken away at fifty-nine. Svend Grundtvig's first essay in literature was a series of translations, with notes, of English and Scottish ballads, published when he was eighteen years old. At the outbreak of the Schleswig-Holstein war, he entered the Danish army as a volunteer. He was soon made lieutenant, and served through 1848–50. He retained a nominal connection with the army down to 1863, when he was made Professor of Northern Philology. The first volume of the 'Old Popular Ballads of Denmark' has the date 1853, the second 1856, the third, a very large one, 1862. An edition of the older Edda, and numerous writings and collections relating to the popular poetry and traditions of the North, must account for only one-half as much of this his principal work being accomplished in the last twenty years as in the previous ten. The book is regarded with unqualified admiration all over Europe, and wherever else it is known.

—In our note in No. 942 of the *Nation*, respecting Reinach's commentary on Bondelmonte's 'Liber Insularum,' we fell into an error as to this voyager's having found "more than a thousand statues in Delos." Herein we imitated the slip of an old copyist, whom M. Reinach expressly corrects. The figure which Bondelmonte used was "a thousand" in its vague, Oriental sense, like "the cattle upon a thousand hills." While recurring to a work which we owe to the French school at Athens, we may say that the *Bulletin* which we have had occasion to notice from time to time deserves a more adequate support from the general public than it receives, as the list of subscribers is little more than *one hundred*, while, as a repository of Greek epigraphy, it is unrivalled among periodical publications, and every number contains heliographic illustrations of previously unpublished statuary etc., which are worth as engravings more than the subscription price of the *Bulletin* (25 francs a year). As it is a publication of purely scientific temper and management, it does not advertise itself and is published at heavy expense to the School. Every number contains three or four of Dujardin's admirable heliographs of antique statuary, or ceramics, such as the specimens of what is probably the most valuable collection of figurines, etc. (from Myrina), in existence, to which we have from time to time called attention. In the five years of its existence it has published 150 photographs and 2,000 to 3,000 inscriptions. Subscriptions may be sent to Ernest Thorin, 7 Rue de Médicis, Paris.

MAINE'S EARLY LAW AND CUSTOM.—II.

Dissertations on Early Law and Custom. Chiefly selected from Lectures delivered at Oxford. By Sir Henry Sumner Maine. London: John Murray. 1883.

THE 'Dissertations on Early Law and Custom' is too considerable a work to be used as a mere text to an analysis of the qualities which distinguish its eminent author. A critic's difficulty in dealing with this book arises simply from the proverbial "embarrassment of wealth." He does not know which of the eleven topics embraced in the lectures he should choose for review. The essays on "Religion and Law," on "Royal Succession and the Salic Law," on "Theories of Primitive Society," on "The Decay of Feudal Property in France and England" are each intensely interesting, and each can make a fair claim for exclusive attention. As, however, we cannot notice, even in the most cursory manner, the whole of a series of disquisitions each of which is a compact essay, teeming with suggestions, we are driven to make a choice, and have come to the conclusion that there is no single chapter which is so full of interest to readers, and so good a specimen of Maine's powers, as that which compares and contrasts the development of French and of English institutions as surveyed by the eye of a philosophic jurist. Our author may have written passages of more power and of more striking originality, but in no part of his speculations has he shown more convincingly how much light the study of early institutions may throw on an obscure problem.

The riddle to be solved is this: The feudalism of France was originally, in its essential characteristics, like the feudalism of England. How did it happen that the feudalism of the one country—the *ancien régime*—became so universally detested, and, we may fairly therefore say, so detestable, that Frenchmen were willing to purchase its destruction at the price of the bloodiest among revolutions, while the feudalism of England never, at any rate in modern times, excited any popular hatred, and developed into a fundamental portion of the much-admired English Constitution? Maine is far too profound a thinker to believe that such a riddle as this can be disposed of by any single reply; indeed, there is nothing more marked in the whole of his mode of thinking than his insistence on the principle that the great speculative questions of human history can hardly ever be met by any one theory applicable to all and every instance. What Maine perceives, as many others must have perceived before him, is that the usual modes of accounting for or of explaining away the hostility of France to the *ancien régime* are absolutely futile; and he has perceived, what very few English writers have perceived before him, that a study of French law, especially as it affected the tenure of land, affords at any rate some explanation of an otherwise almost unaccountable condition of public feeling. That the usual explanations are futile is patent. The idea, for example, that the French nobility were, toward the outbreak of the Revolution, wicked and cruel tyrants—a notion which has received its crudest expression in that 'Tale of Two Cities' wherein Carlyle's 'French Revolution' is done into a serio-comic melodrama by Dickens—is confuted by every line of Taine and De Tocqueville. The nobility of France were, in 1789, more filled with benevolence, with liberalism, with what the literary slang of to-day calls the "enthusiasm of humanity," than any aristocracy has ever been before or since. It is an error, again, to fancy that the peasantry were sinking into deeper and deeper wretchedness; they were, in fact, gradually becoming owners of the soil of France; and De Tocqueville has pointed out the curious fact that discontent was most rife where prosperity had most increased. The King, it is said with truth, was incompetent and weak, and, like all irresolute men, not overhonest; but the King, down even to a comparatively late stage of the Revolution, was popular. The nobility did not fall because they rallied to the court; it was the King who fell because, for almost the first time in French history, the Crown allied itself to the aristocracy. It did not need the genius of Mirabeau to perceive that a monarch who had put himself at the head of the people might have destroyed the privileges

of the nobles, and have become the most powerful and the most popular of French rulers.

The suggestion, again, sometimes hazarded, that the French nation did not in reality hate the institutions which they destroyed, amounts to an absurdity. In the darkest days of the Revolution, no man outside the privileged classes regretted the institutions which had perished. De Tocqueville's love for the past does not blind him to this fact. Burke, in occasional moments of inspired insight, perceived a truth fatal to the whole policy of which he was the passionate advocate. There is nothing in literature more striking than a passage in Butler's 'Reminiscences.' The "reminiscent" was present at a party where French *émigrés*, after listening with delight to Burke's diatribes against the Revolution, asked the question, When shall we be restored? The answer was thundered forth in the one word, *jamais*. Nor is anything gained by saying that France, during the political fever which lasted not for months but for years, was a prey to national madness—one might almost say, to national possession by the devil. Such ideas are worse than a libel on human nature, for they are a libel which cannot even pass for an explanation. To say that France went mad gives no explanation whatever of the cause of the madness. If we are ever to answer the inquiry, which needs a reply, we must, as Maine has done, recognize undoubted facts, and approach a very complicated problem with the calmness of lawyers investigating the intricacy of a difficult case. When the matter is looked at in this way, it is easy, under our author's guidance, to see that a comparative study of the law with relation to land in France and in England does really go a good way toward solving the problem which every philosophic student of the Revolution must somehow or other meet. "If I were to say," writes Maine, "that the first French Revolution took place because a great part of the soil of France was held on copyhold tenure, the statement would doubtless sound like a paradox." Yet he certainly establishes that this paradox contains a good deal of truth. Land held on copyhold tenure is land of which one man, the tenant, is the owner, but in respect of which another man, the lord of the manor—or, in French terms, the *seigneur*—can exact rents and services many of which are, or may be, onerous, and some of which may well become in course of time odious and oppressive. In England itself copyholders suffered heavily from their tenure.

"Roger North . . . tells us that the Lord Keeper Guilford qualified himself for practice at the bar by acting as the steward of various manors, and he quotes a good deal of the Lord Keeper's conversation on the subject of manorial rights. Guilford was in the habit of saying that he found himself the executioner of the cruelty of the lords and ladies of manors upon poor men; that small tenements and pieces of land which had been men's inheritances for generations were devoured by fines; that it was wonderful how Parliament, which took away the royal tenures *in capite*, had never relieved the poorest landowners of the nation from extortion and oppression; and that the tenure ought to be abolished. Here is the very muttering of the volcano before the French revolutionary eruption; but there is this difference, that the class compassionated by North is a relatively small one, as well as a poor one, for he goes on to observe on the large number of manors which had become altogether or partially extinct in England."

Suppose, for a moment, that the whole country had been occupied by copyholders. We then get at least a step toward explaining the discontent of the French peasantry. But if we look a little further into the judicial organization of France and England, we advance a step more on our way. The courts of the manor (to use the terms of English law) were in their nature oppressive. The lord became judge in his own cause, and, what was far worse, the lord meant in practice the lord's representative—or, in other words, the country attorney. In both countries, however, the royal courts checked the abuses, curtailed the jurisdiction, and tended to overthrow the powers of the courts of the manor. The Crown thus became the protector of the people. "What the courts at Westminster Hall were to the English Manor, the French Parliaments were to the French Fief." But toward the middle of the eighteenth century the spirit of the French Parliaments changed: they took to presuming against, and not, as before, in favor of, free tenure.

"The Parliament of Paris, just before the Revolution, ordered the work of Boncerf, 'On the Inconveniences of Feudal Rights,' to be publicly burnt; and the decree no doubt testifies to the opinions most strongly and permanently held by the majority of the French judges. . . . This change of feeling is connected with the innovation, generally regarded as disastrous, by which offices in the great French judicial assemblies became purchasable and hereditary. Thenceforward . . . a judge was almost invariably a man of inherited wealth. In the France of that day, the only investment for wealth was land or interests in land, and proprietorship was just as likely to consist in a right to seignorial dues as in ownership of the soil."

One abuse, in short, as is the way in countries destined to revolution, strengthened and intensified another. The courts went over to the nobles, and the nobles became more and more, not landowners, but the owners of charges upon land. An obvious encumbrancer is hateful to the man whose land he encumbers. While tithes were levied in kind, the parson was not loved by the English farmer; he was more hated by the Irish tenant than the landlord or the middleman. Let no one with these facts before him fancy that the mode in which a class exercises rights over the land may not, even though the rights are not very onerous, be a cause of the deepest popular discontent. The nobility, moreover, in France bore all the odium without possessing the strength of privilege. As the peasants and the middle class increased in wealth, the position of the *seigneurs* became less and less respectable. The English lord or squire was the great man of his village or county; the French *seigneur* was a poor devil who saved himself from starvation by wringing out dues and fines from the peasants, or, in other words, from the petty landowners. "Turn to the 'Bride of Lammermoor,' and gather from it the opinion which the feudal tenants of the Lord of Ravenswood had of the raids of Caleb Balderstone on Wolfshope; extend this to a whole population, and understand that a legion of Caleb Balderstones overran France, and one may be able to bring home to one's self the view which the French peasantry took of the institutions under which they lived."

If, as has been sometimes said, the people of France were irritated by the aristocratic privileges claimed by the *nouveaux riches*—the new nobility who bought patents and privileges—the mass of the nation assuredly did not love those who have been happily called the "old poor." But if you ask why the old families were poor, you find your answer in the legal and the economical conditions of pre-revolutionary France. Those who wish for further explanation on this point must go to Maine's pages. Two circumstances, however, which can be briefly stated, must be noted for the way in which they intensified the bitterness of popular sentiment. The "copyholder" of France did not, like the English copyholder, compare himself with a body of tenant-farmers, but with a body of landowners. He was not, as in England, a man who felt himself lucky not to be an ordinary tenant, but a landowner who felt himself intolerably aggrieved at being loaded with special burdens. The sacredness of contract, again, was one of the fundamental ideas of the French philosophical creed, and was accepted by popular opinion. But manorial rights in France did not, in fact, originate in contract, and were not, by the mass of the people, felt to depend upon agreement and to be, according to the phraseology of the day, natural rights. What, however, was untrue of France was, as Maine points out, true, in a certain sense, of England: "It is a fact of great political and juridical interest, that from very early times landed property changed hands by purchase and sale more frequently than elsewhere." Hence the possession of landed property has rested in England on a basis which commended itself to the prevailing sense of justice. Most of the rights exercised by French *seigneurs* rested on a basis which did not recommend itself to prevailing notions of fairness. Combine together all the different circumstances to which we have been able in this article to do little else than refer, and you get an account, which is at least intelligible, of the revolutionary state of rural France at the meeting of the States-General. The "extremity of detestation" entertained by the rural population for the landowners may not be fully explained by the causes suggested by Maine, but those who doubt that some special cause is needed for an astonishing state of feeling will do well to read and reread this picture of what this condition of sentiment really was:

"The provincial cities and towns were slowly drawn into the movement through the action of Jacobin clubs gradually established in them, and taking their instructions from the central body in Paris, which, no doubt, from the first was a furnace of revolutionary agitation. But the peasantry, always excepting those of the western provinces, were from the very beginning enthusiasts for the destruction of the ancient institutions, and so they remained until they gained their objects. This universal hatred of the peasants had for one of its effects a condition of the country which, no doubt, has often perplexed the reader of the ordinary histories. After a while France became hermetically closed, and escape from the guillotine became almost impossible. Some writers, in explaining this, have attributed to Robespierre a special genius for police organization; but the truth seems to be that the cultivating classes, who at first witnessed with pleasure the emigration of the nobility, constituted themselves a voluntary police as soon as they found that by detaining the nobles in France, they would probably send them to the scaffold."

If any one further doubts whether Maine's explanation of this condition of things is, as far as it goes, true, let him read with the utmost care the whole of the dissertation on the decay of feudal property in France and England. Let him then study 'La Révolution Française et la Féodalité' of Doniol, and let him meditate on the history and the present condition of Ireland. He who does this will hardly hesitate to hold that the study of early law and custom has led Maine very near the true answer of a great historical riddle.

THE ART OF ACTING.

Talma on the Actor's Art. With Preface by Henry Irving. London: Bickers & Son; New York: Roorbach & Co.

The Paradox of Acting. Translated, with Annotations from Diderot's 'Paradoxe sur le Comédien,' by Walter Herries Pollock, with a Preface by Henry Irving. London: Chatto & Windus; New York: Scribner & Welford. 8vo, pp. xx.–108.

THERE are very few books in English on the art of acting, and most of them are good for nothing. It is therefore with great pleasure

that we welcome these translations from the French. Talma's essay was originally prefixed to the edition of the memoir of Lekain, issued as a volume of the collection of 'Mémoires sur l'art dramatique' which was published in France early in this century. The present translation, by an anonymous hand, has been done at the suggestion of Mr. Henry Irving, a most careful student of his art. Diderot's 'Paradox on the Comedian,' although written in 1773, and rewritten, was not published until 1830, long after Diderot's death, and quite in the thick of that Romanticist revival which Diderot's influence had done much to bring about. It was for Grimm that Diderot wrote his 'Salons,' thereby inventing modern art criticism; and it was to Grimm that he addressed the first draft of the 'Paradox.' To Diderot dramatic art and histrionic art were of more interest than pictorial and plastic art, and his alert and open mind delighted in sketching out a scheme of dramatic reform. It is to Diderot's precept rather than to his practice that we owe the modern domestic drama. Beaumarchais was his first and greatest disciple, and yet Beaumarchais failed as long as he relied on Diderot's teaching instead of his own wit; and Diderot's own plays achieved no great success, although we may infer that one of them at least was acted occasionally in English for a while, since it was during a performance of an adaptation of the "Père de famille" that the famous fire in the Richmond Theatre broke out.
